Balance of Payments Statistics Yearbook (BOPSY): Issued in three parts, this annual publication contains balance of payments and international investment position data. Part I provides detailed tables on balance of payments statistics for approximately 167 countries and international investment position data for 96 countries. Part 2 presents tables of regional and world totals of major balance of payments components. Part 3 contains description of methodologies, compilation practices, and data sources used by reporting countries.

SELECTION OF STATISTICAL PUBLICATIONS

International Financial Statistics (IFS)

Acknowledged as a standard source of statistics on all aspects of international and domestic finance, *IFS* publishes, for most countries of the world, current data on exchange rates, international liquidity, international banking, money and banking, interest rates, prices, production, international transactions (including balance of payments and international investment position), government finance, and national accounts. Information is presented in tables for specific countries and in tables for area and world aggregates. *IFS* is published monthly and annually. *Price*: Subscription price is US\$495 a year (US\$247 to university faculty and students) for twelve monthly issues and the yearbook. Single copy price is US\$65 for a monthly issue and US\$95 for a yearbook issue.

Balance of Payments Statistics Yearbook (BOPSY)

Issued in three parts, this annual publication contains balance of payments and international investment position data. Part 1 provides detailed tables on balance of payments statistics for approximately 167 countries and international investment position data for 96 countries. Part 2 presents tables of regional and world totals of major balance of payments components. Part 3 contains descriptions of methodologies, compilation practices, and data sources used by reporting countries. *Price*: US\$98.

Direction of Trade Statistics (DOTS)

Quarterly issues of this publication provide, for about 156 countries, tables with current data (or estimates) on the value of imports from and exports to their most important trading partners. In addition, similar summary tables for the world, industrial countries, and developing countries are included. The yearbook provides, for the most recent seven years, detailed trade data by country for approximately 186 countries, the world, and major areas. *Price*: Subscription price is US\$155 a year (US\$129 to university faculty and students) for the quarterly issues and the yearbook. *Price* for a quarterly issue only is US\$25, the yearbook only is US\$70, and a guide only is US\$12.50.

Government Finance Statistics Yearbook (GFSY)

This annual publication provides detailed data on transactions in revenue, expense, net acquisition of assets and liabilities, other economic flows, and balances of assets and liabilities of general government and its subsectors. The data are compiled according to the framework of the 2001 *Government Finance Statistics Manual*, which provides for several summary measures of government fiscal performance. *Price*: US\$80.

CD-ROM Subscriptions

International Financial Statistics (IFS), *Balance of Payments Statistics (BOPS)*, *Direction of Trade Statistics (DOTS)*, and *Government Finance Statistics (GFS)* are available on CD-ROM by annual subscription. The CD-ROMs incorporate a Windows-based browser facility, as well as a flat file of the database in scientific notation. *Price of each subscription*: US\$450 a year for single-user PC license (US\$225 for university faculty and students). Network and redistribution licenses are negotiated on a case-by-case basis. Please contact Publication Services for information.

Subscription Packages

Combined Subscription Package

The combined subscription package includes all issues of *IFS*, *DOTS*, *BOPSY*, *GFSY*, and *Staff Papers*, the Fund's economic journal. *Combined subscription price*: US\$749 a year. Airspeed delivery available at additional cost; please inquire.

Combined Statistical Yearbook Subscription

This subscription comprises *BOPSY*, *GFSY*, *IFS*, and *DOTSY* at a combined rate of US\$265. Because of different publication dates of the four yearbooks, it may take up to one year to service an order. Airspeed delivery available at additional cost; please inquire.

IFS on the Internet

The Statistics Department of the Fund is pleased to make available to subscribers the *International Financial Statistics (IFS)* database through an easy-to-use online service. The *IFS* database contains time series data beginning in 1948. The browser software provides a familiar and easy-to-use Windows interface for browsing the database, selecting series of interest, displaying the selected series in a spreadsheet format, and saving the selected series for transfer to other software systems, such as Microsoft Excel®. Single user license price for the *IFS Online Service* is \$495, and \$247 for academic users. Dependent on certain criteria, a range of scaled discounts is available. For full details of qualification for these discounts and online payment, please visit <http://www.imfstatistics.org> or email us directly at publications@imf.org.

INTRODUCTION¹

This publication consists of Parts 2 and 3 of Volume 55 of the *Balance of Payments Statistics Yearbook*. (The introduction to Part 3 is shown on page 151 of Part 3.) Part 2 aggregates country data by major balance of payments components. For each component, data for countries, country groups, and the world are provided. In addition to data reported by countries as shown in Part 1 of the yearbook, data are provided for international organizations in Part 2 of the yearbook. The tables in Part 2 include, in addition to reported data, data derived in a few instances indirectly from published sources.

Missing data have been estimated for countries by Fund staff to the extent possible. The estimation procedure is based largely on the use of the Fund's *World Economic Outlook (WEO)* database. With regard to goods and services transactions, where data gaps exist after the latest year of reporting to the Fund, estimates are made by applying the growth rates derived from the *WEO* for the missing year(s) to the latest reported annual data (debits and credits). When the data gaps are in respect of years prior to the latest reported data to STA, the *WEO* data are inserted to complete the series.

As the *WEO* data series for income, current transfers, and the capital account are available only on a net basis, the estimation procedure involves adding the change in the *WEO* balance to the reported data of the most current year—credits if *WEO* shows a net credit balance or debits if a net debit balance is shown. Where there are gaps in the data prior to the latest reported data, the net credit or the net debit figures from *WEO* are substituted directly to estimate income, current transfers, and capital account credits and debits, respectively. With regard to the financial account transactions, *WEO* values are simply substituted for periods when there are no reported data. However, the estimates, which are included in regional and world totals, are not shown for the individual countries concerned. Data on Fund transactions—for example, transactions in SDRs and of the Fund's General Resources Account—are obtained from Fund sources.

"Country" as used in this publication does not always refer to a territorial entity that is a state as understood by international law and practice; the term also covers the euro area, the Eastern Caribbean Currency Union, the Central African Economic and

Monetary Community (CEMAC), the West African Economic and Monetary Union (WAEMU), and some nonsovereign territorial entities for which statistical data are provided internationally on a separate basis.

All tables of aggregates appearing in Part 2 are shown in the table of contents of this publication. Table A-1 provides a summary of international transactions, showing world totals of the major components of the balance of payments. Tables A-2 through A-5 present balances, by country, for the current, capital, and financial accounts, as well as for errors and omissions. Each of these tables includes a breakdown for international organizations, by country group, and by country.

Tables B-1 through B-39 present world and regional totals, by country, of major components of the balance of payments accounts.

Table C-1 presents "global discrepancies" in balance of payments statistics by major components. Global discrepancies shown in the table refer to the discrepancies between the sum of the debit and credit entries of corresponding components reported by countries and estimated by the Fund staff. For example, the global discrepancy shown for the trade balance represents the difference between the global aggregate of trade surpluses for goods and that of trade deficits reported on goods. In principle, under the balance of payments convention, global aggregates for exports should equal global aggregates for imports, and global trade surpluses should mirror global trade deficits, with the global trade balance equal to zero. The same principle applies to other balance of payments components shown in Table C-1.

For a variety of reasons, however, countries generally do not correctly record all transactions, or they classify corresponding transactions differently. Under these circumstances, errors and omissions in the national data and asymmetries (discrepancies) in the global statistics arise. Figures presented in C-1 reflect such net global asymmetries for the different balances. The net errors and omissions shown in the table represent the difference between the global discrepancy figure for the current account and that for the combined capital and financial accounts.

Within the current account, a negative global imbalance or discrepancy indicates a net excess of recorded debits, which may reflect an under-recording of credits, an overstatement of debits, or both. A positive discrepancy in the financial account suggests a net understatement of capital outflows (increase in

¹French and Spanish translations of this introduction appear after this English version; data on world and regional tables follow immediately thereafter.

assets or decrease in liabilities), and/or a net overstatement of recorded inflows (decrease in assets or increase in liabilities).

The memorandum items of Table C-1 show the global discrepancies of certain major components of the balance of payments as a proportion of the sum of credits and debits of the category.

Tables D-1 and D-2 present exports and imports of goods and services, respectively, as a percentage of gross domestic product (GDP), information that is of general interest to data users.

The introduction to Part 1 contains additional information on the presentation of data, conventions used, a description of the conceptual framework of the balance of payments, and an explanation of the coverage of each of the major components of the balance of payments.

INTRODUCTION

La présente publication constitue les deuxième et troisième parties du volume 55 du *Balance of Payments Statistics Yearbook* (Annuaire de statistiques de balance des paiements) (l'annuaire). (L'introduction à la troisième partie figure à la page 151 de la troisième partie.) La deuxième partie présente, pour les divers pays, des données globales sur chaque grande composante de la balance des paiements. Elle fournit, pour chaque composante, des données relatives à chacun des pays, aux groupes de pays et à l'ensemble des pays. S'ajoutant aux données directement communiquées par les pays et reportées dans la partie 1 de l'annuaire, les données correspondantes des organisations internationales figurent à la partie 2. Les tableaux de la partie 2 comprennent dans certains cas, outre les données directement transmises, des données provenant indirectement de sources publiées.

Les données nationales manquantes ont été estimées par les services du FMI dans la mesure du possible. La méthode d'estimation fait largement appel à la base de données des Perspectives de l'économie mondiale (base de données PEM) du FMI. S'agissant des transactions sur biens et services, lorsque l'on ne dispose pas de données pour les périodes postérieures à l'année la plus récente pour laquelle des données ont été communiquées au FMI, les estimations sont calculées par application des taux de croissance tirés de la base de données PEM pour l'année ou les années manquante(s) aux données annuelles disponibles les plus récentes (crédits et débits). Lorsque les chiffres manquants se rapportent à des années antérieures à celle des données les plus récentes qui aient été communiquées au Département

des statistiques, les séries sont complétées à l'aide des chiffres figurant dans la base de données PEM.

Étant donné que les séries de la base de données PEM pour le revenu, les transferts courants et le compte de capital ne sont enregistrées que sur une base nette, cela signifie que, pour calculer les estimations, il convient d'ajouter aux chiffres disponibles pour l'année la plus récente la variation nette du solde figurant dans la base de données PEM — au crédit si ce solde est créditeur net, ou au débit si ce solde est débiteur net. Lorsque les chiffres manquent pour des périodes antérieures à celle des données les plus récentes, on remplace directement les chiffres estimatifs (créditeurs ou débiteurs) du revenu, des transferts courants et du compte de capital par les chiffres nets (créditeurs ou débiteurs) figurant dans la base de données PEM. En ce qui concerne le compte d'opérations financières, on a simplement complété les séries des périodes pour lesquelles aucune donnée n'a été communiquée par les valeurs enregistrées dans la base de données PEM. Les estimations, qui figurent dans les totaux régionaux et mondiaux, ne sont toutefois pas présentées pour les différents pays concernés. Les données sur les transactions avec le FMI — transactions sur DTS et au compte des ressources générales, par exemple — sont celles dont dispose le FMI.

Dans la présente publication, le terme «pays» ne désigne pas toujours une entité territoriale constituant un État tel qu'il est défini selon l'usage et le droit internationaux; ce terme recouvre également la zone euro, l'Union monétaire des Caraïbes orientales, Communauté économique et monétaire de l'Afrique centrale (CEMAC), Union économique et monétaire ouest-africaine (UEMOA), et certaines entités territoriales qui ne sont des États souverains mais sur lesquelles des données statistiques sont fournies séparément au niveau international.

Tous les tableaux de données agrégées publiés dans la deuxième partie sont indiqués dans la table des matières du présent ouvrage. Le tableau A-1 présente un état récapitulatif des transactions internationales, qui fait apparaître les totaux mondiaux pour les principales composantes de la balance des paiements. Les tableaux A-2 à A-5, inclusivement, indiquent, pour chaque pays, le solde du compte des transactions courantes, du compte de capital et du compte d'opérations financières ainsi que du poste des erreurs et omissions. Chacun de ces tableaux fournit une ventilation par organisations internationales, par groupes de pays et par pays.

Les tableaux B-1 à B-39 font apparaître les totaux mondiaux et régionaux, ventilés par pays, des principales composantes des comptes de la balance des paiements.

Le tableau C-1 présente, pour chaque grande composante, les écarts entre les totaux mondiaux dans les statistiques de balance des paiements. Il s'agit, dans ce tableau, des écarts entre la somme des montants inscrits au débit et celle des montants passés au crédit du poste de contrepartie, qu'ils aient été communiqués par les pays ou estimés par les services du FMI. Par exemple, l'écart indiqué pour la balance commerciale au niveau mondial est égal à la différence entre le total mondial des excédents au titre des échanges de biens et celui des montants communiqués pour les déficits au titre de ces échanges. En principe, d'après la convention adoptée pour la balance des paiements, le total mondial des exportations doit être égal à celui des importations, et le total mondial des excédents commerciaux doit être égal à celui des déficits commerciaux, le solde étant égal à zéro. Le même principe s'applique aux autres composantes de la balance des paiements retenues au tableau C-1.

Pour diverses raisons, toutefois, les pays n'enregistrent généralement pas toutes les transactions de façon correcte, ou passent à des postes différents les écritures de contrepartie. Dans ces circonstances, on observe des erreurs et omissions dans les données nationales et des asymétries (écarts) dans les statistiques mondiales. Les chiffres présentés dans le tableau C-1 reflètent ces écarts nets entre les totaux mondiaux pour les différents soldes. Le montant des erreurs et omissions nettes présenté dans le tableau est égal à la différence entre le total mondial de l'écart constaté pour le compte des transactions courantes et celui de l'écart observé pour l'ensemble des comptes de capital et d'opérations financières.

Dans le compte des transactions courantes, un écart négatif au niveau mondial indique qu'il y a un excédent net des montants figurant au débit, lequel peut être dû à l'inscription de montants trop faibles au crédit ou trop élevés au débit, ou aux deux à la fois. Dans le compte d'opérations financières, un écart positif tient au fait que le montant enregistré pour les sorties nettes de capitaux est trop faible (augmentation des avoirs ou diminution des engagements), ou que celui des entrées nettes de capitaux est trop élevé (diminution des avoirs ou augmentation des engagements), ou aux deux à la fois.

Les postes pour mémoire du tableau C-1 indiquent le montant total de l'écart pour certaines grandes composantes de la balance des paiements, exprimé en pourcentage de la somme des montants passés au crédit et au débit du poste.

Le tableau D-1 présente les exportations de biens et de services et le tableau D-2, les importations de biens et de services, exprimées, les unes et les autres, en pourcentage du produit intérieur brut

(PIB), informations d'utilité générale pour les utilisateurs de statistiques.

L'introduction à la première partie fournit de plus amples renseignements sur la présentation des données et les conventions adoptées, ainsi qu'une description du cadre conceptuel de la balance des paiements et une explication du champ couvert par chacune des principales composantes de la balance des paiements.

INTRODUCCIÓN

Esta publicación comprende las partes 2 y 3 del volumen 55 de *Balance of Payments Statistics Yearbook* (anuario). (La introducción de la parte 3 figura en la página 152 de la parte 3.) La parte 2 agrega los datos de los países en los principales componentes de la balanza de pagos. En cada componente se presentan datos de países, de grupos de países y mundiales. Además de los datos reportados por los países, que figuran en la Parte 1 del anuario, los datos correspondientes a los organismos internacionales son provistos en la Parte 2 del Anuario. Los cuadros de la Parte 2 incluyen, adicionalmente a los datos reportados, datos calculados en unos pocos casos de manera indirecta a partir de fuentes publicadas.

En los casos en que faltan datos, el personal del FMI efectúa estimaciones, en la medida de lo posible. El procedimiento de estimación se basa en gran medida en el uso de la base de datos de Perspectivas de la economía mundial del FMI. Con respecto a las transacciones de bienes y servicios, si faltan datos a partir del último año en que se declararon datos al FMI, se elaboran estimaciones aplicando las tasas de crecimiento derivadas de dicha base de datos con respecto al(a) año(s) que falta(n) a los últimos datos anuales declarados (débitos y créditos). Si faltan datos con respecto a los años anteriores a los últimos datos declarados al Departamento de Estadística, se incluyen los datos de Perspectivas de la economía mundial a fin de completar las series.

Dado que sólo se dispone de series de datos de Perspectivas de la economía mundial sobre el ingreso, las transferencias corrientes y la cuenta de capital en cifras netas, el procedimiento de estimación implica sumar la variación del saldo incluido en la base de datos de Perspectivas de la economía mundial a los datos declarados del año más reciente; créditos si en dicha base de datos figura un saldo acreedor neto o débitos si figura un saldo deudor neto. Si faltan datos con anterioridad a los últimos datos declarados, se utilizan directamente las cifras sobre el crédito neto o el débito neto derivadas de Perspectivas de la

economía mundial a fin estimar el ingreso, las transferencias corrientes y los créditos y débitos de la cuenta de capital, respectivamente. Con respecto a las transacciones de la cuenta financiera, se utilizan los valores que figuran en Perspectivas de la economía mundial en los períodos en que no se declararon datos. Sin embargo, no se incluyen las estimaciones que figuran en los totales regionales y mundiales en el caso de los distintos países en cuestión. Los datos sobre las transacciones con el Fondo, por ejemplo, las transacciones de DEG y de la Cuenta de Recursos Generales del Fondo, se obtienen de fuentes del Fondo.

Obsérvese que el término “país”, según se emplea en esta publicación, no siempre se refiere a una entidad territorial que constituya un Estado, conforme al derecho y a la práctica internacionales; el término también abarca la zona del euro, la unión monetaria del Caribe Oriental, Comunidad Económica y Monetaria de África Central (CEMAC), Unión Económica y Monetaria del África Occidental (UEMAO), y ciertas entidades territoriales que no son Estados soberanos, sobre las cuales también se elaboran datos estadísticos y se facilitan a nivel internacional en forma separada.

Todos los cuadros de cifras agregadas que aparecen en la parte 2 figuran en el índice de esta publicación. El cuadro A-1 es un resumen de las transacciones internacionales y presenta totales mundiales de los componentes principales de la balanza de pagos. Los cuadros A-2 a A-5 presentan los saldos, por países, de la cuenta corriente, la cuenta de capital y la cuenta financiera, así como los errores y omisiones. Cada uno de ellos contiene un desglose para los organismos internacionales, por grupos de países y por países individuales.

Los cuadros B-1 a B-39 presentan los totales mundiales y regionales, por países, de los principales componentes de las cuentas de la balanza de pagos.

El cuadro C-1 presenta las “discrepancias mundiales” en las estadísticas de balanza de pagos en los principales componentes, discrepancias que se refieren a las diferencias entre las sumas de los asientos de débito y crédito de los componentes correspondientes declarados por los países y estimados por el personal del FMI. Por ejemplo, la discrepancia mundial con respecto a la balanza comercial representa la diferencia entre el agregado mundial de los superávits registrados en el comercio de bienes y el de

los déficits declarados en ese rubro. En principio, conforme a las convenciones adoptadas en la balanza de pagos, los agregados mundiales de exportaciones deberían ser iguales a los de importaciones, y los superávits comerciales a nivel mundial deberían ser del mismo monto que los déficits comerciales mundiales, con lo que el saldo de la balanza comercial sería igual a cero. Se aplica el mismo principio a los demás componentes de la balanza de pagos que se presentan en el cuadro C-1.

Sin embargo, por diferentes razones, los países no siempre registran correctamente todas las transacciones, o bien las clasifican de diferente manera, y es así como surgen errores y omisiones en los datos nacionales y asimetrías (discrepancias) en las estadísticas mundiales. Las cifras del cuadro C-1 reflejan esas asimetrías para los diferentes saldos. Los errores y omisiones netos que figuran en el cuadro representan la diferencia entre la cifra de la discrepancia mundial para la cuenta corriente y la de la combinación de las cuentas de capital y financiera.

Dentro de la cuenta corriente, un desequilibrio o discrepancia mundial negativa indica un exceso neto de débitos registrados, lo que puede deberse a que se registró un monto de créditos inferior al real, un monto de débitos superior al real, o a ambas razones. Una discrepancia positiva en la cuenta financiera indica que se registraron valores netos de salidas de capital inferiores a los reales (aumento de activos o reducción de pasivos) y/o valores netos de entradas de capital superiores a los reales (reducción de activos o incremento de pasivos).

Las partidas informativas del cuadro C-1 muestran las discrepancias mundiales de ciertos componentes principales de la balanza de pagos como proporción de la suma de créditos y débitos de cada categoría.

Los cuadros D-1 y D-2 presentan las exportaciones e importaciones de bienes y servicios, respectivamente, como porcentaje del producto interno bruto (PIB), información que es de interés general para los usuarios de los datos.

En la introducción de la parte 1 se incluyen información adicional sobre la presentación de los datos, las convenciones utilizadas, una descripción del marco conceptual de la balanza de pagos y una explicación de la cobertura de cada uno de sus principales componentes.

INTRODUCTION¹

Part 3 of Volume 55 of the *Balance of Payments Statistics Yearbook* presents descriptions of methodologies, compilation practices, and data sources used by individual member countries in compiling their balance of payments and international investment position (IIP) statements. These technical reviews are designed to facilitate readers' use of the data presented in this yearbook and to enhance their understanding of the data coverage, as well as the data limitations. They are also intended to inform national balance of payments compilers of the data sources and compilation practices used by their counterparts in other countries; in this way, the reviews should help foster cooperation and the exchange of ideas among national compilers, as well as encourage them to improve their data.

The technical reviews published in the yearbook are based largely on information provided by the reporting countries. Consistent with the efforts undertaken by the Fund staff in converting the Fund's database on balance of payments and international investment position statistics to conform with the fifth edition of the *Balance of Payments Manual (BPM5)* presentations (as described in Part 1 of the yearbook), the technical information provided by reporting countries has been edited and reformatted to follow, as closely as possible, the *BPM5* presentation and to provide a degree of standardization in their contents and presentations. They have been reviewed by the respective countries, and their comments have been incorporated therein. Beginning in 2004, countries are being asked each year to confirm that the description of their methodology and compilation practices remains current. When such confirmation is received, it is noted in the specific entry for that country. The Fund is grateful to the reporting countries for their contributions to the preparation of the descriptions.

For most countries, the reviews are organized in two sections: a general section and a specific one on balance of payments components. For countries that also compile IIP data (which are published in Part 1 of this yearbook), an additional specific section on IIP data is included.

The general section provides an overview of a country's major data sources and the key methods (surveys, exchange records, international transaction reporting systems, and others) it uses to collect balance of payments data and, where appropriate,

¹French and Spanish translations of this introduction appear after this English version; technical reviews on individual countries follow immediately thereafter.

international investment position statistics. The section also discusses major government agencies and other institutions responsible for and involved in the compilation activities. In addition, it states whether the data are compiled under the methodology set forth in the fourth edition of the *Balance of Payments Manual (BPM4)* or the fifth edition (*BPM5*); and in most cases, it provides information on the country's methods of disseminating the data.

The specific sections are organized under the standard components of the *BPM5* for balance of payments and international investment positions. For each of the standard components, the reviews generally describe data sources, how the data are compiled, the extent of the data coverage, and other data limitations. The descriptions of methodology, for the most part, contain only statements of deviations from the *BPM4* or *BPM5* methodology primarily used by the country (as stated in the general section). Thus, the reader may assume, where no definitions or classification details are given, that the compilation of the item is consistent with the methodology described in the appropriate section of the *Balance of Payments Manual*.

This publication contains technical reviews for 156 countries, the euro area, and the Eastern Caribbean Currency Union for which the Fund staff received information. As countries implement the various recommendations of the *BPM5* and make other improvements in their compilation procedures, future volumes of this yearbook will update these technical reviews in collaboration with the authorities. Moreover, as additional countries provide information on their data sources and compilation practices, they will be published in future volumes of the yearbook.

INTRODUCTION

La troisième partie du volume 55 du *Balance of Payments Statistics Yearbook* (Annuaire de statistiques de balance des paiements) (l'annuaire) contient une description des méthodologies, méthodes de calcul et sources de données utilisées par les divers pays membres pour l'établissement de l'état de balance des paiements et du relevé de la position extérieure globale (PEG). Cette description d'ordre technique a pour objet de permettre aux lecteurs d'utiliser plus facilement les données contenues dans le présent volume et de mieux connaître le champ

que recouvrent les données, ainsi que leurs limitations. Elle a également pour but de renseigner les statisticiens de balance des paiements sur les sources de données et méthodes de calcul utilisées par leurs homologues étrangers; de ce point de vue, les notes devraient favoriser la coopération et l'échange d'idées entre les statisticiens nationaux et encourager ceux-ci à améliorer leurs données.

Les descriptions techniques contenues dans l'annuaire se fondent en grande partie sur les renseignements fournis par les pays qui communiquent des données. En conformité avec les efforts que les services du FMI ont fait pour convertir la base de données du FMI sur la balance des paiements et la position extérieure globale afin de la présenter comme le recommande la cinquième édition du *Manuel* (voir la première partie de l'annuaire), les renseignements d'ordre technique fournis par les pays ont été revus et leur présentation modifiée pour qu'ils soient le plus possible conformes aux recommandations de la cinquième édition et qu'il y ait un certain degré d'uniformité, tant sur le plan de la teneur que de la présentation de l'information. Ces descriptions ont été soumises à l'examen des pays respectifs et tiennent compte de leurs observations. Depuis l'année 2004, il est demandé aux pays de confirmer chaque année que la description de leur méthodologie et de leurs modes de compilation des données est toujours d'actualité. Quand une confirmation est reçue ceci est indiqué dans la rubrique du pays concerné. Le FMI remercie les divers pays de leur contribution à l'établissement des descriptions.

Pour la plupart des pays, les descriptions sont organisées en deux sections, l'une générale et l'autre réservée aux composantes de la balance des paiements. Pour les pays qui établissent également des données sur la PEG (lesquelles sont publiées dans la première partie de l'annuaire), une section spécialement consacrée à la PEG a été ajoutée.

La section générale donne un aperçu d'ensemble des principales sources de données d'un pays et des moyens essentiels (enquêtes, relevés des opérations de change, systèmes de communication des transactions internationales, etc.) qu'il utilise pour recueillir des données de balance des paiements et, le cas échéant, des statistiques sur la position extérieure globale. La section traite en outre des principaux organismes gouvernementaux et autres institutions chargés de l'établissement des statistiques ou participant à cette activité. En outre, elle indique si les données sont élaborées conformément à la méthodologie décrite dans la quatrième édition ou la cinquième édition du *Manuel de la balance des paiements*; enfin, dans la plupart des cas, elle fournit des renseignements sur les méthodes de diffusion des données utilisées par le pays.

Les sections spéciales sont organisées suivant les composantes types retenues dans la cinquième édition pour la balance des paiements et la position extérieure globale. Pour chacune des composantes types, elles décrivent généralement les sources de données et indiquent comment les données sont établies, l'étendue du champ qu'elles recouvrent et leurs autres limitations. La description de la méthodologie se borne, pour sa plus grande part, à indiquer si celle-ci s'écarte des recommandations de la quatrième ou de la cinquième édition, selon la méthodologie principalement utilisée par le pays (comme indiqué dans la section générale). En conséquence, lorsqu'aucune précision n'est donnée sur la définition ou la classification de tel ou tel poste, le lecteur peut supposer que la méthodologie employée est conforme à celle qui est décrite dans la section correspondante du *Manuel de la balance des paiements*.

La présente publication contient une description technique concernant 156 pays, la zone euro, et l'Union monétaire des Caraïbes orientales sur lesquels les services du FMI ont reçu des renseignements. À mesure que les pays mettront en pratique les diverses recommandations de la cinquième édition et apporteront d'autres améliorations à leurs méthodes de calcul, il sera procédé, en collaboration avec les autorités, à la mise à jour des descriptions techniques, dont le texte révisé sera publié dans les volumes ultérieurs de l'annuaire. En outre, dès lors que les pays seront plus nombreux à fournir des informations sur leurs sources de données et leurs méthodes de calcul, celles-ci seront publiées dans les futurs volumes de l'annuaire.

INTRODUCCIÓN

En la parte 3 del volumen 55 de *Balance of Payments Statistics Yearbook* (anuario) se describen las metodologías, los procedimientos de compilación y las fuentes de datos utilizados por cada uno de los países miembros para compilar sus estados sobre la balanza de pagos y la posición de inversión internacional. Se incluyen estas descripciones técnicas para facilitar el uso de los datos presentados en este anuario por parte de los usuarios y una mejor comprensión de la cobertura y de sus limitaciones. Además, tienen por objeto informar a los compiladores nacionales de la balanza de pagos sobre las fuentes de datos y los procedimientos de compilación utilizados por los compiladores de otros países, fomentando de esa manera la cooperación y el intercambio de ideas entre los compiladores nacionales y alentando a éstos a mejorar sus datos.

Las descripciones técnicas publicadas en el *anuario* se basan en gran medida en la información suministrada por los países declarantes. En el marco de la labor realizada por el personal del FMI para adaptar la base de datos del FMI sobre la balanza de pagos y la posición de inversión internacional a la presentación que exige la quinta edición (tal como se describe en la parte 1 del anuario), se ha revisado y presentado en un nuevo formato la información técnica suministrada por los países declarantes a fin de que coincida, en la mayor medida posible, con la presentación de la quinta edición y lograr cierto grado de uniformidad en su contenido y formato. Los datos han sido examinados por los respectivos países y se han incorporado los cambios sugeridos por éstos. A partir de 2004, se solicitará que cada año los países confirmen que la descripción de su metodología y de sus prácticas de compilación continua siendo válida. Dicha confirmación será anotada en el registro específico de cada país. A partir de 2004, se solicitará que cada año los países confirmen que la descripción de su metodología y de sus prácticas de compilación continua siendo válida. Dicha confirmación será anotada en el registro específico de cada país. El FMI agradece a los países declarantes su cooperación en la preparación de estas descripciones.

En el caso de la mayoría de los países, las descripciones constan de dos secciones: una sección general y otra específica sobre los componentes de la balanza de pagos. En el caso de los países que también compilan datos sobre la posición de inversión internacional (que se publican en la parte 1 de este anuario), se incluye otra sección específica sobre los datos relativos a la posición de inversión internacional.

En la sección general se presentan las principales fuentes de datos de los países y los métodos básicos (encuestas, registros de las operaciones de cambio, sistemas de declaración de transacciones internacionales, etc.) que utilizan los países para recopilar datos de balanza de pagos y, en los casos en que corresponda, datos sobre la posición de inversión inter-

nacional. En esta sección también se mencionan las principales entidades gubernamentales y otras instituciones encargadas de las actividades de compilación o que participan en las mismas. Además, se indica si los datos se compilan conforme a la metodología establecida en la cuarta edición del *Manual de Balanza de Pagos* o en la quinta edición del *Manual*; en la mayoría de los casos se presenta información sobre los métodos utilizados por cada país para la divulgación de datos.

Las secciones específicas se agrupan conforme a los componentes normalizados de la balanza de pagos y la posición de inversión internacional que establece la quinta edición del *Manual*. En general, en las descripciones se indican las fuentes de datos de cada uno de los componentes, la forma en que se compilan los datos, el alcance de la cobertura de los datos y otras limitaciones de los datos. En la mayoría de los casos, en las descripciones de la metodología sólo se señalan los aspectos en que la metodología utilizada principalmente por el país (tal como se indica en la sección general) se aparta de la establecida en la cuarta o en la quinta edición del *Manual*. Por consiguiente, en los casos en que no se presenten definiciones o detalles sobre la clasificación, puede inferirse que la partida se ha compilado conforme a la metodología descrita en la sección pertinente del *Manual de Balanza de Pagos*.

En esta publicación se presentan descripciones técnicas con respecto a 156 países, la zona del euro, y la unión monetaria del Caribe Oriental sobre los cuales el personal del FMI ha recibido información. A medida que las autoridades pongan en práctica las distintas recomendaciones de la quinta edición del *Manual* e introduzcan otras mejoras en la metodología de compilación de datos, se actualizarán, en las ediciones futuras de este anuario, estas descripciones técnicas en colaboración con las autoridades. Además, a medida que otros países suministren información sobre sus fuentes de datos y procedimientos de compilación, se incluirán también en las nuevas ediciones.

Albania

The following text was confirmed as current in 2004.

I. General

The Bank of Albania (BOA) is responsible for compiling the balance of payments statistics. Sources of data include the BOA's own account, the Council of Ministers, government ministries, Institute of Statistics (INSTAT), General Directory of Customs, commercial banks, and other administrative sources.

The BOA publishes quarterly and annual balance of payments statistics on its website at <http://www.bankofalbania.org> (under Time Series, Monthly, External Sector) and in its monthly *Statistical Report*, *Annual Report*, and *Balance of Payments Bulletin*. Balance of payments data are made public through quarterly press releases released about 2.5 months after the reference quarter.

Balance of payments estimates are compiled in millions of U.S. dollars. Transactions denominated in other currencies are converted into U.S. dollars. For the conversion, the average exchange rate for the reporting period is used. In general, the balance of payments of Albania is compiled in conformity with the methodological principles set out in the *BPM5*. The classification used corresponds with the standard components of the *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

The BOA compiles data on the basis of import and export declaration forms provided by the General Directory of Customs. Transit trade and goods on temporary admission are excluded from merchandise trade. Data on imports are reported on a c.i.f. basis, and exports on an f.o.b. basis, valued in Albanian leks. Import data are converted to an f.o.b. basis by reclassifying freight and insurance costs—estimated at 12.05 and 1 percent respectively of the c.i.f. value of imports. An upward adjustment of 10 percent of the f.o.b. value is made to compensate for what is believed to be underestimation of non-aid and nonmigrants' imports.

Goods for processing and goods procured in domestic ports by carriers are included in the foreign trade statistics in accordance with *BPM5* recommendations, but are not reported separately in the balance of payments statistics. Expenditures in foreign ports are, for the time being, classified as part of port services.

Exports data in the balance of payments statistics include exports of electricity; these exports are not included in the customs figures.

Services

Transportation

Passenger. Bank reports are used to obtain data for sea, air, and other kinds of transport.

Freight. The item is estimated as a percentage of imports and exports of goods. Coefficients are obtained from the foreign trade survey.

Other transportation. Data are obtained through the banking system reports.

Travel

Credits and debits for the travel category (business and personal) are compiled by combining results from the travel survey (conducted by BOA and INSTAT three times a year) with data on arrivals and departures of Albanians and foreign travelers from the Ministry of Internal Affairs. The travel survey is used for the estimation of average duration of stay and average daily expenditures per traveler.

Other services

Communications. Data on communication services are obtained directly from the telecommunication companies and news agencies operating in Albania, as well as from the bank reporting system.

Insurance. Data on freight, life and non-life insurance, and reinsurance are submitted quarterly by insurance agencies.

Technical assistance. Data on technical assistance are derived from information provided by the Ministry of Economy on foreign grants and on loans for technical assistance, as well as a BOA estimate of direct investment inflows.

Government, n.i.e. This item covers government-to-government transactions, namely, expenditures of government for diplomatic and other representations abroad, as well as expenditures of nonresident government entities and international institutions in Albania. Data on government services are received from the Ministry of Finance. The bank reporting form requires information on financial and other services.

Income

Compensation of employees

The BOA estimates the credit data for compensation of employees from the parallel foreign exchange market for remittances abroad. Compensation of employees is estimated to be 10 percent of these remittances. Data on

debits for compensation of employees are obtained from the new bank report form.

Investment income

Data on interest on reserve assets are provided by the commercial banks and the BOA. Data on interest income on portfolio investment are obtained from commercial banks. Data on other interest income are derived from interest payments both on credit lines and interest in arrears provided by the BOA, the Ministry of Finance, the EBRD, and commercial banks. No information on investment income is directly available from direct investment enterprises in Albania.

Current transfers

General government

General government transfer payments are reported directly by the government departments involved in foreign aid coordination. The primary sources of information on foreign grants received are the donor organizations rather than the recipients of the grants in Albania; the donor organizations are generally in a better position to evaluate these grants, particularly those related to technical assistance. Transfers in the form of goods are derived directly from the customs' declaration forms. Transfer payments related to cash grants are obtained from the BOA's own records and the commercial banks' settlement records.

Other sectors

Workers' remittances. Instead of developing a system to capture the inflows of foreign currency at the border, BOA has adopted a system that uses information on the outflows of foreign currency from the parallel cash market in Albania. Remittances are calculated by deducting the following items from the goods imports reported by Customs and adjusted upwards for the import of smuggled goods: imports from aid (customs data), imports settled through the banking system; imports for processing (customs data), imports associated with foreign direct investment (customs data); and net flows of trade credits calculated as changes in stocks and travel expenditures. The net goods imports calculated this way represent goods purchases for which no identifiable sources of financing have been documented. In an effort to broaden the coverage of transactions settled through the parallel market, additional inflows and outflows of currencies circulating in the market are taken into account: net flows of foreign currencies associated with banks and foreign exchange bureaus together with the BOA interventions represent sales and purchases of foreign exchange from residents. Finally, a further deduction is made for the payments of

goods imports out of the workers' remittances received through the banking system.

Other transfers cover nongovernment current transfers. These include gifts, aid (including religious, scientific, and educational), lottery winnings, and the transfer portion of non-life insurance premiums and claims. Also included are scholarships and other support for professional training provided by foreign governments. (The latter may include loans and sundry taxes.) The data are obtained from insurance companies, the MPO (customs taxes), the banking system, and the MOF (for information on statutory quotas of international organizations).

Financial Account

Direct investment

For balance of payments purposes, direct investment capital comprises investments involving nonresident investors' equity of 10 percent or more in an entity resident in Albania. Direct investment enterprises are required to register with the national authorities, but official data on foreign direct investment in Albania are limited. Data on foreign direct investment are estimated using data reported by different state agencies for the business fields that they cover; only data on equity capital are reported. The BOA is developing a survey on foreign direct investment using the updated business register of the General Directory of Taxation.

Portfolio investment

Commercial banks are the main source of data on portfolio investments.

Other investment

This item includes loans to the monetary authority, general government, and private sector, trade credits, and other assets and liabilities. Information on these transactions is derived from several sources: The Ministry of Finance, commercial banks that serve as agents for the government and other sectors, and the BOA provide data on foreign debt (drawdowns, repayments, and arrears) related to the monetary authority, general government, banking system, and other sectors. The BOA's own account supplies information on use of Fund credit and loans.

Commercial bank reports and balance sheets supply information on currency holdings, deposits (both *nos*tro and *vost*ro), and other foreign assets and liabilities of commercial banks. Data are adjusted to exclude valuation changes.

Estimated trade credits are recorded on a net basis as an increase or decrease of the outstanding stock of trade credits.

Reserve assets

Reserve assets, consisting of monetary gold, foreign exchange, SDR holdings, and the reserve position in the Fund are obtained from the BOA's own account.

Angola

The following text was confirmed as current in 2004.

I. General

The National Bank of Angola (NBA) is designated to compile the balance of payments statistics for Angola by the NBA Law 6/97, the National Statistics Law, and the Foreign Exchange Law. The NBA Law states that all entities authorized to operate in the external market must submit to the NBA any requested statistical data, in accordance with the terms and conditions determined by the NBA.

The balance of payments is compiled from various data sources, including administrative records, balance sheet data, surveys, and information from governmental and private institutions. A program is currently under development to improve the quality, coverage, and timeliness of statistics and implement the *BPM5* methodology. To complement the annual presentation, planned short-term improvements include preparing the selected preliminary data to be available 90 days after the end of each quarter.

The balance of payments data are prepared on an annual basis with a monthly breakdown. They are published on the NBA's website (<http://www.ebonet.net/bna>) and in the *Annual Balance of Payments Bulletin*, the *NBA Annual Report*, and the *Economic Statistics Bulletin*, all of which are distributed free of charge. The data are shown in U.S. dollars.

II. Specific Items: Balance of Payments

Current Account

Goods

Exports are estimated primarily on the basis of information requested from oil and diamond exporters, the Ministry of Geology and Mines, the Ministry of Fisheries, and the Instituto do Café (Coffee Institute). Imports are also estimated using various other sources: data from BIVAC (enterprise responsible for checking the valuation and quality of merchandise), and the survey of oil enterprises. The Customs Directorate is computerizing the single customs form for both exports and imports,

which, when implemented, will be the main source of information on the merchandise trade statistics.

Services

This category covers the following components: transportation, travel, insurance, royalties and license fees, and government services not included elsewhere. The information is obtained primarily from surveys and from the NBA, who conducted the official operations and the expenditures of Angolan embassies and consulates abroad, as well as from the Ministry of Fisheries on fishing licenses.

Income

The information is collected from 1) the surveys of oil companies for compensation of employees and direct investment income components, 2) the NBA for interest rates and the interest on public and publicly guaranteed external debt, and 3) commercial banks. This item also includes estimates, based on BIS statistics, of the interest on foreign deposits of the nonfinancial public sector.

Current transfers

The credit entries include grants received from foreign governments and private institutions. The data are obtained from surveys of embassies, consulates, international organizations, and recipient institutions. The debit entries include remittances of foreign workers residing in Angola to their family members abroad and are based on information provided in the surveys of oil companies.

Capital Account

Capital transfers

This item records the forgiveness of external loans granted by creditors to the government of Angola. The information is obtained from the NBA's external debt records. Since 2003, the UNCTAD system for monitoring the external debt—DMFAS (Debt Management and Financial Analysis System)—is used to compile the external debt data.

Financial Account

Direct investment data are obtained from surveys of the oil and diamond direct investment enterprises in Angola. No data are available on direct investment abroad. Other investment data are obtained from surveys of oil companies, monetary data of the banking system, and NBA external debt records.

Reserve assets

The NBA Accounting Department prepares the data. For balance of payments purposes, the data are converted into U.S. dollars at the reference exchange rate for the

relevant period. Revaluation adjustments are included through 2000.

Argentina

The following text was confirmed as current in 2004.

I. General

The National Directorate of International Accounts (Dirección Nacional de Cuentas Internacionales—DNCI) of the Economic Policy Secretariat of the Ministry of Economy (Ministerio de Economía) is responsible for compiling Argentina's balance of payments statistics. These data are published quarterly in the *Economic Report (Informe Económico)* and in the *Quarterly Balance of Payments and Foreign Assets and Liabilities Estimates (Estimaciones trimestrales del balance de pagos y de activos y pasivos externos—DNCI)*. They are also available on the Internet (<http://www.mecon.gov.ar/cuentas/internacionales/>).

The methodology used to compile Argentina's balance of payments has been recently revised and updated to ensure its compliance with the guidelines established in the *BPM5* and to reflect the country's changing economic situation. The data revision process has required finding new sources of information and developing new estimation methodologies. Revised data were released in April 1999, together with the updated methodology ("Metodología de Estimación del Balance de Pagos," DNCI, April 1999) as well as the main changes included in the new data set ("Presentación de la Actualización Metodológica del Balance de Pagos," DNCI, April 1999). Data based on the revised methodology are available from 1992 onwards. All these documents are available on the Internet (same site quoted above).

Major data sources used for the balance of payments compilation depend on the sector that accounts for the transaction. General government and central bank transaction estimates are based mainly on information provided by the Treasury, the central bank, and the state

governments (through surveys). Financial sector data are estimated mainly from the balance sheet information reported to the central bank. Other private sector transaction estimates are based mainly on customs data (for goods transactions) and on enterprises' information collected through their balance sheets or through surveys (for example, the debt survey, foreign direct investment survey, survey of services). Completing the main sources used for the estimates are additional sources like the survey of international tourism, migration authority's data, Securities Central Depository Inc. and stock exchange data, and information available in other countries. Major reclassifications on the portfolio and other investment account (assets) occurred in 2001, 2002 and 2003. This prevents full reconciliation of these balance of payments and international investment position accounts.

The *Quarterly Balance of Payments and Foreign Assets and Liabilities Estimates* pamphlet also includes estimates of external assets and liabilities of the resident sectors. Balance of payments data are compiled in U.S. dollars.

II. Specific Items: Balance of Payments

Current Account

Goods

The National Institute of Statistics and Census (Instituto Nacional de Estadística y Censos—INDEC) compiles statistics on foreign trade on the basis of customs documents. Imports and exports are recorded in the balance of payments in f.o.b. terms. In case those operations of exports or imports do not produce customs documents but have to be included in the statistics of foreign trade, auxiliary sources of information are employed.

Services

Transportation

INDEC compiles statistics on transportation. Data on passenger fares, on-board services, and excess baggage charges are obtained from surveys of the sea, air, and road passenger transport companies operating in Argentina. Data include both the international operations of resident carriers (credit) and the domestic operations of nonresident carriers (debit).

For road transport, the estimates are based on the number of international trips provided by the companies and on the cost of the tickets. They are also based on surveys conducted monthly of departing and incoming buses to ascertain information on the average occupancy rate of the vehicles and the percentage of resident and nonresident passengers.

The credit entries for freight services cover freight charges collected by resident transport companies for

goods exported or transported between foreign ports. These data are obtained from a survey of resident shipping companies and airlines. The debit entries cover freight charges paid to nonresident companies for imported goods. The charges are calculated as the difference between the total freight for imports, as indicated by foreign trade statistics, and freight charges on imports collected by resident companies, obtained from the survey. For road transport, compilers assume that resident companies provide approximately between 30–35 percent of freight on imports and exports, as shown in the trade statistics.

For sea transport, the credit entries for other transportation services are derived from a survey that covers the country's principal ports and various companies that provide services related to sea transport. For air transport, the data are derived from a survey of foreign airlines operating in Argentina.

The debit entry for sea transport is derived from the survey of resident shipping companies. For air transport, the data are derived from the survey of resident airlines operating abroad. Data on other transport come from a survey of resident and nonresident bus companies.

Travel

This item is calculated on the basis of the estimated number of passengers entering and departing Argentina, the number of days they stay, and the estimated average expenditure per person. To improve the estimates for this account, INDEC conducted surveys at main border crossings in 1996. (For more details, see *Estimación de la Cuenta Viajes del Balance de Pagos*–May 1999.)

Other services

Communications. The data for this item are based on a survey of telecommunications and postal service companies on their foreign operations. INDEC compiles the data.

Construction. This account covers work abroad by resident construction enterprises on construction and installation projects that are carried out in a year or less. The data are based on information from the builders' national register of public works (Registro Nacional de Constructores de Obras Públicas), and on the exchange market reporting system since 2002.

Insurance. The data on insurance of imports are based on information from the statistics of foreign trade and from the rate of cost of the insurance service. The data on reinsurance come from the insurance enterprises supervisory agency (Superintendencia de Seguros de la Nación).

Financial. The entries cover commissions paid by the government, and commissions on securities issued by the private nonfinancial sector. The data on commissions paid by the government are obtained from operations reported by the Treasury Secretariat (Secretaría de Hacienda—MEYOSP) and the central bank. Data on com-

missions paid by the private nonfinancial sector are derived from a survey of securities issued and from information provided by the resident entity Caja de Valores.

Computer and information services. These data are based on a survey of companies that trade in database and other computer-related services. INDEC compiles the data.

Royalties and license fees. There are three main sources of information: 1) a survey directed to associations of writers and music composers, 2) a survey directed to cinematography and video companies, and 3) a quarterly survey for the rest of the companies that receive or pay royalties and license fees, updated by a more comprehensive annual survey.

Other business. Since 2002, the merchanting and other trade-related services are based on data from the exchange market reporting system. The entries for operational leasing services are derived from information provided by various airline and sea transport companies. Other business services data are obtained from a survey.

Personal, cultural, and recreational. This account includes the transactions related to producing or distributing broadcasting programs, movies and television shows, and musical and theatrical shows. Data are collected through a quarterly survey of the main channels of air television and cable television of the country, film distributors, theater and musical associations, and the Argentine Society of Artists and Composers (Sociedad Argentina de Artistas y Compositores). Also, this account includes sports shows, museums, libraries, etc. Regarding sports activities, compilers derive data from a quarterly survey of sports associations that perform international transactions.

Government, n.i.e. Compilers base estimates of foreign expenditures in Argentina (credits) on the number of nonresidents working in foreign embassies and consulates in Argentina and their average expenditures. The latter are updated according to movements in the consumer price index in Argentina measured in U.S. dollars. The credit entries also include data provided by the Foreign Office (Ministerio de Relaciones Exteriores y Culto) on consular fees collected abroad. The debit entries cover government expenditures abroad and other public agencies represented in foreign countries (as shown in their budgets).

Income

Compensation of employees

Employees' wages. The estimates include only domestic employees' wages. No information on border and seasonal workers is included. Credit information comes from the shipping companies survey. Also, the Foreign Office provides information every three years about domestic employees working in foreign diplomatic representations in the country. When this information is not

available, expenditures are updated using the Argentine consumer price index adjusted by the exchange rate. Debit entries are derived from budgetary data about wages paid to nonresidents in public entities with representation abroad.

Investment income

Data are estimated on an accrual basis.

Direct investment. The credit and debit entries for the financial sector are derived from profit and loss statements of banks. For other sectors, the credit entries include an average accrued income on real estate investment abroad and income on direct investment abroad by resident companies. The information is collected from the resident enterprises' balance sheets. The debit entries for the nonfinancial private sector are derived from balance sheet data provided on a quarterly basis by a sample of enterprises. The estimates are revised with the results of the annual survey of large enterprises compiled by INDEC. For insurance and pension fund companies, estimates are based on information compiled by their supervisory agencies.

Portfolio investment. Debt securities: For interest earned by the financial system, compilers estimate data from the financial system's consolidated balance sheet data on holdings of portfolio investments. The Treasury Secretariat provides information on interest earned by the nonfinancial public sector from assets invested abroad (mainly interest accrued on holdings of bonds held as guarantees for refinanced foreign debt obligations). The debit entry estimates for resident financial entities are based on balance sheet data. For the nonfinancial public sector, the data sources are the Treasury Secretariat and a survey of the foreign obligations of state governments. To estimate the nonresidents' share of interest payments on securities, compilers use the ratios and methodology employed to determine the residence of securities holders (see note to portfolio investment in the financial account). For the nonfinancial private sector, the debit entries include interest on bonds, negotiable notes, and commercial papers issued abroad and are based on the survey conducted to collect related data. *Equity securities:* The debit entries comprise income estimates based on distributed dividends data collected from the Stock Exchange. (For estimates of nonresident holdings of these securities, see the financial account.)

Other investment. The central bank reports interest earned by the resident financial sector from the investment of international reserves. For interest earned by the rest of the financial system, data are estimated from the financial system's consolidated balance sheet data on holdings of interest-bearing liquid assets and credits or other types of financing provided to nonresidents. The Treasury Secretariat provides information on interest earned by the nonfinancial public sector from assets invested

abroad. For the nonfinancial private sector, interest credits are estimated by applying different rates to the assets invested abroad (bank deposits, trade financing, and portfolio investment). (See the financial account for these assets estimates.)

The debit entries for the central bank are obtained from central bank records. For other resident financial entities, estimates are based on balance sheet data and the average rates applicable to each type of liability: deposits of nonresidents, use of lines of credit from abroad, and correspondents' credits. For the nonfinancial public sector, the data sources are the Treasury Secretariat and a survey of the foreign obligations of state governments. For the nonfinancial private sector, the debit entries are based on the average terms of the international organizations' loans and on data collected through the debt survey directed (twice a year) to this sector's enterprises.

Current transfers

General government

The credit entries cover fines collected by the government from nonresidents for infractions of national regulations and laws, and taxes on external payments. The debit entries are derived from information contained in the budgets of all government agencies and data from the central bank on payments for foreign transfers on behalf of, and by order of, the government. It also includes retirement and survivorship pensions paid to nonresidents, as reported by the social security entity (Administración Nacional de Seguridad Social-ANSES).

Other sectors

Data on workers' remittances are based on estimates of the number of certain foreigners (Peruvians, Paraguayans, Bolivians, Chileans) living in Argentina and of the average amount of remittances. The credit entries for other private transfers cover retirement and survivorship pensions paid to Argentine residents, which are based on information provided by various countries and grants from members of the Organization for Economic Cooperation and Development (OECD). The debit entries for taxes on external receipts are derived from surveys.

Capital Account

This item includes patents, copyrights, and similar assets purchased and sold, and football players' transfer rights between residents and nonresidents. It also includes capital transfers such as debt forgiveness, which is based on information provided by the beneficiaries (national government, financial entities, or private companies).

Financial Account

Direct investment

Direct investment flows include equity participation of 10 percent or more by foreign investors. The data include reinvested earnings and the provision of loan capital between direct investors and subsidiaries, branches, and associated enterprises (intercompany debt).

Data on direct investment abroad and in Argentina for the resident financial sector are derived from the financial statements of these institutions.

For the nonfinancial public sector, the data refer to direct investment in Argentina through privatization of public companies; information is obtained from the Treasury Secretariat and from state governments.

For the nonfinancial private sector enterprises, estimates of direct investment abroad are based on information collected from the firms' balance sheets and related statements. Foreign direct investment in Argentina includes reinvested earnings, equity participation, and changes in ownership. Reinvested earnings are estimated on the basis of accounting data obtained from a quarterly survey of a sample of enterprises with foreign direct investment. These data are provisional and are revised with information obtained from the annual survey conducted by INDEC. Information on changes in equity holdings is derived from information on the acquisitions and sales of equity capital published in the newspapers. This information is verified on a quarterly basis with the enterprises, and it is revised when the annual survey data are available. Intercompany debt is collected through the debt survey directed to private nonfinancial enterprises.

Portfolio investment

Equity securities

Equity securities issued abroad (ADRs) are supposed to be held by nonresidents. For equity securities issued in Argentina, data on the residence of the holders are available from the records of the Securities Central Depository Inc.

Debt securities

Data for both assets- and liabilities-related transactions by the financial sector are estimated from the financial system's consolidated balance sheet data on holdings of portfolio investments. The data are affected by valuation changes.

The Treasury Secretariat provides information on asset investment abroad by the nonfinancial public sector. Debt securities issued abroad by the nonfinancial public sector are supposed to be held by nonresidents, except for holdings of some resident entities, such as banks, pension funds, insurance companies, and public sector organizations. For securities issued in Argentina, data on

the residence of the holders are available from the records of the Securities Central Depository Inc. A complementary survey of state governments is conducted to collect information on their issues of securities abroad.

For the nonfinancial private sector, the estimates related to asset transactions are based on a study on the size and composition of the sector's investment portfolio abroad and on information available in other countries on the liability side. The estimates are based on a survey conducted to collect data on securities issued abroad.

Other investment

Data on those foreign assets and liabilities of the financial sector that are not included under portfolio investment or direct investment are calculated as the difference in stocks outstanding at the end of the period, as shown in the balance sheets of the institutions. The data are, therefore, affected by valuation changes.

Data on assets of the nonfinancial public sector are obtained from the Treasury Secretariat. Data on debt of the nonfinancial public sector (excluding securities) are obtained from the Public Debt Administration and Management System, administered by the Treasury Secretariat. Additional data are obtained from a series of surveys on the foreign debt of state governments.

For the nonfinancial private sector, asset-related flows comprise bank deposits (derived from BIS and Central Bank of Uruguay data), trade credits data (based on data collected through a survey), and other assets, mainly estimates of foreign currency held by residents (derived from currency flows data and from money-demand estimates). On the liability side, the international credit organizations (IFC and IIC) provide the data on loans with international organizations. Other private debt-related flows data with foreign creditors are collected from the debt survey directed to the enterprises of this sector twice a year.

Reserve assets

Changes in reserve assets are derived from stock data published by the central bank on its foreign liquid assets. These are, for example, gold, SDR holdings, Latin American Integration Association payment agreements, notes and deposits, investments convertible into foreign exchange, and reserve position with the Fund. The data are adjusted to exclude valuation changes, which are separately shown.

III. Specific Items: International Investment Position

The data sources on the international investment position (IIP) are the same as those used in compiling the balance of payments.

Armenia

The following text was confirmed as current in 2004.

I. General

The Balance of Payments and Foreign Trade Division (BPD) of the National Statistical Service of the Republic of Armenia (NSS) is responsible for compiling the balance of payments. The first data on international investment position (IIP) were published in 1998. At present, IIP has been compiled and published for the period from 1997 to 2003.

The main sources of balance of payments data are the following: foreign trade statistics from the State Customs Committee (SCC) under the Government of the Republic of Armenia and data on exports and imports of electricity and imports of gas from the Ministry of Energy; the banking sector data from the Central Bank of the Republic of Armenia (CBA); a survey of public and private institutions for the transportation, insurance, and travel data components; data from embassies and international organizations for current and capital transfers; surveys of foreign direct investment enterprises; and data from government institutions (e.g., the Ministry of Finance and Economy (MOF), the Ministry of Privatization, the Ministry of Foreign Affairs (MFA), etc.). For some balance of payments items, the data collected from primary sources are complemented by estimates.

The data are collected and published on a quarterly and annual basis in the *Monthly Bulletin* issued by the NSS. The balance of payments is compiled in U.S. dollars. Some transactions are converted from the original currency to U.S. dollars using the exchange rates prevailing at the time of transactions, and other transactions are converted using the average quarterly exchange rates for the reporting period. The balance of payments is compiled in accordance with the *BPM5*.

Current Account

Goods

The customs data serve as the basis for foreign trade compilation. Starting in mid-1996, the SCC began processing the customs declarations and submitting them to the BPD of the NSS on a monthly basis. Until May 1996, the BPD estimated the value of shuttle trade (mainly trade carried on by individual traders on a small scale by means of chartered foreign business trips). Since then, the SCC has instituted a scaled-down ver-

sion of the simplified administrative document (SAD) to estimate the value of shuttle trade.

The BPD analyzes the data submitted by the SCC and brings to their attention any perceived errors, especially relating to the valuation of goods, for follow-up action. The BPD also obtains, through surveys, data on goods acquired in ports by transportation companies and incorporates them into the trade data. Data on imports include foreign assistance and gifts in the form of goods received by residents of Armenia.

The BPD further adjusts the trade data in accordance with balance of payments methodology: (1) the c.i.f.-based import data are converted to an f.o.b. basis, by deducting an average rate of between 8 and 13 percent (depending on the type of transport) from the c.i.f. value of the imports—rates that were derived from the statistical survey on services conducted in 2000, and (2) a major adjustment is made to customs data for the exports and imports of electricity and import of gas that are not included in the customs data.

Services

Transportation

In addition to the estimates made for the transportation of imported goods referred to above, additional data are obtained from other sources, such as surveys of transportation companies. These surveys collect information on both freight and passenger fares. The estimates are derived from the statistical survey on services conducted in 1999.

Travel

Data on travel are collected from surveys carried out by the NSS. To estimate the total amount of receipts and payments related to travel, the BPD collects data on the number of foreign arrivals and resident departures, the countries of origin and destination, length of stays, and cost of transportation, hotel, meals, and incidental costs. These estimates include expenditures in Armenia by nonresidents and by Armenians in foreign countries on short-term work assignments (that is, for periods of less than one year). The estimates are derived from the statistical survey on services conducted in 1999. Government ministries and agencies also provide data on expenditures on business trips abroad.

Other services

Data on other services, such as insurance, consulting, construction, and financial services, are obtained from a survey of enterprises that provide such services. Expenditures on consulting services are also obtained from a database on technical assistance provided by foreign governments and international organizations. Information on expenditures of foreign embassies and diplo-

matic representatives and international organizations in Armenia is obtained through interviews. The MOF and MFA provide data on expenditures abroad of Armenian diplomatic missions. Estimates are derived from the statistical survey on services conducted in 1999.

Communications. Data are collected mainly from the enterprises and organizations within the Ministry of Communication, such as Armentel.

Income

Compensation of employees

Data on compensation of employees are primarily estimates based on migration patterns of Armenians and also on data from surveys on social statistics conducted by the NSS.

Investment income

The Ministry of Finance and Economy and the CBA report interest payments on the state debt. Other income payments and receipts are obtained through surveys of enterprises.

Current transfers

This item primarily consists of grants in the form of goods and services, including technical assistance provided by foreign governments and international organizations. The BPD obtains these data from the MOF and foreign embassies, international organizations, and foundations that maintain offices in Armenia. Data on humanitarian aid are derived from the customs declarations. Data on technical assistance are estimated. Current transfers also include data obtained from the MOF on fees for membership in international organizations.

An important source of receipts of current transfers is the Armenian Diaspora. These may be in the form of cash or goods. Since the banking system is seldom used in the transfer of cash, and the value of goods transferred may not be recorded by the customs, the BPD estimates such transfers, based on occasional inquiries of households and data obtained from surveys conducted by the NSS's Division of Social Statistics.

Capital Account

Capital transfers

Data on migrants' transfers are estimated. The BPD collects the basic data for the estimates from the State Committee of Real Assets Cadastre at the RA Government. The other significant item in this account consists of capital transfers in the form of machinery and equipment, which are a part of grants made by foreign governments.

Financial Account

Direct investment

Data on foreign direct investment in Armenia in nonfinancial enterprises are obtained through surveys conducted by the NSS. Data on direct investment in financial corporations are obtained from the CBA. These data include information on equity capital, reinvested earnings, and other capital. Data on Armenian direct investment abroad are not available.

Portfolio investment

Data on portfolio investments are obtained from surveys conducted by the NSS and from the CBA.

Other investment

Almost complete data on foreign loans disbursed to all sectors are obtained from the records submitted by the MOF, the CBA, and some of the enterprises with foreign loan liabilities.

This item also includes financial transactions of the banking sector for their own accounts with the exception of direct and portfolio investments. The data are obtained from the CBA.

Reserve assets

The data are obtained from the CBA.

Aruba

The following text was confirmed as current in 2004.

I. General

The Statistical Reporting Unit of the Economic Policy Department of the Central Bank van Aruba (CBA) is responsible for compiling the balance of payments. It compiles the statistics on a cash basis from reports submitted by banks and a number of resident enterprises. Other data sources are the record of exchange transactions and the accounts of the CBA.

The CBA has authorized four commercial banks to undertake foreign exchange transactions. These banks are required to report on a monthly basis the balance of payments data, based on a closed international transactions reporting system (ITRS). In addition, enterprises holding accounts as well as financial assets and liabilities with nonresidents are required by law (the State Ordinance—foreign exchange transactions) to report their holdings to the CBA. They must submit quarterly reports covering settled transactions and changes in

cross-border financial assets and liabilities (the so-called RFA), as well as the opening and closing balances of the accounts and the assets and liabilities respectively.

The CBA prepares the balance of payments statistics on a quarterly basis and publishes them in its *Quarterly Bulletin* and *Annual Report*. In general, the classification of accounts used in the balance of payments has complied with the fifth edition of the *Balance of Payments Manual (BPM5)* since July 1, 1996. The balance of payments data for previous periods have been reclassified accordingly. Data are compiled in Aruban florins (Afl.). Transactions denominated in foreign currency are converted into florins using monthly average exchange rates.

Offshore enterprises are considered nonresidents, pursuant to the State Ordinance—foreign exchange transactions. Consequently, transactions between offshore enterprises established in Aruba and other nonresidents are not included in the balance of payments. However, their transactions with residents settled through local banks are included in the balance of payments.

The balance of payments data are presently derived from the ITRS and RFA. The main data source for the oil transactions is the quarterly reports of the oil companies, which show their balances and transactions held with their foreign parent companies and other nonresidents.

To enhance the quality of the statistics, the data compilers plan to obtain additional information from several surveys, as well as from other data sources.

In addition, steps were taken to estimate the international investment position (IIP) of Aruba; the results for 1998 and 1999 have been published in the *Quarterly Bulletin* of the CBA.

II. Specific Items: Balance of Payments

Current Account

Goods

This category comprises imports and exports of the oil sector, the free zone, and the rest of the economy. Data for goods include general merchandise, goods for processing, repairs on goods, and goods procured in ports by carriers. Imports are valued on a c.i.f. basis. The CBA adjusts the data for cost, insurance, and freight, estimated at 10 percent of the c.i.f. value. Beginning in the first quarter of 2004, exports of oil products (excluding bunker fuel) are recorded under *goods for processing* instead of *general merchandise*. Data on these export components for the period 2000 up to and including 2003 are adjusted accordingly.

Services

Transportation

The item comprises harbor dues and fees, freight, and passenger fares.

Travel

This item includes receipts from transactions in foreign currency, travelers' checks, and credit cards, as well as goods carried out of Aruba by tourists and paid for in foreign currency, travelers' checks, or credit cards. However, because of the difficulty in obtaining a breakdown for the expenses of resident credit card holders, their local expenses are also included. Steps will be taken to adjust the data on travel for these expenses. The item also includes payments related to medical treatments abroad and expenditures of students abroad.

Other services

This component includes management and maintenance fees, royalties, postal and telecommunication charges, computer and information services, insurance services, construction services, and rents and leases.

Government n.i.e. Data comprise, among other things, payments by the government to its representatives and tourism promotion offices abroad, as well as receipts from the Netherlands Royal Navy to finance their expenditures in Aruba.

Income

Compensation of employees

This item includes wages, salaries, and other benefits for work performed during the maximum period of one year.

Investment income

Data include dividends, and interest on debt securities, on loans, and on bank deposits.

The CBA also obtains information on income from the records of the Ministry of Finance and from foreign exchange licenses granted by the CBA, which are required for settling the financial transactions (loans and other financial transactions above Afl. 300,000 for individuals and Afl. 750,000 for legal entities, on a yearly basis).

Current transfers

This category covers both the official and the private sector. Official transfers comprise, among others, tax receipts from off-shore companies, pensions, contributions, and subsidies. Private transfers include workers' remittances, pensions, grants, and premiums and claims related to non-life insurance.

Capital Account

Government transactions include receipts related to development aid (capital grants), and other sector transactions include migrants' transfers.

Financial Account

Direct investment

Data include the transactions in equity, purchases and sales of real estate, and other flows among enterprises in direct investment relationships, such as intercompany loans.

Portfolio investment

This item covers security transactions, such as equity, long-term debt securities, and short-term debt securities (money market instruments).

Other investment

Data include loans, deposits in nonresident banks, premiums and claims related to life insurance, and other financial transactions.

Additional information on direct, portfolio, as well as other investment is obtained from the records from the Ministry of Finance and from the foreign exchange licenses granted by the CBA, which are required for settling the underlying financial transactions (above Afl. 300,000 for individuals and Afl. 750,000 for legal entities, on a yearly basis).

Reserve assets

This component reflects changes in official reserves held by the CBA, which comprise monetary gold and official foreign exchange holdings.

Australia

The following text was confirmed as current in 2004.

I. General

The Australian Bureau of Statistics (ABS) compiles and disseminates Australia's balance of payments and international investment position statistics. ABS uses a wide variety of data sources, ranging from government administrative by-product systems, such as for international trade statistics, to specially designed ABS surveys of businesses, other organizations, and households that have international transactions.

Australia's balance of payments statistics are published quarterly (with data series beginning in the September

quarter of 1959), providing a comprehensive and systematic statement of Australia's economic transactions with the rest of the world. The statement provides detailed goods, services, income, and transfers series, at current prices, in original, seasonally adjusted, and trend-estimates terms. Exports and imports of goods and services are also published in detail in volume terms; implicit price deflators, chain Laspeyres price indices, and terms of trade are also shown.

The financial account covers all equity and debt instruments, classified as follows: by type of capital (direct, portfolio, financial derivatives, other investment, and reserve assets); by direction of investment into/out of Australia; and by sector of the domestic counterparty (by general government, Reserve Bank of Australia, depository corporations, and other).

In addition, both debt assets and debt liabilities transactions and positions, and the associated income, are published quarterly by public/private sector, with separate details for debt domiciled in Australia and debt domiciled abroad. Drawings and repayments are published for other investment liabilities. Detailed international investment position statistics are also published quarterly. Asset and liability aggregate positions and transactions are published by industry, and debt asset and liability positions are also published by the currency and residual maturity of the debt. External debt liabilities are also published according to the *External Debt Statistics Guide* for compilers and users.

More detailed component series are published on both a fiscal year (end-June) basis and a calendar year (end-December) basis for the current account, as well as details by country on a calendar year (end-December) basis. For the financial account and the international investment position, summary series and some detailed components are also classified by country of counterparty. On a monthly basis, international trade in goods and services statistics (on a balance of payments basis), including current price series in original, seasonally adjusted, and trend terms, are published but with limited detail for services components. Australia's published balance of payments and international investment position statistics are also available, for a charge, on the ABS website (www.abs.gov.au) or on CD-ROM from the ABS.

The conceptual framework and classification structure of the Australian balance of payments and international investment position statistics published by the ABS corresponds to that underlying the *BPM5*, with modification and extension to take account of domestic user requirements for additional detail and alternate views of the data and to accommodate integration with national accounting practices under the *1993 SNA*.

Australia's balance of payments and international investment position statistics are compiled in Australian dollars. In principle, values originally denominated in foreign currencies are converted into Australian dollars at the market exchange rate applying at the time of the transaction (often approximated as the average for the day of the transaction) or at the reference date for stocks data. In practice, data providers use a range of conversion practices in reporting to the ABS.

The following provides a brief description of ABS concepts, sources, and methods. For further details, see the ABS publication *Balance of Payments and International Investment Position, Australia, Concepts, Sources and Methods* (ABS cat. no. 5331.0) and *Statistical Concepts Reference Library* (ABS cat. no. 1361.0). Both of these products are available, for a charge, on the ABS website (www.abs.gov.au) or on CD-ROM from the ABS.

II. Specific Items: Balance of Payments

Current Account

Goods

The ABS derives general merchandise data mainly from international trade statistics, which are based on Australian Customs Service (ACS) records. Adjustments are made to account for differences between the coverage, timing, and valuation of international trade statistics and the requirements of *BPM5*. The ACS reports imports to the ABS on a c.i.f. and f.o.b. basis. The f.o.b. data are used directly in compiling the merchandise items, and the c.i.f. data are used in compiling the data for freight payable to nonresidents (see *Freight services* below).

The value of goods crossing the customs frontier for processing, together with the value of processing performed on re-exported goods, is estimated from international trade statistics. However, re-exported goods are often not separately identified from general merchandise, and separate entries are not available for goods re-imported after processing abroad, which are included indistinguishably in general merchandise. Data on repairs on goods are compiled directly from international trade statistics.

ABS derives data from international trade statistics on expenditure in Australia by nonresident transport operators on bunkers and aviation fuel and all other goods procured in ports. Expenditure abroad by resident transport operators on goods procured in ports is obtained from surveys of the resident shipping and airline operators. Confidentiality constraints prevent a dissection of the estimates by mode of transport.

As with merchandise, transactions in nonmonetary gold that crosses the customs frontier are recorded in cus-

toms documents. ABS specifically adjusts for gold that changes ownership but does not cross the customs frontier. No dissection is available between gold held as a store of value and other gold.

Services

Transportation

Passenger. Data cover passenger services provided by sea and air. The main source of data is the quarterly ABS Survey of International Trade in Services (SITS). From the September quarter 1994 onward, for confidentiality reasons, the credit series also includes all non-freight earnings of resident transport operators and the expenses in Australia of nonresident transport operators. For confidentiality reasons, before the September quarter 1997, the debit series includes cruise fares. From the September quarter 1997 onward, these cruise fares are included in travel debits.

Freight. The main sources of data are the ABS SITS for credits and customs-based merchandise trade statistics for debits. Confidentiality constraints prevent a dissection of the estimates by mode of transport.

Other transportation. Before the September quarter 1994, for confidentiality reasons, this item includes minor amounts for dry-charter receipts and payments that should be reclassified to operational leasing services. From the September quarter of 1994 onward, for confidentiality reasons, the credit series is included in passenger services. Confidentiality constraints prevent any dissection of the estimates by mode of transport.

Travel

The ABS derives travel credits largely from data collected in the International Visitor Survey conducted by the Bureau of Tourism Research. ABS uses these data in conjunction with results from its monthly overseas arrivals and departures statistics, which it compiles from information collected by the Department of Immigration and Multicultural and Indigenous Affairs from arriving and departing international travelers.

Travel credits also include the receipts by domestic airlines from international airlines for the on-carriage, in Australia, of foreign visitors who have purchased tickets abroad. The source is the ABS SITS. Also included is the estimated expenditure of foreign military personnel on rest and recreation in Australia.

ABS compiles information on students' expenditure in Australia from student numbers and their associated fees, provided by the Department of Education, Science and Training, and estimated average expenditures on other goods and services sourced from a survey of foreign students.

Benchmark estimates for travel debits are compiled from a periodic household survey of returning Australian travelers. The survey provides a dissection of the average expenditure per travelers by purpose of travel (business and personal), by income earned abroad and cash taken abroad. Between these surveys, the bureau compiles estimates using data from the SITS, which covers businesses providing travel finance and outbound travel and collects data on prepaid tours, credit card usage, and traveler's checks issued. As with travel credits, the ABS uses these data in conjunction with results from its monthly overseas arrivals and departures statistics.

Other services

Unless specifically mentioned, other service component data are compiled from the ABS SITS. For some *BPM5* standard components, estimates are not separately available for confidentiality reasons.

Communications. For confidentiality reasons, communications services includes minor amounts relating to other business services.

Insurance. This item is compiled largely from a collection conducted by the Australian Prudential Regulation Authority. Data are supplemented from the ABS SITS, which covers insurance brokers and those businesses insuring abroad directly.

Financial. ABS statisticians compile these data primarily from the SITS and other ABS surveys of economic activity covering the margin returns of foreign exchange dealers. The series also includes financial intermediation services indirectly measured (FISIM). Incorporating FISIM estimates is not recommended, on practical grounds, in *BPM5* but is a recommendation of the 1993 SNA and was introduced in Australian balance of payments statistics to maintain consistency with Australia's national accounts.

Government, n.i.e. The bureau statisticians derive earnings and expenditures of resident government entities from government accounts or from ABS surveys. Expenditures in Australia by foreign governments on acquiring goods and services from other than resident government entities are derived from benchmark information supplied periodically by foreign embassies and consulates in Australia. The bureau interpolates and extrapolates these estimates using the numbers of officials and staff on diplomatic lists.

Income

Compensation of employees

The primary data sources for wages and salaries paid to nonresidents working in Australia are the International Visitor Survey, conducted by the Bureau of Tourism Research, and a survey of foreign students conducted on behalf of the Department of Education,

Science, and Training. The debit series is supplemented with minor amounts relating to nonresidents working in Australian missions abroad, derived from government budget papers.

Compilers estimate credit items from a periodic benchmark survey of returning Australian travelers, used in conjunction with monthly data on Australians traveling overseas. These credit data are supplemented with minor amounts relating to residents working in foreign missions located in Australia.

Investment income

ABS compiles the data from its quarterly Survey of International Investment. It compiles and publishes income on a full accrual basis. It adjusts the other investment income series for financial intermediation services indirectly measured (FISIM). Incorporating FISIM estimates is not recommended, on practical grounds, in *BPM5* but is a recommendation of the 1993 SNA and was introduced in Australian balance of payments statistics to maintain consistency with Australia's national accounts.

Current transfers

General government

The primary data source for estimates of current aid transfers is monthly reports from AUSAID, Australia's official aid agency. The Australian Taxation Office provides data on withholding tax receipts by general government.

Other sectors

ABS compiles entries from its surveys and other administrative collections. The largest component relates to insurance transfers (see above for the sources used in measuring insurance services).

Capital Account

Capital transfers

General government

The primary source for estimates of capital aid transfers is monthly reports from AUSAID.

Other sectors

Migrants' transfers. For business migrants, ABS compiles the data source from the Department of Immigration and Multicultural and Indigenous Affairs' monthly estimates of both the number of migrants entering Australia under the business skills categories and of the average funds transferred by these migrants. For all other migrants, overseas arrivals and departure estimates of the number of migrants are used in conjunction with an estimate of per capita transfers.

Acquisition/disposal of nonproduced, nonfinancial assets

The item includes identified purchases and sales of Australian embassy land. ABS compiles data on transactions in the ownership of copyright, patents, etc. from its quarterly SITS.

Financial Account

The ABS compiles data for the financial account from information reported in its quarterly Survey of International Investment, which surveys resident end investors, resident enterprises with foreign financial liabilities, and custodians holding securities issued by residents on behalf of nonresident investors. The survey measures the opening and closing position in all foreign financial assets and liabilities, the transactions and other changes in position (price, exchange rate, and other volume changes), and the investment income associated with claims on and liabilities to nonresidents.

Direct investment

Data are reported by resident direct investors and direct investment enterprises. For reasons of confidentiality, separate details are not available for equity capital claims on and liabilities to affiliated enterprises (for direct investment abroad) and equity capital claims on and liabilities to direct investors (for direct investment in Australia).

Portfolio investment

See *Financial Account* above for general information on the sources and methods. For securities domiciled in Australia, the methods of estimation are somewhat different, based largely on details reported by custodians rather than securities issuers. To derive transactions, compilers supplement custodians' holdings of securities on behalf of nonresidents, mostly reported at the individual security level, with details of quoted market-price changes in those securities. For securities domiciled abroad, compilers collect comprehensive data quarterly.

Other investment

See *Financial Account* above for general information on the sources and methods.

Reserve assets

The ABS obtains data on reserve assets from the Reserve Bank of Australia. For foreign exchange, details are not separately available on the counterparty (monetary authorities and banks) for currency and deposit claims, nor for the types of securities held.

III. Specific Items: International Investment Position

Descriptions of sources and methods for the financial account above generally apply to the IIP statement, with the main data source being the quarterly ABS Survey of International Investment.

Austria

I. General

The Austrian balance of payments compilation system combines data from two main sources—trade statistics compiled by the Central Statistical Office (CSO) of Austria and an international transactions reporting system (ITRS) compiled by the Oesterreichische Nationalbank (OeNB—Austrian National Bank). The OeNB has final responsibility for compiling the balance of payments and does so on a *BPM5* basis. Recalculations have been made going back to 1992. The accounts are compiled in euros, and statistics are published in euros and Austrian schillings.

The Austrian ITRS is a system for reporting transactions settled through accounts held between a resident and a nonresident party. There are two basic categories of reporters.

In the first category, domestic banks, including the central bank, report on their own transactions and transactions of their clients to the extent the transactions are settled through the accounts of the banks. These reports cover the flows in the period, as well as the position at the beginning and the end of the period (i.e., a closed system). The reported accounts are subdivided into working balances, deposits, and loans. All reporting accounts have a breakdown by the sector of the nonresident counterpart (banks and nonbanks), by currency, and by the country of residence of the counterpart abroad. There is no exemption threshold in the Austrian ITRS. In January 1998 the simplification threshold was set to EUR 5,500 for interaccount transactions (distributed between balance of payments items using a key based on historical experience) and for cash transactions (recorded as travel receipts or expenditures by default).

The second category consists of surveys of nonbank residents covering their accounts with nonresidents. It comprises accounts directly held with foreign banks, credit accounts (i.e., claims on and liabilities to nonresidents excluding trade credits), reports on clearing settlements, and reports on trade credits (i.e., net changes derived from stock data). All reporting accounts (except for

reports on trade credits) are broken down by currency and country of residence of the counterpart abroad.

Reports on nonresident accounts are denominated in the original currency. OeNB converts transactions and changes in these accounts into euros, using the average monthly exchange rate as a proxy for the exchange rate at the time of the transaction. In trade statistics, exports and imports are valued at the customs value rate.

The residency principle is fully applied. OeNB compiles the geographical allocation of transactions in (1) direct investment according to the directional principle, (2) portfolio investment according to the debtor/transactor principle, and (3) other investment and changes in reserve assets according to the creditor/debtor principle.

The Austrian balance of payments is compiled monthly on a cash basis. No revisions are made for cash data. Transaction-based results are published quarterly. Regular revisions are made after two quarters from the end of the reporting year, and a final revision for quarterly and annual data takes place with a lag of 18 months.

OeNB publishes the Austrian balance of payments in its monthly publication *Statistisches Monatsheft* and on the internet (www.oenb.co.at). A quarterly publication *Berichte und Studien* and the annual report *Geschäftsbericht der Oesterreichischen Nationalbank* include analytical statements. Both are available in German and English.

The international investment position statistics (IIP) are compiled mainly from stock figures derived from different surveys and the ITRS. The structure of the IIP follows *BPM5*. The only important deviation is that the IIP does not record net equity of households in life insurance reserves and in pension funds. IIP data are compiled on an annual basis and, in general, are valued at market prices. The net IIP and the net external debt position, as well as changes in the position reflecting transactions, price changes, and exchange rate changes, are calculated. OeNB publishes the IIP in its *Statistisches Monatsheft* and the *Berichte und Studien*.

II. Specific Items: Balance of Payments

Current Account

Goods

For general merchandise, the trade statistics are the main source of data for quarterly and annual balance of payments statistics. Because external trade figures for imports are valued c.i.f., they have to be converted into f.o.b. values. OeNB compilers do this using expenditure figures for freight and auxiliary transport services.

The trade statistics include transactions in nonmonetary gold, goods for processing, and repairs on goods; compilers deduct them from general merchandise and show them separately in the balance of payments presentation. Goods also encompass other transactions measured through the ITRS reporting system (i.e., the sale of goods to nonresidents and the acquisition of goods by residents). Only revised annual and quarterly statements report trade data.

Services

Transportation

This item covers freight revenues and expenditures, as well as international passenger transport and auxiliary services.

Travel

Travel now excludes international passenger transport. Monthly, quarterly and annual figures contain payments, including credit cards, Eurocheques, and travelers' checks, reported by banks. The respective clearing houses report gross debits and credits.

Compilers classify as *travel* by default the transactions in currency exchange, up to a EUR 5,500 threshold per transaction. Data on schilling banknotes bought and sold abroad are replaced with partner country figures on sales and purchases of Austrian schilling notes and with estimates where partner country information is not available.

The compilers also adjust monthly for *compensation of employees* on the credit side (Austrian border workers in Germany and Switzerland) and for *workers' remittances* on the debit side and, if necessary, for capital exports.

A survey of 12,000 households on their travel expenditures abroad allows checking of debit figures and gives information on the type of travel (business, health, same-day visitors, etc.), type of expenditure (transport, accommodation, goods purchased), and means of payment.

Other services

Reported figures are based on payments reported through the ITRS. The main deviations from *BPM5* are as follows: Insurance services are based on gross payments, and no breakdown by type of insurance is available. Differences between external trade statistics and the payments figures for goods are shown as "not classifiable transactions" in national publications and as "miscellaneous business services" in this yearbook. Such differences reflect (1) service components in connection with merchandise transactions (e.g., planning, training sessions, know-how transfer, consulting, marketing, patents and licenses, etc.), (2) plant engineering, especially on-site purchases, and (3) valuation differences between foreign trade statistics and the ITRS.

Income

Compensation of employees

OeNB adjusts for travel on the credit side (Austrian border workers in Germany and Switzerland). (See *Travel*.)

Investment income

Income is recorded on an accrual basis. Foreign direct investment income includes data on reinvested earnings. The compilers replace provisional estimates on reinvested earnings by the outcome of a survey among approximately 3,500 Austrian enterprises with a time lag of 18 months.

Current transfers

General government

Public transfer transactions include membership and administration fees (including the contribution to the EU budget), compensatory payments, penalties, donations, pensions, and other public transfers.

Other sectors

Private transfer transactions include membership and administration fees, compensatory payments, penalties, donations, inheritance, financial support, gifts, workers' remittances, migrants' transfers, and other private transfers.

Capital Account

Capital transfers

Public sector capital transfers consist mainly of EU reimbursements that are not attributable to *current transfers* (i.e., investment subsidies for infrastructure). Private sector capital transfers comprise, among other things, debt forgiveness, migrants' transfers, legacies, the setting up of foundations, and the like.

Acquisition/disposal of nonproduced, nonfinancial assets

This category reflects, for instance, the purchase of patents (as opposed to their use), the sale of customer bases, transfer fees for sportspeople, and so on.

Financial Account

Direct investment

Direct investment flows cover investment and disinvestment in equity capital, reinvested earnings, and credits between affiliated enterprises. The cross-border acquisition and disposal of premises and buildings also falls in the direct investment category. Compilers use the directional principle for allocating transactions, and they use the 10 percent criterion for classifying direct investment. The Austrian monthly cash balance of payments does not include reinvested earnings.

Portfolio investment

Portfolio investment encompasses equity securities, debt securities, and money market instruments. Compilers record purchases and sales security-by-security, using the international security identification number (ISIN) for identification. The sources of the data are surveys of banking activity where banks act as custodians and of Austrian end-investors. (See entry under IIP: portfolio investment.)

Financial derivatives

OeNB records the acquisition and disposal of financial derivatives at their respective transaction value. The Bank does not book differences between buying and reselling prices as earnings but views them as valuation gains. Income does, however, still cover those components that clearly affect earnings. This applies, for instance, to financial derivatives based on interest (such as forward-rate agreements and interest-rate swaps in connection with securities).

Other investment

This item includes trade credits, loans, sight and time deposits, as well as other assets and liabilities. Each of these components is also attributed by domestic sector, not by maturity. Long-term banking loans are shown on the assets side; short-term sight and time deposits are stated on the liability side. *Other assets* and *other liabilities* also cover debt forgiveness and outstanding claims and liabilities. For instance, an outstanding credit is shown at the time of its maturity as repayment under *loans*, regardless of whether the redemption had already been effected or not. If the redemption deadline expired and the claim had not been settled, a new claim is generated under *other assets*.

Reserve assets

The accounting department of the OeNB is the source of these data. Reserve assets include monetary gold, foreign exchange and currency, reserve position in the Fund, claims on the European Central Bank, and other assets and liabilities. The transaction principle has also been applied to official reserves. The valuation does not draw on balance-sheet rates but is governed by the same rules as the valuation of all other transactions of the financial account.

III. Specific Items: International Investment Position

Direct investment

These data are based on an annual direct investment survey of approximately 3,500 domestic companies, re-

porting balance sheet information at book values and in Austrian schillings. (There is a threshold of 1 million Austrian schillings of nominal capital.) The geographical allocation of inward direct investment follows the "ultimate beneficial owner" principle, but "first counterpart" information is available as well. Estimates of outward and inward direct investment positions valued at market prices (earnings value method) are published in the annual report.

Portfolio investment

The domestic sector is divided into monetary authorities, banks, general government, and the nonbank private sector. Published stock data are valued at market prices. Banks acting as domestic primary custodians must report (to the OeNB on a monthly basis) their own holdings and their holdings on behalf of other residents and nonresidents of domestic and foreign securities. The primary custodians are defined as the custodians who maintain the accounts on behalf of the end-investors ("nearest to the end-investor"). Austrian end-investors (noncustodians) must report their own holdings on domestic and foreign securities outside the banking-custodian system on an annual basis, if the value of the securities exceeds EUR 75,000 at the end of the year.

Both the domestic custodians and the end-investors report (security-by-security) the face value of each security and the security identification code. If the code is not an official code, the market price and other features of the security have to be reported for calculation purposes. Compilers then calculate the market value, using monthly back-office quotations, and convert it into schillings, using the exchange rate of the reporting date.

Financial derivatives

Data on financial derivatives are presented as a separate category.

Other investment

OeNB uses stock positions derived from bank and non-bank reports, including currency, deposits, and loans (except loans compiled under direct investment and trade credits). Compilers note the original currencies and subsequently calculate the schilling equivalent at the rate of exchange at the reporting date. Reporting entities convey, to the OeNB, data on trade credits; the data relate to credits granted and taken out, based on balance-sheet data and valued in Austrian schillings. OeNB compiles all other claims and liabilities within other investment by using cumulative balance of payments flows.

Reserve assets

The balance sheet of the central bank is the source of these data, except for the valuation of monetary gold.

The compilation corresponds to the balance of payments transactions. Monetary gold is valued at the market price in the IIP.

Azerbaijan

The following text was confirmed as current in 2004.

I. General

The National Bank of Azerbaijan (NBA) is responsible for compiling the balance of payments statistics of Azerbaijan. The NBA collects data for the balance of payments estimates from various sources, including the banking sector for the international transaction reporting system (ITRS), the State Statistical Committee (SSC), the Ministry of Finance, the State Customs Committee (SCC), other governmental agencies, and the International Oil Consortiums (IOCs).

NBA compiles the data on a quarterly basis and publishes them in its *Monthly Bulletin* and *Annual Report* and in the periodical press. From 2003, the balance of payments data are also available on the NBA's website (<http://www.nba.az>). The balance of payments data are compiled in U.S. dollars. The methodology used to compile the balance of payments statistics of Azerbaijan follows the *BPM5* recommendations.

II. Specific Items: Balance of Payments

Current Account

Goods

Data on general merchandise are based on external trade statistics compiled by the SSC using customs returns. These data are adjusted for coverage, classification, and valuation to bring them into conformity with balance of payments concepts. The main adjustments are to exclude the cost of freight and insurance from imports valued on a c.i.f basis; to include estimates of shuttle trade, bunker fuel provision, and goods procured in ports; and to value crude oil at market prices. The NBA also includes estimates for goods that are not registered in the custom declarations. These estimates are derived from the statements of transport organizations.

The estimates of shuttle trade are based on data for the number of individuals crossing the customs frontier and the average value of goods imported per individual crossing. Timing adjustments are made to correct customs statistics that report, as a rule, the crude oil exports of the Azerbaijan International Operating Company

(AIOC) registered in the Black Sea ports two to three months after crossing the border of Azerbaijan. The NBA adjusts these data on the basis of the monthly reports submitted by the AIOC.

Services

Transportation

This category covers freight and passenger transportation, and port services for all modes of transport. Data on passenger fares and port service charges are based mainly on information collected by the SSC from marine shipping, airline, railway, and road transport companies. The credit entries for freight consist mostly of transit fees for the transit traffic from neighboring countries. Freight payments to nonresidents are estimated at approximately 80 percent of the amounts deducted for freight and insurance from imports valued on a c.i.f. basis. Data for other transportation services are derived from the ITRS.

Travel

Data for the travel component are estimated by combining the SCC data on the number of foreign visitors entering Azerbaijan and Azerbaijan residents traveling abroad with data collected from the commercial banks on the average per capita expenditures of travelers.

Other services

Data on other services are mainly derived from the ITRS, supplemented with information obtained from direct reporting entities, including enterprises involved in IOC construction and other business services. Data for communication services are obtained from a survey conducted by the SSC. Data on construction services are collected from the SSC survey of construction companies and from IOCs' data obtained by the NBA. The source of the data on government services is the ITRS and administrative data of the Ministry of Foreign Affairs.

Income

Compensation of employees

Wages and salaries of nonresidents employed in Azerbaijan are estimated based on information reported by the IOCs, the Azerbaijan State Caspian Marine Shipping Company, and the State Concern AZAL.

Investment income

Direct investment. This item covers mainly direct investment income transactions of Transoil Companies—shareholders of the AIOC. The basis of calculating direct investment income is the information provided by the AIOC on their exports, operating expenditures, and capital expenditures. The source of the data for direct investment income of enterprises in the non-oil sector is the ITRS.

Other investment. This item covers interest receipts and payments on long- and short-term loans, deposits, other commercial and financial claims and liabilities, loans from the IMF, and SDR holdings. These data are obtained from the ITRS, quarterly reports of the NBA, the Ministry of Finance, and enterprises.

Current transfers

General government

The credit entries include humanitarian, technical, and other assistance received from abroad. The NBA bases its estimates on data from the ITRS, including cash remittances received by the humanitarian institutions through the banking system, and humanitarian aid data collected by the SCC. The debit entries cover contributions to the international organizations.

Other sectors

Data on workers' remittances are obtained from the ITRS.

Financial Account

Direct investment

Direct investment enterprises are defined as enterprises with a foreign equity participation of more than 10 percent. These enterprises include mainly the IOCs and joint ventures. Data on direct investment in Azerbaijan are derived from reports submitted by enterprises of the IOCs to the NBA on a quarterly basis, supplemented with the results of surveys of joint ventures conducted by the SSC. Reports of the IOCs include data on capital repatriation, which the NBA treats as disinvestment in the oil sector in the balance of payments statement. Estimates of direct investment abroad are based on the data received from the ITRS.

Other investment

Data on trade credits are estimated as the difference between the value of exports of goods shown in the trade statistics and the corresponding receipts of foreign exchange recorded in the ITRS.

Data on external public sector debt include loans received by the government as well as government guaranteed loans. These data are obtained from the Ministry of Finance. Data on loans received by banks cover drawings and repayments reported in the ITRS. Data on other assets and liabilities are derived from the ITRS, reports of enterprises, and reports of the NBA.

Reserve assets

Reserve assets comprise the NBA holdings of reserves. Data are calculated quarterly on the basis of information received from departments of the NBA.

III. Specific Items: International Investment Position

Starting from data for 2002, the international investment position is compiled as a comprehensive statement that comprises data on international reserves, foreign direct investment, portfolio investment, and other investment assets and liabilities by sectors including the foreign assets of the State Oil Fund.

Data sources for the IIP are the same as those used for compiling the balance of payments statistics.

The Bahamas

I. General

The Central Bank of The Bahamas (CBOB) is responsible for compiling the balance of payments statistics. The CBOB obtains primary data from several sources, including exchange control records on current payments, income and capital flows relating to direct investment, and budgetary accounts of central government and other public sector entities. In addition, the CBOB conducts several quarterly surveys to compile information on services, imports, exports, income, unrequited transfers, and private nonbank financial flows.

CBOB compiles the data on a quarterly basis, publishes them in its *Quarterly Statistical Digest*, *Economic Review*, and *Annual Report*, and reports the data to the Fund. Balance of payments estimates are compiled in millions of Bahamian dollars, a unit of which is equivalent to the U.S. dollar. The classification of accounts used in the national presentation of The Bahamas' balance of payments closely corresponds to the presentation of the *BPM4*. A major deviation is in the treatment of the "offshore" banking sector as nonresident for compiling the balance of payments. The coverage includes only the local expenses of these entities.

The CBOB has submitted quarterly and annual data in the *BPM5* format to the Fund beginning with data for 1995.

II. Specific Items: Balance of Payments

Current Account

Goods

CBOB currently estimates these data from various sources. It estimates transactions of "offshore" industrial companies on the basis of questionnaire responses it receives from these companies. It estimates non-oil imports

based on exchange control records of total foreign currency sales and customs import records. Trade data on the imports of oil are adjusted, concerning coverage, to exclude goods imported for processing or storage without a change in ownership. Since June 1985, oil processing activities have ceased in The Bahamas.

The entries for goods procured in ports by carriers capture receipts and payments for foreign bunkering, port and handling charges, landing fees, and other ancillary expenses (provisions and stores) relating to oil tankers, other ships, and aircraft. Credits cover earnings of Bahamian shipping companies and aircraft; debits relate to foreign shipping companies' outlays. CBOB obtains data from surveys of oil companies, foreign airlines, and shipping companies on goods procured in Bahamian ports by foreign carriers.

Services

Transportation

The data on freight and passenger services cover all modes of transport and port services. CBOB obtains entries for transportation services from surveys of both foreign and resident shipping and airline companies. Freight and insurance expenses are estimated as 9.1 percent of imports c.i.f. Freight is further disaggregated into air and sea transportation, based on a survey conducted using customs declaration forms.

Travel

CBOB compiles travel credit entries using the Ministry of Tourism's tourist expenditure estimates, which are in turn based on exit surveys of foreign visitors (cruise and stopovers) conducted by the Ministry of Tourism. Estimates are compiled by taking the product of the number of foreign visitors and an estimate of an average expenditure per visit. CBOB compiles travel debit entries using exchange control records.

Other services

Communications. Estimates are based on exchange control records.

Construction. CBOB obtains data mainly from surveys and exchange control records.

Insurance. The central bank obtains the data on nonmerchandise insurance remittances from exchange control records. Estimates for goods insurance are based on customs declaration forms.

Royalties and license fees. This item covers transactions with nonresidents involving fees for use of asset titles and rights, specifically franchise fees relating to hotels, restaurants, and other businesses. Debit data are obtained from exchange control records.

Other business. The bank obtains data from exchange control records and supplements them by private sector surveys.

Government, n.i.e. Credit entries represent the expenditures of consulates and officials of foreign territories in The Bahamas and are obtained from quarterly surveys. Debit entries are based on the central government's budgetary documents.

Income

Investment income

Debit entries cover transactions of the central bank, the public sector (including central government), domestic banks, and the private sector. CBOB obtains data from exchange control reports, quarterly reports from the banking sector, and other surveys. Currently, the component does not include interest earnings and payments by domestic commercial banks that have significant offshore activities.

Current transfers

General government

Estimates are based on quarterly government budgetary data and are supplemented by other public sector information.

Other sectors

For workers' remittances, the data source for debit items is mainly exchange control records.

Capital Account

Capital transfers

Migrants' transfers. Data are derived from exchange control records.

Financial Account

Direct investment

The bank compiles data from exchange control records, supplementing them by quarterly surveys to capture property and equity capital investments.

Other investment

Other assets and liabilities cover data on the external debt transactions of the central government and public corporations. The bank derives them from their respective budgetary information.

Entries for domestic banks cover changes in their net foreign assets/liabilities position. Long-term transactions cannot be segregated and are included in currency and deposits. CBOB derives data on other private sector assets/liabilities from enterprise surveys it

conducts and supplements the data with exchange control record information.

Reserve assets

Data reflects changes in the foreign exchange assets of the CBOB.

Bahrain, Kingdom of

I. General

The Economic Research Directorate (ERD) of the Bahrain Monetary Agency (BMA) is responsible for compiling Bahrain's balance of payments statistics. Data for balance of payments statistics are obtained from various sources, including the Ministry of Finance and National Economy (MOFNE), the Ministry of Oil and Industry (MOI), the Central Statistics Organization (CSO), public sector companies such as Aluminum Bahrain (Alba), Gulf Air, and balance sheet returns submitted to ERD by all licensed banks in Bahrain. Entries affecting Gulf Air in the present accounts are prorated to reflect the ownership shares of the sponsoring states (Bahrain, Oman, Qatar, and the UAE). Thus, Gulf Air is not entirely "resident" in the current treatment. The licensed banks comprise full commercial banks (FCBs), offshore banking units (OBUs), and investment banks (IBs).

The balance of payments statistics are compiled in millions of Bahrain dinars (BD) on an annual basis, and they are published in the BMA's *Annual Report* and *Quarterly Statistical Bulletin*. The compilation framework is in accordance with the fifth edition of the *Balance of Payments Manual (BPM5)*. Data consistent with the *BPM5* extend from 1990-to-date in the published series. In contrast to previous practice, OBUs, IBs, and other "exempt" financial institutions in Bahrain now are classified as resident entities ("exempt" means they are licensed principally for transactions with nonresidents).

A few of the series for the banking system used in the balance of payments are obtained from annual financial accounts filed with the supervisory directorates in BMA. A few others are from responses to monthly surveys for balance of payments purposes conducted with the FCBs, and moneychangers and exchange houses active in transferring funds for expatriate workers living in Bahrain.

II. Specific Items: Balance of Payments

Current Account

Goods

The ERD prepares the merchandise series on the basis of export and import tabulations submitted by the CSO. The information provided by the CSO is organized according to the harmonized tariff nomenclature. ERD adjusts imports—which are reported c.i.f.—to an f.o.b. basis for the balance of payments compilation. Information on imports and exports of oil and oil products is provided by MOI. Services provided by Asry (Arab Shipbuilding and Repair Yard Company) and Basrec (Bahrain Ship Repairing and Engineering Company) to nonresidents' ships are classified under *repair on goods*.

Services

Transportation

In this category, debits for freight are estimated at 10 percent of the c.i.f. imports from CSO. Credit entries for transportation services are derived from information provided by Gulf Air for tickets sold by its offices outside Bahrain and payments received by port and airport authorities against services provided to foreign ships and airlines.

Travel

Credits. Tourists and business travelers coming via air and sea and 10 percent of Saudi tourists coming to Bahrain via the causeway are assumed to stay in hotels and other apartments. Data on gross output (revenue) of hotels (covering room rent and other revenue) and restaurants (sales) are obtained from MOFNE. All rental revenue of hotels is assumed to be earned from nonresidents, while assumptions are made on the proportion of other revenue of hotels and sales of restaurants ascribable to nonresidents. Using these estimates and data on the number of persons staying in hotels, obtained from the Tourism Directorate, estimates of per capita expenditure are derived. A lower estimate of per capita expenditure is applied to the number of tourists not staying in hotels. In addition, an allowance is made for miscellaneous expenditures (e.g., taxi fares, purchases of souvenirs, etc.). Ninety percent of Saudis arriving via the causeway are considered day travelers and assumed to spend about BD 40 per person.

Debits. Bahrainis crossing the causeway are assumed to spend, on average, BD 30 per person. In addition, an allowance is made for the overseas training costs of Bahraini officials. Survey reports on bank transactions, which cover records on foreign currency notes and

traveler's checks sold to residents (e.g., tourists, businessmen, students studying abroad), are also used.

Other services

Insurance. Insurance debits are estimated at about 1 percent of c.i.f. import values. The coverage of the Bahraini insurance sector is incomplete, so no credits are presently recorded.

Other business services. Credits are services rendered by commercial banks to foreign governments and reported on the monthly balance of payments surveys, and Gulf Air services. Debits are Alba's and Gulf Air's expenditures abroad.

Income

Compensation of employees

Most expatriates working in Bahrain are long-term and thus are residents. Therefore, debits for labor income are no longer entered for these workers.

Investment income

Direct investment. Credits are entered for the banking system and the Pension Fund Commission, based on direct investments abroad made by several locally incorporated banks and Pension Fund direct investment in nonresident companies. The rate of return on direct investment and division of this income between dividends and reinvested earnings are estimated. Debits are entered for the banking system based on equity of foreign entities in Bahraini banks (mainly OBUs) reported on ERD balance sheet returns. Rates of return and division of this income between dividends and retained earnings are estimated. Debits are also entered for the foreign share of Alba's and Asry's income, since they are 23 percent and 81 percent owned by nonresidents respectively.

Portfolio investment. Credits are attributed mainly to holdings of debt instruments by the banking system and the Pension Fund; data are obtained from the banks' balance sheet returns and Pension Fund data submitted to the ERD. Debits are attributed to the banks' issues of international securities; data are derived from the banks' balance sheet returns.

Other investment. Both debits and credits are mainly in the banking system, arising from banks' cross-border positions related to deposits and loans, including non-equity positions with affiliates. Amounts of income are estimated on the basis of prevailing international interest rates (dollar, LIBOR). Both credits and debits are estimated for all types of banks (FCBs, OBUs, and IBs) based on their balance sheet returns.

Credit entries for the government are interest received on official reserve assets. Debits reflect interest paid on

external public debt by the central government; these are reported to BMA by MOFNE. Credit entries for the monetary authority represent interest received by BMA for its own external assets. Given the absence of a breakdown of asset types, these are classified as other investment. BMA has no foreign liabilities. Credit entries for other sectors comprise Gulf Air investment income receipts, and debits comprise Gulf Air investment income payments plus Alba and Asry's interest payments on foreign loans.

Current transfers

Other sectors

Workers' remittances. Data are derived from surveys of FCBs, moneychangers, and other sources, which cover remittances to home countries by foreign workers in Bahrain. As mentioned, most of these workers are long-term and are treated as residents.

Other transfers. This component shows credits derived from the FCB surveys about payments that may be regarded as inward transfers.

Capital Account

Capital transfers

The government of Bahrain receives budgetary and extrabudgetary assistance in the form of annual grants from several other Gulf Cooperation Council (GCC) countries. These grants meet the definition of capital transfers under *BPM5*. Data are provided by MOFNE. There are no other balance of payments transactions classified in the capital account.

Financial Account

Direct investment

Direct investment in Bahrain is estimated from reports on equity positions in the banking sector and in Alba and Asry. Balance sheets and other tables are submitted to ERD. The breakdown between equity capital and retained earnings for the banks is estimated on an annual basis so that balance of payments flows are consistent with year-end levels reported by these entities.

Direct investment abroad presently is measured for the banking system, using details on annual returns submitted by locally incorporated banks to the BMA's Bank Supervision Directorate, about investment in foreign affiliates. The State of Bahrain also has some equity positions in foreign entities (e.g., GIC, in Kuwait), but these have not yet been included in the balance of payments statistics.

Portfolio investment

Asset entries principally reflect net purchases of debt and equity instruments by the banking system, the Pension

Fund Commission, and the mutual funds. Data sources comprise balance sheet returns for the banking system, tables prepared by the ERD for the pension fund, the outstanding investment of the mutual funds as reported to the Financial Institution Supervision Directorate, and Gulf Air net portfolio capital. Until 1998, portfolio liabilities were recorded as zero, but some banks recently have issued international debt instruments, which are captured in the balance of payments statistics.

Other investment

Both assets and liabilities are concentrated in loan and deposit activities of the banking system, which are compiled from the ERD balance sheet returns. For assets, loans and deposits transactions are recorded separately. On the liabilities side, bank transactions are mostly in the form of deposits. BIS statistics suggest that nonbank sectors do not have large transactions with BIS-area banks; however, it is noted that Bahrain is not included separately in U.S. submissions to the BIS.

Debits for government asset transactions under "other investment" reflect funds paid by Bahrain to regional and international organizations (e.g., as additional capital) and are taken from MOFNE data. Liability transactions are changes in government loan obligations, mostly borrowing from regional development funds, where Bahrain's official external liabilities are concentrated. Changes in the government's liabilities are broken down into borrowing and repayment components. Other sectors' liabilities are Alba's, Asry's, and Basrec's foreign loan drawings and repayments and Gulf Air's net borrowings. Asry's net outstanding suppliers credits are compiled in the trade credit item.

Reserve assets

The government's reserve assets total (without detail) and liabilities are provided by other BMA sources, except for Fund-related components, which come from the Fund record.

BMA's own external assets, without breakdown by type, also are provided by other BMA sources. These are assumed to be mainly placements with banks.

III. Specific Items: International Investment Position

IIP statistics for Bahrain were compiled for the first time in 1999. IIP data are available for the period beginning with 1990 and are compiled on the same basis as the revised balance of payments statistics. While still in progress, the IIP already covers important sectors of the national economy and will be expanded in step with further work on the external accounts. IIP components are largely parallel to the balance of payments and, at the present time, are the following:

Banking system. The ERD balance sheet returns cover the banking system comprehensively, except for the Housing Bank and the Bahrain Development Bank, which are small and have no external positions. Institutional and geographic lines are drawn to be consistent with *BPM5* and other accepted criteria. The balance sheet returns are the basis for measuring banks' external positions, as well as for the balance of payments, with minor exceptions related to direct investment abroad, discussed earlier. Information gathered in the ERD returns is sufficient to distinguish clearly, in most cases, among types of cross-border assets and liabilities held by the banks.

Bahrain Monetary Agency. The BMA's international (reserve) assets are reported, without breakdown by type, at market values. These are classified as claims on foreign banks. BMA reports no cross-border liabilities.

Government. MOFNE reports basic information on the central government's external liabilities, which consist almost entirely of concessional loans from regional development institutions.

Other sectors. The inward direct investment position in Aluminum Bahrain is included in the IIP based on its balance sheet. Nonresidents (Saudi Arabia and Breton Investments) hold a combined 23 percent direct investment share in this enterprise. Other balance of payments-related Alba transactions are not yet included. Gulf Air data are included in the balance of payments but not yet classified in the IIP. Pension Fund investment data have been included recently in both the balance of payments and the IIP, starting with 1998 data for the IIP and 1999 data for the balance of payments. Mutual fund data have also been included in both the balance of payments and the IIP, starting with 2000 data for the IIP and 2001 data for the balance of payments. Asry and Basrec financial data have been included in the IIP and the balance of payments starting with 2000 and 2001 data respectively.

Further expansion of the IIP is planned, in conjunction with balance of payments work, with the objective of including economic sectors such as insurance and, in the government sector, the second social insurance fund.

Bangladesh

The following text was confirmed as current in 2004.

I. General

The Statistics Department of the Bangladesh Bank (BB) is responsible for compiling the balance of payments statistics, which are now in accordance with the *BPM5* from the first quarter of 1996. The compilation and

recording procedure of balance of payments data has been improved and refined as follows: BB has introduced a new coding list in accordance with the requirements of the *BPM5* and collects data accordingly. To minimize the coverage deficiencies inherent in a balance of payments compilation system relying on banking data, BB has broadened the existing survey system. A survey to collect data on compensation of employees in Bangladesh diplomatic missions abroad and foreign diplomatic missions and international organizations in Bangladesh is in place. The BB conducts a regular survey of direct investment enterprises.

The Statistics Department collects data on exports, imports, services, and income from the banks (authorized to deal in foreign exchange) through foreign exchange returns as per the international transactions reporting system (ITRS). Export data used in compiling the balance of payments are based on shipments collected from customs returns. The department also collects balance of payments statistics on reserve transactions, foreign aid, and government expenditures abroad from the BB, Ministry of Finance (MOF), and commercial banks.

Aid disbursement data are based mostly on donor reporting systems monitored by the MOF's Economic Relations Division (ERD). The BB collects data on short- and medium-term borrowing by the Bangladesh Petroleum Corporation, Bangladesh Biman, Shipping Corporation, and other enterprises directly from the respective organizations.

The BB compiles balance of payments data on a monthly, quarterly, and annual basis. Data are presented in millions of taka. Monthly and quarterly data contain debits and credits for all major accounts. The BB's annual publication of the data is accompanied by analytical reviews and detailed classifications that meet the requirements of a comprehensive framework. It also contains, besides the global balance of payments, separate balance of payments with selected countries/regions/groupings, viz., U.K., U.S., Canada, Japan, European Union, other European countries, member countries of the Organization of Islamic Conference (OIC), member countries of ASEAN, and other Asian countries.

II. Specific Items: Balance of Payments

Current Account

Goods

BB bases data on merchandise exports on information provided by the Export Promotion Bureau (EPB) from customs declarations. The BB simultaneously releases total exports and detailed breakdowns by commodity, classified according to the Harmonized System, and by destination of exports. Data are on a monthly basis and

are based on customs reports from six national customs centers. Data, valued on an f.o.b. basis, are presented in crores of taka (1 crore=10 million).

BB obtains data on imports primarily from exchange control records. These banking data are supplemented by information on imports, funded by external official debt and grants, which are compiled by the ERD. The Bangladesh Export Processing Zones Authority provides data on goods for processing, as well as other imports and exports of enterprises operating in the Export Processing Zone.

Merchandise import data are collected on a c.i.f. basis. Compilers adjust the data for transportation and insurance charges to derive an estimate for f.o.b. The use of customs-based import data, rather than exchange records, for balance of payments purposes is planned.

Services

The Statistics Department obtains these data from exchange control records, supplementing them with interest payment data from ERD and interest/discount data from internal records of BB.

Transportation

Transportation covers those services performed by residents in one economy for those of another, by all modes of transportation that are involved with carriage of passengers, movement of goods (freight), charter of carriers with crew, and other related supporting and auxiliary services. The category excludes freight, insurance, repairs of transport equipment, and goods procured in ports by nonresident carriers.

Travel

The Statistics Department collects data on travel transactions through the banks. It records as credits the receipts from foreign visitors, and as debits the residents' expenditures abroad.

Other services

Communications. Communication services cover receipts and payments on account of telephone, telegraph, facsimile, and telex, including broadcasting and electronic mail, postal, and courier services.

Construction. The item includes (1) receipts for work abroad on construction projects and on installation by resident enterprise personnel and (2) payments on account of salary and allowances paid to nonresident enterprise personnel, engaged in construction projects in Bangladesh.

Insurance. Credit entries cover net premia on direct insurance and reinsurance assumed by resident insurance companies. Debit entries cover premia on mer-

chandise insurance on imports estimated at 10 percent of import freights. Data on other insurance transactions are not available separately but are included in other business services.

Financial. Entries include (1) receipts of banks operating in Bangladesh from their offices and their correspondents abroad on account of commissions, cable charges, differences in exchange rates, etc. and (2) payments by banks to their branches and correspondents abroad on account of commissions, cable charges including fees associated with letters of credit, bankers' acceptances, lines of credit, financial leasing, other fees, etc.

Computer and information. Entries cover receipts and payments on account of computer data processing and news-related services, including data processing, hardware consultancy, software implementation, maintenance and repair of computers, and news agency services.

Royalties and license fees. The item includes receipts and payments associated with the authorized use of intangible, nonproduced, nonfinancial assets and proprietary rights (e.g., patents, copyrights, trademarks, industrial processes) and use through licensing agreement of produced originals of prototypes (e.g., manuscripts and films).

Other business. The item includes receipts and payments on account of merchanting and other trade-related services, operational leasing, and miscellaneous business, professional, and technical services.

Personal, cultural and recreational. The entries cover receipts and payments on account of audiovisual and related services and other cultural and recreational services.

Government, n.i.e. The credit entries are service expenditures of foreign diplomatic missions and international organizations in Bangladesh. Debit entries are expenditures relating to Bangladesh diplomatic personnel, diplomatic and trade missions, and military expenditures abroad.

Income

Compensation of employees

Data relate to wages, salaries, and other benefits received by short-term workers (less than one year) from nonresident employers and that of local staff of embassies, consulates, and international organizations.

Investment income

Direct investment. The Statistics Department derives data on direct investment income from enterprise surveys.

Portfolio investment. The department collects data on portfolio investment income from the foreign exchange record provided by authorized dealers.

Other investment. Other investment income covers receipts and payments of interest (including discounts) on all other resident claims (assets) on nonresidents and liabilities to nonresidents.

Current transfers

The component includes official grants in food and commodities, workers' remittances, other gifts and donations, etc.

General government

Credit entries include grants in the form of food and commodities received from donor countries and international organizations.

Other sectors

Credit entries cover mainly workers' remittances and donations provided by foreign private organizations.

Capital Account

Capital transfers

Capital transfers consist of the transfer of ownership of fixed assets or forgiveness of financial liabilities between residents and nonresidents without quid pro quo. It includes official project grants data, collected from the ERD.

Financial Account

The financial account covers all transactions associated with changes of ownership in an economy's foreign financial assets and liabilities. Transactions are based on exchange control records and data on debt servicing maintained by ERD.

Direct investment

BB collects data on direct investment transactions, both abroad and in the reporting economy, through an enterprise survey. The data obtained from the survey are incorporated into the balance of payments.

Portfolio investment

BB collects information on portfolio investment through banks.

Other investment

This component includes all financial transactions that are not covered in the categories for *direct investment*, *portfolio investment*, or *reserve assets*. Under *other investment*, the instruments classified under assets and liabilities comprise trade credits, loans (including use of Fund credit

and other loans from the Fund), currency and deposits, and other assets and liabilities.

Reserve assets

Data on international reserves comprise monetary gold, SDRs, reserve position in the Fund, and foreign exchange, which are collected from internal records of the BB and IMF.

Barbados

The following text was confirmed as current in 2004.

I. General

The Economics Section of the Research Department of the Central Bank of Barbados (CBB) is responsible for compiling balance of payments statistics. The CBB compiles these data in Barbados dollars on an annual basis and publishes them in the *Balance of Payments of Barbados* around September of each year. The classification of accounts follows, as closely as possible, the guidelines set out in the *BPM5*.

The Economics Section derives most of the data from surveys carried out by the Statistics Section of the CBB's Research Department. Other sources of data are the record of exchange transactions and the CBB's own accounts. The Section also obtains data from the Barbados Statistical Service (BSS), the Ministry of Finance, and other public entities. CBB's Research Department estimates some unavailable data. At present, there is little coordination with national accounts compilers at the BSS.

Offshore institutions are, in general, treated as nonresidents for balance of payments purposes. These are specially designated banks, insurance companies, foreign trade corporations, and companies involved in various other service activities such as data processing and publishing. However, because of the difficulty in obtaining data on their operations, only their transactions with residents for financial, computer, and information services are included in the balance of payments.

II. Specific Items: Balance of Payments

Current Account

Goods

BSS's *Overseas Trade Report* is the source of these data. Exports and imports are valued on an f.o.b. basis. Some adjustments for coverage, classification, valuation, and

time of recording are made to convert trade data to a balance of payments basis.

In particular, coverage adjustments to exports are made to (1) include goods exported through parcel post, (2) include the sale of notes, coins, and stamps as collectors' items, and (3) exclude stocks of consignment goods held overseas by residents. The Post Office provides data on sales of stamps, and the CBB provides data on sales of notes and coins. Also, compilers make a valuation adjustment to exports on account of the monetary compensation paid by the European Union to Barbadian sugar exporters.

For imports, coverage adjustments are made to (1) include unissued currency notes, coins, and stamps, (2) exclude outstanding balances on consignment imports, and (3) include other transactions such as the purchase of ships and aircraft by residents.

Services

Transportation

CBB derives the credit entries for freight from enterprise surveys. The debit entries for freight are estimated as 10 percent of imports c.i.f. and are assumed to represent services provided by nonresident carriers. The debit entries for passenger services, which represent sea and air fares paid by Barbadians to nonresident carriers, are estimated from survey forms returned by nonresident carriers. The credit entries cover receipts of domestic carriers for similar services. The port and airport authorities provide data on other transport services.

Travel

CBB obtains these estimates from BSS estimates. The BSS obtains values representing travelers' expenditures from information derived from surveys of travelers on the length of stay and type of accommodation. The compilers apply estimated average daily expenditures to the number of visitors recorded. For the debit entries, the CBB compilers supplement the data with exchange record information.

The credit entries on business travel include expenditures by foreign seasonal workers in Barbados, and the debit entries include expenditures abroad by resident seasonal workers. The Ministry of Labor provides these data.

In the case of personal travel, compilers classify the data by purpose of travel into health, education, and other. Compilers base credit estimates for students and health-related travelers on a survey of colleges and hospitals; they base debit entries on exchange record data.

Other services

CBB obtains most of the data for the various services listed below from surveys carried out by its Statistics

Section of the Research Department between March and May of each year.

Communications. These data, derived from CBB surveys, cover international settlements related to postal, telegraph, telephone, and satellite services.

Construction. These data, also derived from CBB surveys, include short-term services on construction performed abroad by resident enterprises or in Barbados by nonresident enterprises.

Insurance. This item includes the provision of life insurance and pension funds to nonresidents by resident insurance companies and to residents by nonresident insurance companies. It also covers freight insurance, nonlife insurance, and services provided for reinsurance. Other than freight insurance on imports, estimated as 1 percent of imports c.i.f., these data are derived from CBB surveys. Barbados still uses the premiums less claims approach.

Management fees. CBB derives these data from its surveys, the exchange record, and commercial bank quarterly returns on income and expenditure. The entries include the share of branches in their parent company's expenses, and services obtained under management contracts.

Financial. Also derived from CBB surveys, the entries include, besides the standard international financial services, the financial service transactions of offshore companies with residents.

Computer and information. These data, derived from CBB surveys, include transactions of offshore companies with residents.

Royalties and license fees. These data are derived from CBB surveys.

Other business. These data, derived from CBB surveys, comprise merchanting and other trade-related services, operational leasing, and miscellaneous business, professional, and technical services. The credit entries on other trade-related services cover the cost of services rendered by Barbadian agencies (including branches that are treated as agencies) to their overseas principals. The debit entries cover the cost of services rendered to Barbadian residents by foreign agencies. No information on merchanting is available.

Personal, cultural, and recreational. These data are derived from CBB surveys.

Government, n.i.e. These entries are based on data supplied by embassies, other agencies of foreign governments, international organizations located in Barbados, and the Ministry of Finance.

Income

Investment income

Direct investment. CBB compiles these data from its surveys. The credit entries include reinvested earnings on direct investment abroad and income received from overseas affiliated companies of Barbadian parent companies. The debit entries cover reinvested earnings on direct investment in Barbados and income accruing to head offices abroad from their affiliated companies in Barbados.

Portfolio investment. These data are compiled from CBB surveys.

Other investment. CBB derives these data from its surveys, the record of exchange transactions, and government records.

Current transfers

No distinction is made in the available data between current transfers and capital transfers.

General government

CBB derives these data from its surveys and from data supplied by the Ministry of Finance.

Other sectors

CBB obtains the data from the Ministry of Labor, the Barbados Post Office, and the record of exchange transactions.

Capital Account

Capital transfers

As indicated above under current transfers, it is not yet possible to break down unrequited transfers into current transfers and capital transfers.

Financial Account

Direct investment

These data, derived from CBB surveys, include an offsetting equity investment entry corresponding to the undistributed earnings recorded under investment income in the current account.

Portfolio investment

These data are derived from CBB surveys.

Other investment

CBB derives government-transaction data under this category from its own records and the records of the Accountant General and the Ministry of Finance. Some data are adjusted to convert them to a calendar year

basis. CBB also obtains data corresponding to transactions of the monetary authorities from its own accounting records.

CBB derives the data on transactions of the banking sector from the questionnaire "Statement of External Assets and Liabilities," submitted monthly by the commercial banks to the CBB. It derives the data corresponding to other sectors from its surveys.

Reserve assets

These data cover changes in the CBB's foreign exchange holdings, sinking-fund assets set aside by the government for future repayments on domestic liabilities, other foreign exchange holdings of the government, and foreign assets of the commercial banks excluding loans and deposits of nonresidents. The commercial banks' foreign assets are deemed to be under the control of the monetary authorities and available for balance of payments purposes.

The sinking-fund assets of the government comprise money market securities issued or guaranteed by foreign governments. The other foreign reserve assets of the government include balances in the Foreign Exchange General Account, foreign investments of the public sector, and miscellaneous funds.

Belarus

The following text was confirmed as current in 2004.

I. General

The National Bank of Belarus (NBB) has the overall responsibility for collecting and compiling data on the balance of payments and international investment position.

The main sources of data for compiling the balance of payments are (1) the international transactions reporting system (ITRS), including the banking system, which is under the responsibility of NBB; (2) reports of the Ministry of Statistics and Analysis (MSA); and (3) other official sources of information such as the Ministry of Finance, Ministry for Foreign Affairs, and State Customs Committee (SCC). NBB compiles the statistics for the balance of payments in accordance with the *BPM5* standard classification.

The ITRS records the gross movements (credits and debits) on the bank accounts by the detailed balance of payments components. Transactions are reported in the original currency, in aggregated and coded form in accordance with the *BPM5* standard classification. The NBB converts those data in non-U.S. dollars into U.S.

dollar equivalents using monthly appropriate exchange rates.

MSA collects monthly enterprise surveys of international transactions in goods with Russia. Using standard forms, official sources send information quarterly about the government's external debt and its service, and the maintenance of embassies abroad.

The first year for which the balance of payments of the Republic of Belarus was compiled in accordance with international standards was 1992. Presently, NBB compiles the balance of payments on a quarterly and annual basis according to the recommendations of the *BPM5*. The data is presented in rubles and the U.S. dollar equivalent. The balance of payments is published on the Internet, in the *Bulletin of Banking Statistics* and in the NBB information bulletin together with commentaries, supplementary tables, methodological notes, and a description of the data sources. The international investment position of the Republic of Belarus is compiled simultaneously and published together with the balance of payments.

II. Specific Items: Balance of Payments

Current Account

Goods

The main source of information about foreign trade is customs statistics on exports and imports between Belarus and other countries (except Russia), on the basis of cargo customs declarations, and between Belarus and Russia on the basis of statistical customs declarations. MSA is responsible for compiling the statistics of the balance of merchandise trade.

For balance of payments purposes, original transactions are reported at the same time in local currency and in U.S. dollars. NBB compares these data with the ITRS data and adjusts them for coverage (returned imports and exports, temporary exports and imports, and exports and imports of diplomatic establishments). It adjusts imports data from a c.i.f. to an f.o.b. basis using the debit statistics for freight.

NBB also adjusts the merchandise trade data for repairs on goods, and goods procured in ports by carriers. It has adjusted the balance of payments data for 1997–2000 for the valuation of exports and imports of goods and services at market exchange rates. In addition, it has adjusted the MSA trade data for the amounts of migrants' property. Supplementing the customs data, adjustments are made for goods taken out of the country by individuals for sale abroad, and for consumer goods and cars purchased by individuals

abroad for sale in Belarus ("shuttle trade"), which are not included in the customs trade statistics.

Services

Transportation

The main sources of information for freight and transport services are banking reports and the MSA surveys of transport companies.

Travel

The main sources of data are (1) the MSA surveys of hotels and tourist companies, (2) the Frontier Troops State Committee for information on the number of foreign visitors and residents of the Republic of Belarus who enter and leave the country, and (3) other official sources of information such as the Ministry of Finance and the State Customs Committee.

The NBB estimates travel services on the basis of estimated average per diem expenditures, the number of residents traveling abroad and nonresidents traveling in the Republic of Belarus, and the estimated duration of their stay. The Frontier Troops State Committee provides data on the number of travelers, country of origin (for inward travelers), country of destination (for outward travelers), and types of travel (private, business, tourism, transit, etc.).

Travel debits include the estimated value of vehicles imported by resident individuals of the Republic of Belarus for noncommercial use. The SCC registers the number of vehicles and provides data on the aggregate value of vehicles brought into the country by natural persons.

Other services

The NBB obtains data for these transactions from monthly banking surveys and the MSA quarterly surveys, where all types of services are coded in accordance with the *BPM5* classification.

For government services, such as money transfers to Belarusian embassies abroad, NBB obtains the information from the Ministry for Foreign Affairs.

Income

Compensation of employees

NBB produces estimates in line with the *BPM5* methodology.

Investment income

Interest income is recorded on an accrual basis. The main sources of these data are banking reports and data obtained from the Ministry of Finance based on the records of the debt liabilities of general government. Data on investment income from direct investment, including reinvested earnings, are obtained from a quarterly MSA survey of direct investment enterprises. Infor-

mation on long- and short-term loan interest income of nonbanking sectors of the economy is obtained from the monthly enterprise reports sent directly to the NBB.

Current transfers

General government

The NBB obtains data on current transfers in kind from the SCC. It obtains data on receipts and payments related to general government transfers in cash from the banking surveys.

Other sectors

The NBB obtains information for these items from banking surveys, supplemented by data on workers' remittances based on MSA surveys on labor migration.

Capital Account

Capital transfers

This item includes data about migrants' transfers, which NBB estimates on the basis of information received from the MSA.

Financial Account

Direct investment

The basis for compiling this item is information that reflects both investments of residents abroad and investments of nonresidents in the economy of Belarus. Data are obtained from several sources: quarterly MSA surveys of direct investment enterprises, NBB data for contributions in the banking sector, and reports of special types of enterprises reporting directly to the NBB.

Portfolio investment

Two sources are used: (1) the ITRS is the sole source for the liabilities data and for part of the assets data and (2) the NBB's special reports on transactions involving securities issued by the NBB and general government are used as a data source for the rest of the assets data.

Other investment

Trade credit

The NBB obtains information on trade credit from the MSA reports. It supplements these data by data from reports of energy enterprises.

Loans

The Ministry of Finance provides data on long-term government external debt. The monthly reports sent to the NBB by enterprises provide information on long- and short-term loans of the nonbanking sectors of the economy. The monthly balance-sheet reports from

banks provide the assets and liabilities data for foreign loans of the banking sector.

Currency and deposits

This item consists of (1) changes in the stocks of banks' assets and liabilities obtained from the banks' monthly balance sheet reports, and (2) changes in the stocks in the accounts of the Belarusian nonbanking institutions held with banks abroad.

Reserve assets

The main source of information on changes in gross official reserves is the balance sheet of the NBB adjusted for valuation changes. This item reflects changes in the monetary gold, convertible currencies, SDRs, the reserve position in the Fund, and other assets that are under the control of the monetary authorities.

III. Specific Items: International Investment Position

The IIP is compiled on a quarterly and annual basis according to the recommendations of the *BPM5*. The classification of external assets and liabilities included in the IIP is consistent with that used in the financial account of the balance of payments. Sources of information for the IIP data are the same as those used for the compilation of the financial account of the balance of payments.

Belgium

The following text was confirmed as current in 2004.

I. General

A consolidated balance of payments statement for the Belgium-Luxembourg Economic Union (BLEU) was prepared until December 31, 2001. From January 1, 2002, Belgium and Luxembourg prepare separate balance of payments statements. Ad hoc legislation has transferred the responsibility of the balance of payments data collection from the Belgian Luxembourg Exchange Institute (BLEI) to the National Bank of Belgium (NBB). Therefore, the NBB is responsible for compiling and publishing balance of payments data of Belgium from 2002 onwards.

The system is very similar to the former one with some adjustments in the field of the reporting threshold and the procedures for reporting of the banking sector.

Within the framework of the BLEU and the monetary association of both countries, which was integrated into the European Monetary Union on January 1, 1999, a complete balance of payments presentation was established only for the BLEU, considered as a sole entity vis-à-vis the

rest of the world. However, in accordance with the European Monetary Union established under the Maastricht Treaty, separate presentations of Belgium's and Luxembourg's current account transactions have been drawn up since 1995. A complete balance of payments for Belgium is available only as from January 1, 2002. The international investment position statement covers only the foreign assets and liabilities of residents of Belgium.

Beginning in January 1995, the methodology used to compile the BLEU balance of payments is essentially the methodology set forth in the *BPM5*; exceptions are noted below. Data for earlier periods were compiled using earlier versions of the methodology; these were converted to the format used in the *BPM5*.

The major source for compiling the Belgian balance of payments is an international transactions reporting system (ITRS). The NBB is responsible for compiling and publishing the balance of payments of Belgium.

The Belgian system is based on the communication of all individual payments between a resident and a non-resident, further referred to as the "general data collection system." The responsibility for reporting rests with the residents. The reporting procedure distinguishes between payments made through domestic banks and payments made outside the domestic banking sector. When a resident makes an international payment through a domestic bank, the resident provides the required information to the intervening bank via a detailed declaration on the economic nature of the underlying transaction. The bank reports these transactions, as well as international transactions made for its own account, to the NBB by using transaction codes defined by the NBB. These payments correspond to changes in the correspondent accounts of the domestic bank (*nos-tri* accounts) or in the accounts held by nonresidents with the domestic bank (*lori* and *vostr* accounts). Each transaction report indicates the counterpart country of the payer or the payee.

When a resident settles transactions outside the domestic banking sector, the resident must report all necessary information directly to the NBB. This procedure applies to transactions settled through accounts held by a resident with a bank located abroad, to international netting arrangements (whether bilateral or multilateral), and to intercompany current accounts. The information provided directly by the resident is identical to that reported by the banks.

In addition to the above procedures, some major enterprises report all their transactions directly to the NBB, whether intermediated through resident or nonresident banks. Whereas the banks prepare and transmit the reports daily, the enterprises that directly provide reports return them monthly.

Apart from some reports on netted transactions and on intercompany accounts (which use a reference currency in their reporting), both types of reports are denominated in the original currency of the payment or transaction. Conversions into euros (EUR) are made by using the monthly average exchange rate for the most commonly used currencies and the end-of-month rate for other currencies.

From September 2001, foreign trade statistics are used for compiling transactions in goods. Data for the period 1995–2000 have been revised accordingly. The NBB obtains trade credits and liabilities from a survey of a representative sample of domestic enterprises it conducts monthly, including a limited breakdown by country and by currency. The results of the survey allow the derivation of the corresponding components for trade credits in the financial account. For transactions in services, the NBB considers the time of settlement a proxy for the time the services are delivered. Since 1996, a survey on foreign direct investment has been conducted annually. The results are used to improve the corresponding items in the balance of payments.

The NBB compiles the Belgian balance of payments monthly and publishes these data in its quarterly *Statistical Bulletin*; the detail corresponds to the standard components of the *BPM5* for current account transactions but is more limited for the financial account. The NBB also provides these monthly data to the European Central Bank, the Statistical Office of the European Commission (Eurostat), and the OECD. It provides a detailed set of quarterly and annual data to the IMF.

II. Specific Items: Balance of Payments

Current Account

Goods

In accordance with *BPM5*, NBB compiles data for general merchandise, goods for processing, repair of goods, goods procured in ports by carriers, and nonmonetary gold. From September 2001 onward, foreign trade statistics are the main source for the goods component of the balance of payments (data have been revised since 1995). Trade statistics are adjusted with information collected via the ITRS to adapt them to *BPM5*. No estimates are made in the event of missing data. No valuation of imports is done on an f.o.b. basis, and no reallocation is made to transportation and insurance.

Services

Transportation

Source data distinguish the means of transportation (sea, air, and other transport) and provide, within each cate-

gory, a breakdown into passenger, freight, and other transport services. A further breakdown of transportation by five supplementary types is available. Receipts and expenditure for freight transport cover only that part of freight costs identified as such by reporting banks and enterprises. Since no c.i.f./f.o.b. conversion of goods is undertaken, part of these costs is included in general merchandise (see *Goods*).

Travel

Sources include data related to the use of credit cards. Some adjustments are made to consider the impact of border workers.

Other services

Construction. Depending on the reporting by banks, part of the goods imported by the enterprise for use in construction projects is included under *Goods*, rather than in the value of construction services. The same is true for expenditures for local supplies. The present reporting system does not separately identify goods for construction supplied to the building site in the host country from the contractor's country or from third countries.

Insurance. NBB records separate data for life insurance, freight insurance, other insurance, reinsurance, and auxiliary services. It collects separate gross premiums received and gross claims paid. It estimates service charges and includes them in insurance services, whereas it records the rest of the premiums and claims in current transfers or in the financial account (for life insurance) in conformity with *BPM5*.

Receipts and expenditures concerning freight insurance contain only that part of freight insurance that reporting banks and enterprises report separately. Since no c.i.f./f.o.b. conversion of goods is undertaken, part of those costs is included in general merchandise (see *Goods*).

Financial. Additional estimates are made to include administration fees, concerning units of collective investment of the capitalization type, that are not paid or received explicitly but are included in the price of the securities.

Merchanting. This item does not exclude goods purchased and not resold in the same period, so there is no recording of net proceeds from merchanting from completed deals only.

Income

Compensation of employees

NBB uses social security data as a supplementary source to substitute gross figures (including social security transfers) for net figures (salaries paid or received).

Investment income

NBB calculates investment income flows on the basis of the international investment position (IIP) stocks. To do so, it selects an average rate of return for the major components of the IIP on a yearly basis, except for the short-term instruments where it applies a quarterly update of the return. It applies these rates of return to the corresponding IIP figures of the previous year. If IIP data for the previous year are not available, it calculates the income flows on the basis of the second to last year (adjusted for the impact of the balance of payments of the previous year).

A breakdown by subcomponent is available for the main items: direct, portfolio, and other investment. From September 2001, reinvested earnings have been estimated and included in the balance of payments data (data have been prepared from 1995).

Capital Account

Acquisition/disposal of nonproduced, nonfinancial assets

The general data collection system distinguishes these transactions from those considered to be patents and license fees, part of the current account, by use of appropriate transaction codes.

Financial Account

Direct investment

NBB collects the direct investment transactions via the general data collection system, meaning that although the definition of the concept conforms to the prescriptions of the *BPM5*, the Bank cannot apply the directional principle. The Bank uses the asset/liability principle to qualify the direction of the investment—it considers an outgoing flow (foreign equity capital, loans granted) an investment abroad; it considers an incoming flow (domestic equity capital, loans received) an investment in Belgium.

Trade credits and debt securities between affiliated enterprises are registered but are not included in direct investment (they are classified as portfolio investment and other investment, respectively). NBB verifies basic data on direct investment transactions with other sources to eliminate transactions that should be classified as portfolio investment or other investment. It also compares the direct investment transactions against the results of the yearly direct investment survey and updates them accordingly.

For direct investment transactions that are not settled via financial flows, NBB obtains data from information published by the enterprises according to legal provisions and from the Supervisory Institution for Financial Markets.

Reinvested earnings are estimated yearly on the basis of various sources available to the NBB—among others, the structural survey and the survey of direct investment, both of which are annual surveys covering a different sample of enterprises. The procedure aims to fix the rate of reinvested earnings to be applied to the total figure for direct investment. This procedure has been applied since September 2001, and data from 1995 have been prepared.

Portfolio investment

NBB derives data on portfolio investment transactions undertaken by banks from statements of assets and liabilities in various currencies reported by the banks monthly. NBB subtracts these data from the figures globally registered for the private sector as portfolio investment via the general data collection system to provide a breakdown between banks and other (private) sectors. Using a similar procedure for the general government sector, NBB uses external sources with a lower frequency.

Financial derivatives

The data collection system provides information on options and other financial derivatives (forwards, futures, swaps). For options, a supplementary breakdown is available to distinguish assets from liabilities on the basis of the residency of the issuer of the option. For the other instruments, NBB makes the distinction on the basis of the net balance of the transactions.

Other investment

Trade credits

NBB bases estimates for trade credits on a specific survey of a representative sample of enterprises. No distinction is made between long- and short-term trade credits. This item neither identifies nor includes trade credits between related enterprises.

Loans

NBB obtains data on short-term bank loans from the assets and liabilities statements reported monthly by the banks. It subtracts these data from the figures globally registered for the private sector via the general data currency collection system to provide a breakdown between banks and other (private) sectors.

Currency and deposits

NBB compiles data on bank deposits (short- and long-term) from the assets and liabilities statements that the banks report monthly.

Reserve assets

NBB obtains transactions data from its accounting statements.

III. Specific Items: International Investment Position

The IIP covers only the foreign assets and liabilities of Belgian residents. NBB compiles the IIP using data on both stocks and flows. The sources for the stock data are the balance sheet of the NBB, data reported by the Ministry of Finance, and statistics on the banks' assets and liabilities. Stock data that the NBB obtains from the banking sector include portfolio investment (equities, long-term debt instruments, and money market instruments) and other investment (short- and long-term loans and deposits). Stock data that the NBB obtains from the general government include portfolio investment (government bonds) and other investment, while stock data from the monetary authorities include reserve assets and other assets.

For direct investment of the banking sector, and all IIP components of the other sectors, the NBB cumulates the relevant balance of payments flows. Adjustments are made for changes in exchange rates and, in the cases of portfolio equity investment and direct equity investment, for changes in prices, using stock exchange indices. The Bank applies price changes to equity capital and shares, using specific stock exchange indices for the main currencies. It applies different procedures to quoted and unquoted shares. For real-estate investment, the Bank makes a price adjustment by reference to a domestic index of real estate prices. It calculates exchange rate changes using the end-of-year rate by currency, so that the stocks for the previous years are estimated at current rates.

NBB computes transactions using the monthly average rate for the month of registration. The Bank bases the valuation of portfolio investment on the book value for the banking sector, the nominal value for the general government, and a proxy to the market value for other sectors. For the banking sector, it adjusts equities to a proxy of the market value by applying a stock market index valuation rate. For all other items, it applies the valuation to the registered accumulated flows.

Belgium-Luxembourg

I. General

A consolidated balance of payments statement for the Belgium-Luxembourg Economic Union (BLEU) as a whole was prepared until December 31, 2001. The reason for this was that since 1921 Belgium and Luxembourg had together constituted an economic union and

that the Luxembourg currency was linked to the Belgian currency.

In 1995, separate statements had to be prepared and disseminated for each country's current account, in accordance with the provisions of the Treaty of Maastricht, whereas the capital account and the financial transactions account were compiled globally. Since January 1, 2002, Belgium and Luxembourg prepare separate complete balance of payments statements.

For Belgium, ad hoc legislation transferred the responsibility of the balance of payments data collection from the Belgian Luxembourg Exchange Institute (BLEI) to the National Bank of Belgium (NBB). In the case of Luxembourg, the national legislation was amended to endow the Banque centrale du Luxembourg (BCL) and the national statistical agency, the Service Central de la Statistique et des Etudes économiques (STATEC), with a joint responsibility in compiling and disseminating the Luxembourg balance of payments statistics (see notes for Belgium and Luxembourg in the present volume).

All the following information pertains to the common balance of payments statement prepared and disseminated until 2002 for Belgium-Luxembourg as a single entity.

Within the framework of the BLEU and the monetary association of both countries, which was integrated into the European Monetary Union on January 1, 1999, a complete balance of payments presentation was established only for the BLEU, considered as a sole entity vis-à-vis the rest of the world. However, in accordance with the European Monetary Union established under the Maastricht Treaty, separate presentations of Belgium's and Luxembourg's current account transactions have been drawn up since 1995. There is no international investment position (IIP) statement for both Belgium and Luxembourg; the IIP for BLEU covers only the foreign assets and liabilities of residents of Belgium.

Beginning in January 1995, the methodology used to compile the BLEU balance of payments is essentially the methodology set forth in the *BPM5*; exceptions are noted below. Data for earlier periods were compiled using earlier versions of the methodology; these were converted to the format used in the *BPM5*.

The major source for compiling the BLEU balance of payments is an international transactions reporting system (ITRS) managed by an autonomous institution, the BLEI, which collects data on international payments. The NBB is responsible for compiling and publishing the balance of payments of the BLEU and of Belgium.

The BLEU system is based on the communication of all individual payments between a resident and a nonresident, further referred to as the "general data collection

system." The responsibility for reporting rests with the residents. The reporting procedure draws a distinction between payments made through domestic banks and payments made outside the domestic banking sector. When an international payment is made through a domestic bank, the resident provides the required information to the intervening bank via a detailed declaration on the economic nature of the underlying transaction. The bank reports these transactions, as well as international transactions made for its own account, to the BLEI by using transaction codes defined by the BLEI. These payments correspond to changes in the correspondent accounts of the domestic bank (*nostri* accounts) or in the accounts held by nonresidents with the domestic bank (*lori* and *vostri* accounts). Each transaction report indicates the counterpart country of the payer or the payee.

When transactions are settled outside the domestic banking sector, the resident must report all necessary information directly to the BLEI. This procedure applies to transactions settled through accounts held by a resident with a bank located abroad, to international netting arrangements (whether bilateral or multilateral), and to intercompany current accounts. The information provided directly by the resident is identical to that reported by the banks.

In addition to the above procedures, some major enterprises report all their transactions directly to the BLEI, whether intermediated through resident or non-resident banks.

Reports provided by the banks are prepared and transmitted on a daily basis, whereas those provided directly by enterprises are returned on a monthly basis. Apart from some reports on netted transactions and on intercompany accounts (which use a reference currency in their reporting), both types of reports are denominated in the original currency of the payment or transaction. Conversions into Belgian francs were made by using the monthly average exchange rate for the most commonly used currencies and the end-of-month rate for other currencies.

From September 2001, foreign trade statistics are used for compiling transactions in goods. Trade credits and liabilities are obtained from a survey of a representative sample of domestic enterprises conducted monthly, including a limited breakdown by country and by currency. The results of the survey allow the derivation of the corresponding components for trade credits in the financial account. For transactions in services, the time of settlement is considered a proxy for the time the services are delivered. Since 1996, a survey on foreign direct investment has been conducted annually. The results are used to improve the corresponding items in the balance of payments.

BLEU monthly balance of payments statements were published in the quarterly *Statistical Bulletin* of the NBB and provided to the European Central Bank, the Statistical Office of the European Commission (Eurostat), and the OECD. A detailed set of quarterly and annual data was provided to the IMF. Since January 1, 2002, only separate monthly statements are provided to the above-mentioned institutions.

II. Specific Items: Balance of Payments

Current Account

Goods

In accordance with *BPM5*, data are compiled for general merchandise, goods for processing, repair of goods, goods procured in ports by carriers, and nonmonetary gold. From September 2001, foreign trade statistics are the main source for the goods component of the balance of payments (data have been revised since 1995). Trade statistics are adjusted with information collected via the ITRS to adapt them to *BPM5*. No estimates are made in the event of missing data. There is no valuation of imports on an f.o.b. basis, and there is no reallocation to transportation and insurance.

Services

Transportation

Source data distinguish the means of transportation (sea, air, and other transport) and provide, within each category, a breakdown into passenger, freight, and other transport services. A further breakdown of transportation by five supplementary types is available. Receipts and expenditure for freight transport cover only that part of freight costs identified as such by reporting banks and enterprises. Since no c.i.f./f.o.b. conversion of goods is undertaken, part of these costs is included in general merchandise (see Goods).

Travel

Sources used in compiling the travel item include sales and purchases of foreign currency by residents, and of francs by nonresidents. These transactions are measured by physical flows of banknotes between domestic and foreign banks or by drawing or paying-in of banknotes by a nonresident from, or into, an account with a domestic bank. A part of these transactions is considered to be receipts and expenditures for travel purposes.

Another source of information on travel is data related to the use of credit cards. However, this source does not distinguish between business travel and personal travel. Some adjustments are made to take into account the impact of border workers.

Other services

Construction. Depending on the reporting by banks, part of the goods imported by the enterprise for use in construction projects is included under Goods, rather than in the value of construction services. The same is true for expenditures for local supplies. The present reporting system does not separately identify goods for construction supplied to the building site in the host country from the contractor's country or from third countries.

Insurance. Data are recorded separately for life insurance, freight insurance, other insurance, reinsurance, and auxiliary services. Gross premiums received and gross claims paid are collected separately. Service charges are estimated and included in insurance services, whereas the rest of the premiums and claims are recorded in current transfers or in the financial account (for life insurance) in conformity with *BPM5*. Receipts and expenditures concerning freight insurance contain only that part of freight insurance that reporting banks and enterprises report separately. Since no c.i.f./f.o.b. conversion of goods is undertaken, part of those costs is included in general merchandise (see Goods).

Financial. Additional estimates are made to include administration fees, concerning units of collective investment of the capitalization type, that are not paid or received explicitly but are included in the price of the securities.

Merchanting. This item does not exclude goods purchased and not resold in the same period, so there is no recording of net proceeds from merchanting from completed deals only.

Income

Compensation of employees

Social security data are used as a supplementary source to substitute gross figures (including social security transfers) for net figures (salaries paid or received).

Investment income

Investment income flows are calculated on the basis of the IIP stocks. An average rate of return for the major components of the IIP is selected on a yearly basis, except for the short-term instruments where a quarterly update of the return is applied. These rates of return are applied to the corresponding IIP figures of the previous year. If IIP data for the previous year are not available, the income flows are calculated on the basis of the second to last year (adjusted for the impact of the balance of payments of the previous year).

A breakdown by subcomponent is available for the main items: direct, portfolio, and other investment. From September 2001, reinvested earnings have been estimated and included in the balance of payments data (data have been prepared from 1995).

Capital Account

Capital transfers

Debt forgiveness. No information on this item is collected.

Acquisition/disposal of nonproduced, nonfinancial assets

The general data collection system distinguishes these transactions from those considered to be patents and license fees, part of the current account, by use of appropriate transaction codes.

Financial Account

Direct investment

The direct investment transactions are collected via the general data collection system, meaning that although the definition of the concept conforms to the prescriptions of the *BPM5*, the directional principle cannot be applied. The asset/liability principle is used to qualify the direction of the investment—an outgoing flow (foreign equity capital, loans granted) is considered an investment abroad; an incoming flow (domestic equity capital, loans received), an investment in the BLEU.

Trade credits and debt securities between affiliated enterprises are registered but are not included in direct investment (they are classified as portfolio investment and other investment, respectively). Basic data on direct investment transactions are verified with other sources to eliminate transactions that should be classified as portfolio investment or other investment. The direct investment transactions are also compared against the results of the yearly direct investment survey and upgraded accordingly. Data for direct investment transactions that are not settled via financial flows are obtained from information published by the enterprises according to legal provisions and from the Supervisory Institution for Financial Markets.

Reinvested earnings are estimated yearly on the basis of various sources available to the NBB—among others, the *structural survey* and the *survey of direct investment*, both of which are annual surveys covering a different sample of enterprises. The procedure aims to fix the rate of reinvested earnings to be applied to the total figure for direct investment. This procedure has been applied since September 2001, and data from 1995 have been prepared.

Portfolio investment

Data on portfolio investment transactions undertaken by banks are derived from statements of assets and liabilities in various currencies reported by the banks on a monthly basis. These data are subtracted from the figures globally registered for the private sector as portfolio investment via the general data collection system to

provide a breakdown between banks and other (private) sectors. A similar procedure is used for the general government sector where external sources with a lower frequency are used.

Financial derivatives

The data collection system provides information on options and other financial derivatives (forwards, futures, swaps). For options, a supplementary breakdown is available to distinguish assets from liabilities on the basis of the residency of the issuer of the option. For the other instruments, the distinction is made on the basis of the net balance of the transactions.

Other investment

Trade credits

Estimates for trade credits are based on a specific survey of a representative sample of enterprises. No distinction is made between long- and short-term trade credits. Trade credits between related enterprises are not identified nor included in this item.

Loans

Data on short-term bank loans are obtained from the assets and liabilities statements reported monthly by the banks. These data are subtracted from the figures globally registered for the private sector via the general data currency collection system to provide a breakdown between banks and other (private) sectors.

Currency and deposits

Data on bank deposits (short- and long-term) are compiled from the assets and liabilities statements reported monthly by the banks.

Reserve assets

Transactions data are obtained from the accounting statements of the NBB.

Belize

The following text was confirmed as current in 2004.

I. General

The Research Department of the Central Bank of Belize (CBB) compiles Belize's balance of payments on a quarterly basis. Annual balance of payments statistics are derived as the sum of the four quarters of a calendar year. Data for the estimates are collected from several public and private sector institutions. The most prominent among these are the Central Statistical Office (CSO), the

Ministry of Finance, the five commercial banks, non-governmental organizations, Belize Tourism Board, foreign embassies, and the central bank itself. Beginning in 1999, the compilation of Belize's balance of payments is based on the *BPM5*. The previous years' compilations were based on *BPM4*.

Each year, the CBB Research Department's Balance of Payments Unit conducts a survey of resident enterprises. The primary objective of this survey is to collect data on the international flows of funds to and from these organizations during the year. In addition, tourist expenditure surveys are conducted regularly to update estimates of tourist expenditures in Belize; these transactions have become a significant component of the services section of the current account.

Belize's balance of payments data are published in millions of Belize dollars and are published in the CBB's *Annual Report and Accounts*, *Quarterly Review*, and *Statistical Digest*. The United States is Belize's largest trading partner, and the Belize dollar is pegged to the U.S. dollar at a rate of BZ\$2.00 to US\$1.00.

II. Specific Items: Balance of Payments

Current Account

Goods

Merchandise trade statistics are obtained from the CSO on a monthly basis. Starting in 2003, the CSO began using the ASYCUDA (Automated System for Customs Data) to compile trade data including gross imports, retained imports, transshipments, re-exports, and domestic exports—as keyed in by the Customs and Excise Department. The trade data series were revised back to 2000.

Transshipments and re-exports are important elements of Belize's international trading activities, primarily because of the country's proximity to inland areas of Mexico and Guatemala. Therefore, a significant portion of goods crossing Belize's frontiers is further conveyed to these countries, and a large portion of imports is temporarily stored in Belize in bonded warehouses. Any relevant duties and/or fees are assessed when these goods are removed, either to be re-exported or to be consumed domestically. The goods are then appropriately classified as re-exports or retained imports. The re-exports are captured in the export numbers.

A commercial-free zone (CFZ) area at the border with Mexico began retailing activities in 1996, but the trade volumes have only become significant since 1999. Because the CFZ is outside the national customs area, Customs does not keep detailed statistics on imports into and exports out of the CFZ. It treats any imports

entering Belize consigned to the CFZ as a transshipment. Some records are maintained on the bulk re-export of goods from the CFZ to third countries, but inadequate records exist for retail sales to nonresident customers who visit the zone. However, an estimate of gross sales in the CFZ is made based on CFZ gross imports plus a markup.

Adjustments for timing are made to the Customs export figures where citrus is shipped out but sold in another reporting period.

Whereas the CSO compiles export data on an f.o.b. basis, it records imports on a c.i.f. basis. To convert the value of imports to an f.o.b. basis, the CBB assumes that 1 percent of the c.i.f. value relates to insurance and 6.5 percent to freight. These amounts are deducted from the c.i.f. values to estimate the f.o.b. value for imports.

The merchandise trade data also include the value of goods passing through the parcel post, as well as electricity imports from Mexico. Data on bunker fuel are obtained from oil companies, either on request or through annual surveys of these firms.

Services

Transportation

Since Belize has no shipping lines or international airline, credit entries contain only revenues collected from foreign carriers. These data are collected from annual surveys of the Airport and Port Authorities. The debit entries reflect the 6.5 percent of c.i.f. imports estimated for freight costs under sea transport, and resident payments to foreign airlines for air fares recorded in exchange control records. The Airport Authority and the Port Authority provide data on other transportation services. The shipping and airline companies also provide data on mail fees and other port disbursements, and resident airline agents supply data on passenger fares paid to foreign carriers. Branches of foreign airlines are treated as resident companies, and all remittances to the head office are recorded as profits under factor income.

Travel

Travel credits are derived by estimating expenditures of four main categories of nonresidents—seasonal and border workers, students, cruise ship passengers, and stay-over tourists. Expenditures by seasonal and border workers are estimated at 50 percent of income earned. Expenditures by foreign students are estimated based on the annual survey of colleges and other educational institutions. Expenditures by cruise ship passengers are estimated by multiplying the number of cruise ship passengers disembarking by an average expenditure figure obtained from an expenditure survey. Expenditures for stay-over visitors are estimated by multiplying the number of bona fide stay-over visitors—further disaggre-

gated into business, nonbusiness visitors, and nonbusiness Belizean-Americans—by their average length of stay and average daily expenditure.

Owing to the large numbers of people who move daily between Belize and Guatemala and between Belize and Mexico, it is necessary to adjust the number of arrivals through these two land borders. Certain ratios are used to estimate the actual number of these stay-over visitors. The number of arrivals at the international airport is adjusted for in-transit travelers and nonresident Belizeans who are on a visit to Belize, but enter the country using their Belizean passports and are, thus, recorded by the Immigration officials as resident Belizeans. The average length of stay and average daily expenditure are derived from expenditure surveys conducted regularly by the CBB.

Travel debits are taken from the CBB's exchange records, which provide a comprehensive breakdown of the funds spent abroad for business and other categories of travel. Resident nonbusiness travel is supplemented by estimates of credit card expenditure abroad. Data on official travel debits are obtained from the Accountant General's contract notes, which record payments made by the CBB on behalf of the government.

Other services

Data on flows to and from embassies in Belize are obtained from their responses to the annual surveys, as well as the foreign exchange records of the commercial banks, contract notes, fiscal records, and other government revenue and expenditure estimates. Inflows to sustain military units operating locally are taken from exchange records submitted to the CBB by the commercial banks. Taxes collected by the government from transshipped goods are entered as credit items from the in-transit trade.

Entries for Belize's military expenditures abroad are taken from the Belize Defense Force's responses to an annual survey. For the government, data on professional services, scholarships and training, and other goods and services are taken from the Accountant General's contract notes, which record international payments made on behalf of the government. Merchandise insurance is estimated as 1 percent of the c.i.f. value of imports.

Other services (credit) include inflows to international and regional organizations obtained from commercial banks' exchange records. Data on communications are reported by the Belize Telecommunications Limited and the Post Office in annual surveys. Other business services, including professional and management services and nonmerchandise insurance, are sourced from the central bank's exchange control records.

Receipts from in-transit trade, representing income received by private companies involved in the re-export business and commissions paid by foreign companies to residents, are derived from information furnished by shipping, airline, and insurance agencies in annual surveys. Data for the other services are derived from the CBB's exchange control records.

Income

Compensation of employees

Credit entries for compensation of employees are estimates of wages paid to residents who work for embassies, and international and regional organizations located in Belize. The credit item assumes that approximately 50 percent of wages earned by nonresidents working in Belize are spent in Belize. Debits consist of an estimate of wages paid to seasonal and border workers in Belize. Most migrant workers in Belize are in the agricultural sector, particularly in the banana, citrus, and sugar industries. The debit item is an estimate originally based on surveys of agricultural companies that hire foreign workers. The survey data are used in conjunction with current information received from the Immigration and Labor Departments.

Investment income

Data on private investment income (credit) represent income earned by the commercial banks operating in Belize on their foreign holdings, as reported by the commercial banks. The entry for public sector investment income (credit) represents earnings by the central government and the central bank on their investments abroad, as reported by these entities. Debit items for private sector investment income include interest and dividend payments to nonresidents abroad, as shown in the exchange records. The branches of foreign airlines in Belize are treated as resident enterprises that transfer profits to headquarters. Information on the public sector's external interest payments is obtained from the Commonwealth Secretariat's Debt Recording and Management System (CS-DRMS), housed in the Research Department of the CBB.

Current transfers

Current transfers cover grant receipts, private remittances, and the receipts of nonprofit organizations. Capital transfers are the transfer of ownership of a fixed asset or the forgiveness of a liability.

General government

Estimates for grant receipts are based on data gathered from the fiscal accounts of the government. The information source for the debit entries is government payments abroad, recorded in the Accountant General's contract notes.

Other sectors

Credit and debit entries on workers' remittances are derived from the commercial banks' foreign exchange returns and from reports submitted to the central bank by a large, private money-transfer service company. Debit entries also include remittances made through the post office, as reported by the postal service in an annual survey. However, a significant portion of inflows (credits) in the form of money orders and drafts are not accounted for, because a large number of these instruments do not pass through the formal financial system. Receipts for insurance claims are also derived from the commercial banks' exchange returns. Data on receipts of nonprofit organizations are obtained by surveying these enterprises. This source is supplemented with data contained in the commercial banks' foreign returns submitted to the CBB.

Capital Account

Capital transfers

Information is obtained from government debt records for debt forgiveness. Data on migrant transfers are collected from the CSO and the exchange records of the CBB.

Financial Account

Other investment

The CS-DRMS provides data on the public sector's drawings on and repayments of external loans. Capital subscriptions and other debit and credit items are obtained from the Accountant General's contract notes.

Private sector financial account transactions are compiled from estimates based on several official and unofficial sources. Official sources include the CBB's exchange records, which contain information on foreign investment in local enterprises by foreigners, portfolio investment, loan drawings and repayments, repatriation of funds, and investment in real estate. Unofficial sources include compilers' estimates. Before 1994, financial inflows to purchase shares and/or debentures in the telephone and electricity companies comprised most of the credit item for portfolio investment. Data on portfolio investments are obtained from the CS-DRMS and government contracts. Commercial bank returns provide data on changes in the banks' foreign assets and liabilities.

Reserve assets

Data on Belize's official international reserves are taken from records of the CBB and the Accountant General's office; the latter reports the government's foreign exchange holdings.

Benin

I. General

The Central Bank of West African States (Banque Centrale des Etats de l'Afrique de l'Ouest-BCEAO), headquartered in Dakar, Senegal, is responsible for preparing the draft balance of payments. The draft is submitted to Benin's Balance of Payments Committee, chaired by a representative of the Minister of Finance, for approval. While the BCEAO headquarters determines the methodology and compilation procedures and collects certain primary data at a regional level, the National Agency (the branch of the BCEAO in Benin) collects the bulk of the statistical data and compiles the balance of payments.

The BCEAO compilers gather the data from several sources, primarily the BCEAO's own departments, the banks, the National Institute of Statistics and Economic Analysis (Institut National de la Statistique et de l'Analyse Economique-INSAE), ministries and other government agencies, embassies and international organizations, and surveys of industrial and commercial enterprises. Data are gathered annually mainly through questionnaires.

The annual balance of payments statistics approved by the Balance of Payments Committee are published in a brochure entitled "Balance des Paiements de la République du Bénin," which BCEAO headquarters forwards to the Fund. The balance of payments figures are shown in millions of CFA francs and have until now followed the international principles adopted in the third edition of the *Balance of Payments Manual*.

II. Specific Items: Balance of Payments

Current Account

Goods

BCEAO bases the data on official foreign trade statistics published by the INSAE. To compile these data, the INSAE uses the customs statistics provided by the General Directorate of Customs and Indirect Duties, which are derived from customs export and import declarations. Foreign currency amounts are converted into CFA francs at the exchange rates applicable on the Paris Stock Exchange, which the BCEAO forwards to Customs once a week. Imports are compiled on a c.i.f. basis; however, the official foreign trade statistics produced by the INSAE are adjusted for coverage, valuation, and time of recording.

Services

Transportation

This item covers freight and insurance relating to international shipping, other passenger transportation services (regardless of the mode of transport used), and port services. BCEAO estimates transportation services based on data gathered from the Joint Benin-Niger Railways and Transportation Organization, port authorities, shipowners and shipping agents, foreign airlines, and the Air Navigation Safety Agency.

The debit entries for freight and insurance on merchandise imports are estimated to represent 15 percent of the c.i.f. value of imports before adjustment. Since the change in parity of the CFA franc against the French franc in 1994, this rate has been increased to 17.6 percent. Apart from the freight and insurance on imported merchandise, other credit or debit entries are estimated based on data supplied by the various sources mentioned above.

Travel

BCEAO derives credit entries from surveys of hotels and travel agencies conducted by the Tourism and Hotel Business Directorate. Estimates are calculated based on the number of visitors, the number of overnight stays, and the estimated average expenditure by tourists.

Debit entries are drawn from data on pilgrimages provided by the Islamic Union of Benin, data on mission expenditures of government officials provided by the General Directorate of the Budget and Equipment, and an estimate of the holiday expenditures of technical assistants and other nonresidents.

These credit and debit entries are supplemented with the amounts obtained from the breakdown, by economic type, of exchanges of BCEAO banknotes between West African Economic and Monetary Union (WAEMU) member countries.

Other services

Insurance. The National Insurance and Reinsurance Company provides data on transactions with nonresidents. Credit entries cover direct insurance premiums, reinsurance premiums, and reinsurance claim payments received, and debit entries correspond to direct insurance claim payments, reinsurance premiums, and the various fees paid. No separate estimates for insurance on merchandise are available.

Other business. Amounts entered include commissions, management expenses and agents' fees, the rental of goods and equipment, communications services, and film rental costs.

Government, n.i.e. The data are derived from information provided by the various ministries and government departments concerned, diplomatic missions and international organizations located in Benin, the French Pay Office in Benin, and consulting firms. Credit entries include the expenditure in Benin of foreign diplomatic missions, international organizations, and aid program and technical assistance offices. Debit entries represent expenditure of Benin's diplomatic missions abroad.

Income

Investment income

Credit entries relate to statutory royalties paid, interest paid by the BCEAO on government deposits, dividends and interest on investments, and interest collected from abroad by enterprises and banks.

Debit entries include interest payable on the public and private external debt, financial costs, and interest paid abroad by enterprises and banks. Data are obtained from the agencies concerned and from reports by banks and enterprises.

Current transfers

No distinction is made in the available data between current transfers and capital transfers.

General government

Credit entries to this account correspond to taxes and fees paid by foreign sea and air shipping companies; local expenditure of the Agency for Air Traffic Safety (Agence pour la Sécurité de la Navigation Aérienne-ASECNA); intergovernmental grants, including debt forgiveness; grants from foreign private institutions to the government; and grants received under aid programs.

Debits represent mainly government contributions to the operating expenses of the international organizations to which Benin belongs. The Ministries of Finance and Planning provide the data.

Other sectors

The amounts credited to this account cover transfers from abroad of the savings of Beninese nationals; pensions of civilians and soldiers received from abroad, particularly from France by war veterans; the costs of foreign scholarships used in Benin; transfers from migrants; and grants for social projects. Data are obtained from the Post Office, commercial bank reports, and surveys of embassies.

Debit entries consist of transfers of the savings of foreign residents, estimated by the BCEAO; ASECNA revenue in Benin; and taxes and royalties paid with respect to pilgrimages to Mecca.

Capital Account

Capital transfers

As indicated above under current transfers, it is not yet possible to break down unrequited transfers into current transfers and capital transfers.

Financial Account

Other investment

For private sector foreign assets and liabilities, the Autonomous Amortization Fund (Caisse Autonome d'Amortissement–CAA) supplies data on drawings and repayments on loans owed by enterprises for government-guaranteed borrowing abroad. These data are supplemented with survey data from enterprises regarding changes in their long- and short-term foreign assets and liabilities.

The CAA provides the data on the public external debt, especially on drawings made and repayments outstanding. Other debit entries on this account relate to the payment of subscriptions to the capital of international organizations and community institutions.

Reserve assets

The data on reserve assets are obtained from the central bank's statement. They cover the reserve position in the Fund, SDR holdings, and other foreign exchange assets, particularly those in operations accounts.

Bolivia

The following text was confirmed as current in 2004.

I. General

The Balance of Payments Department of the Central Bank of Bolivia (Banco Central de Bolivia–BCB) is responsible for compiling Bolivia's balance of payments. The department depends also on the Office of the Deputy Manager for the External Sector Office of the Chief Economist, BCB.

The Balance of Payments Department obtains statistical data from various sources in addition to the BCB's own records, namely, the National Statistical Institute (INE); the National Customs Office; the Ministry of Economic Development, the Ministry of Mining and Hydrocarbons; Bolivian State Oil Fields (Yacimientos Petrolíferos Fiscales Bolivianos); the Vice Ministry of Tourism; the Superintendency of Pensions, Equity, and Insurance; the National Service of Migration; the Ministry of Labor; the banking sector; the nonbank financial sector, and the Vice Ministry of Public Investment and External Fi-

nancing. The Balance of Payments Department also surveys various private sector institutions and enterprises and international organizations to collect data on services, income, unilateral transfers, and private, nonbank financial flows.

Data are compiled in U.S. dollars. Transactions denominated in other currencies are converted to U.S. dollar equivalents, using the exchange rate prevailing at the end of the reporting period for transactions derived from the balance sheets of data providers. For other transactions, BCB uses the average exchange rate for the period.

Since 1997, the classification of accounts used in the Bolivian balance of payments generally corresponds to the recommendations of the *BPM5*. Balance of payments statistics are compiled quarterly. Preliminary data are disseminated forty-five days after the end of the reference period. The BCB's Department of Information and Publications publishes these statistics in the following bulletins: *Statistical Bulletin* (monthly and quarterly); *External Sector* (semiannual), *Annual Report of the BCB*, and on the website of the BCB. The monthly, quarterly, and semiannual bulletins are published two, four, and five months respectively after the end of the reference period.

II. Specific Items: Balance of Payments

Current Account

Goods

The BCB calculates foreign trade in goods on the basis of data obtained from the National Statistical Institute. Merchandise imports and exports are valued on a c.i.f. and f.o.b. basis, respectively. Both amounts are expressed in U.S. dollars. The customs data record the physical movement of goods across Bolivia's borders, but these data are adjusted with respect to coverage, valuation, and timing to accord with *BPM5* concepts. The National Customs Office provides the information on freight, insurance, and other expenditures for imports.

Services

Transportation

This account covers freight and passenger services for all modes of transport. The BCB obtains transportation services data from the respective authorities and from surveys it conducts for this purpose.

Travel

Since 2000, this information is obtained through an annual survey conducted by the INE. This is in accordance with an agreement signed by the BCB, the Vice Ministry

of Tourism, and the INE. Travel transactions are broken down between business and personal travel.

Other services

BCB obtains the data from its own records, surveys, and information collected from private institutions directly connected to the sector providing or receiving these services. Such institutions are the postal and telecommunications companies (Correos, ENTEL, AES, and others), the Superintendency of Telecommunications, the Superintendency of Pensions, Equity, and Insurance, private banks, the Ministry of Foreign Affairs, embassies, and television, radio, and cinema enterprises. This item includes services in communications, insurance, finance (data come from the banks' quarterly reports of income and expenditure), computers, royalties, and license fees, other business and professional, personal, cultural, and recreational, and other government services.

Income

Compensation of employees

This item includes the remuneration of seasonal and border workers. The BCB obtains data on the number of workers from its surveys and the Ministry of Labor.

Investment income

Data are based on information obtained from the INE's quarterly foreign direct investment survey. BCB calculates the profits of foreign direct investment based on an estimated rate of return. In the case of the capitalized enterprises, the *Bulletin of the Superintendency of Pensions, Equity, and Insurance* provides the data. BCB obtains data on other investment income from its own official records, the banking system, and estimates. Credit entries are obtained from the BCB's quasi-fiscal report and estimates.

Current transfers

BCB compilers derive the entries on official transfers from official reports of the Vice Ministry of Public Investment and External Financing (VIPFE) and from information from the foreign exchange balance produced in the BCB. The debits on official transfers are based on information provided by the Treasury on current contributions to international organizations. The credits and debits on private transfers are derived from information provided by companies that carry out electronic money transfers and from information provided by other donors.

Capital Account

Capital transfers

The BCB obtains data from its records, various donor organizations, and governments.

Financial Account

Direct investment

Since 1998, this information has been obtained through quarterly surveys conducted by the INE. This is in accordance with an agreement signed by the BCB, the Ministry of Foreign Trade and Investment, the National Statistical Institute, and the Private Entrepreneurs Confederation of Bolivia (Confederación de Empresarios Privados de Bolivia). To conduct the surveys, the INE personally interviews representatives of the enterprises that receive foreign direct investment. It then classifies the acquired information by economic sector, source, destination, and type of investment.

Portfolio investment

Since 1996, this item includes data on treasury bill holdings by nonresidents. Since 2003 the BCB has been conducting a quarterly survey of portfolio investment abroad by residents. In addition, since 1999, the item includes transactions of the Liquid Assets Requirement Fund of the commercial banks and other financial institutions.

Other investment

This item includes transactions of the public external debt (multilateral, bilateral, and private). BCB obtains the information from its records and from its monetary balance. External private indebtedness includes changes in the medium- and long-term private debt, which is obtained from the records of the International Operations Office of the BCB and from quarterly reports of the private banking system, other financial institutions, and data published by creditor institutions, like the Corporación Andina de Fomento. Other capital transactions are based on BCB records and estimates. Since 1999, BCB has obtained data on the flows of residents' deposits in nonresident banks from the Bank for International Settlements.

Reserve assets

BCB obtains this item from its official balance sheet, which includes holdings of monetary gold, foreign exchange, investments in securities, holdings of SDRs, etc.

III. Specific Items: International Investment Position

The institutional classification corresponds to the *BPM5* recommendations.

Sources of information on international investment position data are the same as those used for the balance of payments. In addition, the Gold and Foreign Exchange Position Statement from the monetary accounts of the BCB is used to determine asset price variations and foreign exchange variations of reserve assets. Foreign

exchange variations in the medium- and long-term public external debt are those reported by the Management and Analysis External Debt System (SIGADE).

Bosnia and Herzegovina

The following text was confirmed as current in 2004.

I. General

The Central Bank of Bosnia and Herzegovina (CBBH) is responsible for compiling Bosnia and Herzegovina's (BiH) balance of payments. The main data sources are the statistical and other government institutions, commercial banks, and the CBBH. The data are supplemented with information received from other sources and estimates.

During the period 1998–2000 balance of payments statistics were compiled annually. Starting from 2001, balance of payments statistics are also prepared quarterly, expressed in both the domestic currency (convertible marka—KM) and U.S. dollars. To the extent feasible, balance of payments estimates are compiled in accordance with the methodology in *BPM5*. These reports can be found on the CBBH website (<http://www.cbbh.ba>), as well as in the quarterly and annual CBBH bulletins.

To minimize disruption to the historical series, at the time of publication of the latest quarter's estimates revisions are made only for the past year except that large revisions to earlier periods will always be made. Once a year, revisions are made to all previous periods, and significant revisions are highlighted.

Revisions are made to previously published estimates for several reasons: source data are revised by agencies compiling that data (e.g., Customs); some source data do not become available for lengthy periods after the reporting period at which time the preliminary estimates are replaced (e.g., OECD data on official transfers); and new and improved estimation techniques are introduced from time to time as a result of investigations.

II. Specific Items: Balance of Payments

Current Account

Goods

Customs declarations are the primary source for compiling foreign trade data. The Federation Statistical Institute prepares data on exports and imports of goods from customs declarations for the Federation of BiH. The Customs Administration of Republika Srpska directly provides data for Republika Srpska, and the Customs

Service of Brcko District directly provides data for the administrative unit of Brcko District. On the basis of these data, foreign trade statistics are prepared at the country level.

Substantial timing, coverage, and valuation adjustments are made to the primary source data in compiling the balance of payments statistics of BiH. According to *BPM5*, exports and imports of goods should be expressed on an f.o.b. basis of exports/imports in the general trade system (exports from/imports into free circulation, exports after/imports for inward processing, exports for/imports after outward processing, and exports from/imports to warehouses). Since source data are obtained from three different sources and one of them disseminates data on exports and imports based on the special trade system, the coverage adjustments include estimates of goods that are not included in the value of exports and imports in the special trade system, e.g., goods imported into warehouses but not for final consumption purpose, and similarly the goods exported from warehouses. Also, certain estimates are made for exports and imports not declared to Customs ("undeclared goods"), undervaluation of exports and imports ("undervalued goods"), and timing adjustments between quarters for imports of goods, owing to the delays in the processing of customs declarations.

For recent years, it is estimated that unrecorded exports amounted to 9 percent of the total recorded exports, comprising 6 percent undeclared exports of goods and goods exported from warehouses and 3 percent undervalued exports of goods. For recent years, 24 percent was added to arrive at total unrecorded imports. Of the 24 percent, 9 percent is estimated as undeclared imports and imports into warehouses but not for final consumption (a decrease from 13 percent in 2001), while 15 percent is the amount of undervalued imports. The total value of imports of goods after these adjustments is on a c.i.f. valuation. To derive an f.o.b. valuation of goods, a deduction of 7 percent of the total adjusted value of the imported goods was made.

Services

Since no reliable, comprehensive source data are currently available on transactions in services with nonresidents, these transactions are mostly estimated. These estimates take particular account of the decreasing presence of the international community in BiH, as well as seasonal influences in the provision of certain types of services. Services are classified into three groups: transportation, travel, and other services.

Transportation

The value of transport services and insurance of goods (debits) is estimated on the basis of the estimated differ-

ence between the value of imported goods at c.i.f. and f.o.b. values. Freight transportation services that are provided by nonresidents are calculated from this amount. Services related to the international transportation of passengers include the estimates of air and bus transportation services of domestic and foreign companies.

Travel

Official and private travel are estimated based on studies of transactions of nonresident experts and employees of foreign embassies, as well as international, civil, and military organizations in BiH, and foreign tourists in BiH.

Other services

Other services consist of communication, construction, financial, insurance and reinsurance of property and persons, government services (current expenditure of BiH embassies abroad), and other business services. They are each partly estimated and partly based on data reported to CBBH by the relevant organizations.

Income

In the balance of payments for BiH, there are two main components of income: compensation of employees and investment income.

Compensation of employees

Compensation of employees is estimated as the amount of salaries and wages to BiH residents paid by nonresident employers, especially international civil and military organizations and embassies. On the basis of *BPM5*, most of the foreign staff employed in international organizations in BiH are treated as residents, since they reside in the country for at least one year. The total value of compensation of employees of international organizations in BiH is calculated from the estimated number of domestic and foreign staff and their average salaries.

Investment income

Investment income includes income received from or paid to nonresidents on loans and deposits. These data are compiled from information provided by the CBBH, the commercial banks, relevant international monetary and financial institutions, and ministries responsible for servicing external government debt.

Current transfers

General government

This item includes donations from abroad for which the main source is the data on official development aid to BiH that are published by the OECD in its *Development Assistance Committee Statistics*.

Other sectors

Current transfers of other sectors consist of remittances from abroad to BiH residents, monetary transfers of BiH returnees, and foreign pensions of BiH residents, as well as transfers to BiH residents studying abroad.

Capital Account

Capital transfers

General government

Capital transfers of the government sector used for financing capital projects in BiH are derived, based on data published by the OECD and the World Bank.

Other sectors

Capital transfers from abroad to other sectors include estimated migrant transfers in kind (cars, equipment, and home appliances).

Financial Account

The financial account includes investment flows and changes in reserve assets. Investments are classified by functional category in accordance with *BPM5*.

Direct investment

The data on foreign direct investment in BiH (including portfolio investment) are obtained from the Ministry of Trade and Economic Relations. Since the first quarter of 2004, the quarterly surveys on foreign investment in BiH have been introduced. All BiH enterprises with foreign investment were surveyed via an exploratory survey conducted in 2003.

Portfolio investment

In the past, data on portfolio investment in BiH were included in the direct investment in BiH. Starting from the first quarter 2004, transaction in equities and other securities that are traded or tradable have been collected through the aforementioned quarterly surveys, but it is difficult to obtain these data in a timely manner. In addition, data for the previous periods are not available.

Other investment

Other investment, assets is the largest part of investment flows in BiH. The data source is CBBH's monetary statistics data on the changes in the level of deposits in foreign currency in the BiH commercial banks. In addition, estimates are made for transactions in foreign currency that take place outside the banking system.

Other investment, liabilities comprise transactions in loans to the government sector (government institutions data) and to other sectors (estimated), trade credit flows (estimated), and other financial liabilities of BiH residents

to nonresidents (the change in commercial banks' foreign liabilities).

Reserve assets

The reserve assets data comprise foreign currency, SDRs, and the reserve position at the Fund. Transactions in foreign currency reserves and SDRs are obtained from the CBBH monetary statistics. Monetary gold transactions are not recorded in the balance of payments of the BiH.

Botswana

The following text was confirmed as current in 2004.

I. General

The Bank of Botswana (BOB) is responsible for compiling the balance of payments statistics of Botswana. The BOB obtains primary data from various sources: namely, the Trade Statistics Unit (TSU) of the Central Statistical Office (CSO) in the Ministry of Finance and Development Planning (MFDP), the Department of Mines in the Ministry of Mineral Resources and Water Affairs, the South African Chamber of Mines, The Employment Bureau of Africa (TEBA), the Cash Flow Unit of the MFDP, and exchange control/foreign exchange transfer forms. Major producers/manufacturers and exporters also regularly return information. In addition, the BOB conducts annual balance of payments surveys (i.e., the *BOP Enquiry*) of most corporations, embassies, and international organizations. These surveys cover information about direct investment, income, and capital flows.

The BOB prepares the balance of payments data annually and publishes them in its *Annual Report* and the monthly *Botswana Financial Statistics (BFS)*. The data are also available on computer diskette. Data on exports are prepared monthly and published quarterly in the *BFS*. The BOB reports these data to the Fund.

Balance of payments data are now compiled on the basis of the *BPM5* methodology. The classification of accounts used in the national presentation of Botswana's balance of payments now closely follows the presentation of the *BPM5*.

Balance of payments are compiled in millions of pula; where necessary, transactions denominated in other currencies are converted to Botswana pula equivalents. The midpoint exchange rate prevailing at the end of the reporting period is used for these transactions.

II. Specific Items: Balance of Payments

Current Account

Goods

The main source of data on goods is the CSO's TSU. Many of the data on exports are, however, based on monthly returns from the major export producers in the mining and manufacturing sectors. The TSU provides data on other exports monthly. The TSU also provides all data on imports; it prepares these data on a monthly basis.

Data on exports and imports are valued on an f.o.b. and c.i.f. basis, respectively. The BOB's Research Department adjusts these data for coverage, valuation, and timing to conform to balance of payments concepts. Data from foreign transfer forms (Forms A and S) on exports and imports are used for cross-checking wherever possible. These data are also used to estimate goods for processing and repairs on goods.

Services

Transportation

Transportation services cover air, road, and rail transport for freight, passenger, and courier services. Annual surveys of transport companies (both private and parastatals) provide much of these data, but the surveys are supplemented by data captured from exchange control forms. Some of the freight data are estimated using data from customs.

Travel

In the past, travel estimates were based on amounts reported on Forms A and S in the banks' exchange reporting system. These estimates were considered likely to be understated, particularly on the credit side, because of the incidence of pre-paid travel settled offshore and the likelihood that expenditure by nonresident visitors while in Botswana will not be classified to the travel item.

To improve the estimates on the credit side, a methodology was established using arrival statistics and the results of a Department of Tourism Visitor Survey. Arrival statistics are compiled by the TSU from migration cards, which classify noncitizen visitors according to their reasons for entering Botswana (tourism, business, seeking work, in transit, etc.). The Visitor Survey, which was first conducted for the 1998 year and is now being repeated approximately every two years, provides useful measures of lengths of stay and average expenditure in various categories of visitor. Estimates are made using information on the average length of stay and expenditure

data for each category of visitor applied to the appropriate arrivals data.

The BOB derives data on travel by Botswana government officials from the MFDP's Cash Flow Unit.

On the debit side, the coverage of the item has been improved by the addition of a number of categories of expenditure that were not previously measured. These include:

- student expenditure abroad (derived from Ministry of Education disbursements);
- expenditure abroad by resident air travelers (estimated from air departures and assumptions about length of stay and average expenditure); and
- similar expenditure abroad by resident land travelers (estimated from purchases of foreign exchange for travel reported on Form A, less the amount estimated for air travelers).

Other services

To compile all other services, the BOB uses data from exchange control forms and estimates based on those records. Other services include, among others, communication, construction, insurance, financial, computer and information services, and royalties and license fees.

Other business. These data cover transactions on legal, accounting, and management fees, merchandising and other trade-related fees, operational leasing services, professional fees, and others.

Personal, cultural, and recreational. The BOB uses exchange control forms and estimates based on these forms to compile these data.

Government, n.i.e. The MFDP's Cash Flow Unit provides data for the debit items relating to government expenditure, mainly by Botswana diplomatic missions. The credit entries include services under aid programs, technical assistance, foreign diplomatic missions, and international organizations based in Botswana. The main source of the credit entries is the foreign exchange transfer forms. There is also a survey of embassies and international organizations. The response to the survey is, however, not satisfactory at present.

Income

Compensation of employees

The compilers obtain data on credit items from the TEBA (the employment agency for Botswana migrant workers in South African mines), the South African Chamber of Mines, and the foreign exchange transfer forms. Transactions reflect mainly remittances by Botswana mine workers in South Africa. Compilers ob-

tain data on debit items, covering mainly immigrants' transfers, from the foreign exchange transfer forms.

Investment income

Direct investment. The BOB compilers collect these data through an annual balance of payments survey of major enterprises. Through this survey, the compilers also collect data on reinvested earnings and undistributed branch profits.

Portfolio investment. The compilers obtain data on portfolio investment income mainly from annual balance of payments surveys of companies and from the balance sheet/income statement of the monetary authority (i.e., the BOB). The BOB has recently been able to source data from pension fund managers through their regulator, the Registrar of Pension and Provident Funds, in the MFDP.

Other investment. The compilers obtain these data through annual balance of payments surveys of resident companies, the MFDP's Cash Flow Unit, and commercial bank returns.

Current transfers

General government

The BOB derives these data from information provided by the MFDP's Customs and Excise on the Common Customs Union account. The source for remittances is the foreign exchange forms.

Other sectors

The compilers derive data of other sectors from foreign exchange forms. The MFDP's Cash Flow Unit supplies data on grants.

Capital Account

Capital transfers

Migrants' transfers. The BOB derives these data from foreign exchange forms. The entries cover mainly transfers of savings of Botswana emigrants.

Financial Account

Direct investment

Compilers obtain data for both direct investment abroad and in Botswana from annual balance of payments surveys of resident enterprises.

Portfolio investment

The data are derived from annual balance of payments surveys of resident enterprises and the Registrar of Pension and Provident Funds.

Other investment

The BOB obtains data from the balance of payments survey of enterprises, foreign exchange forms, and annual reports of major corporations. The Common Customs Union Account of the MFDP supplies data on the government's transactions and assets, and the Cash Flow Unit of the MFDP provides data on government liabilities (loans). The BOB also uses commercial bank data on currency and deposits (i.e., balances due to/from banks abroad and affiliated banks, as well as deposits of nonresidents).

Reserve assets

The BOB derives the data from its records. These data reflect changes in the holdings of official foreign reserves.

III. Specific Items: International Investment Position

Direct investment

The BOB derives the information from annual balance of payments surveys of enterprises resident in Botswana. The stock figures are consistent with the balance of payments flows data.

Portfolio investment

Compilers derive data on the outstanding values of both portfolio assets and liabilities from annual surveys of resident companies, as well as from banks and insurance corporations and Pension Fund Managers. They also use supplementary data from the BOB income statement.

Other investment

The BOB obtains data on government assets and liabilities from the MFDP's Cash Flow Unit. It also uses annual surveys, along with the commercial banks' income statements. All stock data are consistent with the relevant balance of payments flows data.

Reserve assets

The balance sheet of the BOB is the main source of these data.

Brazil

The following text was confirmed as current in 2004.

I. General

The Central Bank of Brazil (CBB), through its Economic Department's Balance of Payments Division, is responsible for compiling, monitoring, and analyzing Brazil's bal-

ance of payments data. The CBB also publishes and disseminates this information.

The basic sources of data for compiling the balance of payments goods entries are reports from the Foreign Trade Secretariat of the Ministry of Development, Industry, and Foreign Trade (or Commerce—MDIC) and the Secretariat of Federal Revenue of the Ministry of Finance. For other balance of payments transactions, the main source is the National Statistics on Exchange Operations (exchange record)—a consolidated statement of the exchange operations reported by banks and compiled by the CBB's Foreign Capital and Exchange Department. The CBB supplements data on exchange flows with data reported by other government agencies and from sea and air transport companies. Data for the compilation of reserves are obtained from the CBB's International Reserves Operations Department.

The CBB Information System collects data on transactions of the currency exchange market directly from financial institutions and other agents authorized to deal in foreign currencies. These transactions are formalized through an electronically generated legal instrument called an "exchange contract" or by means of a simplified form showing the nature and terms of the operation. The contract and offer form data are sufficiently detailed for compiling the balance of payments. The data on domestic currency transactions between residents of Brazil and residents abroad are processed through the same CBB system and likewise used for the balance of payments.

The balance of payments is compiled in U.S. dollars on a cash basis. Compilers convert the data collected in local currency to U.S. dollar equivalents at the average daily market rates published by the CBB. To convert stock data, the compilers use end of period rates, whereas for flows, they use average period rates.

The CBB publishes the balance of payments on a monthly basis in its *External Sector Press Release*, available on the Internet (at <http://www.bcb.gov.br>), along with detailed time series. This presentation departs from the layout recommended in the fifth edition of the IMF's *Balance of Payments Manual (BPM5)* and focuses on classifications most relevant to the Brazilian economy. However, the balance of payments statements transmitted to the IMF and other international organizations follow the standardized classifications recommended in *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

The data refer to f.o.b. values. The data collection methodology is based on international recommenda-

tions by the UN, the Latin American Integration Association, and MERCOSUR. Export and import data are provided by SISCOMEX (Sistema Integrado de Comércio Exterior—Integrated Foreign Trade System), which permits daily monitoring of foreign trade operations at all stages of the process. Trade statistics are published monthly. Global trade statistics are published with a lag of approximately three working days, and detailed data are published with a lag of no more than three days. MDIC is responsible for SISCOMEX and for collecting export and import data.

Services

Transportation

The CBB uses data provided directly by Brazilian seagoing shipping companies and the National Waterways Transportation Agency, supplemented by exchange records data. Operations involving air, sea, and other (river/land) modes of transport are monitored separately.

The source of data on passenger transport is the exchange record. For charters, the CBB derives data from exchange contracts and the National Waterways Transportation Agency, which along with companies, also supplies data on freight and cross-trade. Data on other transportation services are either reported by companies or based on exchange records.

Travel

CBB uses exchange record information to compile this account. The data cover revenues and expenditures regarding sales and purchases by means of international credit cards, currency transactions between tourist and authorized exchange operators, and receipts and payments between domestic and foreign tourism operators.

Other services

The basic source is the exchange record.

Insurance. The entries mainly cover gross earnings and claims received and paid on insurance of exports and imports and on reinsurance.

Income

Compensation of employees

Because the source of the data is the exchange record, this item does not record the part of this income spent in the country in which it is obtained. See also note on current transfers.

Investment income

The source used for investment income transactions is the exchange record. Data are compiled on a cash basis.

Current transfers

Compilers derive data for cash transactions from the exchange record. The entries also cover grants in kind. On the credit side, the Ministry of Finance provides information (i.e., goods imports), while on the debit side, the Ministries of Industry, Commerce, and Tourism provide data (i.e., goods exports).

The entries for workers' remittances may include amounts appropriate to compensation of employees and vice versa.

Capital Account

Capital transfers

The source is the exchange record.

Financial Account

Direct investment

The primary source is the exchange record. The classification of the exchange record permits staff to separate funds received directly by enterprises for capital participation (classified as direct investment) from inflows of funds for purchases of equity securities (classified as portfolio investment). The CBB also takes into account investment in goods, as reported in export and import statistics. It takes into account conversions of loans into equity and reinvestments of profits, derived from CBB's Foreign Capital Department records. The entries include long-term intercompany loans but not intercompany trade credits.

Portfolio investment

The source is the exchange record. The entries for equity securities cover all equity investment made through the stock exchange.

Other investment

The sources on transactions in other investment assets and liabilities are the exchange record, the consolidated balance sheets of financial institutions authorized to deal in foreign exchange, data from Brazilian companies that hold short-term external trade credits, and reports from international organizations.

Reserve assets

The entries under this category refer to transactions in the CBB's external holdings, administered by the International Reserves Operations Department. CBB adjusts the data obtained from its records to exclude changes caused by revaluation/devaluation of other currencies vis-à-vis the dollar and monetization/demonetization of gold holdings.

III. Specific Items: International Investment Position

International investment position data comprise external assets and liabilities of the reporting country, in accordance with the methodology set out in *BPM5*.

Assets

Direct investment abroad. The data source is the census on Brazilian Capital Abroad, compiled by the CBB.

Portfolio investment. The data sources are the census on Brazilian Capital Abroad and Bank for International Settlements (BIS) reports on securities pledged as collateral.

Financial derivatives. The data source is the census on Brazilian Capital Abroad.

Other investment. The data sources are the census on Brazilian Capital Abroad and Brazilian memberships in international organizations.

Reserve assets. Data are sourced from the International Reserves Operation Department (Depin) and the External Debt and International Relations Department (Derin). The CBB's reserve assets comprise monetary gold, SDRs, and foreign currency assets, represented by deposits (overnight, repurchase agreements in the Federal Reserve Board, and time deposits), securities and Reciprocal Payment and Credit Agreement (CCR credits). The reserve position in the IMF is also considered a reserve asset.

Securities and CCR credits are recorded at market value. Gold assets are valued by the London PM fixing, end-of-period price. SDR assets are recorded using the SDR/USD end-of-period exchange rate published by the IMF.

The declaration on Brazilian Capital Abroad, containing end-period data, is sent annually to the CBB by all residents holding assets abroad valued at R\$200,000 or higher (the CBB can alter this value each year). The quarterly IIP assets for March, June and September are estimated by the balance of payments flows.

Liabilities

Direct investment in reporting country. The CBB's census of Foreign Capital in Brazil collects the data on equity capital every five years. The last published data refer to 1995 and 2000. For intercensus years, estimates are based on the balance of payments foreign direct investment monthly flows. Data on intercompany loans are sourced from the Electronic Declaratory Registration/Financial Operations Registration System (RDE-ROF) statistics, compiled and published quarterly in the CBB's *External Sector Press Release*.

Portfolio investment. For equity securities in the reporting country, stocks cover nonresidents' investments in eq-

uity securities in Brazil. CBB obtains these data from the Central Bank Information System—Sisbacen. Regarding portfolio investment abroad, data are sourced from the Brazilian Securities Exchange Commission (CVM). The data comprise nonresidents' investments (ruled by the National Monetary Council Resolution 1289, dated 3.20.1987—Annex V), concerning the market value of the Brazilian depositary receipts program (Brazilian companies shares negotiated abroad).

Financial derivatives. CBB derives financial derivatives data from CVM.

Other investment. CBB obtains trade credits and loans data from the RDE-ROF system, related to external debt statistics. For nonregistered external debt, it obtains data from the Accounting Plan of the National Financial System Institutions (Cosif) and from Petrobras' (Brazilian oil company) reports on credit lines. CBB obtains currency and deposits data from its accounting systems and from Cosif. Other liabilities comprise the negative balance of the Reciprocal Payment and Credit Agreement (CCR), and the data are sourced from Derin.

Bulgaria

The following text was confirmed as current in 2004.

I. General

The Bulgarian National Bank (BNB) is responsible for compiling the balance of payments of Bulgaria. The main sources of data are the commercial banks, domestic corporations and individuals, the National Statistical Institute (NSI), the Ministry of Finance (MOF), other government agencies, and various departments of the BNB.

Since the beginning of 1996, the data have been compiled on a monthly basis. The BNB publishes its data on its website at <http://www.bnb.bg> and in its *Monthly Bulletin*, *Semi-Annual Report*, and *Annual Report*. The balance of payments of Bulgaria is provided to the Board of the BNB and to certain official institutions, such as the Council of Ministers, MOF, and other government agencies. The data are also provided to various international organizations such as the IMF, Eurostat, and the ECB.

The first series based on *BPM5* were released with 1991 data. Balance of payments estimates are compiled in millions of Bulgarian leva, euros, and U.S. dollars. Where possible, conversion is made using the exchange rate prevailing at the time at which the transaction takes place. Otherwise, the average exchange rate for the reporting period is used.

In general, the balance of payments of Bulgaria is compiled in conformity with the methodological principles

set out in the *BPM5*. The classification used corresponds with the standard components of the *BPM5*. The first international investment position statement was published for December 31, 1998.

II. Specific Items: Balance of Payments

Current Account

Goods

Merchandise exports and imports are based on customs data.

The BNB and NSI adjust the trade records for timing, coverage, and valuation to conform to balance of payments concepts. Exports and imports of goods are valued at market prices on an f.o.b. basis. The c.i.f. value of imports is adjusted to f.o.b. using an 8 percent adjustment factor.

Services

Transportation

Passenger. Credit and debit entries are based on BNB estimates.

Freight. This category covers transportation of goods and port services. Freight is estimated as a percentage of exports and imports of goods.

Other transportation. This item covers services connected with transport of natural gas via pipelines.

Travel

Estimates are compiled using a data model that combines data on numbers of travelers to and from Bulgaria with estimates of per capita expenditure to calculate the total credit and debit entries.

Other services

The main source of data is the international transactions reporting system (ITRS), which also reports on enterprises with accounts abroad.

Income

Investment income

Data are available for commercial banks, other sectors, the monetary authority, and general government. For direct investment, dividends and other earnings are recorded on a due-for-payment basis. Data on reinvested earnings (debit) in other sectors are derived from the annual direct investment surveys of the NSI, as well as through surveys of the largest foreign-owned enterprises, which are used for preliminary estimates. Data on commercial banks' reinvested earnings are derived

from their accounting records. Portfolio investment income is recorded on an accrual basis. Other investment income is recorded on a due-for-payment basis.

Current transfers

General government

Data are derived from information provided by commercial banks, the Ministry of Finance, and other sources. The entries include grants in cash and in kind received from foreign governments, private institutions, as well as other sources.

Other sectors

The ITRS is the main source of information on other current transfers. Data cover pensions, gifts, grants, inheritances, and social contributions.

Capital Account

Capital transfers

Information on capital transfers is available from the MOF and the BNB.

Financial Account

Direct investment

Data on foreign direct investment in Bulgaria are obtained from the Privatization Agency, the Central Depository, commercial bank reports, notaries public for data on nonresident purchase of real estate, quarterly and annual surveys of resident direct investment enterprises conducted by the NSI, surveys of the largest foreign-owned enterprises conducted by the BNB, and quarterly reports of intercompany debt transactions as well as changes in the capital of foreign-owned insurance and pension companies. Estimates for direct investment abroad are based on the ITRS information and reports from corporations.

Portfolio investment

The Ministry of Finance, the BNB, commercial banks, and the Central Depository are the main sources of data for this component.

Other investment

Loans

The main source of information for the commercial bank liabilities in the form of loans is their reports to the BNB, and the data source for the loans of corporations is their quarterly reports. Data on government and government-guaranteed loans are received from the Ministry of Finance. For the asset side, data are received from the commercial bank reports and through the direct report-

ing from the domestic corporations on their loans to nonresidents. The Ministry of Finance supplies data on the government loans to nonresidents. Data on trade credits for both assets and liabilities are reported quarterly by the corporations.

Currency and deposits

Banks and enterprises that have transactions in their accounts abroad provide the data. Information is complemented by Bank for International Settlement (BIS) data. Data are adjusted to exclude valuation changes.

Reserve assets

Included are transactions in the BNB's external holdings that are administered by the Issue Department. Data are obtained from the BNB's records and adjusted to exclude changes caused by the revaluation/devaluation of other currencies vis-à-vis the Bulgarian leva, euro, and U.S. dollar.

III. Specific Items: International Investment Position

The data sources used to compile Bulgaria's international investment position statement are primarily the same as those used to compile the balance of payments statement, that is, the MOF, balance sheets of the BNB, the commercial banks, data on deposits of the nonbank sector held abroad, Bank for International Settlement (BIS), the NSI, an annual survey of direct investment abroad, and other administrative sources.

Direct investment

Data on direct investment abroad are obtained from ITRS data, as well as corporations' records.

Preliminary estimates of stock data on foreign direct investment in Bulgaria are produced as a sum of the stock data as of the end of the previous year plus the transactions reported in the balance of payments for the current year. These data are later revised to reflect the results of the NSI comprehensive annual survey among nonbank direct investment enterprises, stock data on intercompany loans, and data collected by the BNB on the stock of banks' liabilities to foreign direct investors.

Portfolio investment

The BNB and the banks' accounts are the primary sources for the compilation of portfolio investment assets, while the BNB, the MOF, the commercial banks, and the Central Depository are the sources for the portfolio investment liabilities. Debt securities (liabilities) are valued at face value. Other sectors' data are estimated as the net sum of all transactions recorded in the balance of payments since 1991.

Other investment

This component is compiled primarily from data obtained from the MOF, the BNB, commercial banks, and private enterprises. Trade credit liabilities and assets of the real sector are based on the records of corporations. The BNB compiles stock data on *loans* extended by resident entities to nonresidents, on the basis of information from the commercial banks, Ministry of Finance, and companies' reports. These data cover the monetary authorities, general government, commercial banks, and corporations. On the liabilities side, the BNB compiles data on loans received by the general government on the basis of information from the Ministry of Finance. Data on loans of the nonfinancial sector are collected from the records of corporations, and on loans of the commercial banks are compiled from their reports. For the banking sector, data for deposits abroad are obtained from the commercial banks' balance sheets; for the other sectors, information is obtained from corporations with the accounts abroad and from the BIS. On the liabilities side, the deposits of nonresidents held with domestic banks in both national and foreign currency are recorded on the basis of information from the commercial banks' balance sheets.

Reserve assets

The data are obtained from the balance sheet of the BNB.

Burundi

The following text was confirmed as current in 2004.

I. General

The Research Department of the Bank of the Republic of Burundi (BRB) is responsible for compiling Burundi's balance of payments statistics. The department collects statistical data from several sources, in particular the Customs Department of the Ministry of Finance (import and export statistics); statements submitted to the BRB by the commercial banks and by resident companies transacting with nonresidents in the areas of insurance and transportation; international organizations such as the United Nations Development Program; certain embassies; and internal departments of the BRB.

BRB compiles the data on an annual basis and publishes them in its *Annual Report*. The account classification used in the national presentation of the balance of payments closely follows the methodology of the *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

The BRB compiles goods statistics on the basis of trade data provided by Customs, which compiles exports f.o.b. and imports c.i.f.

For exports, BRB adjusts the trade data to exclude coffee and tea exports f.o.b Bujumbura from the total of exports f.o.b Bujumbura and to include coffee exports f.o.b Dar-es-Salaam and f.o.t (free on truck) Bujumbura and tea f.o.b Mombasa and London.

For imports, the coverage adjustments involve deducting, from the trade data, the imports by embassies, transportation and insurance costs, and other related charges, as well as personal effects. Conversely, data on imports of electricity are added to the imports recorded by Customs. BRB derives transportation and insurance costs, included in the c.i.f. value of imports, from annual surveys of transportation and insurance companies. Since 1996, this ratio has been estimated at 10 percent of the c.i.f. value.

Services

Transportation

For shipments, credit entries essentially represent transit receipts and other transportation receipts. With the help of an annual survey of transportation companies, BRB's Research Department estimates transportation costs on imported goods.

For passenger services, BRB compiles data on the basis of a survey of air carriers conducted by BRB's Financial Operations Department. The data are drawn exclusively from receipts from these companies and are recorded in the settlement statement.

Travel

BRB derives the entries for travel from a survey of hotels, foreign tourist spending in Burundi, and spending abroad by residents (BRB statement of exchange transactions).

Other services

Insurance. Insurance companies provide the data in an annual survey conducted by the BRB; data pertain to insurance costs for imports and exports.

Government, n.i.e. The entries under this classification mainly consist of transfers of funds to Burundian embassies abroad and to foreign embassies in Burundi.

Income

Compensation of employees

Debit entries encompass workers' savings and fees for research and work performed. The commercial banks provide this information, and the BRB publishes it monthly in the statement of receipts and payments.

Investment income

Credit entries pertain to interest earned on official reserves, whereas debit entries relate to interest paid by government entities and by public and private enterprises.

Current transfers

These transactions consist of private unrequited transfers and interofficial transfers (bilateral and multilateral aid, capital grants in kind, technical assistance in kind, emergency aid, and others). Data on transfers are recorded mainly in the settlement statement published by the BRB.

Another source is the data reported by donors and lenders to the Ministry of Development and Reconstruction Planning. Debit entries under this item relate to Burundi's subscriptions to nonfinancial international organizations of which Burundi is a member.

Capital Account

Capital transfers

Migrants' transfers. This item is composed exclusively of final departures and appears in the statement of exchange transactions.

Financial Account

Direct investment

Equity participation and reinvested earnings are classified according to the direction of the transaction (to abroad and from abroad). Equity participation is recorded through commercial bank exchange records and appears in the statement of receipts and payments.

Other investment

BRB derives trade credit data (for imports and exports) by comparing movements of goods shown in customs statistics to the settlement records for exports and imports appearing in the statement of receipts and payments. The BRB derives commercial bank assets and liabilities from the asset/liability statements that the banks submit to the BRB. It obtains drawings on government loans received, and the repayment of these loans, from the Treasury Department of the Ministry of Finance. The BRB sources

data on other short-term credits of the private sector from the statement of receipts and payments.

Reserve assets

BRB derives the relevant data from Burundi's monetary survey as prepared by the BRB.

III. Specific Items: International Investment Position

The data sources on the international investment position (IIP) are the same as those used in compiling the balance of payments.

Cambodia

The following text was confirmed as current in 2004.

I. General

The National Bank of Cambodia (NBC) is responsible for compiling and disseminating the official BOP and IIP statistics for Cambodia and collects data on international transactions of the monetary sector or obtains them directly from foreign sources. Principal data sources for other sectors are collected from a number of government institutions and agencies; shipping lines and airlines; insurance companies; foreign embassies in Cambodia and multilateral organizations; other private sector organizations, including commercial banks and other financial institutions; and nongovernmental organizations providing development aid. In addition, data compiled by the other NBC units are also obtained for these purposes.

The NBC compiles the statistics on a quarterly and an annual basis and publishes annual results in its monthly *Economic and Monetary Statistics Review*. It also reports annual and quarterly statistics to the IMF.

In principle, the statistics are compiled on the basis of the recommendations of the *BPM5*; however, because of the absence of suitable data, approximation is required for some items and classifications, such as the estimation of re-exports.

Because U.S. dollars have circulated freely in the economy since 1993 and are used for almost all large transactions, statistics are compiled in both U.S. dollars and riels. The dual compilation also avoids the distorting effects of large variations in the value of the Cambodian riels in the mid-1990s. Where statistical information is not available in U.S. dollars, the data are converted to U.S. dollars at either the period average buying ex-

change rate or, for transactions derived from stock data, at the end-of-period buying exchange rate.

II. Specific Items: Balance of Payments

Current Account

Goods

Estimates for general merchandise are compiled from a number of data sources. From the Customs and Excise Direction (CED), the NBC obtains monthly statistics of imports and exports of goods, on which import duty or export taxes are imposed. To these it adds estimates for tax-free exports and duty-free imports, re-exports, and informal trade.

For exports, the most important tax-free components are informal exports of timber, tax-free and informal exports of rubber, exports (principally garments) under the Generalized System of Preferences (GSP), agricultural produce (principally fish and paddy rice), and informal re-exports to neighboring countries. Estimates of informal fish, paddy rice, and timber exports are based on partner-country information and data from the Ministry of Agriculture Forestry and Fishery. Tax-free rubber and other agricultural produce exports are estimated from data from the Ministry of Commerce. NBC compilers calculate re-exports by applying estimates of the proportions of particular commodities known to be commonly re-exported to imports of these commodities.

For imports, estimates of commodity-aid and imports financed by project aid are based on international-aid statistics compiled by the Council for the Development of Cambodia (CDC) and published in the Development Cooperation Report. Until 2001, details of government imports were collected from government accounts maintained by the Ministry of Economy and Finance. Since 2002, data on government imports are sourced from the CED. Estimates of imports by foreign investment enterprises and by export-oriented businesses are based on data derived from investment approvals granted by the CDC.

Customs export data are compiled on an f.o.b. basis, and imports on a c.i.f. basis in source data provided by CED. Freight and insurance on imports are respectively estimated to be 7.2 percent and 0.8 percent of the c.i.f. value of imports, and adjustments are made for these in the statistics.

The statistics do not separately identify goods for processing and goods for repair but include them with other commodities imported and exported. Estimates of goods procured in ports by carriers are based on information provided by the various airlines and KAMSAB (for data on the shipping lines).

Services

Transportation

Separate estimates are made for air and sea transportation services.

For *air* transportation services, compilers estimate freight on imports carried by nonresident airlines by applying an average freight rate per ton to the quantity of imports. They use the same methodology to estimate details of freight on exports carried by the resident airline.

To estimate passenger fares paid by residents to nonresident airlines, compilers combine information on the number of passengers collected from the Ministry of the Interior on the numbers of resident and nonresident arrivals and departures, an average weighted airfare, and passenger loadings by the different airlines serving Phnom Penh. They similarly estimate passenger fares paid by nonresidents to the resident airline.

Other air transportation services are estimated from information provided by the resident airline for expenditure in foreign ports and from information provided by the Civil Aviation Authority for expenditure in Cambodia by nonresident airlines.

For *sea* transport, the compilers estimate freight on imports carried by nonresident carriers by deducting freight on air imports from the estimate of freight on total imports and applying to the result the share of nonresident shipping. They estimate freight on exports carried by resident carriers by multiplying an average freight rate for exported goods by the proportion of the tonnage of exports estimated to be carried by residents.

Other sea transportation services are estimated from information provided by resident shipping agents and port authorities.

Travel

For travel credits, separate estimates are made for expenditures by gamblers, tourists, business travelers, and the expatriate staff of international agencies. For example, for tourists and business travelers, compilers combine information on the number of arrivals with information on the length of stay and the average pattern of expenditure collected from the Ministry of Tourism and travel agents. For short-term employees of international organizations in Cambodia and employees of aid agencies, compilers base estimates on the number of such staff and the pattern of expenditure.

Travel debits include estimates based on numbers of departures of residents, their estimated length of stay abroad, and their pattern of expenditure. The distinction between business and personal travel is not attempted.

Other services

The credit entries include receipts from nonresident telecommunication enterprises for telecommunication services provided in Cambodia (obtained from the Ministry of Post and Telecommunications). They also represent estimated expenditures in Cambodia by embassies of foreign governments on rent and purchases of services (estimates are based on an inquiry made to embassies in Cambodia in 1994; estimates of personal, cultural and recreational services; estimates of facilitation fees and other miscellaneous services; and expenditure in Cambodia by diplomatic missions).

The debit entries include the following:

- (1) payments to nonresident telecommunication enterprises by the Ministry of Post and Telecommunications;
- (2) estimates of royalties and license fees paid;
- (3) estimated payments to nonresident contractors providing construction services on projects funded by development assistance transfers (estimated with other aid-related transactions; see current transfers);
- (4) estimates of personal, cultural, and recreational services;
- (5) estimates of net insurance paid to nonresident insurers on imports and other nonlife risks incurred in Cambodia (obtained from insurance enterprises);
- (6) service charges on official debt and annual membership assessment paid to the IMF;
- (7) operational leasing charges paid to nonresidents by resident transport operators (information from resident operators);
- (8) estimated lease payments on building by Cambodian embassies abroad;
- (9) estimates of management fees; and
- (10) expenditures by the Cambodian government on maintaining its representation abroad and travel abroad by officials (information from government accounts).

Income

Compensation of employees

Credit entries include estimates, based on an inquiry made to foreign embassies in Phnom Penh in 1994, of payments that foreign embassies in Cambodia made to local employees.

Debit entries represent salaries paid to nonresidents providing short-term technical assistance to Cambodia. To make the estimates, the data compilers take a proportion of the total technical assistance identified in international-aid statistics compiled by the CDC. The proportion of the total that is assumed to be short-term

is based on local inquiries among organizations providing technical assistance.

Investment income

Direct investment. Cambodian direct investment abroad is estimated based largely on a model using average rates of return, average direct investment abroad (mainly housing) by long-term expatriates residing in Cambodia and wealthy Cambodians, and the number of expatriates and wealthy Cambodians.

For inward foreign direct investment income in the financial sector, the NBC measures reinvested earnings and distributed equity income using data it collects for monetary management and supervisory purposes. Interest paid on loans to the monetary sector from foreign direct investors is included indistinguishably with interest on other investment.

For foreign direct investment in other sectors, information on reinvested earnings is not available, but the NBC collects information on distributed equity income using data compiled by the CDC. Interest payable to foreign direct investors on borrowing by other sectors is also included in the direct investment income.

Portfolio investment. Income credit is estimated based on dividend and interest assumptions applied to estimates of portfolio investment abroad by expatriates and wealthy Cambodians residing in Cambodia.

Portfolio investment income debits are estimated as zero, because there are no security markets in Cambodia and no data are available.

Other investment. On the credit side, income comprises interest on reserve assets in the form of SDRs (information from the IMF) and foreign exchange (information from fund managers), as well as estimates of other investment income from abroad (mainly interest on bank accounts) received by expatriates and wealthy Cambodians residing in Cambodia.

On the debit side, the principal item is interest payable on official sector debt. The source is government accounting records. To the extent that some of this is not paid, it is also reflected in increases in other investment liabilities. The IMF interest charges are included. An estimate is also made for income paid on nonofficial sector liabilities.

Current transfers

Current transfer credits include current external assistance (budget support grants, commodity aid, project aid, training, and other technical assistance) and family support remittances received from nonresidents. For the current external assistance receipts, information is available from data collected by the CDC, data from multilateral organizations, foreign government embassies,

and nongovernment organizations providing aid. This information is classified into current and capital aid transfers on the basis of the nature of the transaction and on an inquiry made to aid providers. For the family support, workers' remittances received from abroad, and other transfers (mainly donations to Cambodian pagodas and charities), compilers make a small estimate based on the ITRS and other ad hoc source data.

Current transfer debits consist of Cambodia's membership contributions to international organizations (information obtained from government financial accounts), and estimates of remittances by expatriates working in Cambodia abroad, based on the ITRS and other ad hoc source data.

Capital Account

Capital transfers

This category includes aid transfers of a capital nature (see description under current transfers) and debt forgiven by creditor countries (information on debt forgiveness is available from debt management records maintained by the Ministry of Economy and Finance). Estimates are also made for migrant transfers credits and debits based on an estimation model tracking the change in residency of Cambodians and foreign expatriates arriving or departing on a long-term basis. Acquisition/disposal of nonproduced, nonfinancial assets is assumed to be zero.

Financial Account

Direct investment

Outward direct investment is estimated based largely on an estimation model on the average direct investment abroad (mainly housing) by long-term expatriates residing in Cambodia and wealthy Cambodians, and the number of expatriates and wealthy Cambodians, supplemented by information from media and other sources on direct investment in enterprises abroad. Inward direct investment transactions are estimated in three parts.

First, data on investment in the monetary sector are available from monthly data collected by the NBC. Information is available on equity investment and reinvestment of earnings. Borrowing from direct investors is included with other borrowing and is not separately distinguished. Second, data on equity and other direct investment in the casino industry is sourced on an ad hoc basis from Ministry of Economy and Finance.

Third, investment in other sectors is available from a quarterly survey conducted by the CDC to monitor the progress of foreign investment projects. Information is available for equity investment and distributed equity

income but not for reinvestment of earnings. Foreign borrowing by direct investment enterprises is measured, and the simplifying assumption is made that this is all direct investment, although it is likely that some part of this borrowing is not from direct investors. Short-term direct investment transactions are not measured.

Portfolio investment

Portfolio investment by Cambodian residents abroad is estimated based on the model described in the direct investment section above, which is also used to estimate portfolio investment abroad by expatriates and wealthy Cambodians residing in Cambodia. Portfolio investment in Cambodia is estimated as zero as there are no security markets in Cambodia and no data are available.

Other investment

Other investment transactions are estimated as derived from several sources. Trade credits and debits estimates are based on export and import data. A source of information on banks' foreign assets and liabilities is the data collected by the NBC. Foreign assets include the share of salaries accumulated in their home countries by expatriates working on long-term technical assistance projects in Cambodia (these expatriates are treated as residents of Cambodia). Estimates of this component are made as part of the process of estimating aid transactions generally. Foreign liabilities include borrowing by the monetary authority from the IMF and by the government from multilateral and bilateral sources.

The lack of suitable sources prevents effective measuring of transactions in foreign financial assets and liabilities of other sectors, although the estimation model described in the direct investment section above is also used to estimate other investment abroad by expatriates and wealthy Cambodians residing in Cambodia and net changes in foreign exchange holdings of residents. Other investment borrowing by direct investment enterprises is included indistinguishably with direct investment borrowing by those enterprises.

Reserve assets

Transactions in Cambodia's reserve assets are estimated (from data provided by the IMF and fund managers) as the changes in the stocks of assets between the beginning and the end of a period. Adjustments are made for revaluations owing to exchange rate changes and reclassifications resulting from the unblocking of some accounts abroad.

Canada

The following text was confirmed as current in 2004.

I. General

The Balance of Payments Division (BOPD) of Statistics Canada is responsible for compiling Canada's balance of payments statistics, which are published on a quarterly basis. Commencing with the first quarter 2003, international investment position (IIP) statistics are also released quarterly.

As of the first quarter of 1997, BOPD modified these statistics back to 1926 according to the standards set out in the fifth edition of the *Balance of Payments Manual (BPM5)*. Canada's balance of payments statistics are an integral part of the Canadian System of National Accounts, which implemented the 1993 System of National Accounts in the fall of 1997.

In certain specific cases, the recommendations of *BPM5* were not adopted for the following reasons: limitations in data sources (such as for financial derivatives, compensation of employees, and merchanting); lack of analytical usefulness of results (such as the netting of premiums and claims arising from insurance and re-insurance); or complexities in implementing the recommended treatment (such as market valuation of direct investment positions). Apart from the latter, the overall impact in terms of value is not regarded as significant.

Statistics Canada publishes the balance of payments and IIP data bilaterally according to six geographic areas (United States, United Kingdom, other European Union (EU) countries, Japan, other OECD countries, and all other countries). It releases the balance of payments data within 60 days of the reference quarter and releases the IIP data within 80 days of the reference quarter. The usual revision cycle entails revising the data for the four previous years once a year (in the first quarter), except for major historical revisions (generally every 10 years) when all the series are subject to revision.

The BOPD derives the data largely from a combination of surveys and other sources—chiefly administrative records—and supplements them with benchmark and category-specific estimates. The average response rate for the annual surveys of the division, and on which much of its coverage rests, is 65 percent. For the quarterly surveys, it is 65 percent, and for the monthly surveys, over 90 percent.

The data are released in an electronic database (CAN-SIM) and through internet publications at www.statcan.ca (click on "Our products and services"), as well as in the following publications: Statistics Canada catalogs Canada's International Balance of Payments, 67-001-

XIE/-XIF and Canada's International Investment Position, 67-202-XIE/-XIF (to order, telephone 1-800-700-1033 or order @statcan.ca). Research papers on various topics of the balance of payments and IIP are also available at [www.statcan.ca/products and services](http://www.statcan.ca/products_and_services) or by phoning 613-951-1855.

More detailed statistics are also released on 1) international trade in goods (monthly, by commodity, and by country, including seasonally adjusted and constant dollar series); 2) international travel; 3) international transactions in services (annual, Statistics Canada catalog 67-203-XIE/-XIF); and 4) international transactions in portfolio securities (monthly, Statistics Canada catalog 67-002-XIE/-XIF). These data are also available on the Internet (see address above).

II. Specific Items: Balance of Payments

Current Account

Goods

Exports and imports of goods are valued at the border of the exporting economy; that is, the price of goods includes transportation costs to the border. The BOPD bases the data for the compilation of the goods trade largely on Canadian customs documents. However, it uses U.S. customs documents on imports from Canada to compile the data for Canadian exports to the United States.

The division makes various adjustments for the following: 1) coverage (where customs records are sometimes insufficient or overstate transactions for balance of payments recording); 2) timing (temporary adjustments, as for late documents, are shown until appropriate entries are made in the customs base); 3) valuation of inland freight (to add freight to the export frontier when Customs values goods at the place of last direct shipment, as in the case of imports); and 4) other valuation and residency (as adjustments to (a) remove discounts, increase software valuation on exports, or reduce custom software transactions already covered in service imports, and (b) reflect a change of ownership between Canadian residents and nonresidents when not indicated in origin-based customs records).

Overall, the adjustments on exports are more numerous and sizable than on imports. The adjustment for underestimation of non-U.S. exports is a substantial addition to the customs data. The largest adjustment for imports arises from ensuring that the data appropriately include inland freight to the border.

It should be noted that the adjustments are not always strictly balance of payments adjustments. Often, they are used to rectify what would ideally have been originally recorded as customs data. Another large adjustment is made in bilateral accounts, to convert customs imports on a country-of-origin basis to the last country of shipment, which is believed to better reflect ownership change of the goods.

Services

Transportation

For *passenger* transport, BOPD relies on monthly administrative data, combined with estimates of average passenger fares from a quarterly sample survey of expenditure characteristics by the Culture, Tourism, and Center for Education Statistics Division (CTCES) of Statistics Canada. Included with passenger transport is coverage of cruise fares, which international standards define as travel.

For *goods* transport the BOPD records, as transportation receipts, the bilateral services that Canadian-domiciled truck operators provide beyond the Canada-U.S. border, whereas it treats as transportation payments the services that U.S.-domiciled truck operators provide within the Canadian border. Taking most components for this calculation from the U.S. Bureau of Economic Analysis (BEA), BOPD follows the BEA basic methodology for this series.

For *water* and *air* transport, BOPD derives information from several specific surveys it conducts annually. It maintains survey frames from industry registers and media sources, along with information on shipping companies from the Transportation Division of Statistics Canada. Where regular follow-ups to surveys do not produce sufficient data, the division imputes amounts based on prior responses and available external information.

BOPD often combines the survey results with other sources. For example, for the 1997 historical series, the division adapted methodology to increase the coverage of global payments abroad for the transport by sea of imports. That is, the division closely re-edited the basic survey of freight on non-oil imports to calculate unit values. It then multiplied the unit values by international shipping tonnage unloaded at Canadian ports, as compiled by the Transportation Division of Statistics Canada. The tonnage activity is largely handled by nonresident carriers.

Since deregulation of air services in the late 1980s, reporting has been less than complete for airfreight receipts and for payments for supporting landside services, especially geographic breakdowns. Certain payments data on bilateral airfreight and landside ser-

vices benefit from U.S. estimates, reflecting incomplete information obtained from the Canadian sources.

Travel

The CTCES Division compiles the basic Canadian travel statistics. CTCES derives these statistics from a combination of census data and sample counts of travelers crossing the border, coupled with sample surveys used to collect specific information from travelers, including their expenditures and main purpose of visit. Beginning with the reference year 2000, a new air exit survey introduced on-site interviews for foreign travelers at eight key Canadian airports.

Travel is subdivided into travel for business reasons and travel for personal reasons: *Business* travel covers expenditures by cross-border workers, but insufficient data bar their identification as such in the Canadian statistics. Also, as a result of data limitations, cruise fares as noted above are recorded under transportation services rather than travel. As part of the business travel item, the CTCES calculates estimates of spending by crews (of airplanes, ships, boats, trains, and trucks).

For *personal* travel, data for health-related travel consist of foreign spending for hospital services in Canada. CTCES records these data from the annual hospital survey of the Canadian Institute for Health Information, projecting data for recent years where survey results are not yet available. With the 1995 reference year, CTCES introduced estimates for physician services linked to U.S. data on the payments side. Also starting in 1995, access to U.S. sources has enabled a fuller estimate covering payments, beyond provincial health plans, at major medical centers and university hospitals located in the United States.

On the receipt side of the education series, CTCES produces the estimates by combining the time series on the number of students with average tuition rates and adding estimates of other expenditure. For expenditures of Canadian students in the United States, the data have been supplied by the U.S. BEA from 1981 onward and were linked with balance of payments data for prior years. CTCES updates the data on student expenditures overseas to incorporate volume and expenditure estimates.

Other services

Commercial services. Canada produces data for more than 25 categories of other services, based on norms initially set out in *BPM5* and subsequently extended by the OECD and Eurostat. Described overall in Canadian publications as "commercial services," these services cover categories other than transportation, travel, and government services.

The BOPD of Statistics Canada compiles the data, collecting much of it through a comprehensive annual survey of receipts and payments by type, country, and status of trade (as between related or unrelated parties). The division supplements these data by its other annual surveys (as for insurance) and by data from other divisions of Statistics Canada, in areas such as architectural services, technical services, communications, research and development, films, or environmental services. BOPD also obtains data from government administrative records and selected counterpart series from the U.S. Department of Commerce.

For the current year, the division estimates data from two quarterly sample surveys, based on results of the previous annual census survey. In 1997, it introduced quarterly breakouts of some 14 commercial services from 1995 onwards.

Nonresponses to the surveys tend largely to comprise low or nil value transactions for the period. To allow for underreporting in the survey and operations too small to survey, the BOPD applies a provision based on analysis of taxation records. If follow-ups do not result in sufficient data, the division imputes amounts from past results, external information, and broader annual projections as a control indicator.

The division collects the data net of withholding taxes but publishes them inclusive of withholding taxes. A data user will find a range of individual improvements to coverage and detail in the annual publication *Canada's International Transactions in Services*.

For commercial services, a number of specific divergences occur from current international norms, for reasons indicated at the outset. These affect such categories as

- 1) construction services (projects longer than a year are accepted as services when so reported);
- 2) local supplies appear with construction (or engineering services);
- 3) insurance (premiums and claims are recorded gross; freight insurance is not identifiable);
- 4) financial services (foreign exchange fees and financial services rendered through correspondent banking remain to be measured);
- 5) information services (exclude direct subscriptions, except through a postal adjustment to goods imports, and so far include little coverage of services that support the provision of internet transactions);
- 6) trade-related service (merchandising is excluded, because an apt measure has not been found; some commissions are valued in goods);

7) equipment rentals (includes most rentals with operators rather than with their specific services);

8) certain automotive charges are treated in Canadian statistics as services but not identified by international norms as such; these services appear in Canadian statistics under miscellaneous services, as do rough estimates for remuneration to commuters and seasonal workers (treated as units of own-account labor); and

9) lastly, miscellaneous interaffiliate transactions are grouped with business management consulting and accounting services.

Government n.i.e. These services cover international transactions arising from government activities (diplomatic, commercial relations, and military), not classified elsewhere in the balance of payments.

From 1995 onward, construction has been moved to the construction services account, while purchases of existing buildings continue to be treated as government services. In conformity with international standards, land transactions are classified as nonproduced nonfinancial assets in the capital account. Also, outlays by the federal government for contributions to the operations of international organizations and programs are excluded from government services and shown in current transfers.

From 1997 onward, data on a range of immigration services paid by nonresidents have been added to this account. These data draw on administrative aggregations of revenues and entry of persons recorded by Citizenship and Immigration Canada.

BOPD collects almost all the government data from administrative sources, except for ad hoc surveys conducted to obtain estimates of spending by foreign embassies in Canada (the last such survey was conducted to collect 1995 data). The U.S. BEA provides most data on spending by U.S. government authorities in Canada. Canadian administrative records provide data on spending by countries other than the U.S.

Insofar as BOPD uses official government records, the source data are on a cash basis and the division incorporates them as such in the balance of payments accounts (rather than on an accrual basis, as called for by international standards).

Income

Investment income

The BOPD estimates investment income from both survey results and derivation procedures. Investment income is grouped under direct investment, portfolio investment, and other investment.

Direct investment. For both receipts and payments, BOPD uses preliminary data to initially estimate quarterly data

on direct investment profits. The data are then superseded by more complete annual sources.

For profits on Canadian direct investment abroad by enterprises other than banks and insurance companies, BOPD compiles data on a quarterly basis by adding dividend receipts and reinvested earnings. The division obtains dividend receipts data from a quarterly survey and obtains reinvested earnings data from the quarterly survey of the Industrial Organization and Finance Division (IOFD) of Statistics Canada. Annually, these estimates are superseded with data on profits and dividends from two annual surveys and from tax data from Canada Customs and Revenue Agency, which provides information on profits from abroad and dividends from abroad.

For profits abroad of banks and insurance companies, BOPD constructs the data directly from income statement data; the data are not broken down between dividends and reinvested earnings.

For profits relating to foreign direct investment in Canada, BOPD takes the data directly from the IOFD quarterly survey, applying foreign ownership percentages (derived from the annual survey) to these series to prorate the foreign ownership portion of profits. BOPD obtains data residually on reinvested earnings by subtracting dividends from profits as obtained from the IOFD survey results. The division compiles the dividend series from a quarterly survey and from its own benchmark estimates. It then edits these quarterly foreign-derived profits against annual survey data.

Portfolio investment. The BOPD calculates data on portfolio interest payments on Canadian bonds from a detailed inventory of Canadian bonds (including deep discount bonds), resulting in reliable calculations based on security-by-security detail. The division obtains monthly and quarterly underlying amounts, rates, term, and currency from issuers and brokers. These amounts are further adjusted through an annual census survey of borrowers.

Since January 2003, BOPD derives interest on money market instruments (such as treasury bills, commercial paper, and the like) using interest rate accruals on coupon and amortization of discount/premium. Prior to January 2003, interest calculation was derived from average yields applied to the stocks outstanding for the various instrument categories. The division compiles the stocks data by cumulating flows in original currencies and converting them at period-end exchange rates. This procedure is being replaced with a detailed calculation on a security-by-security basis, similar to the system used to process Canadian bonds.

For portfolio interest receipts from the United States, BOPD derives data from five-year benchmark information on U.S. portfolio liabilities to Canada, compiled by the U.S. Treasury. Non-U.S. figures for interest receipts

on portfolio investment are calculated from benchmark positions updated with flows.

For receipts on portfolio dividends, the division applies dividend yields to a large and detailed inventory of foreign bonds held by the major Canadian financial institutions. The division collects these data on bonds through the annual Survey of Canadian Portfolio Investment.

For payments of dividends, the division derives data from an annual survey. The difficulty of surveying all companies with established foreign portfolio ownership in turn affects the coverage of the associated dividend payments.

Other investment. Among other investment series, interest from banking operations booked in Canada is derived from data supplied by Canadian banks on a quarterly questionnaire. To derive interest received and paid by the Canadian nonbank sector, BOPD uses positions and relevant market yields.

For foreign bank claims on and liabilities to Canadian residents other than banks, BOPD obtains data from the U.S. Treasury, the Bank of England, and the Bank for International Settlements (BIS). The division also obtains, from annual surveys, data on Canadian borrowing from foreign banks.

For earnings on international reserves, the division obtains data from official records. Similarly, it bases interest receipts on government-financed export credits on administrative records. It bases some further relatively minor components on administrative records and best estimates.

It is noted that income is limited to property income and excludes income from compensation of employees. This exclusion is a departure from international standards. As indicated, labor income is assigned in the Canadian data under miscellaneous services to businesses. The income could be deemed as representing units of own-account labor. The Canadian treatment has been adopted because of data limitations.

Current transfers

The BOPD of Statistics Canada compiles the current transfers data. The division updates the data annually or quarterly from source information, which ranges from monthly compilations of official assistance to annual data running at least two years behind the reference year, such as for data on U.S. withholding taxes from the Internal Revenue Service. The division also adjusts the data to a calendar year basis from government sources that operate on fiscal years ending March 31, notably the series on Canadian withholding taxes.

For private remittances, the division takes information from various sources. For instance, it obtains data on social security payments to nonresidents from administra-

tive data of the Canadian government. It takes information directly from Statistics Canada's Survey of Household Spending on remittances sent from abroad.

Beginning in 1991, BOPD has added estimates from U.S. sources for certain personal gifts and for study and health benefits that Canadian residents receive but do not pay for. Fuller bilateral data have improved the estimate of pension receipts.

For federal government expenditures in support of international organizations and programs, the division takes data largely from the Public Accounts. Lastly, it obtains data on official contributions, including administrative expenses, from the Canadian International Development Agency.

In 2003, the division used administrative data to estimate the remittances made by nongovernmental organizations from Canada. Results have been revised upward from 1999.

Capital Account

Capital transfers

Canadian statistics include migrants' assets and debt forgiveness by the government of Canada and its enterprises, as well as inheritances and acquisition or disposal of nonproduced, nonfinancial assets.

For immigrants' funds, the BOPD takes monthly data from official immigration records. Emigrants' funds, relatively small, are lacking information at source. Thus the Demography Division of Statistics Canada supplies estimates of the number of emigrants, to which BOPD applies an average value of funds transferred.

The data on debt forgiveness come from administrative data of the federal government. Private forgiveness of loans has not been observed and, as such, is not in Canadian data. Small estimates of inheritances represent carry-forwards from earlier studies.

Acquisition/disposal of nonproduced, nonfinancial assets

The acquisition or disposal of nonproduced, nonfinancial assets covers intangible assets and selected transactions of government in tangible assets (land and subsoil assets). Data on intangible assets are derived from surveys and media information.

Financial Account

Direct investment

Direct investment covers all transactions in equity and debt, including reinvested earnings, between the Canadian enterprise and the foreign enterprise linked by a direct investment relationship. The data sources consist of nine surveys conducted by the BOPD and other

sources, ranging from administrative data to information collected from public sources, especially the financial press.

Quarterly the BOPD surveys the enterprises that typically exhibit significant direct investment flows; it supplements these data by transaction data associated with specific projects and takeovers, which are reported in the financial press and in other news services.

Given that the division bases the current quarterly flows of direct investment on a sample survey of the largest enterprises, supplemented by other sources mentioned above, BOPD executes additional procedures to improve the quality of quarterly flows. For the nonsurveyed portion, a system estimates for undercoverage of flows based on information from the previous annual surveys, which is replaced when annual results become available. Sources and methods applicable to Canadian direct investment abroad closely parallel those for foreign direct investment in Canada.

Portfolio investment

In the Canadian statistics, portfolio investment covers transactions between Canadian residents and foreign residents in stocks and bonds (both Canadian and foreign) and in Canadian money market instruments. The Canadian practice conforms to international standards, except for transactions in foreign money market instruments, which are under development and will be included under portfolio flows in the near future.

The data sources are surveys conducted by the BOPD, as well as administrative sources from the Bank of Canada and the BIS. The financial press is an important source of information, as is FPIInformat. In the surveys that BOPD conducts with financial intermediaries, which represent the bulk of the data, BOPD requests the intermediaries to submit trading information on behalf of their clients in electronic form, with details of each transaction. The remaining surveys request information from either the investors in foreign securities or the issuers of Canadian securities and are used to complement the data obtained monthly from financial intermediaries.

Statistics Canada uses an extensive and detailed system to process data on Canadian bonds, which has recently been extended to process Canadian money market instruments. This all-encompassing system, processing not only flows but also positions and investment income, has been extensively described in an agency research paper "Measurement of Foreign Portfolio Investment in Canadian Bonds" in www.statcan.ca (click on "Our products and services").

Other investment

Loans

Transactions in loan assets comprise the following: loans by the government of Canada and its enterprises, which cover direct loans to foreign countries and to international agencies; loans by Canadian banks; loans by corporations, including mortgage loans; and loans by the corporate and personal sectors through reverse repurchase agreements (reverse repos).

BOPD obtains the data on loans by the government of Canada and its enterprises from administrative data. The division obtains data on loans by Canadian banks from administrative data submitted by Canadian banks to the Bank of Canada. It derives data on loans by corporations, including mortgage loans, from the annual questionnaire and a quarterly sample survey. And it compiles data on loans under repurchase agreements from the monthly surveys of financial intermediaries.

Transactions in loan liabilities comprise the following: corporate, government, and government enterprises' borrowing from foreign banks, including syndicated bank facilities; mortgage loans and other loans; and loans by the corporate and personal sectors through repurchase agreements (repos).

For loan borrowing by Canadian corporations and government enterprises, BOPD obtains data from annual surveys. The division projects the first estimate from a quarterly sample. For borrowing under repurchase agreements, it compiles data from the monthly surveys of financial intermediaries. For foreign short-term bank borrowing, it takes data from a combination of survey data and the monitoring of foreign banking data to detect large movements. The U.S. Treasury, the Bank of England, and the BIS provide data on foreign banking claims on Canada.

Currency and deposits

Transactions in deposit assets comprise deposits abroad of Canadian banks—including gold and silver and short-term interbank asset transactions—and deposit assets of Canadian depositors other than banks. For Canadian banks' deposit assets, BOPD derives statistics from the administrative data submitted by Canadian banks to the Bank of Canada and from a survey on gold and silver transactions. BOPD compiles statistics on deposit assets by Canadian entities other than banks from foreign banking data it obtains from the U.S. Treasury, the Bank of England, and the BIS.

Deposit liabilities are primarily those liabilities lodged by nonresidents with Canadian banks (including gold and silver and short-term interbank liability transactions). Some small foreign deposits also exist at Canadian trust companies and the Bank of Canada. BOPD

derives data on Canadian banks' deposit liabilities from the administrative data submitted by Canadian banks to the Bank of Canada and from a survey on gold and silver transactions. The division derives data on deposits from foreign central banks at the Bank of Canada from administrative data.

Other

Other assets and other liabilities are residual categories that include claims other than direct and portfolio investment and that are not in the form of loans or deposits.

Transactions in other assets comprise the following: Canadian nonbank foreign money market transactions; corporations' trade credits and other short-term receivables; progress payments; transactions in foreign real estate by the Canadian household sector; assets held abroad by immigrants; government of Canada subscriptions to international agencies; and financial derivatives and other miscellaneous claims on nonresidents.

BOPD obtains the data on subscriptions to international agencies from administrative sources. It compiles data on foreign money market instruments from a mixture of administrative data obtained from the U.S. Treasury and from survey data. For deferred assets of Canadian immigrants, it derives information from administrative data of Citizenship and Immigration Canada. Data on derivatives come from a monthly survey. For the series on progress payments, the division derives data from the financial press and several known respondents it surveys occasionally. And it obtains data on other assets, including trade credit and short-term receivables, from a quarterly sample survey on a preliminary basis and from an annual census survey on a final basis.

Transactions in *other liabilities* include the following: Canadian government demand-note liabilities issued as part of government subscriptions to international agencies; corporations' trade credits and other short-term payables; progress payments; transactions in Canadian real estate by the foreign household sector; liabilities to prospective migrants; and other miscellaneous liabilities. Some provisions are also made for transactions in derivatives.

BOPD derives the data on Canadian government demand-note liabilities from administrative data. It obtains data on short-term payables, including trade credits, from a quarterly sample survey on a preliminary basis and from an annual census survey on a final basis. It derives the series on progress payments from the financial press and several known respondents it surveys occasionally. And it derives the series on prospective migrant liabilities from administrative data of Citizenship and Immigration Canada.

Reserve assets

Transactions in Canada's reserve assets cover official holdings of foreign exchange and other reserve assets of the Exchange Fund Account, the Minister of Finance, the Receiver General for Canada, and the Bank of Canada. BOPD obtains the data on positions from administrative data of the Canadian official monetary authorities. It derives the transactions by compiling differences in monthly positions in original currencies.

III. Specific Items: International Investment Position

Canada's international investment position (IIP) is the statistical statement presenting the value and composition of the stock of Canadian financial claims on nonresidents and Canadian financial liabilities to nonresidents at the end of each quarter. Statistics Canada compiles the Canadian statement according to international standards and conventions described in the fifth edition of the *Balance of Payments Manual*.

For valuing foreign financial assets and liabilities in Canada's IIP, the division uses the valuation recorded in the books of the enterprise in which the investment is made (debtor principle). A market valuation is also provided except for direct investment, which is still recorded at book value. This is a departure from international standards, which call for market valuation of the IIP.

Direct investment

For operational purposes in Canada, if an enterprise owns at least 10 percent of the voting equity in a foreign enterprise, a direct investment relationship is deemed to exist between these two enterprises. In the Canadian statistics, the BOPD measures direct investment as the total value of equity, net long-term claims, and, from 1983 onwards, the net short-term claims of nonbank enterprises held by the enterprise on a nonresident.

Canada values direct investment position series from the books of the enterprises in which the direct investment is made. This means that BOPD measures direct investment abroad from the books of the foreign enterprises and not from the books of the resident enterprises having a direct investment abroad. Similarly, the division measures foreign direct investment in Canada from the books of the resident enterprises' receiving the direct investment.

To compile direct investment data, the division uses several questionnaires to target various aspects of claims. One is a quarterly sample survey, while the others are annual quasi-census surveys. These annual questionnaires request information on long- and short-term positions as well as the structure of Canadian

companies in the reporting enterprises when they report the operations of their Canadian subsidiaries and other related Canadian entities.

For Canadian direct investment abroad, the division asks Canadian entities to report information on foreign subsidiaries, associates (including joint ventures), branches, and miscellaneous investment, as well as noncapitalized expenditures abroad (for the companies involved in mining and oil exploration) of the Canadian reporting entity.

In addition, the questionnaire asks for accounting information for each related foreign entity as recorded in the books of the foreign entity, as well as the value of the investment as recorded in the books of the Canadian reporting entity (referred to as carrying value).

For foreign direct investment in Canada, the compilers ask Canadian entities to provide long- and short-term liability, as well as equity, as part of foreign direct investment. The compilers also use a number of administrative sources to complement the survey results.

A system processes the survey results, ranging from capturing data through to validating data and deriving flows of capital and year-end positions. Once the system tabulates data for the year-end positions, it executes two major procedures:

The most elaborate one is *adjust enterprise*, a program to eliminate, once a year, duplicate reporting between Canadian holding companies and their Canadian-related parties, as reported in the different questionnaires on foreign direct investment. The program also allocates the ownership of assets and liabilities based on the foreign ownership of the Canadian holding companies. The system tracks the ownership structure of the corporations in the enterprise to eliminate duplication resulting from the consolidation of some reporting units by the Canadian holding company.

The other procedure is the *carry forward*, which uses flows to project the current quarterly positions, taking into account the foreign ownership portion, the current year's transactions, growth factors, and exchange rates of the current year.

Portfolio investment

In the Canadian statistics, portfolio investment consists of investment in stocks and bonds (both Canadian and foreign) and in Canadian money market instruments. Departing from international standards, portfolio investment excludes investment in foreign money market instruments, which is indistinguishably included in other investment. An initiative is under way to incorporate these foreign money market instruments under portfolio investment in the near future.

To the extent possible, BOPD values the securities at the book value of the companies that issue the instruments. It values investment in stocks on the basis of the shareholder's equity of the company that issued the stocks. It defines the book value of bond and money market instruments as the price at which the security was originally issued plus interest accruals. A market valuation of these instruments has also been recently provided except for Canadian money market instruments, which will also be presented at market value in the near future.

BOPD compiles *asset* positions on foreign securities from an annual position survey on Canadian holdings of portfolio securities, beginning with the year-end 1997. Previously, it compiled positions from cumulating flows. For the first time, the 1998 edition of *Canada's International Investment Position* integrated the results of the new survey.

The division derives *liability* positions on Canadian securities largely from cumulating transactions adjusted by information on positions. For new issues of Canadian securities, the division uses the administrative data source from the Bank of Canada and a number of public sources, supplemented by survey results of major issuers.

BOPD obtains data on the investment in Canadian securities by Canadian banks from "Geographical Distribution of Assets and Liabilities of Chartered Banks Return (GDAL)," which Canadian banks submit to the Bank of Canada. For Canadian bonds (Canada's liability) issued in foreign currencies, the division revalues the bonds at year-end to reflect the closing rate of exchange of the period. It updates Canadian equities data yearly, with financial flows that Canadian investment dealers and large Canadian investors report on monthly surveys.

Other investment

Loan assets and loan liabilities

Loan assets include government of Canada loans extended directly to foreign countries and to international organizations. The government makes these loans, in part, by issuing non-interest-bearing, nonnegotiable demand notes, which are recorded as other liabilities. This account also includes the following: export loans by agencies of the government of Canada, such as the Export Development Corporation and the Canadian Wheat Board; loans of banks and other businesses; and loans made under repurchase agreements involving securities as collateral.

The asset account excludes loans and subscriptions to the IMF (classified in official international reserves) and subscriptions to international agencies (classified as other assets).

The asset account records an offsetting entry to account for allowances related to concessional loans to developing countries that are part of Canada's international development assistance program; Canada's net position vis-à-vis subscriptions to the capital of, and loans to, international financial institutions; and potential debt or debt service relief measures for financially troubled countries under multilateral agreements. The entry also includes some loan loss provisions set up by Canadian chartered banks on their foreign loans.

BOPD obtains the data, on the asset side, on loans by the government of Canada to foreign countries and to international agencies, from administrative data from the Canadian International Development Agency and from the Public Accounts of Canada (for loans by various departments). The division obtains data on loans by government enterprises from the Export Development Corporation and the Canadian Wheat Board and from the Public Accounts of Crown Corporations. It obtains data on loans by Canadian banks from the GDAL, submitted to the Bank of Canada. And it derives loans by corporations, including mortgage loans, from surveys.

Loan liabilities comprise data on corporate, government, and government enterprise borrowing from foreign banks, including syndicate bank facilities, mortgage loans, and other loans, such as loans made under repurchase agreements (repos) involving securities as collateral. BOPD obtains the data, on the liability side, from the annual surveys.

Deposit assets and deposit liabilities

Deposit assets comprise deposits abroad of Canadian banks, including gold and silver and short-term interbank claims, and deposit assets of Canadian depositors other than banks.

Deposit liabilities comprise foreign deposits at Canadian banks (including gold and silver and short-term interbank liabilities) and exclude bank debentures and the share capital of banks held by nonresidents. (Debentures are recorded under portfolio Canadian bonds, the share capital of Schedule I banks under portfolio Canadian stocks, and the share capital of Schedule II banks under foreign direct investment in Canada.) There are also liabilities of trust companies and of the Bank of Canada.

BOPD derives both deposit assets and deposit liabilities from administrative data that the Canadian banks submit to the Bank of Canada. The division compiles deposit assets of Canadian entities other than banks from foreign banking data obtained from the U.S. Treasury, the Bank of England, and the BIS. It derives foreign deposits, which are from foreign central banks, at the Bank of Canada from administrative data, and it derives foreign deposits of trust companies from a survey.

Other assets and other liabilities

Other assets include the following:

- 1) Canadian nonbank holdings of foreign money market instruments;
- 2) trade receivables and other short-term receivables with unrelated companies and, up until 1983, with related companies of nonbank enterprises (from 1983 onward, short-term intercompany claims of nonbank enterprises are reclassified as direct investment);
- 3) progress payments;
- 4) real estate investment abroad of the household sector;
- 5) assets held abroad by immigrants;
- 6) government of Canada subscriptions to international agencies excluding those to the IMF, which are classified as official international reserves;
- 7) financial derivatives; and
- 8) other miscellaneous claims on nonresidents.

On the asset side, compilers obtain data for subscriptions to international agencies from the Department of Finance, the Canadian International Development Agency, and Public Accounts. For foreign money market instruments, they compile data from a mixture of administrative and survey data. They derive data on the deferred assets of Canadian immigrants from administrative data of Citizenship and Immigration Canada. They derive series on progress payments from the financial press and several known respondents that they survey occasionally. They obtain financial derivatives data from a monthly survey, and they obtain other asset data from annual and quarterly surveys.

Other liabilities include the following:

- 1) government of Canada demand note liabilities;
- 2) trade payables and other borrowings from unrelated companies and, up until 1983, from related companies of nonbank enterprises (from 1983 onward, short-term intercompany liabilities of nonbank enterprises are reclassified under direct investment);
- 3) foreign real estate investments in Canada;
- 4) mortgage liabilities of the personal sector;
- 5) dividends declared but not paid;
- 6) SDRs;
- 7) progress payments;
- 8) liabilities to prospective immigrants;
- 9) value of Canadian securities held in nominee accounts for nonresidents; and
- 10) other miscellaneous liabilities.

On the liability side, compilers derive government of Canada demand note liabilities from administrative data. They obtain data on short-term payables, including trade credits, from a quarterly survey. They derive the series on progress payments from the financial press and from several known respondents they survey occasionally. And they derive the series on prospective migrant liabilities from administrative data of Citizenship and Immigration Canada.

Reserve assets

Official international reserves cover official holdings of foreign exchange and other reserve assets of the Exchange Fund Account, the Minister of Finance (including the position with the IMF), the Receiver General for Canada, and the Bank of Canada. Reserve assets comprise monetary gold, SDRs, reserve position with the IMF, foreign exchange assets (consisting of currency and deposits and securities), and other claims. The compilers obtain these figures from administrative data of the Bank of Canada.

Cape Verde

I. General

The Department of Statistics and Economic Research (DEE) of the Bank of Cape Verde (BCV) is responsible for compiling Cape Verde's balance of payments statistics. The DEE department obtains data from commercial banks, ministries, government agencies, and other administrative sources. In addition, the department uses surveys to collect information on services, income, transfers, and private financial flows of the nonbanking sector.

The BCV publishes the balance of payments in its bulletin. It compiles data in millions of Cape Verde escudos. Whenever possible, data comply with the *BPM5*. Staff adjusted time series retroactively up to 1986 to harmonize them with the *BPM5* methodology. Data are subject to revision and should be used with caution.

II. Specific Items: Balance of Payments

Current Account

Goods

DEE compiles data on exports on an f.o.b. basis using data from pre-export registration bulletins issued by the Directorate General of Commerce, for goods subject to control. For exports of manufactured and free-trade zone goods (not subject to previous registration), the department collects data from the Customs.

DEE compiles data on imports on an f.o.b. basis, using information from the Exchange Control Division of the BCV for imports subject to preregistration and customs data for the rest. The latter include goods imported by export-processing enterprises and investment enterprises and imports of heavy equipment (aircraft, ships, and agricultural desalinizing machinery). The department applies valuation adjustments to imports of duty-exempt items entering customs on a grant basis.

Services

DEE obtains information on services primarily from the foreign-exchange record (the structure of which is based on the *BPM5*). Staff supplement the information with data collected through surveys of major service enterprises (airlines, shipyards, port and airport authorities, communications, fuel supply for carriers), as well as export-processing enterprises.

Transportation

DEE obtains information on freight from the exchange record and from data from the Customs on goods entering the country on a c.i.f. basis. Staff derive the data on passenger and other transportation services from the exchange record and surveys of the national airline, fuel suppliers, and port and airport authorities.

Travel

Entries in the travel category include tourism, business travel, students, civil servants, and other travelers. Staff collect data from the exchange record.

Other services

Communications. DEE supplements data from the exchange register with data collected through questionnaires sent to the telecommunications enterprise and the Post Office.

Insurance. Entries under this heading include reinsurance operations of resident insurance companies. No payments abroad are made for merchandise insurance, because all imports must be insured by domestic insurance companies.

Other business. This category includes several unseparated service categories, such as equipment rental, film rentals, advertising, magazine subscriptions, commissions and brokerage fees, computer services, and business and technical services.

Government, n.i.e. The main source of data is the foreign exchange record, supplemented with surveys to embassies.

Income

Compensation of employees

DEE supplements data from the exchange record with information collected through surveys issued to export-

processing industries on wages and salary payments to nonresidents.

Investment income

Direct investment. DEE derives the data from the exchange record. Information on reinvested earnings is not available.

Other investment. Data on interest on government and government guaranteed external debt come from the records of the Treasury and cover scheduled payments. DEE compares these data with the payments data available from the exchange records to calculate interest arrears. In the analytic presentation, the department classifies arrears of interest and principal as exceptional financing. Staff collect data on other public and private enterprises directly from those enterprises through surveys. The credit entries include interest on foreign deposits of the BCV and commercial banks.

Current transfers

Government transfers include grants-in-cash and in-kind received from foreign governments and international organizations. The Directorate General of International Cooperation, the Customs, and resident offices of foreign donors provide the data. Other transfers include workers' remittances in cash (derived from the exchange record) and in kind (obtained from the Customs).

Financial Account

Direct investment

This category includes transactions in equity, both abroad and in Cape Verde. It also includes loans between parent companies and branches or subsidiaries. DEE derives the data from the exchange record.

Other investment

This category includes transactions on public and private external debt. For disbursements in cash, the exchange record is the primary source of information. For loan disbursements in technical assistance, equipment, and training, both the financing agency and the beneficiary are sources of information. DEE reconciles the data with information provided by the Treasury. The Treasury also provides data on scheduled repayments on government debt. DEE compares these data with the payments made through the exchange record to determine the amount of arrears. The department also obtains data on private external debt from the banking records and surveys to private enterprises (free zone and other).

Reserve assets

DEE obtains data on international reserves directly from the monetary statistics.

Chile

The following text was confirmed as current in 2004.

I. General

The Central Bank of Chile (CBC) compiles the balance of payments statistics, using information from sources both inside and outside the institution. External sources include various public and private organizations. The CBC obtains much of the information required for balance of payments purposes through the foreign exchange transactions system, supplemented by surveys and forms specially designed for statistical purposes.

The CBC compiles balance of payments statistics quarterly, with a maximum lag of two months. It publishes a summary version in its monthly *Bulletin* and on its website. The detailed data are included in a special publication entitled *Balance of Payments of Chile Annual*, also posted on the CBC website. In April 2004, the *Balance of Payments Chile Annual* on the website contained the latest revised quarterly figures from 2000 through 2003.

The CBC adopted *BPM5* concepts and classifications in May 2002, when it released a new balance of payments series, covering data from 1996 onwards, compiled according to those guidelines. Although the recommendations contained in the *BPM5* have not been fully implemented, the remaining recommendations are being adopted gradually. Valuation is in U.S. dollars, normally at prevailing market prices and transaction exchange rates.

In June 2002, the CBC first released an international investment position statement, covering end-year stock data beginning in 1997. Data on IIP are disseminated for stocks—not changes in stocks. Efforts are underway to compile and disseminate annual data on transactions, exchange rate changes, price changes, and other adjustments that explain the variations in positions in international financial assets and liabilities. The CBC values the stocks in U.S. dollars. It updates the data annually, posts them on its website, and also includes them in the *Balance of Payments Chile Annual* and the monthly *Bulletin*. In addition to the standard *BPM5* components, stocks reported in the IIP are broken down by institutional sector, according to a sectoral classification that is more disaggregated than that of the standard components.

II. Specific Items: Balance of Payments

Current Account

Goods

Exports and imports are estimated mainly on the basis of customs declarations. Customs documents value

both exports and imports on an f.o.b. basis. Data are reported in U.S. dollars, with transactions in other currencies converted into U.S. dollar equivalents at market exchange rates, which are adjusted on a monthly basis.

The data obtained from customs documents are adjusted to bring them closer to the recommendations of *BPM5* with respect to coverage, valuation, and timing. In particular, data on imports and exports are adjusted to record trade through free zones at the time the goods enter or leave the country. Estimates are made for certain imports not covered by the information provided by customs, and the customs value of some big-scale exports sold on consignment is adjusted to better reflect market prices.

Services

Transportation

Passenger. Credit and debit entries for passenger services are estimated on the basis of information obtained from quarterly forms provided by resident carriers (i.e., shipping companies and airlines) and by representatives of nonresident transport companies. The CBC supplements the data with information from annual surveys of resident carriers, a benchmark survey of other carriers, and data on vehicles crossing the border. Before complete information is obtained from the forms and surveys, preliminary estimates are made.

Freight. This category covers all modes of freight transport. The CBC obtains data on freight transactions from customs declarations, which it processes on a monthly basis, combined with information from quarterly forms and an annual survey of resident carriers (i.e., shipping companies and airlines).

Other transportation. The CBC derives the data from quarterly forms provided by resident carriers (i.e., shipping companies and airlines) and by representatives of nonresident transport companies. It supplements the data with information from a benchmark survey of representatives of other nonresident carriers and monthly data on number and type of vehicles crossing the border.

Travel

Both credit and debit entries are estimated by combining monthly data provided by

Immigration authorities on the number of foreign visitors and Chilean travelers who enter and exit the country, with data on average expenditures and length of stay obtained from surveys. These surveys, carried out three times a year (high, mid- and low seasons), cover tourism by both incoming and outgoing travelers. The surveys are undertaken in accordance with an agree-

ment between the CBC and the National Tourism Service, a government agency.

Other services

Communications. The CBC obtains data for both credit and debit entries from annual surveys.

Insurance. Data on insurance transactions related to goods are estimated from customs documents and quarterly forms provided to the CBC (since 2002) by resident insurance companies. Data on reinsurance transactions are estimated from these forms, supplemented by information from the balance sheets of insurance companies.

Financial. Credit and debit entries are estimated on the basis of balance of payments financial flows and rates for service charges informed to the CBC. They are supplemented by information provided to regulatory institutions by banks and pension funds.

Computer and information. Credit entries are estimated on the basis of a benchmark survey, data on exports of services provided to Customs, and information gathered by means of the foreign exchange transactions reporting system. Debit entries are estimated from the foreign exchange transactions reporting system and data on taxes that affect those transactions.

Royalties and license fees. Data for credit entries are estimated from two benchmark surveys and from the foreign exchange transactions system. Data for debits are estimated from the foreign exchange transactions reporting system and information on taxes that affect those transactions.

Other business. This category includes trade-related commissions, operational rental without crew, and other miscellaneous business, professional, and technical services. The main data sources for foreign trade commissions are benchmark surveys of import intermediaries and customs agents, plus data on commissions stated on export documents. Sources for other services are quarterly forms provided to the CBC by resident transport companies, the foreign exchange transactions reporting system, and information on taxes that affect imports of those services.

Personal, cultural, and recreational. These data are estimated on the basis of exploratory surveys to audiovisual and sports entities, the foreign exchange transactions reporting system, and information on taxes that affect imports of those services.

Government, n.i.e. Credit entries are based on estimates supported by historical data obtained from foreign exchange controls and on information on prices and exchange rates. The CBC obtains the debit entries from official government data.

Income

Compensation of employees

Credit entries are estimated. Debit entries, which the CBC derives from official sources, cover payments to local staff who work for Chilean government offices located abroad.

Investment income

Direct investment. The CBC obtains data on direct investment income mainly from direct investors and direct investment companies either through special surveys and forms or their income and expenditure statements. The data are supplemented by the exchange transactions reporting system, which records exchange transactions channeled through the "formal" exchange market (banks and some exchange offices). Beginning in 1990, for inward investment, and in 1992, for outward investment, these data include reinvested earnings. Data on dividends and distributed branch profits are generally available on a monthly basis. The CBC uses them in addition to annual and quarterly data to estimate monthly data on reinvested earnings on direct investment income abroad and on inward direct investment.

Portfolio investment. These entries are estimated on the basis of the foreign exchange transactions system data, and information from the financial statements of foreign capital investment funds (available twice a year). Since 2002, they are also based on data supplied to the CBC by banks and other institutional investors.

Other investment. The CBC obtains data on this item from various sources, most of which are available on a monthly basis. The sources include data from special forms filled out by commercial banks and other debtors and investors, plus data from the CBC's accounting system, the foreign exchange transactions system, and financial statements of companies. The data cover interest, which is basically recorded on an accrual basis in the case of assets, and when it is paid, in that of liabilities. Exceptions are capitalization of interest by direct investment enterprises, which is registered on an accrual basis, and the case of rescheduled interest. In the latter case, interest is recorded on the date when it should have been paid, with an offsetting entry under "other investment."

Current transfers

General government

Credit entries correspond mainly to taxes collected from nonresidents; the CBC obtains the data from administrative records submitted by investors and from government sources. Debit entries represent contributions to international organizations.

Other sectors

No data are available for workers' remittances. Credit entries for other current transfers include grants, mainly in kind and, to a lesser extent, in foreign currencies. The CBC obtains data on grants in kind from customs statistics, whereas it bases grants in foreign currencies on estimates obtained from the foreign exchange transactions system. Debit entries refer mainly to tax payments abroad by resident (air and shipping) transport companies, which provide quarterly forms to the CBC. The credit and debit entries for current transfers also include premiums, minus service charges, and claims for insurance.

Capital Account

Capital transfers

All transfers are recorded as current because it is not possible to distinguish between current transfers and capital transfers.

Financial Account

Direct investment

Direct investment flows are estimated and disseminated monthly. For direct investment flows to Chile, the CBC bases monthly figures on data provided by the foreign exchange transactions system, the Foreign Investment Committee, the forms provided to the CBC by recipients of these investments, and the estimates of reinvested earnings. This item includes intercompany debt. The CBC bases monthly figures of direct investment abroad on data provided by the foreign exchange transactions system, information submitted directly to the CBC by investors, and estimates of reinvested earnings. This item also includes intercompany debt.

The CBC derives annual and quarterly data on reinvested earnings on direct investment in Chile and direct investment abroad mostly from special surveys, forms, or financial statements of direct investors and direct investment enterprises. From 1990 onward, the balance of payments include data on reinvested earnings in the case of inward investment. In the case of outward investment, such data are included from 1992 onward.

Portfolio investment

On the asset side, this item includes portfolio investments abroad of pension funds, mutual funds, international investment funds, banks and insurance companies, as well as corporations and households. On the liability side, the item includes nonresident investments in domestic bonds and in American depository receipts and investment funds of foreign capital. Some equity securities continue to be recorded under *other investment liabilities*. The basic sources of data on portfolio invest-

ment are the foreign exchange transactions system, special forms sent to the CBC, and data submitted by regulatory institutions. They are supplemented by (semianual) financial statements of investment funds, which are used to estimate profits and the repatriation of capital. Most of these data are available on a monthly basis and are normally recorded in U.S. dollars.

Financial derivatives

The CBC obtains data from the foreign exchange transactions system and forms provided by the domestic transactors.

Other investment

This item covers all other financial flows, the largest items of which are medium- and long-term loans (disbursements and amortization), short-term loans, currency and deposits, trade credits, and other assets and liabilities. The CBC obtains the data from various sources such as banks' balance sheets, special forms provided to the CBC, direct information from some companies, and the foreign exchange transactions system. In general, the CBC calculates short-term flows as changes in stock positions and, therefore, includes revaluations. On the other hand, the entries for medium- and long-term flows do not include revaluations. The item also includes liabilities constituting foreign assets reserves for Latin American Integration Association (LAIA) reciprocal credit agreements.

Reserve assets

The CBC obtains data based on changes in stocks from its accounting records. It makes adjustments to consider changes in prices and exchange rates.

III. Specific Items: International Investment Position

With some exceptions, the concepts and definitions used are in accordance with *BPM5*. Sources of information on international investment position data are generally the same as those used for the balance of payments.

The People's Republic of China: Mainland

The following text was confirmed as current in 2004.

I. General

The State Administration of Foreign Exchange (SAFE) of the People's Bank of China is responsible for compiling

Mainland China's balance of payments. Prior to 1996, the SAFE, in preparing the balance of payments statement, collected data from various sources including government agencies, banks, and SAFE's internal records. The balance of payments statement was compiled in conformity with the methodology set forth in the *BPM4*.

Beginning with 1996, Mainland China's balance of payments statistics have been compiled in accordance with the *BPM5* on the basis of an international transactions reporting system (ITRS) introduced by the SAFE in January 1996. SAFE will supplement that new data collection system, which is based on information drawn from bank transaction records, with new surveys to collect data on travel, direct investment, and portfolio investment, as well as transactions of financial institutions.

Concerning the data since 1997, SAFE applied the *BPM5* methodology to the compilation of balance of payments statements. Because data of prior years were not adjusted accordingly, changes in the magnitude of the items in the balance of payments accounts for the years 1997 to 1999, as compared to data of previous years, could be attributed in part to the application of the *BPM5*.

Since 1998, the cumulative data are compiled for the first three, six, and nine months of the year, as well as for the whole year.

II. Specific Items: Balance of Payments

Current Account

Goods

The data are based on trade statistics compiled by the General Administration of Customs (Customs). Prior to 1996, *goods for processing* was presented in accordance with the *BPM4* guidelines (i.e., processing fees were recorded under *business services*) rather than the *BPM5* treatment; this resulted in a substantial difference between the value of goods reported in the balance of payments and that reported in the trade data produced by Customs, as the latter included these transactions on a gross basis. *BPM5* recommends that such transactions be recorded, as gross values of imports and subsequent exports, under goods; the latter treatment has been adopted for the 1996 data. Beginning in 1997, ITRS has provided useful data for items such as *goods for repair* and *goods procured in ports*, etc.

Services

Transportation

Until 1995, SAFE obtained credit entries for transportation (shipment) and port services from the Ministry of

Communications (MOC) and Ministry of Railways, among other sources. Beginning in 1996, the SAFE derives credit entries from the ITRS. Debit entries are drawn from import statistics compiled by Customs and from information derived from the ITRS.

Travel

The compilers obtain data on travel from the National Tourism Administration (NTA). The NTA collects the data through sample surveys conducted by the State Statistical Bureau.

Other services

Prior to 1996, SAFE obtained data for this item from various government agencies. Since 1996, it has derived data from the ITRS.

Income

Investment income

Prior to 1995, data on reinvested earnings were included indistinguishably in direct investment equity, but were not accounted for in investment income in the current account. As a result, reinvested earnings were implicitly included in net errors and omissions in those years. Beginning in 1995, SAFE has collected such data separately and included them in investment income. It collects the data for other investment income from banks and other SAFE sources. Since 1996, it has also drawn such information from the ITRS and from data compiled by the Ministry of Foreign Trade and Cooperation (MOFTEC).

Current transfers

Prior to 1996, these data came from Customs. Since 1996, the Customs and the ITRS are the primary data sources for this component.

Financial Account

Direct investment

The data on inward direct investment flows are based on the MOFTEC collection of information on foreign-funded enterprises (i.e., resident enterprises with an aggregate of 25 percent or more of their equity funded by nonresidents). The entries for direct investment equity capital inflows for all years have included increases in direct investment equity capital arising from reinvested earnings. As concerns data for the years 1997–99, SAFE separately identified direct investment equity capital inflows from the reinvested earnings, in accordance with *BPM5*.

Portfolio investment

The China Securities Regulatory Commission (CSRC) compiles data on issues of shares. SAFE derives data on bonds from its debt statistics.

Other investment

The SAFE receives relevant data from banks and other SAFE sources.

Reserve assets

The SAFE obtains data on changes in reserve assets from the People's Bank of China (the central bank of Mainland China) and SAFE sources.

The People's Republic of China: Hong Kong

The following text was confirmed as current in 2004.

I. General

The Census and Statistics Department (C&SD) of the Hong Kong Special Administrative Region (HKSAR) of the People's Republic of China is responsible for compiling and disseminating balance of payments and international investment position (IIP) statistics for the HKSAR. The C&SD has released detailed balance of payments statistics since the reference period 1998. The disclosure lag of detailed quarterly balance of payments statistics fully met the IMF's Special Data Dissemination Standard (SDDS) requirements by end-2000. The methods of dissemination include a press release, the C&SD website, a quarterly report on balance of payments statistics, and the monthly digest of statistics.

The C&SD released IIP for the reference years 2000 and 2001 in June 2002. The disclosure lag for IIP statistics for 2001 fully met the IMF's SDDS requirements. The methods of dissemination include a press release, the C&SD website, and several tables of the IIP published in the quarterly report on the balance of payments statistics.

The C&SD compiles the balance of payments and IIP statistics of the HKSAR in accordance with the concepts and methodology set out in the *BPM5*.

The balance of payments statistics include (1) detailed current account data, including imports and exports of goods and services, the latter with breakdowns of 11 service items; inflows and outflows of investment income by component (i.e., direct investment income, portfolio investment income, and other investment income) and compensation of employees; and inflows and outflows of current transfers by sector (i.e., general government and other sectors); (2) detailed capital and financial account data, including inflows and outflows of capital transfers by sector (i.e., general government and other sectors); inward and outward direct invest-

ment by component; assets and liabilities of portfolio investment, and other investment by instrument and by sector (i.e., banks and other sectors); assets and liabilities of financial derivatives by sector (i.e., banks and other sectors); and net change in reserve assets; and (3) net errors and omissions.

For IIP statistics, the primary distinction is between assets and liabilities; the difference between the two represents the net IIP. Fully consistent with the balance of payments financial account, the first IIP subclassification is by type of investment. It divides assets into direct investment, portfolio investment, financial derivatives, other investment, and reserve assets; liabilities are divided the same way (except for reserve assets).

The data sources used for compiling balance of payments and IIP statistics include merchandise trade statistics, various surveys on business enterprises/establishments and households, and administrative data from government departments and other organizations, supplemented by data from other sources.

The C&SD compiles the balance of payments and IIP statistics of the HKSAR in Hong Kong dollars. It converts source data on transactions and positions reported in foreign currencies to local currency using market exchange rates. Data on transactions and positions with Mainland China are treated as external transactions and positions and are included in the balance of payments and IIP statistics of the HKSAR.

II. Specific Items: Balance of Payments

Current Account

Goods

The C&SD derives data on general merchandise and nonmonetary gold primarily from merchandise trade statistics, which are compiled on the basis of trade declarations submitted by importers and exporters. The data source for statistics on goods for processing is the "Survey on Trade Involving Outward Processing in Mainland China."

Import statistics are valued on a c.i.f. basis, and adjustments are made to convert the value of imports to an f.o.b. basis. The ratio for the adjustments from c.i.f. to f.o.b. is estimated from data obtained from the "Survey on Insurance and Freight Costs for Import Trade."

Since inward processing trade, as well as outward processing trade in areas other than Mainland China, are relatively insignificant for the HKSAR, the C&SD does not separately identify statistics on such processing trade but includes them under general merchandise. Owing to practical difficulties in separately identifying statistics for repairs on goods and goods procured in

ports by carriers, the C&SD includes such statistics in the data on general merchandise. For statistics on non-monetary gold, any unrecorded movement of gold will be estimated and included in Goods as appropriate.

Services

C&SD collects data on trade in services primarily from the "Annual Survey of Imports and Exports of Services" (ASIES), supplemented by results from other annual or quarterly surveys and administrative data sources. Data from administrative sources include those from the Hong Kong Tourism Board, the Immigration Department, the Treasury, and the Customs and Excise Department. Services data for 32003 presented in this *Yearbook* contain only the net balance and total credits and debits. A full breakdown of 11 service items will be compiled when the ASIES results for 2003 become available.

Income

The primary data source for statistics on investment income is the "Survey of External Claims, Liabilities, and Income" (SECLI). The C&SD collects income data, with taxes being deducted at source. Estimates are made in respect of the flows of compensation of employees.

Current transfers

C&SD uses data models and administrative records for estimating current transfers. It derives the input parameters for the data models mainly from information it collects from administrative returns and relevant organizations. As for transfers of the government sector, it obtains the data from government accounting records.

Capital Account

Capital transfers

The C&SD uses data models and official records for estimating capital transfers. It derives the input parameters for the data models mainly from information it collects from administrative returns and relevant organizations. As for transfers of the government sector, it obtains the data from government accounting records.

Acquisition/disposal of nonproduced nonfinancial assets

Owing to the lack of information on transactions with nonresidents in nonproduced, nonfinancial assets and the relative insignificance of these assets for the HKSAR, C&SD considers the balance of this component to be zero.

Financial Account

Direct investment

C&SD obtains data on the components of direct investment from the SECLI, conducted on a quarterly and an-

nual basis. The SECLI uses enterprise groups as units for data reporting. It takes a Hong Kong enterprise group (HKEG) as the unit for data reporting on direct investment. It designates the HKSAR parent company of a HKEG as the target company for reporting data for the enterprise group as a whole, and relevant data can normally be found in the consolidated account of the enterprise group.

The C&SD uses a data model to estimate the amount of direct investment in Mainland China made by individuals without setting up companies in HKSAR. It classifies and presents financial derivative transactions and positions involving affiliated enterprises under the financial derivative category. Any transaction flows derived from changes in positions are adjusted to exclude any valuation and other changes.

Portfolio investment

C&SD collects data on portfolio investment items from SECLI. The major data suppliers are local financial intermediaries or agents such as banks, securities houses, share registrars, nominees, custodians, trusts, and fund managers that often engage in external financial investment activities. SECLI is designed for collecting all quarterly and annual data required for compiling detailed statistics on portfolio investment. Any transaction flows derived from changes in positions are adjusted to exclude any valuation and other changes. Repurchase agreements are treated as loans.

Financial derivatives

C&SD collects data on financial derivatives from SECLI. The major data suppliers are local financial intermediaries or agents such as banks, securities houses, nominees, custodians, trusts, and fund managers that often engage in external financial investment activities. The C&SD closely follows recommendations as specified in *Financial Derivatives: A Supplement to the BPM5* published by the IMF in compiling the statistics. They include net cash settlement payments in interest rate swaps and forward rate agreements as financial account transactions. The C&SD also classifies and presents financial derivative transactions and positions involving affiliated enterprises under this category.

Other investment

SECLI is designed for collecting all quarterly and annual data required for compiling detailed statistics on other investment. The main target respondents are local financial intermediaries or agents. Any transaction flows derived from changes in positions are adjusted to exclude any valuation and other changes. To make up for any omission of data on offshore deposits placed by HKSAR nonbank residents, C&SD regularly conducts reconciliation work to compare survey estimates with

relevant statistics published by the Bank for International Settlements.

Reserve assets

C&SD obtains data on transactions and positions of foreign exchange reserves from the Hong Kong Monetary Authority. Net change in reserve assets excludes any price, exchange rate, and other changes.

III. Specific Items: International Investment Position

Descriptions of sources and methods for the financial account above generally apply to the IIP statement. SECLI, the main source for collecting data on transactions, also collects data on positions as appropriate.

The People's Republic of China: Macao

The following text was confirmed as current in 2004.

I. General

The Monetary Authority of Macao (AMCM) and the Statistics and Census Service of Macao (DSEC) are the two government bodies responsible for compiling and disseminating the balance of payments for the Macao SAR. The AMCM is responsible for collecting data for the financial sector, while the DSEC is responsible for collecting data for the nonfinancial sector. The AMCM merges the two sets of data and compiles the final balance of payments statistics. The methodology used is largely in accordance with the *Balance of Payments Manual, fifth edition (BPM5)*. Exceptions are noted below.

The main sources of data used to compile the balance of payments are enterprise surveys and annual economic activity surveys, plus administrative data from various government bodies, other small-scale surveys, and estimations from data models. Questionnaires and surveys are the major means to collect data for services, income, transfers, and financial accounts. National accounts statistics are also used for goods and as supplements to the services account. Owing to the Statistics Act in Macao, confidential data are hidden or grouped into other similar items, which are noted in Part II.

Macao SAR reports data in Macao's currency, pataca, and compiles them on an annual basis. It releases the balance of payments within 12 months after the end of the calendar year and makes it available on the Internet (<http://www.dsec.gov.mo> and <http://www.amcm.gov.mo>).

Transactions denominated in other currencies are converted into pataca using, if possible, the exchange rates prevailing at the time of the transactions or otherwise the annual average exchange rates.

The Macao SAR currently does not produce international investment position statistics.

II. Specific Items: Balance of Payments

Current Account

Goods

General merchandise trade statistics are obtained mainly from trade statistics published by the DSEC. These data value exports of goods on an f.o.b. basis and imports of goods on a c.i.f. basis. Adjustments are first made to imports of four categories of goods through the equilibrium analysis of supply and use in the national accounts. The analysis shows that some merchandise goods are undervalued. These include food and beverages, other consumer goods, raw materials, and construction materials. Moreover, to conform with the concepts of *BPM5*, adjustments are made for classification and valuation, in particular to change imports to an f.o.b. basis.

Users of the data should also note that the data do not include goods sent abroad and received from overseas for processing or assembling and subsequently reimported and re-exported. The value of this processing is recorded in other business services in the services account. The goods account also excludes other goods such as goods sent or received through parcel post, banknotes, and coins in circulation. For confidential reasons, *Goods procured in ports by carriers* (credit) is included in *General merchandise, exports f.o.b.*

Services

Transportation

The data on passenger, freight, and other transportation are obtained from statistics of various activity surveys and national accounts. As the current survey system does not differentiate the value of this service among different modes of transportation, no breakdown on the type of transportation is available.

Travel

Credit entries for travel are derived from national account statistics that include travelers' expenditures on gaming, accommodation, and other expenses, utilizing data of the Visitor Expenditure Survey, Hotel Survey, and administrative records on hotel and gaming receipts. Gaming expenditures of nonresidents are estimated based on an assumed rate applied to the total gaming receipts on administrative records. Travelers' expenditures

on accommodation are estimated from the number of room nights sold and the average room rates, whereas expenditures on other areas are estimated by using the number of visitor arrivals, per capita spending of visitors, and other tourism data. The split between business and personal travel is based on purpose of visit reported by interviewed visitors. Entries for business travel (debit) are derived from the enterprise surveys and activity surveys, whereas those for personal travel (debit) are extracted from national account statistics that are mainly estimated from the Household Budget Survey and other statistics.

Other services

Data are obtained from enterprise and activity surveys, except for government services n.i.e., which are collected from the Government Expenditures Abroad Survey. Users of the data should note construction services (credit), which are included in "Other business services" because of confidentiality reasons. Special treatment is given to insurance services, as required by the balance of payments; their calculations are explained in greater detail as follows:

Insurance. Entries are compiled from enterprise and activity surveys. Life, non-life, and reinsurance transactions are treated in the same way. Gross premiums and claims are collected separately. The gross premiums are deducted from claims and then recorded as insurance services; claims are included in current transfers as offsetting entries.

Income

Compensation of employees

Compensation of employees (credit) is currently missing because local workers employed temporarily abroad do not need to report to the Macao government. Also, income data are not available for resident employees who work for foreign embassies and international organizations located in Macao. Such information will be reported as it becomes available. The debit entries are compiled based on enterprise surveys and the Government Expenditures Abroad Survey.

Investment income

The enterprise survey for the financial sector collects investment income data of all enterprises in this sector, whereas the enterprise survey for the nonfinancial sector only collects investment income of enterprises with inward and/or outward foreign direct investment (FDI).

Direct investment. The basic source of information is enterprise surveys. Reinvested earnings are attributed to the year in which they accrue. The *BPM5* and OECD definitions of direct investment are generally applied.

Portfolio investment. For the financial sector, enterprise surveys are the main source of information. The Coordi-

nated Portfolio Investment Survey (CPIS), however, serves as the principal source for collecting data in this area for the nonfinancial sector.

Other investment. The basic source of information is enterprise surveys. Interest income, other than for the monetary authority, is compiled partly on a due-for-payment basis and partly on an accrual basis. The monetary authority reports income on reserve assets on an accrual basis.

Current transfers

General government

The Macao government rarely receives current transfers from abroad. Thus entries (debit) include grants in cash and in kind to overseas governments or organizations. Data are obtained from the Government Expenditures Abroad Survey. However, the item does not cover technical assistance.

Other sectors

A special small-scale survey aimed at nonprofit and charitable organizations is used to collect this information. Workers' remittances are estimated on the basis of number of foreign workers and an assumed rate of remittance out of their wages.

Capital Account

Capital transfers

It is not always possible to break down unrequited transfers into current transfers and capital transfers. Thus, all transfers, unless the nature is known, are classified under current transfers. However, it is believed that capital transfers are extremely small out of the total transfers. The methodology for migrants' transfers (inward) is under review. Migrants' transfers (outward) are calculated on the basis of number of migrants moving to other countries and their estimated personal wealth.

Financial Account

The enterprise survey for the financial sector collects investment of all enterprises in this sector, whereas the enterprise survey for the nonfinancial sector only collects investment of enterprises with inward and/or outward FDI.

Direct investment

Data on direct investment are obtained from enterprise surveys.

Portfolio investment

Enterprise surveys for the financial sector cover both portfolio investment assets and liabilities, whereas the CPIS for the nonfinancial sector reports only portfolio in-

vestment assets. Financial derivatives are recorded on a net basis.

Other investment

The flow data are derived from differences between beginning and ending stocks reported in enterprise surveys.

Reserve assets

Data are derived from the stock value shown in balance sheet accounts of the AMCM.

Colombia

The following text was confirmed as current in 2004.

I. General

The Balance of Payments Section of the Central Bank (Bank of the Republic) (BR) is responsible for compiling the balance of payments statistics. BR compiles data on a quarterly basis in U.S. dollars in accordance with the methodology described in the *BPM5*. The data sources for the balance of payments are administrative records, surveys, and estimates. Administrative records are the source for data on international trade statistics, freight (debit), transfers, investment income, private external debt, portfolio investment, and direct investment.

Surveys are the source for external public debt. In addition, BR compiles the external debt of the financial system and other services using survey data.

Data on external trade transactions of the free zones, debit entries of commercial credits with a maturity of less than six months and a threshold of less than US\$10,000, private sector interest, and trade credit asset flows are currently estimated.

II. Specific Items: Balance of Payments

Current Account

Goods

BR bases data on international trade statistics on customs declaration forms processed monthly by the National Statistics Administration Department (DANE) and the National Customs and Taxation Directorate (DIAN), surveys (goods procured in ports by carriers), and estimates (external trade transactions of the free zones). Available data include exports f.o.b. and imports f.o.b. and c.i.f. The data, as released by the compiling institutions, are already adjusted for timing, coverage, etc. to conform to the balance of payments methodology.

Data on external trade transactions of the free zones are derived from figures reported by DANE, based on information gathered in the Annual Survey of Manufacturing between 1994 and 1997. Since 1998, flows have been estimated on the basis of the performance of nontraditional exports and total imports.

Goods for processing. BR bases data on exports of goods for processing on customs records processed by DANE and on Ecopetrol statistics on offshore assembly. No data are available on imports of goods for processing.

Repairs on goods. The data, based on customs declaration forms processed by DANE and DIAN, refer to the value of the service provided by residents (nonresidents) on personal property owned by nonresidents (residents) in the country.

Goods procured in ports by carriers. The value recorded is based on quarterly surveys of carriers.

Nonmonetary gold. The statistics on the BR's gold purchases and sales transactions with foreign banks are obtained from BR's Records and Payments Unit. Customs declaration forms processed by DANE and DIAN are the source of data on exports and imports of gold by private transactors. In addition, unregistered gold transactions are estimated on the basis of mining output data supplied by the Ministry of Mines.

Services

Compilers utilize the data on the quarterly survey system that BR devised for the various transactors specializing in each of the services.

Transportation

BR compiles credit and debit entries for passenger services and other transportation on the basis of data supplied by national and foreign airlines. It compiles freight credit entries on the basis of data supplied by national airlines and shipping companies, and it bases freight debit entries on data supplied by DIAN for imports of goods.

Travel

The travel component measures nonborder travel (via airports) and cross-border travel (through land-border crossing points). The data for nonborder travel are estimated on the basis of information on international passenger movements provided by the Civil Aviation authorities and the Administrative Department of Security. Data for cross-border travel are derived from quarterly surveys conducted at five land-border crossing points.

Other services

The section bases the recording of international service transactions on the survey system BR developed. Ser-

vices include communications, computer and information, financial, insurance, construction, business, royalties, and others. In particular it is worth pointing out that the recording of government services debits is performed by the Revolving Fund of the Ministry of Foreign Affairs, while government services credits are estimated on the basis of data supplied by some embassies and international organizations.

Income

Compensation of employees

The credit and debit entries are based on data reported by foreign delegations in BR's quarterly surveys. The entries are also based on an estimate of the number of border workers and the average minimum wage in effect in neighboring countries and in Colombia. Compilers obtain the data on border workers from BR's quarterly border survey.

Investment income

Direct investment. The section obtains credits of earnings and dividends from investment by Colombians in enterprises abroad from the administrative records kept by BR's International Exchange Department (DCIN).

Debits of earnings/dividends are based on data contained in the financial statements reported to the Superintendency of Securities and Enterprises by Colombian enterprises in which nonresidents hold equity interests. Users of the data should note, in particular, that the calculation of earnings debits does not include adjustments for inflation.

Portfolio investment. Compilers obtain data on portfolio investment credits from BR's Accounting Information System (SIC) in the case of returns on international reserves. They also obtain data from an estimate of the return on the average balance of asset holdings abroad by public and private enterprises.

On the other hand, the section calculates portfolio investment payments on the basis of data from surveys of enterprises under the Unified Foreign Debt Statistics System (SEUD) in the case of government bonds. It calculates private sector payments on the basis of data in the administrative records of the DCIN and the Superintendency of Securities.

Other investment. Data on other investment income are obtained from administrative records of the DCIN. Data on public sector payments abroad are obtained from information provided by enterprises in the SEUD monthly surveys, by the Inter-American Development Bank (IDB), and by the World Bank. Private sector payments abroad are compiled from DCIN administrative records.

Current transfers

Credit and debit data sources are the balance sheets of resident insurance companies, the exchange bureaus, the Ministry of Finance and Public Credit, the National Planning Department (DNP), DANE, DIAN, surveys of international organizations, and the administrative records of the DCIN.

Capital Account

Capital transfers

This type of transaction is not very frequent in the Colombian economy. However, in cases in which partial information on this kind of transaction was available, it was classified under current transfers.

Financial Account

Direct investment

BR bases data on foreign direct investment in Colombia and on Colombian investment abroad mainly on BR's DCIN administrative records, arranged according to the year in which the investment was made. The section supplements these data with information it obtains from investors' foreign exchange declaration forms, DIAN import records, and the financial statements reported annually by enterprises and entities to the Superintendency of Enterprises, Securities, and Public Services.

Data on foreign investment transactions in the petroleum sector are obtained from DCIN foreign exchange records, the BR's services imports survey, and information provided by enterprises in the sector. Users of the data should note, in particular, that reimbursements are calculated on the basis of petroleum export statistics, domestic sales by multinationals to Ecopetrol, and other variables indicating their foreign exchange receipts (such as re-exports and income from the sale of services).

Portfolio investment

The section bases asset data on portfolio investment by Colombians abroad on the administrative records of the Superintendency of Banks, the High Council on Fiscal Policy, and the DCIN.

Liability data on portfolio investment in Colombia are taken from administrative records of the DCIN and the Superintendency of Securities. Portfolio investment statistics on bond issues, placement, and redemption by Colombian enterprises and institutions on foreign capital markets are derived mainly from two sources: (1) for public sector investment, from surveys of enterprises through SEUD, and World Bank and IDB data; and (2) for the private sector, from statistical records of the DCIN, the Superintendency of Banks, the Superinten-

dency of Securities, and data reported by the enterprises and entities issuing the bonds.

Other investment

Trade credits

The section calculates assets on the basis of export data reported by the DANE and on administrative records kept by the DCIN. It obtains data on trade credit-related liabilities from information provided by the SEUD external debt surveys, the World Bank, the IDB, and administrative records of the DCIN. Users should note that credits with a maturity of less than six months and with a threshold of less than US\$10,000 are estimated by DIAN from customs' imports data.

Loans

BR compiles long-term loan assets and liabilities from administrative records reported by the sector to the DCIN, monthly survey data reported by the public sector to SEUD, information provided by the World Bank and the IDB, and the weekly financial sector survey conducted by the BR. It derives short-term external debt figures from the financial reports of nonfinancial public entities such as Ecopetrol, the National Coffee Fund, Carbocol, and the government; from the weekly foreign borrowing survey of the financial sector; and from private sector administrative records reported to the DCIN.

Currency and deposits

BR derives data on currency and deposit assets of the nonfinancial sector from current clearing account transactions. It culls data on the external assets of the financial sector from information reported in the financial statements of the institutions in the system.

Other assets and liabilities

Current clearing account transactions are used to record nonfinancial sector assets abroad. Data on external assets are taken from the foreign exchange-denominated financial statements of the institutions in the financial sector.

Reserve assets

Data on the country's reserve assets are based on the BR's SIC. This component excludes changes owing to price or exchange rate adjustments.

III. Specific Items: International Investment Position

The data sources used to compile Colombia's international investment position (IIP) are basically the same as those used to compile balance of payments statistics. Thus, the data sources are the foreign exchange and

customs records, the balance sheet of the nonbank and financial sectors, and data on public and private foreign indebtedness compiled by BR. The main sources of information by IIP component are described below.

Direct investment

Stocks of direct investment in Colombia and Colombian investment abroad are based on foreign exchange records' financial balances, external trade statistics, and surveys of petroleum service enterprises. Valuation changes are based on the sectoral indices in the Stock Exchange of Colombia and converted to U.S. dollars by using the peso-dollar exchange rate.

Portfolio investment

BR measures the stock of portfolio investment abroad using BR's foreign exchange statistics, balance sheets of financial institutions and public entities, and a survey on portfolio investment abroad that the BR carries out. BR conducted the first survey in 2001 and applies it biannually. The stock of Colombian investment assets is valued at market prices.

Estimation of the foreign portfolio investment in Colombia is based on the reports of the funds of foreign investment to the Securities Superintendence (Superintendencia de Valores). The stock of bonds issued by public and private entities is based on statistical records of external debt that BR compiles. In general terms, Colombia values its public and private external debt at historical cost. Equity investment is valued by using the index of the Stock Exchange of Colombia.

Reports of investment stocks sent to the Securities Superintendence are expressed in national currency. BR converts them to U.S. dollars using the peso-dollar exchange rate prevailing during the period.

Other investment

Data sources are stocks of assets and liabilities from commercial banks, loans and deposits held with foreign banks based on the foreign exchange records, statistics of external trade, data on public and private foreign indebtedness that BR compiles, enterprises' financial reports, and reports from the Ministry of Finance. Liabilities are calculated at historical cost.

Reserve assets

Data are obtained from the balance sheet of BR.

Congo, Republic of

The following text was confirmed as current in 2004.

I. General

The Bank of Central African States (BEAC) is responsible for compiling the Republic of Congo's balance of payments. The balance of payments data are annual and are compiled in millions of CFA francs. BEAC has prepared the statistics through 1995 in accordance with the recommendations of the *BPM5*, taking into account the specific context of the BEAC zone of issue. Regarding compilation methods, BEAC has introduced new questionnaires to implement the balance of payments methodology as set forth in *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

Exports and imports are valued on an f.o.b. basis. BEAC derives transactions from three sources: direct reports by enterprises and the Congolese Public Treasury (for government operations) in response to questionnaires; postal and banking statements for those not surveyed by questionnaires; and an estimate derived from flows of BEAC currency notes.

Services

Transportation

BEAC values shipping costs either directly, based on the reports of enterprises, the postal administration, and banks, or, if this is not available, by assuming that shipping costs are 18 percent of the c.i.f. value of imports. Other transportation entries include services rendered by carriers, mainly for the international transportation of passengers, and goods and services purchased by carriers and consumed in the course of their business.

Travel

Credit entries include expenditure in the Republic of Congo by foreign travelers, and debit entries include current expenditure by residents traveling abroad, regardless of the nature of the travel. The postal administration (SOPECO) and banks report the amounts for both types of entries; the banks report transactions in foreign banknotes, travelers' checks, transfers of travel agencies, tourists transiting the Republic of Congo, etc. BEAC also collects the information by means of questionnaires sent to the United Nations and its affiliated agencies, the Congolese Public Treasury, and embassies (for scholarships paid directly abroad). It supplements these figures by an estimate of flows of BEAC and franc zone currency notes and an estimate of expenditure by technical assistants during their leave abroad.

Other services

Insurance. Data on insurance of goods are not classified separately and are included in freight. Data on other insurance transactions relate to premiums paid abroad by the national insurance company, ARC (debit entry), and the other insurance companies (e.g., AGC, Gras Savoye). This item also relates to the amount of reinsurance claims settled with the national insurance company and the other insurance companies (e.g., AGC, Gras Savoye) (credit entry). BEAC supplements these figures by reports from banks and the postal administration, as well as from other enterprises in the case of insurance directly contracted abroad by residents.

Other business. These amounts include commissions, study and research costs (especially petroleum), management costs, etc. The figures are reported by enterprises, banks, the postal administration, and international organizations.

Government, n.i.e. Credit entries relate to expenses of all kinds (operating expenses in particular) of foreign diplomatic personnel and governments and of international organizations located in the Republic of Congo. Debit entries cover all expenditure abroad by the Congolese government for its diplomatic representations (wages paid to staff and operating expenses of the Republic of Congo's embassies abroad) and expenditure on services financed by international aid and by the government budget. To these are added private transfers by the staff of the Republic of Congo's embassies abroad and the revenue of foreign diplomatic missions in the Republic of Congo. BEAC takes the amounts recorded from reports by banks and the postal administration (embassy supplies, transfers), the Congolese Treasury (wages and other embassy expenses), transactions of the Paymaster-General of France, the French Development Fund (Agence Française de Développement—AFD), and foreign embassies.

Income

Investment income

This item covers actual transfers for dividends, coupons, and interest on private and public loans (interest paid on the external public debt of the Republic of Congo) and reinvested earnings. It includes charges and interest paid to the Fund, and the BEAC profits paid to the Congolese Treasury. Enterprises, banks, the BEAC, and the Congolese Amortization Fund (Caisse Congolaise d'Amortissement—CCA) provide these amounts.

Current transfers

The data available distinguish current transfers from capital transfers. BEAC derives the transactions from many sources—direct reports by enterprises, United Nations and its affiliated agencies, embassies, and the Congolese

Public Treasury (for government operations). It also bases the data on questionnaires to nonfinancial entities, on postal and banking statements to those not surveyed by questionnaires, and on estimates derived from flows of BEAC currency notes.

General government

Credit entries include grants, particularly technical assistance grants (Fonds d'Aide et de Coopération [French Fund for Aid and Cooperation—FAC], UN and affiliated agencies, other countries, etc.) and project grants. They also include aid and subsidies to the Congolese public sector from aid agencies (FAC, UN and affiliated agencies, European Development Fund [Fonds Européen de Développement—FED], etc.) and from foreign governments for development purposes. In addition, credits include other unrequited transfers that do not constitute development aid (e.g., unallocated budget subsidies, taxes, pensions, assistance in the form of technical and military equipment, signature bonuses paid by petroleum companies to the government, etc.). The debit side includes development contributions and subsidies of all kinds from the Congolese public sector and other non-aid benefits provided free of charge. The Congolese Public Treasury, international organizations, and embassies (data on financial and technical cooperation) provide the data.

Other sectors

The primary entries cover workers' remittances (debits). These include transfers abroad of the remuneration of resident individuals (generally expatriates), payment abroad of the wages of residents by resident enterprises, and the wages of expatriates and technical assistants, that are paid directly abroad. Entries also include transactions against BEAC currency notes repurchased from the Bank of France and the BCEAO. These figures are reported by enterprises, banks, the postal administration, and the BEAC.

Capital Account

Capital transfers

See note on current transfers.

Financial Account

Direct investment

BEAC obtains data essentially from enterprises and banks. Credit entries include foreign capital contributions, reported by enterprises as long-term investment in the Republic of Congo in the form of equity investment or standing loans or advances, and current account advances by parent companies. The item also records the counterpart of reinvested earnings. BEAC classifies disinvestment operations and repayments of loans and advances on the debit side.

Portfolio investment

Data do not permit distinguishing direct investment from portfolio investment.

Other investment

Loans

The Autonomous Amortization Fund provides data on public borrowing. Credit entries include drawings on foreign long-term (more than one year) loans and advances granted to the Congolese public sector. Debit entries cover service of the external public debt (principal). Data recorded under other long-term loans and assets include the Republic of Congo's payments to the capital increases of international organizations. Amounts under other short-term loans correspond to liquidity loans and advances received by the Congolese government from abroad.

Currency and deposits

BEAC takes figures from its books. Data on liabilities of the monetary authorities relate to changes in the accounts of foreign official agencies (the Fund, French Treasury, and other banks). For foreign assets and liabilities of the banking sector, BEAC obtains data from reports of the commercial banks and the postal administration. Other short-term capital of other sectors includes data on trade credits. BEAC obtains these data from enterprises and reports on banks and postal administration settlements.

Reserve assets

BEAC obtains the data from its records. This item includes monetary gold, SDR holdings, reserve position in the Fund, and foreign exchange assets of the central bank, consisting especially of franc zone currency notes and the operations account position with the French Treasury. Figures on monetary gold correspond to the change in monetary gold held by the central bank, which is adjusted twice annually on the basis of the price of gold on the world market.

Costa Rica

The following text was confirmed as current in 2004.

I. General

The Central Bank of Costa Rica (CBCR) is responsible for compiling and disseminating Costa Rica's balance of payments statistics. Within the CBCR, the Balance of Payments Area of the Monetary Department of the Economic Division prepares the data following the *BPM5*

guidelines. The department obtains the data on international transactions in services, income, transfers, and financial items from annual and quarterly surveys of more than 700 enterprises and institutions.

Other providers of primary data are other areas of the CBCR, the National Institute of Statistics and Census (INEC), the National Banana Corporation, the Agricultural and Industrial Sugar Cane League, the Costa Rican Coffee Institute, the Directorate General of Customs (DGA), the Foreign Trade Promoter (PROCOMER), the Costa Rican Tourism Institute (ICT), the national banking system, and the Ministry of Finance (MOF).

II. Specific Items: Balance of Payments

Current Account

Goods

The INEC is mandated by law to compile and publish the official figures for exports and imports of goods on the basis of customs declarations. The CBCR compiles data for exports and imports on the basis of customs declarations received from the DGA and PROCOMER. Export data are valued on an f.o.b. basis, and import data are valued on an f.o.b. and c.i.f. basis. The following adjustments are made: (1) valuation, for those goods whose final price is not known at the time of shipping and preparation of the customs declaration; (2) time of recording, for goods that are shipped before the date on which the customs declaration is completed; (3) coverage for goods without customs records, such as goods procured in ports by carriers; and (4) classification, to allocate the freight and insurance import charges to the corresponding services items.

Services

Transportation

CBCR obtains data on freight, passenger transportation, and other transportation services, as well as on other international transactions by air, land, and sea transportation companies, from information reported in the questionnaires that it sends to such companies.

Travel

Estimates are based on data reported by the ICT on the number of foreigners visiting Costa Rica and residents traveling abroad and on data obtained through sample surveys on per capita spending and average length-of-stay. The Directorate General of Migration and Foreign Travel provides the ICT with monthly data on the number of nonresident travelers entering Costa Rica and the number of residents leaving. The ICT undertakes quarterly surveys to derive the average amount spent and the average stay.

Other services

Insurance. On the debit side, the CBCR records amounts deducted from c.i.f. imports. The credit entries cover claims received. No resident companies provide merchandise insurance services.

Royalties and license fees. Data are derived from the survey.

Other business services. Included under this item are transactions connected with communications, agents' fees, professional and technical services, operational leasing, and miscellaneous services.

Government, n.i.e. Data include government services connected with embassies, international organizations, etc. Data are received from these institutions as well as from the Ministry of External Relations and Religion.

Income

Investment income

The item includes income accruing from direct investment in Costa Rica and income from investment abroad by Costa Rican banks and airlines. Data on direct investment income concern distributed and undistributed earnings and corporate direct investment losses. Also included is interest on the assets of the CBCR, commercial banks, and the INS abroad, as well as interest received by private companies on trade credits extended and deposits abroad. The MOF and the central bank itself provide the data on the interest on foreign public debt. Interest of private debt is obtained through the survey.

Current transfers

CBCR obtains the data on private sector transfers from the survey and gathers data on general government transfers from consultations with the entities concerned. CBCR reports duties, taxes, grants (in cash and kind), workers' remittances, pension payments, and mailed gifts (parcel post) under this heading.

Capital Account

Capital transfers

The entries in this category include data on external debt forgiveness and, if available, data on other capital transfers.

Financial Account

Direct investment

Data on direct investment include the provision of capital, reinvested earnings, and intercompany debt transactions. Data are obtained from the survey.

Portfolio investment

The CBCR's Subdirectorate of Foreign Debt and the MOF are the data sources for official portfolio transactions (e.g., bonds issued by the public sector). For private sector portfolio transactions, CBCR obtains the data from surveys and the custodians.

Other investment

The sources of information for official financial transactions (capital subscriptions to international organizations and foreign public debt) are the CBCR Sub-Directorate of Foreign Debt and the MOF.

For the private sector, CBCR uses the survey to compile data, which include, among other things, deposits by residents in banks abroad, trade credits (granted and received), export and import prepayments, and loans.

Reserve assets

The CBCR's assets include monetary gold, the reserve position in the IMF, credit balances in the Central American Clearinghouse, subscriptions to the Central American Stabilization Fund, bank deposits abroad, and foreign securities.

III. Specific Items: International Investment Position

Data sources for the international investment position are the same as those used in compiling the balance of payments.

Côte d'Ivoire

I. General

The Central Bank of West African States (BCEAO), headquartered in Dakar, Senegal, is responsible for the compilation of Côte d'Ivoire's balance of payments. The National Agency (the branch of the BCEAO in Côte d'Ivoire) collects the bulk of the statistical data and compiles the balance of payments, whereas the BCEAO headquarters determines the methodology and compilation procedures and collects certain primary data at a regional level. Balance of payments statistics are published after approval by Côte d'Ivoire's Balance of Payments Committee, which comprises representatives from several government departments under the chairmanship of the Minister of Economy and Finance. The data are compiled on an annual basis. Final data are published about two years after the reference year in the publication *Balance des Paiements*.

The main sources for the final data are customs statistics and reports of various organizations or government bodies—both national and foreign (United Nations Development Program [UNDP], European Development Fund [EDF], French cooperation mission, General Directorate of Government Accounting, the Treasury, etc.). In addition, the BCEAO conducts various surveys to obtain data on services, income, public transfers, and private and public capital flows. The figures for some balance of payments items are estimated.

In harmony with the other West African Economic and Monetary Union (WAEMU) countries, balance of payments data and the corresponding international investment position have been prepared in accordance with *BPM5* since 1996. The enterprise survey has been revised to take into account the data requirements of the *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

The primary source of the goods data is customs statistics, which are adjusted for timing, valuation, and coverage. These adjustments are made by the National Statistics Institute (Institut National des Statistiques—INS), which is responsible for preparing the national accounts. The INS sends the data to the BCEAO, which in turn makes further adjustments, the most important of which is the deduction of freight and insurance from imports c.i.f. to convert them to an f.o.b. basis. The BCEAO also reclassifies revenue and expenditure on bunkering, goods for processing, and purchases of film, music tapes, and disks, etc.

Services

Transportation

Credit entries for freight consist primarily of the income of resident carriers. The figures for sea and rail freight are obtained from surveys of the companies concerned, whereas road freight figures are estimated. Beginning with the 1996 balance of payments, a new survey for road carriers has been introduced. Debit entries for freight are obtained by applying a coefficient called the freight rate to imports c.i.f. This coefficient, now estimated at 16.99 percent, is obtained by comparing imports f.o.b. with imports c.i.f. on customs declarations. New questionnaires are expected to collect more accurate data on import freight. The data on passenger services are collected from the national airline, Air Ivoire, and the offices of nonresident airlines. The figures for port services are collected from ports and from transit and consignment companies.

Travel

Credit entries are obtained primarily from statistics on arrivals of foreign tourists and hotel occupancy provided by the Ministry of Tourism and Crafts (formerly High Commission for Tourism). A direct survey of hotels is also conducted. Debit entries are based on estimates and mainly cover expenditure of non-Ivoirien residents while out of the country. These figures are derived from the income of nonnationals working in the private sector, the wages of technical assistants and non-Ivoirien staff of international organizations with offices in Côte d'Ivoire, and the length of the leave of such persons. Figures on government missions are obtained from the Payroll Directorate. The expenditure of Ivoirien students abroad is primarily taken from surveys of donors for foreign scholarships and of the Ministry of Higher Education for scholarships granted by the Ivoirien government.

Other services

Insurance. Data are collected from a survey of insurance companies. Credit entries include reinsurance claims paid to Ivoirien insurance companies, and debit entries cover reinsurance premiums paid by these companies.

Financial. Data are obtained from the survey of nonfinancial enterprises by the BCEAO.

Other business. Data are obtained from the survey of nonfinancial enterprises by the BCEAO.

Government, n.i.e. The credit entries correspond to goods and services purchased in Côte d'Ivoire by foreign governments and embassies and international organizations with offices in the country. The data are obtained from surveys or are estimated on the basis of debit activity in the accounts of these entities with Ivoirien banks. The debit entries cover expenditure by the Ivoirien government abroad. These data are obtained from the General Directorate of Government Accounting and the Treasury. The debit entries also include receipts in Côte d'Ivoire by foreign embassies and consulates.

Income

Compensation of employees

The credit entries consist of wages paid to residents by the multinational Air Afrique, which is treated as a nonresident entity, and an estimate of the wages paid to residents by other nonresident entities. The debit entries correspond to the compensation paid to nonresidents by national shipping companies.

Investment income

Direct investment. Debit flows correspond to the transactions of subsidiaries and branches of foreign companies established in Côte d'Ivoire. The figures are ob-

tained in an annual survey of enterprises by the BCEAO or from the data on industrial and commercial profits provided by the General Directorate of Taxes.

Portfolio investment. The flows correspond to the transactions of Ivoirien-owned companies. The figures are also obtained in the annual survey of enterprises by the BCEAO and the data on industrial and commercial profits provided by the General Directorate of Taxes.

Other investment. Data comprise essentially external public debt service, valued on an accrual basis. The General Directorate of Government Accounting and the Treasury provides the data.

Current transfers

Current transfers are indistinguishable from capital transfers. Steps have been taken to introduce the distinction beginning with the 1996 final data.

General government

Credit entries are obtained from the reports of foreign governments and embassies established in Côte d'Ivoire and information found in UNDP and EDF reports. Debit entries correspond to technical assistance expenses defrayed by Côte d'Ivoire and Côte d'Ivoire's contributions to international organizations. These data are obtained from the Treasury's accounts.

Other sectors

Workers' remittances. Data are based on the analysis of the payroll of non-Ivoirien residents and the "A" banknotes issued by Côte d'Ivoire and received by other WAEMU countries. Information is also received from banks' reports.

Other. Other transfers consist of gifts received by Ivoirien residents. Also included are foreign scholarships to Ivoirien students, pensions paid by France to veterans, and transfers between private individuals. These data are obtained from embassies and banks.

Capital Account

Capital transfers

See note to current transfers.

Financial Account

Direct investment

The BCEAO collects the data in an annual survey of direct investment enterprises defined as companies in which at least 51 percent of the capital is held by non-residents. Data cover equity investment, reinvestment of earnings, and intercompany loans, including commercial credit.

Portfolio investment

The annual survey of enterprises provides figures on portfolio investment.

Other investment

The data on general government assets are obtained essentially from the Treasury accounts. On the liability side, the figures on official debt restructuring and amortization are obtained from the CAA. Data on assets and liabilities of the monetary authorities are taken from the BCEAO accounts. Assets and liabilities of banks include the assets and liabilities of the commercial banks and the debts and claims relating to the postal activities of the Ivoirien Postal and Savings Institution.

Reserve assets

Reserve assets comprise SDRs, the reserve position in the Fund, and assets in the operation account with the French Treasury. The data are obtained from the accounting statements of the BCEAO.

Croatia

The following text was confirmed as current in 2004.

I. General

The Croatian National Bank (CNB) is responsible for compiling the balance of payments and international investment position for Croatia. Data sources include reports of the government institutions, such as the Central Bureau of Statistics (CBS) and Croatian Institute for Health Insurance; special reports of the CNB, namely the international transactions reporting system (ITRS), external debt data, monetary statistics, and data on reserve assets; and estimates based on the statistical research carried out by the CNB.

The balance of payments is compiled on a quarterly basis in U.S. dollars, as well as in national currency—kunas. The presentation and compilation of the balance of payments follows the methodology recommended in *BPM5*.

Since the original data are reported in different currencies, the transaction values are converted into one unit of account by applying the exchange rate from the CNB exchange rate list in one of the following manners: (1) applying the midpoint exchange rate on the date of the transaction; (2) applying the average monthly or quarterly midpoint exchange rate in the case the transaction date is not available; or (3) applying the end-of-period exchange rate for the calculation of a change in the transaction value between the two

periods. The end-of-period balances reported in the original currency serve as a basis for calculating the change in the original currency value, which is converted by applying the average midpoint exchange rate in the observed period into the value of change in the reporting currency.

II. Specific Items: Balance of Payments

Current Account

Goods

The main data source for exports and imports of goods is the CBS report on foreign merchandise trade of the Republic of Croatia. These data are adjusted for coverage and classification. Accordingly, goods exports and imports in the balance of payments are reported on an f.o.b. basis, where the value of imports f.o.b. is estimated on the basis of research studies of the CNB on the stratified sample of importers. The resulting value serves as a basis for the estimate of the share of transportation and insurance services by which the original value of imports c.i.f., stated in the CBS report, is reduced. In the 1993–2001 period, this share stood at 7.10 percent (estimated only on the basis of the large exporters), while from 2002 on, it has amounted to 3.73 percent.

For the period from 1993 to 1996, the value of imports was revised using estimates of imports in duty free zones, which have been included in the merchandise trade statistics since 1997. Starting from 1996, new classification on repairs on goods and goods procured in ports by carriers was introduced. In addition, since 1999, based on the survey on consumption of foreign travelers in Croatia and domestic travelers abroad, the item of goods exports has been modified by the estimated value of goods sold to foreign travelers and tourists and taken out of the Republic of Croatia. The item of goods imports is adjusted for the estimated value of goods imported personally by the Croatian citizens from the neighboring countries (shopping expenditures).

Services

Transportation

This category covers the international transportation of passengers, goods, and other transportation services.

From 1993 to 1998 the data sources were the ITRS and questionnaires received by the CNB from enterprises engaged in the international transportation of goods and passengers. Expenditures on transportation services also included 1) part of the differences between c.i.f. and f.o.b. imports, pertaining to services provided by nonresidents, and 2) estimates of the operating

costs of Croatian transportation companies in international transportation.

As of the first quarter 1999, revenues and expenditures from transportation services are compiled on the basis of data from the new CNB survey on international transportation services, with two exceptions—first, revenues and expenditures from road transport are still compiled from ITRS data, and second, data on c.i.f./f.o.b. adjustments for nonresident carriers are obtained from the questionnaires on transportation costs related to imports of goods, classified by modes of transportation and residency. From the first quarter of 1999, a breakdown by mode of transportation is available.

Travel

Income from services rendered to foreign travelers and tourists, as well as expenditures incurred by domestic travelers and tourists abroad, are shown under the travel component. From the second half of 1998, the Croatian National Bank started carrying out the survey on the consumption by foreign travelers in Croatia and domestic travelers abroad. Since early 1999, the results of this survey (stratified sample) have been combined with the Ministry of the Interior data on the total number of foreign and domestic travelers, along with the data on distribution of foreign travelers by countries contained in the CBS report on tourism for compiling the travel component.

Other services

The other services position is compiled by using various data sources. In addition to data on insurance and communication services, which have been determined by CNB special statistical research in 2001, the values of all other services are derived from the ITRS.

Income

Transactions in the income account are classified into four main groups. The compensation of employees item is compiled on the basis of the ITRS. Income from direct investment, portfolio investment, and other investment are reported separately. Data on reinvested earnings are reported separately, under direct investment income, calculated on the basis of CNB research on direct and other equity investment. In contrast to data on dividends, these data are not available for the 1993–96 period, since at that time they were not reported separately. On the basis of statistical data on external debt relations, starting from 1997, income from direct investment includes data on interest arising from credit relations between residents and nonresidents directly related through ownership. Income from equity portfolio investment is compiled on the basis of the same research. On the other hand, data on debt portfolio investment income have been compiled since 1999 based on income reported in statistics on foreign credit relations,

which also encompass payments related to debt securities owned by nonresidents. Income from other investments includes all payments and collections of interest in accordance with the foreign credit relations statistics.

Current transfers

Current transfers are reported separately for the general government sector and other sectors. The main data source on current transfers for both sectors is the ITRS. In addition to taxes and excise duties, pensions, monetary support, and donations, which are included in current transfers of both sectors, the government sector encompasses data on multilateral cooperation, whereas other sectors include data on workers' remittances. Current transfers of the general government sector also include data on exports and imports of goods without a payment obligation, provided by the CBS. During the 1993–98 period, current transfers of other sectors also encompassed an estimate of unregistered foreign currency remittances, which accounted for 15 percent of the positive difference between unclassified inflows and outflows of the household sector. From 1993 to the second quarter of 1996, the CNB also assessed a portion of the outflow based on current transfers. Since 2002, inflows and outflows based on current transfers of other sectors are supplemented by the data of the CNB special statistical research on international transactions related to insurance services.

Capital Account

Capital transfers

This category is compiled from the ITRS data on migrants' transfers (revenues and expenditures). In addition, the capital account includes transfers that cannot be classified into current transfers, such as the allocation of gold of the former Socialist Federal Republic of Yugoslavia or investments in patents and rights.

Financial Account

Direct and portfolio investment

Foreign direct investments include equity capital, reinvested earnings, and debt transactions between related residents and nonresidents. Direct investments are defined according to the 10 percent ownership criterion for both direct investment abroad and direct investment in Croatia. The CNB research on foreign direct investments started in 1997 when corporations included in the survey also provided data on direct investments for the 1993–96 period. For this period, no data are available on reinvested earnings and other capital under the direct investment component (excluding the banking sector). These data became available only in 1997 when the abovementioned research was launched. Since

1999, data on debt transactions within the direct investment component have been collected on the basis of external debt statistics.

Data on equity portfolio investments are collected from the same data source as the data on direct investments. Debt portfolio investments include all investments in short- and long-term debt securities that cannot be classified under direct investments. In the 1997–98 period, these data were collected through the CNB research on direct and portfolio investments, and since 1999 data on external debt and monetary statistics data for the banking sector have been used. Starting from 2002 and 2004, this position has also been compiled for investment funds and pension funds, respectively.

Other investment

Other investment is classified according to the following institutional sectors: CNB, government, banks, and other. The government sector comprises central government, local government, and local funds. The banking sector comprises commercial banks.

Data on foreign assets include trade credits, loans, and currency and deposits of banks and other sectors.

During 1996–2002, trade credits included the CNB estimates of advance payment and deferred payments, made on the basis of the sample of the large importers and exporters. Data on advance payments have been estimated since 1996, while data on short-term delayed payments (first up to 90 days, then up to 150 days, and today from 8 days to 1 year) have been collected since 1999. In 2003, this collection was replaced by a new one, where the selected companies, regardless of their size (stratified sample), are obliged to submit data. Data on delayed payments with the original maturity of more than one year are derived from the CNB foreign credit statistics. Foreign loans received and extended, which are not attributed to the direct investments component, are classified by the institutional sector and maturity under the other investment. The CNB foreign credit statistics serve as a data source for these transactions.

The currency and deposits component shows residents' claims on foreign countries for foreign exchange and deposits with foreign banks, as well as obligations of the Croatian banks for deposits owned by nonresidents. Monetary statistics represent a data source for the general government sector and banks sector. Monetary statistics data on the stocks and currency composition of foreign assets and liabilities are used to assess transactions, with the exchange rate changes eliminated from the differences in stocks. In the 1993–98 period, data on other sectors' claims under this component were compiled on the basis of the CNB estimate of a portion of net foreign currency inflows of the household sector, which is not classified under the current transfers. Since

1999, this component has included only the data based on the Bank for International Settlement quarterly data, while data for the fourth quarter of 2001 and the first two quarters of 2002 relate to the effect of the EMU countries' currencies changeover to the euro.

Reserve assets

In the period from 1993 to 1998, the estimate of reserve assets transactions was made by converting the changes in stocks in the original currencies into U.S. dollars by applying the average monthly exchange rates for the relevant currencies. Since 1999, the changes in reserve asset stocks have been calculated on the basis of the CNB accounting data.

III. Specific Items: International Investment Position

The international investment position is compiled in accordance with the recommendations set out in the *BPM5*. Data sources include reports from banks, enterprises, the CNB, and the Zagreb Stock Exchange (CROBEX).

Data on foreign investments abroad and foreign investments in Croatia are recorded in U.S. dollars. Depending on the available sources of data, the conversion of values from the original currencies in U.S. dollars is performed by applying (1) the current rate of exchange or the average monthly midpoint exchange rate of the CNB to transactions; or (2) the midpoint exchange rate of the Croatian National Bank on the reporting date to balances.

Direct investment

Data on direct investment are derived from a survey on direct and portfolio investment conducted by CNB. The survey covers the equity investments both in Croatia and abroad. Data on other capital are derived from reports provided by CNB. The equity investments have been compiled since the beginning of 2001 and are adjusted for changes in the official index of the CROBEX.

Portfolio investment

Data on equity portfolio investment are derived from the survey mentioned in the direct investment section and are adjusted for changes in the official index of the CROBEX.

Data on debt portfolio investment are derived from reports on foreign assets and liabilities reported by CNB, government, Croatian banks, and corporations. They include data on bonds and notes and money market instruments grouped by institutional sectors: CNB, government, banks, and other.

Other investment

Data on foreign assets and liabilities are compiled from reports provided by CNB, government, Croatian banks, and companies, regarding trade credits, loans, and currency and deposits.

Trade credits (assets and liabilities) comprise foreign claims and foreign liabilities of the relevant sectors arising from trade credits. The source of data is the register of foreign credits kept by the CNB.

Loans (assets and liabilities) comprise data on loans extended and received between residents and nonresidents classified according to the institutional sectors. The source of data is the register of foreign credit kept by the CNB.

Currency and deposit assets comprise the total liquid foreign exchange of banks authorized to do business abroad net of the amount of foreign exchange deposited by domestic banks with the CNB as a part of the reserve requirements. In addition to foreign claims of domestic banks, foreign claims of the government sector are also shown. The sources of data are reports from the government and banks.

Currency and deposit liabilities comprise the total foreign exchange and kuna liabilities to nonresidents of the relevant sectors in the form of the current accounts balances and time and demand deposits. The sources of data for this item are reports from banks.

Reserve assets

This item is compiled from the data provided by the CNB, as described in the balance of payments methodology above.

Cyprus

The following text was confirmed as current in 2004.

I. General

The agency responsible for compiling the balance of payments statistics for Cyprus is the Central Bank of Cyprus (CBC). The CBC obtains data for the balance of payments mainly from settlements (banks) and complements the data from other sources, such as the Cyprus Statistical Service (CYSTAT), the Department of Land and Surveys, other government departments, semigovernmental organizations, the Cyprus Stock Exchange, and directly from financial and nonfinancial enterprises.

The CBC compiles the statistics monthly, quarterly, and annually, publishing them quarterly and annually. The

balance of payments statements are published in the CBC's *Annual Report* and on its website. The CBC compiles the statistics in millions of Cyprus pounds using the classification and the standard components of the *BPM5*.

Following the gradual abolition of exchange controls on capital flows, the CBC developed a new balance of payments reporting system, in operation since January 2002. The intent was to offset the loss of data associated with the abolition of controls and to produce statistics in accordance with both *BPM5* and Eurostat/ECB requirements. The system is open-settlements based, complemented by direct reporting and surveys.

In particular, since January 1, 2002, resident banks must report to the CBC, on an individual transaction basis, all transactions between residents and nonresidents (using the *BPM5* definition of residency) that are carried out on behalf of their customers or on their own behalf. Banks are required to record each transaction (credit or debit) and indicate the country, currency, and type of operation, as well as the institutional sector in the case of financial account transactions.

The CBC is also participating in the International Monetary Fund's Coordinated Portfolio Investment Survey (CPIS), conducted with reference to end-December 2002. As a result of its participation in the 2001 CPIS, the central bank established positions on outward portfolio investment as of December 31, 2001 and included them in the partial international investment position (IIP) statement for Cyprus. As of 2002 onwards, it is producing a full IIP statement, while for the years from 1999 to 2001, it compiled partial IIP statements, excluding the international business sector.

In addition, the CBC has started revising the old balance of payments series from 1995 onwards to comply with the *BPM5* residency definition. So far, data for the years 2000 and 2001 have been adjusted.

II. Specific Items: Balance of Payments

Current Account

Goods

The CBC compiles the balance of payments statistics on the basis of imports and exports statistics produced by CYSTAT. These figures record the physical movement of goods across the national frontier (general trade system), as declared by importers and exporters on completed customs documents. Goods exported and imported are valued on an f.o.b. and c.i.f. basis, respectively. For balance of payments purposes, the customs data are adjusted for coverage, such as for the ex-

clusion of returned goods, and for reclassification, such as for freight and insurance on imports.

Services

Transportation

This category covers freight and passenger services provided by sea and air transport operators. The central bank derives debit entries for freight services from the estimates made to convert imports from a c.i.f. to an f.o.b. basis (i.e., freight and insurance are assumed to equal 10 percent of imports c.i.f.).

Concerning passenger transport, banks report the data through the settlements system, and with respect to credits, CBC cross-checks the figures with data obtained from a limited survey of major resident passenger transport operators. The item also includes data on supporting, auxiliary, and other services related to transportation.

Travel

For travel credits for tourism, the central bank obtains data from CYSTAT, which conducts a monthly frontier survey on tourist expenditure in Cyprus. CBC combines per person expenditure derived from the survey with the number of tourist arrivals, as given by the frontier survey of incoming travelers, which CYSTAT also conducts. With regard to education-related revenue, CBC conducts an annual survey among those colleges that provide educational services to nonresidents and compares the survey results with data reported by banks under the settlements system.

For travel debits, CBC obtains the value from the settlements system. Reported data include foreign exchange allowances issued to resident travelers for tourism purposes, foreign exchange issued for education, private medical spending abroad, payments by resident travel agents, and foreign exchange outflows through credit cards.

Other services

Communications. CBC checks settlements data for consistency with data obtained from a survey of the companies or organizations in this field. Conducted on an annual basis, the survey obtains quarterly data. It includes the major semigovernmental organizations in this area, that is, the Cyprus Telecommunications Authority, the Cyprus Postal Service, couriers, etc.

Insurance. Merchandise insurance is estimated on the basis of the total value of imports c.i.f. (i.e., at an assumed proportion of 1 percent). For nonmerchandise insurance, the data that CBC obtains from banks through the new reporting system include life insurance and pension funding, other direct insurance, reinsurance, and auxiliary services related to insurance.

Royalties and license fees. Again, data for this item are obtained through settlements for both debit and credit entries.

Other business services. Settlements comprise the main source of data for this item and are complemented by data obtained from the International Business Department and the annual survey of major companies/transactioners. Among the items included in this category are merchanting and other trade-related services, operational leasing and miscellaneous business, and professional and technical services, which include legal, accounting, business, marketing, advertising, architectural and various other services.

Government services, n.i.e. Entries for this category include foreign military expenditures in Cyprus, foreign embassy expenditures in Cyprus, the Cyprus government's foreign service expenditures abroad, and other government expenditure abroad. CBC obtains the data from the government accounts (budget abstracts), settlements, and bank returns.

Income

Compensation of employees

Data are obtained from the settlements system for both inward and outward flows.

Investment income

Direct investment. As a result of the CBC's participation in Eurostat's Foreign Direct Investment (FDI) Pilot Project with Candidate Countries, Cyprus is producing all Y5 and Y6 questionnaires of the BOP Vademecum, including Y5-3 and Y6-3. Breakdowns are available by type of instrument, country, and economic activity. The definitions set out in the *BPM5* are followed. CBC applies the 10 percent rule to separate FDI from portfolio investment income. Also, it records income on intercompany loans as income on direct investment, identifying it separately from other investment income.

Since 2002, the central bank obtains data on dividends, interest on intercompany loans, and rent from the settlements system. It cross-checks the settlements data, complementing them with information contained in audited accounts of FDI companies and the remaining exchange control records. It records reinvested earnings annually on the basis of information contained in audited accounts of FDI companies. Also, it records an offsetting entry in the financial account item direct investment.

Since the audited accounts of FDI companies are not available in time, reinvested earnings for the current year are estimated on the basis of information in the accounts for previous years. The estimated figures are

replaced by actual data when they become available about one year later.

Portfolio investment. The settlements system provides data on the portfolio income of banks and their resident customers on a payments basis. In the case of bonds issued abroad by domestic banks, CBC estimates accrued interest. For interest payable on securities issued by the government (euro commercial paper and euro medium-term notes), the compilers obtain data from the CBC's External Debt Section.

Other investment. The settlements system provides data on other investment income (credits and debits) of banks and resident customers. For banks' own transactions with nonresidents, interest on both loans and deposits is reported on an accruals basis. For interest on reserves, CBC obtains data from its Accounting Services Department.

Current transfers

General government

The Ministry of Finance provides data on general government transfers, which include transfers from the United Nations, the European Union, the United States, etc.

Other sectors

CBC compilers collect data on outward and inward transfers of other sectors, including workers' remittances, cash gifts, inheritances, lottery prizes, etc., from banks through the settlements system.

Capital Account

In general, the new balance of payments compilation system follows the definition of the capital account set out in the *BPM5*. CBC records migrants' transfers and acquisitions or disposals of land by the government of Cyprus abroad or by foreign governments in Cyprus in the capital account. However, there is not as yet any distinction between current and capital transfers with respect to grants received or extended by the government.

Financial Account

Direct investment

Cyprus has established a regular FDI reporting system, whereby it obtains data on FDI flows from the settlements system, which it complements and cross-checks with the accounts and other returns of the companies and banks. The CBC obtains information on the initiation of an FDI relationship from the statistical declarations submitted by resident investors to the domestic banks or to lawyers or accountants of the FDI companies, who forward the information to the CBC. This

FDI declaration is updated whenever there is a change in the FDI company's issued capital or in the percentage participation of the direct investor(s) in the company. The compilers supplement and cross-check these data with data from the CBC's International Business and Exchange Control Section as well as the Banking Supervision and Regulation Division

As a result of Cyprus's participation in Eurostat's FDI pilot project, Cyprus is producing all Y5 and Y6 questionnaires at the required geographical and economic activity levels of analysis and using the NACE classification of economic activity. It will collect information on stocks of FDI assets through a combined CPIS/FDI survey conducted with reference to 2002, while it will make a first assessment of stocks of FDI liabilities on the basis of accounts of inward FDI enterprises and data from the Cyprus Stock Exchange.

The central bank applies the 10 percent OECD benchmark definition of FDI. In accordance with the *BPM5* definition of residency, the bank considers companies in the international business sector with a physical presence in Cyprus (including all international banking units) as residents.

Portfolio investment

Under the settlements system, banks report inward and outward portfolio investment flows. For the banks' own portfolio transactions, domestic banks report security-by-security data, including an ISIN code, while for customers' portfolio transactions, a breakdown by security is not required. Furthermore, the CBC derives data on banks' own portfolio flows from their monthly balance sheets and other returns submitted to its Banking Supervision and Regulation Division.

The CBC collects data on debt securities issued abroad by the government, specifically euro commercial paper and euro medium-term notes (EMTN), from its External Debt Section. Concerning inward investment in securities listed on the CSE, the CSE transmits to the CBC the security-by-security data on nonresident purchases and sales of securities listed on the CSE. Data are broken down by sector, instrument, and country. The 10 percent rule is applied to distinguish direct from portfolio investment.

Financial derivatives

Since 2002, the central bank has recorded transactions in financial derivatives as a separate category of the financial account; previously it included them under portfolio investment (debt securities). Under the settlements system, banks report transactions in financial derivatives broken down by country, currency, and institutional sector.

Other investment

Trade credits

The entries for long-term trade credits on the assets side include prepayments made for imports of military equipment and for imports of aircraft by Cyprus Airways. Data are obtained from the government and from Cyprus Airways.

On the liabilities side, trade credits comprise estimates of suppliers' credits calculated using a formula based on the pattern of imports. Specifically, trade credits are estimated on the basis of the assumption that one-third of the imports of the previous four months are unpaid.

Loans

CBC compiles drawings and principal repayments of government loans from data collected from its External Debt Section and from government accounts. It obtains data on the banking sector's loans from the settlements system and from monthly balance sheets. For the other sectors' loans, it obtains data from the settlements system and directly from those semigovernmental organizations that are treated as part of the private sector.

Currency and deposits

For the banking sector's deposits, CBC obtains data from the settlements system and from monthly balance sheets. It obtains data on the other private sector's deposits from the settlements system and directly from those semigovernmental organizations that are treated as part of the private sector. Concerning deposits maintained abroad by the nonbank private sector, CBC gathers limited data through the settlements system.

Reserve assets

The main source of data on reserve assets is the central bank's Accounting Services Department. It compiles stocks of reserve assets monthly, which are available one to two weeks after the end of the reference month. Breakdowns by instrument and by currency are available. CBC prepares a geographical breakdown quarterly, communicated to the IMF on a strictly confidential basis. For the transactions in reserve assets presented in the quarterly balance of payments, it derives the data from stocks, including adjustments for changes due to exchange rate fluctuations.

III. Specific Items: International Investment Position

The CBC compiled partial international investment position (IIP) statements, on the basis of the previous (exchange control) residency definition for the years 1999 to 2001. In particular, FDI assets and liabilities, as well as portfolio investment liabilities in the form of equity

securities, were not available, while loan liabilities of the private nonbank sector were only partly covered. As of reference year 2002, the central bank is producing a full IIP statement.

Direct investment

CBC compilers drew positions on FDI liabilities from the stocks recorded in the audited accounts of international business companies and banks and from data submitted by the CSE on listed companies, for the reference year 2002. In the case of FDI companies for which accounts were not available, stocks were initially estimated from accumulated flows. Furthermore, the CBC conducted a combined CPIS/FDI survey on stocks of assets abroad for the reference year 2002.

Portfolio investment

Cyprus participated in the 2001 CPIS and has compiled portfolio investment assets as of end-December 2001. Following the end-investor security-by-security approach, it covered all resident entities undertaking portfolio investment abroad, namely, domestic banks, international banking units, domestic and international insurance companies, investment companies, and non-financial international business companies with a physical presence in Cyprus. Owing to exchange control restrictions applicable until the end of March 2002, domestic nonfinancial companies and Cypriot households were generally not allowed to perform portfolio investment transactions abroad and were thus not covered by the 2001 CPIS.

Cyprus is also participating in the 2002 CPIS, which has been extended to cover positions of FDI assets as well. CBC is planning to conduct this survey annually and to use the results to compile portfolio investment and FDI assets. As a result of the liberalization measures adopted in March 2002, the household sector may now undertake portfolio investments abroad and will therefore be included in future surveys. For the reference year 2002, an estimate of this sector's portfolio assets abroad was made on the basis of flows. For the 2003 CPIS, the same approach described above has been used with the following addition: for the household sector, the CBC collected data on a security-by-security basis from a large number of entities that act as custodians and/or fund managers. It asked them to report the portfolio holdings of their resident natural person customers.

CBC will compile portfolio investment liabilities in equity securities for reference year 2002. In this respect, the CSE has started to report to the CBC stocks of liabilities of listed companies vis-à-vis nonresidents (i.e., equity capital held by nonresident shareholders).

Financial derivatives

Stocks of financial derivatives are compiled.

Other investment

The compilers draw complete data on other investment assets and liabilities of the banking sector from bank balance sheets. Regarding other investment positions of the nonbanking private sector, the available data comprise estimates of trade credit liabilities and loan liabilities of public corporations. For the deposit assets of this sector, compilers obtain data from the Bank for International Settlements (BIS) *Quarterly Review*.

Reserve assets

The CBC compiles stocks of reserve assets on a monthly basis. The CBC also participates in the IMF's annual Survey of the Geographical Distribution of Securities Held as Foreign Exchange Reserves (SEFER).

Czech Republic

The following text was confirmed as current in 2004.

I. General

The Czech National Bank (CNB) is responsible for the compilation of the balance of payments and international investment position statistics. The data necessary for compiling the balance of payments are collected from various sources: the banking sector (that is, the commercial banks and various departments of the CNB itself), securities traders/brokers, the Czech Statistical Office (CZSO), various government ministries (such as the Ministry of Finance and the Ministry of Labor and Social Affairs), government agencies (such as the National Property Fund), and the corporate sector, including specialized units (such as transportation and insurance companies). Many of these sources are also used for compiling the international investment position. For some balance of payments items, estimates complement the data collected from primary sources.

The CNB compiles the balance of payments quarterly (for the 1993–2000 period in cumulative form and starting from 2001 in individual quarters). Since January 2003, the CNB has also published monthly estimates (for key items in accordance with the European Central Bank requirements). The balance of payments and international investment position statistics are published in CNB publications and on the website at www.cnb.cz; in addition, annual data are published in the yearbooks of the CZSO.

The balance of payments and international investment position data are compiled in Czech koruny (CZK) and are published in euros and U.S. dollars as well as koruny. Some transactions are converted from other cur-

rencies to CZK using the exchange rate prevailing at the time of the transaction; other transactions are converted using the average exchange rate for the reporting period. The stocks of assets and liabilities in the investment position are converted from foreign currencies to CZK using the exchange rate prevailing at the end of the reporting period.

At present, not all items of the balance of payments correspond fully to the standards required by the *BPM5*; the collection and compilation procedures are, however, gradually being adjusted to conform to the recommendations of the *BPM5*. Starting with the division of Czechoslovakia into the Czech and Slovak Republics on January 1, 1993 and until the end of the mutual payment system based on bilateral clearing (October 1, 1995, when a free currency payment system between the two countries was introduced), the Czech Republic balance of payments vis-à-vis the Slovak Republic was compiled separately. Technical and legal obstacles prevented classifying the bilateral financial transactions in as much detail as that used for the Czech Republic and the rest of the world, because the range of data available from commercial banks about transactions with the Slovak Republic was limited. Thus, a consolidated balance of payments for the period 1993–95 could not be compiled at the level of detail required by *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

The CNB receives monthly data on exports and imports from the CZSO, which is responsible for final data processing. These data are collected by customs authorities; since accession to the European Union (EU), data are collected for trade with EU member states (using the Intrastat system) separately from trade with third countries (which are based on customs statistics). In the Intrastat system, goods are recorded in the month in which they were dispatched (exports) or received (imports) or alternatively in the following month when the obligation to pay VAT arises. Other goods are reported to customs generally within two or three days of the goods crossing the customs frontier for exports and at the time of crossing the customs frontier for imports. Foreign trade data are recorded in the balance of payments under the items general merchandise, goods for processing, repairs on goods (from 2001 onwards), and nonmonetary gold. Goods procured in ports are included in transportation so far, as part of payments for services.

The CNB used to make several adjustments to data obtained from customs statistics to put them on a balance

of payments basis. For the period 1993–96, the values of exports and imports were reduced by the estimated value of the interest on trade credits, which were then recorded under income. Starting from 1997, the value of goods in the customs statistics does not include interest on trade credits.

The CNB also adjusted the value of imports of natural gas from Russia. For the period 1993–95, these imports represent the repayments of a government credit and, for the period 1996–99, represent payments for construction works performed by Czech enterprises in Russia. The CNB has converted the value of these imports, originally denominated in transferable rubles, into market prices in U.S. dollar equivalents.

The CZSO regularly (quarterly) updates monthly trade statistics. For the balance of payments compilation, the CNB uses preliminary trade data until the CZSO publishes a definitive trade balance.

Services

Transportation

Data for receipts and expenditures related to air and railway transport of goods and passengers are collected directly from transportation companies. For other kinds of transport, the data are based on the commercial banks' records. Starting from 2001, data on the division into freight, passenger, and other transport are available.

Additional data are required from companies involved with transporting natural gas through the territory of the Czech Republic to Western Europe (credit) and transporting gas and oil through Slovakia to the Czech Republic (debit).

Data on freight services connected with exports and included in the contractual export price are estimated from customs declarations and reported under *transportation-credits*. The cost of transportation for imports, when included in the import price, remains part of the trade balance with a debit entry.

Travel

For the period 1993–98, the travel item was compiled using data provided by the CZSO on the number of travelers; the CZSO obtained information from police on the arrivals of foreign visitors and on the trips of Czech residents abroad. Estimates of average expenditures by foreigners during their stay in the Czech Republic and of Czech tourists during their trips abroad were based on regular inquiries at selected border crossings. The estimates were also based on information from the banking sector on purchases of Czech currency by nonresidents and foreign currency by residents, on the use of credit and payment cards, and on the receipts and expenditures of hotels and travel agencies.

Since 1999, the banking statistics, complemented by the CZSO survey of travelers at accommodation establishments, have been the main source of information used to compile the travel item. From 1998 onwards, the travel data are supplemented with data on expenditure by foreigners in the Czech Republic and Czechs employed abroad for less than one year. Starting from 2001, the CNB produces data showing the split between business and personal travel.

Other services

Information on receipts and expenditures related to other services is derived from banking records of amounts received from abroad for services provided and of amounts paid for services received.

Insurance. For the period 1993–98, data are based on bank records of receipts and expenditures related to life and pension insurance and non-life insurance; the practice differs from *BPM5*. From 1999 onwards, the data are obtained from a survey of insurance companies in the Czech Republic. Because data on freight insurance are not available separately from freight services, they are included under transportation.

Merchandising. This item was recorded gross up to 2001 and is now recorded net.

Government, n.i.e. Because no surveys of embassies, consulates, and international institutions are available so far, banking records on the transfers of funds between embassies, etc. and their home countries are used as a proxy for expenditures of Czech representation abroad, as well as for spending of foreign embassies in the Czech Republic (including staff).

Income

Compensation of employees

Income from the short-term employment of Czech citizens abroad (credit) and similar employment of foreigners in the Czech Republic (debit) is recorded under this item. The derivation is based on the estimated number of persons employed in the host country and the assumed level of their salaries; up to 1997 this is decreased by expenditures related to their stay abroad. From 1998 onward, this item includes contributions paid by employers on behalf of employees to social security.

Investment income

Data on direct investment income are based on the CNB enterprise surveys and banking records. Owing to the lack of information on reinvested earnings and undistributed branch profits, direct investment income for 1993–97 comprised only dividends and other distributed profits transferred abroad and received from

abroad. Since 1998, the data on reinvested earnings have been derived from annual enterprise surveys.

Information on portfolio investment income is obtained from bank records and the reports of security brokers. Banking records are the source of information on interest receipts and payments on government credits (interest income is based on actual payments). Interest on commercial banks' assets and liabilities and on trade credits and corporate sector loans is derived from bank records, supplemented by estimates of the CNB. Income on the reserve assets of the CNB is derived from its balance sheet and income statement and is recorded on an accrual basis.

Current transfers

Data on current transfers (i.e., pension payments, inheritances, gifts, alimony, membership contributions, and other cash transfers) are derived from banking records. From 1998 onwards, this item includes taxes on income and contributions to social security schemes. Transfers to and from EU institutions linked to development aid and social policy are recorded under current transfers. Transfers linked to structural measures and agricultural policy are recorded partly as current transfers and partly as capital transfers.

Capital Account

Capital transfers

Data for 1993 reflect transfers resulting from transactions in shares acquired from voucher privatization between Czech and Slovak shareholders. Data on transfers of funds connected with migration are obtained from the records of the banking sector.

Acquisition/disposal of nonproduced, nonfinancial assets

For the period 1993–96, acquisition/disposal of nonproduced, nonfinancial assets such as patents, copyrights, etc. was included in the services component of the current account, together with payments associated with the use of these assets. Information for this component is derived from the banking statistics.

Financial Account

Direct investment

Direct investment is defined according to the *BPM5*, using the 10 percent ownership criterion. For the period 1993–97, the reported data on both inward and outward foreign direct investments consisted only of changes in equity capital. Since the reference year 1998, the direct investment flows cover investments in equity, reinvested earnings, and other investment capital, representing assets and liabilities related to suppliers' credits and other credits and loans between direct

investors and direct investment enterprises. Up to 1997, other investment capital was recorded under *other investment* in the balance of payments statistics. From the reference year 1998, this item has been reclassified under direct investment.

The main source of data on equity capital and other capital is companies' reports submitted to the CNB under the reporting obligations pursuant to the Foreign Exchange Act. Other sources include the National Property Fund, which provides information on privatization of state-owned shares, the Securities Center, commercial courts, which provide information on newly established joint ventures, and public sources. The data on reinvested earnings for recent periods are based on estimates. The final data are drawn from the annual direct investment survey.

Portfolio investment

The information on nonresident transactions in securities denominated in domestic currency is collected from securities traders' reports. The information on transactions in securities issued by residents in foreign markets is collected from resident issuers. Transactions in money market instruments are obtained from the Registration Center of the short-term securities market at the CNB. Data on resident transactions in foreign securities are obtained from banks and securities dealers and from other nonbank financial institutions' reports.

Financial derivatives

Transactions in financial derivatives (recorded in the balance of payments since 2000) are derived from the commercial banks' statements on external assets and liabilities.

Other investment

Data on transactions in corporate sector assets and liabilities are derived from quarterly enterprise surveys (trade credits) and from reports submitted to the CNB under reporting obligations (loans). Because of the limited number of respondents, the data obtained from surveys have to be completed with estimates based on other sources. Data on short-term capital transactions of banks as well as long-term bank deposits are derived from statements of the external assets and liabilities of commercial banks and the CNB. The banks provide information on drawings and repayments of long-term bank loans and government credits. Information on capital subscriptions to international nonmonetary organizations is obtained from administrative sources.

Reserve assets

For the period 1993–95, data on changes in stocks of reserve assets were derived from the CNB balance

sheet. Since 1996, data on transactions in reserves have been reported.

III. Specific Items: International Investment Position

Direct investment

The direct investment position data include equity capital and reinvested earnings, and since 1997, other capital data. The relevant positions in indirectly owned foreign direct investment enterprises are recorded as well. From the reference year 1997, the main source of information on both Czech direct investment abroad and foreign direct investment in the Czech Republic is an annual enterprise survey conducted by the CNB. The preliminary stock data are derived from the transactions data.

Portfolio investment

Information on liabilities reflecting the ownership of domestic bonds and shares by nonresidents is collected from security brokers and from resident issuers. Data on domestic short-term financial instruments held by nonresidents are obtained from the Registration Center of the short-term securities market at the CNB. The stocks of assets reflecting ownership of foreign securities by residents are reported by banks, licensed security traders and nonbank financial institutions and are supplemented by estimates.

Financial derivatives

The receivables and payables from financial derivatives are monitored and recorded only when a resident commercial bank participates in the transaction.

Other investment

Data on banks', other sectors', and government assets and liabilities are derived from the CNB balance sheet, statements of the external assets and liabilities of the banking sector, enterprise surveys, statements of government assets and liabilities, and various other sources. Data on assets and liabilities of the corporate sector are acquired through a selection procedure covering about 550 subjects both on the exports and imports side (approximately three quarters of the trade balance turnover).

Reserve assets

The source of data on reserve assets (official reserves) is the balance sheet of the CNB. Monetary gold is valued at US\$ 42.22 per troy ounce (until the end of 1999) and at market price (since 2000).

Denmark

The following text was confirmed as current in 2004.

I. General

Statistics Denmark and Danmarks Nationalbank share responsibility for the collection and compilation of the Danish balance of payments statistics, where Statistics Denmark is responsible for the current and capital account, and Danmarks Nationalbank is responsible for the financial transactions and part of the current account concerning property income to and from abroad. Data on a settlement basis are used as input for Statistics Denmark's elaboration of the official balance of payments. In addition, Danmarks Nationalbank collects, compiles, and analyzes data on the international investment position (IIP), direct investment, and other external assets and liabilities. From the beginning of 2005, a completely new compilation system based on direct surveys and integration of stock (IIP) and flows (BOP) will replace the existing system.

The existing settlement system was implemented in 1998 and is based on the "Executive Order on Foreign Exchange Regulations" issued by the Ministry of Economic Affairs on July 11, 1994. The detailed regulations, reporting forms, etc. are based on Danmarks Nationalbank's *Udlandsbetalinger-Indberetningsforskrifter* of October 2002.

The reporting system is a closed ITRS, in which all transactions that entail a change in the external position of an individual resident bank are reported. The settlement system consists of two systems: the Transfer System and the Securities System. Data collected through the Transfer System cover all cross-border payments except those related to securities transactions. The transfer system data are integrated in the banks' internal systems; in other words, the collection of information on the economic purpose of the payment is integrated into the home banking links or via other means of communication between the bank and the customer.

The Securities System is a fully automated system, in which all security trading and income transactions relevant to the balance of payments are reported by the banks' settlement/accounting systems using a standard reporting form. In addition to the payments reported by the banking sector on its own account and on behalf of its resident clients, direct reporting is received from nonbank residents (typically large enterprises) on payments via accounts abroad, as well as setoff/netting transactions. The main features of the reporting system are described in more detail in Danmarks Na-

tionalbank's *Monetary Review* of the second quarter of 1999.

In the Transfer System, payments in excess of Dkr 100,000 (EUR 13,400) were reported individually until October 1, 2002, with information on the purpose of the payment, country, and the identification of the resident ordering customer/beneficiary. Payments of less than Dkr 100,000 (EUR 13,400) were reported on a monthly basis, without information on the purpose of the payment or customer identification. On October 1, 2002, two thresholds were introduced: an exemption threshold of Dkr 100,000 (EUR 13,400) and a simplification threshold of Dkr 250,000 (EUR 34,500).

Securities payments in the Securities System, payments related to transactions in which the banks themselves take part, and direct reporting are reported regardless of any threshold. The monetary financial institutions' (MFIs') and Danmarks Nationalbank's own transactions in financial account items are reported as an integrated part of the MFI statistics collected in accordance with the regulations adopted within the European System of Central Banks (ESCB) directly through a new system established in 2003.

The Danish balance of payments is compiled on a monthly basis. The balance of payments statistics are published approximately 30 working days after the end of the reporting period. Data for financial account items are published on the 18th banking day following the end of the reporting period. Aggregated transaction-based data are transmitted to the ECB after 30 working days and remain confidential until the statistics are released in Denmark.

Danmarks Nationalbank publishes monthly balance of payments data for the financial account on a settlement basis in *Nyt* and *Tabeltillaeg* (table summary), which are published only as PDF files. *Nyt* is published first and contains data covering a limited period and few specifications. Two other publications of Danmarks Nationalbank—the *Monetary Review* and the *Annual Report*—contain extracts of data from the *Monthly Financial Statistics*, together with balance of payments data on a transactions basis. Publications released by Danmarks Nationalbank are available on the Internet on the website of Danmarks Nationalbank at <http://www.nationalbanken.dk>.

The statistical database is accessible online via the Danmarks Nationalbanks website.

Statistics Denmark publishes monthly balance of payments data on a transactions basis in *Nyt* from Statistics Denmark; the publication is available at <http://www.dst.dk>.

II. Specific Items: Balance of Payments

Current Account

Goods

Goods data are based on foreign trade statistics compiled by Statistics Denmark. Adjustments from c.i.f. to f.o.b. valuation of imports are made. Furthermore, adjustments are made for procurements, repairs, returned goods, and traded goods not crossing the border.

Services

The services items are basically compiled from settlement data. Additional sources are used though; most importantly, data on sea transport are compiled by including account statistics from the shipping trade.

Income

Compensation of employees

The entry is based on settlement data. Income taxes and social contributions are imputed, and the contra-entry is recorded under current transfers.

Investment income

Settlement data are not recorded on a full accrual basis. Income on portfolio investment is collected in the Securities System, where information is received on four items of the transaction: the value of the security, accrued interest, forward premium, and other costs. In the case of interest payments related to redemption and coupon payments, only one item is assigned a value. This is supplemented by data on the yield on repo transactions. Finally, data are included on discounts/premiums on Danish debt securities registered at the Danish Securities Center (in practice, those resident securities that are quoted on the Copenhagen Stock Exchange). Statistics Denmark is responsible for the calculation of the discounts/premiums on the Danish debt securities. Data on income on direct investment are supplemented by data on reinvested earnings. Danmarks Nationalbank collects data on reinvested earnings annually through the IIP enterprise survey.

Current transfers

The transfer items are basically compiled from settlement data. Additional sources are used, mainly government account statistics and reports from the insurance supervisory authority. Accordingly, non-life insurance transactions are listed here except for the service part. Deviations of a conceptual nature, as well as deviations relating to data availability, arise in this area. The basic problem is that of separating capital transfers from current transfers (see Capital Account). All EU transfers are compiled as current transfers, except for some specific items that are defined as capital

transfers. This item also includes gifts below a certain threshold (Dkr 5 million—around EUR 700,000).

Capital Account

Capital transfers

The capital account is based on settlements, supplemented by government account statistics. No breakdown is released, although information attributed by country and sector is available in the settlement statistics. This item includes gifts above Dkr 5 million and legacies, governmental debt forgiveness of lending to developing countries, capital transfers from EU institutions (which normally account for 5 to 8 percent of total EU transfers), government capital transfers, migrants' transfers, and patent and goodwill rights. (All migrants' and immigrants' transfers of deposits/loans held with Danish banks are included in the capital account.) The separation, for statistical purposes, of the Faroe Islands and Greenland from Denmark in July 2000 is considered a capital transfer. Migrants' and immigrants' assets/liabilities other than those held with banks are not covered in this item. Full data on investment grants made by general government are not available. Data for private sector debt forgiveness are not available but are believed to be insignificant.

Financial Account

Direct investment

Danmarks Nationalbank collects monthly data on direct investment flows based on the general settlements reporting and yearly stocks and property income (including reinvested earnings) from a sample survey of enterprises. The survey has been carried out at the end of the years 1991, 1994, 1996, and yearly from 1998. When the collection system was implemented, payment codes were added, which took into account the directional principle. Monthly estimates on reinvested earnings are included in balance of payments statistics on a transaction basis but not in the settlement statistics.

Portfolio investment

Portfolio investment is reported by the banks via the Securities System. The Securities System contains all securities transactions that might be relevant to the balance of payments. In principle, all transactions involving a nonresident issuer, a nonresident counterpart/customer, a foreign denomination, a nonresident clearing house, or a nonresident fiscal agent are reported. Data on portfolio flows are received at the settlement date, which means that extensive statistics on portfolio flows are available within three days. However, not all information on portfolio flows comes from the settlement system. As from January 2003, banks' own portfolio flows are reported in the framework of

the new monetary financial institution (MFI) statistics. Finally, direct reporting of accounts abroad and the Transfer System also contain securities transactions.

Financial derivatives

The definition of financial derivatives is in accordance with the "revised" *BPM5*. The payments on financial derivatives are based on settlement statistics. All payments on financial derivatives are considered as belonging to this item, regardless of whether they constitute interest-related payments or foreign exchange of principal-related payments. The codification used by Danmarks Nationalbank distinguishes between, on the one hand, swaps and FRAs, and, on the other, derivatives such as forward exchange agreements, futures, and options. No breakdown is released at present, but information attributed by country and sector is available in the settlement statistics.

Other investment

The definition of other investment is broadly in line with the *BPM5*, with some exceptions. Banks report the flows of other investment for transactions between residential accounts and foreign accounts. Loans and deposits involving foreign counterparts, which are successively invested abroad without domestic rollover, are not generally reported in the settlement system. Thus the settlement system focuses on the flows between residents and nonresidents. The new MFI statistics, introduced in January 2003, allow Danmarks Nationalbank to take account of the change of counterpart in rollovers of loans and deposits.

Trade credits are derived as the difference between settlement data and transaction data for goods.

No maturity breakdown between long- and short-term investment is currently available for other investment; however, the new MFI statistics will allow the attribution of part of the financial flows (derived from the banking statistics) by maturity. The liabilities of Danmarks Nationalbank and the banks' net position in TARGET are now classified as *other investment*, in accordance with *BPM5*.

Reserve assets

Reserve assets are compiled on a net basis. At present, this item includes all changes in the net external position of Danmarks Nationalbank, comprising monetary gold, SDRs, the reserve position in the Fund, and foreign exchange. Such changes are derived from the balance sheet of Danmarks Nationalbank. All reserve assets are readily available (i.e., highly liquid, marketable, and creditworthy), fully controlled by Danmarks Nationalbank, and denominated in foreign currency (i.e., in currencies other than the Danish krone).

III. Specific Items: International Investment Position

With minor exceptions, the concepts and definitions used are in accordance with *BPM5*. Danmarks Nationalbank endeavors to produce IIP data within nine months of year-end, which are published in *Nyt* on Danmarks Nationalbank's website (www.nationalbanken.dk) under Statistics, download Statistics. Stock data are based on sample surveys of enterprises, MFI statistics, information on securities held in custody by banks for the nonbanking sectors, debt securities statistics from the Danish Securities Center showing non-resident holdings of Danish debt securities quoted on the Copenhagen Stock Exchange, debt securities statistics covering Danish debt securities issued abroad, and the annual accounts of central government. The sample surveys are conducted on an annual basis and cover the private nonbanking sector, local government, and social security funds. Danmarks Nationalbank produces preliminary IIP statistics based on accumulated flows and estimated value changes until the survey results are available. These statistics, which are published in *Nyt*, are produced on a quarterly basis and are available within three months after the end of the quarter.

Direct investment

Direct investment is compiled according to the directional principle. Direct investment is valued at market prices if the company is listed on a stock exchange and is valued using the equity method for all other companies.

Portfolio investment

Portfolio investment is valued at market prices. Mortgages are classified as debt securities because Danish mortgages are traded in an organized market. Small enterprises' and households' holdings of securities, which are held in custody abroad, as well as their loans and deposits with foreign-owned banks abroad are not covered by the sample survey. Nonresidents' holdings of equity securities issued by Danish enterprises that are held in custody abroad and not redeposited in Danish banks are also not covered.

Financial derivatives

Data on financial derivatives are recorded on a gross basis and valued at market prices. Futures with daily margining are excluded.

Other investment

Trade credits, loans, and deposits are valued at book values, which are normally equal to their nominal values.

Reserve assets

Reserve assets are recorded at closing mid-market prices at the end of the appropriate period.

Dominica

See East Caribbean.

Dominican Republic

The following text was confirmed as current in 2004.

I. General

The International Department of the Central Bank of the Dominican Republic (Banco Central de la República Dominicana—BCRD) is responsible for compiling balance of payments statistics. It compiles these statistics using data collected by the General Directorate of Customs (Customs), the National Statistical Office, the Secretariat of State for Foreign Relations, the National Free Zone Council, the Superintendency of Insurance, other Dominican government agencies, and other departments of the BCRD. International organizations and agencies, embassies, and national private institutions, such as the Foreign Investors Association and the Free Zones Association, also provide data.

With a few exceptions, data for each balance of payments item are derived from a variety of sources. Questionnaires and surveys are the main sources of data for services, income, transfers, and direct investment transactions. The record of exchange transactions, prepared by the BCRD's International Department, is used as a source only for some minor items; the coverage of the exchange record has become limited as a result of the liberalization of foreign exchange controls.

The balance of payments is prepared annually and, since 1996, quarterly. Data are compiled on a monthly, quarterly, or biannual basis, and in U.S. dollar equivalents. Transactions denominated in other currencies are converted into U.S. dollars at the exchange rate applicable at the time of the transaction or at the average exchange rate for the period. Stock data are converted at the end-of-period exchange rate.

With the Fund's technical assistance, the methodology for compiling the balance of payments statistics from 1993 was revised in 1996 to conform with the guidelines of the *BPM5*. Consequently, the treatment of external transactions related to the free zones and foreign direct investment has been adjusted. Likewise, transportation and communication services are now

recorded on a gross basis, and external debt transactions are recorded on an accrual basis. Data for some service transactions, however, still need to be improved. Balance of payments statistics are published in the BCRD's *Quarterly Bulletin* (*Boletín Trimestral*), *Report of the Dominican Economy* (*Informe de la Economía Dominicana*), and *Annual Report* (*Memoria Anual del Banco Central*).

II. Specific Items: Balance of Payments

Current Account

Goods

Customs compiles international trade statistics based on customs documents, which it provides to the BCRD's International Department on a monthly basis. Both export and import data are compiled on an f.o.b. basis. The transactions of the free zones are identified separately. The International Department makes a number of adjustments to improve coverage, classification, valuation, and time of recording to convert these data to a balance of payments basis. Goods for processing are recorded on an f.o.b. basis and are based on data collected by Customs and on monthly surveys provided by about 450 enterprises located in more than 35 free zones. The surveys also collect data on local expenditures incurred by these enterprises. Although Dominican legislation assigns a nonresident status to free-zone enterprises, they are treated as residents for balance of payments compilation purposes. Nonmonetary gold transactions are identified separately. There are no data for repairs on goods and only credit entries for goods procured in ports.

Services

Transportation

The International Department compiles and classifies credit and debit entries by mode of transportation (sea, air, and land) and category of transportation (freight, passenger, and other transportation services). Freight services obtained by importers are based on data recorded in customs declarations; the value of freight obtained from nonresidents is derived from estimates for freight services provided by residents. Data on passenger transportation are based on the quarterly surveys of resident shipping and airline companies. Data on port services are also collected from the port authorities.

Travel

Estimates are derived by combining data on numbers of travelers with estimates of the average stay and expenditure of nonresident and resident travelers. The International Department obtains the number of travelers from the BCRD's daily records of arrivals and departures of

travelers at national airports. These data are cross-checked with data from the National Statistics Office and the Secretariat of State for Tourism. Data from the National Migration Office are not used because of the delay in their availability. Compilers obtain average stay and expenditure estimates from quarterly surveys undertaken by the BCRD's National Accounts Department.

Other services

Communications. These data cover gross income from, and expenditure on, international telecommunications services and postal services. Data are based on quarterly surveys.

Insurance and reinsurance. This item includes the charges for insurance services derived from premiums paid and claims received from nonresident insurance companies.

Royalties and license fees. This category includes transactions reported by enterprises whose contracts on transfers of technology are registered at the BCRD. Because of the limited coverage and the considerable delay in recording these data, data are supplemented with estimates.

Other business. This category includes an aggregate estimate for the following services: financial services (external public debt commissions, in particular), computer and information services, cultural services, and other business services. The estimate is based on exchange record data; the available data are insufficient to make separate estimates for each of these categories.

Government, n.i.e. The International Department obtains credit entries for this item from surveys that cover expenditures incurred by embassies, accredited consulates, and offices of international agencies located in the Dominican Republic. Debit entries cover expenditures of Dominican embassies and consulates abroad; these are reported by the Secretariat of Foreign Relations. In both cases, adjustments are made for coverage and classification.

Income

Compensation of employees

This item covers compensation paid to residents hired by embassies, consulates, and international agencies located in the Dominican Republic. These data are derived from a survey of these institutions; the survey was designed by the BCRD's Service Division of the International Department.

Investment income

Direct investment. Data on direct investment income transactions are based on biannual surveys—con-

ducted by the BCRD's International Department—of direct investment enterprises; the number of enterprises surveyed was increased significantly in 1996. The aim is to achieve total coverage.

Portfolio investment. These data are based on the results of the biannual surveys of direct investment enterprises, and, therefore, the coverage of portfolio investment transactions is restricted to transactions undertaken by these enterprises. A portfolio investor is defined as one who directly or indirectly holds less than 10 percent of the enterprise's equity capital.

Other investment. Interest on short-, medium-, and long-term foreign loans and credits to the public and private sector are recorded on an accrual basis from 1993 onwards. Contra-entries to unpaid interest are recorded in the corresponding item of the financial account (rescheduling or arrears) or the capital account (debt forgiveness). External public debt includes loans to the private sector guaranteed by the government. Data on public sector transactions are collected by the Capital Subdirector of the BCRD's International Department, and data on private sector transactions are based on surveys. Credit entries include estimates of interest received from resident nonbank deposits; these are based on international banking statistics published in the Fund's *International Financial Statistics*.

Current transfers

General government

Data are based on the surveys periodically sent to the various embassies and international agencies located in the Dominican Republic and on reports sent by some recipient institutions. Adjustments are made on the basis of other indicators, such as data on bilateral and multilateral cooperation reported by the United Nations Development Program with a considerable delay.

Other sectors

The entries for this item include workers' remittances, which cover money sent by Dominicans residing abroad to their families in the Dominican Republic. The BCRD's International Department estimates these transactions on the basis of quarterly surveys of resident households conducted by the BCRD's National Accounts Department and on data collected in studies on this subject. This category also includes pensions and retirement benefits paid by the U.S. government to residents of the Dominican Republic who were formerly employed by the U.S. government institutions; the U.S. embassy provides these data. The item also includes the service charges derived from premiums paid and claims received from nonresident insurance companies.

Capital Account

Capital transfers

The entries in this category include recently incorporated data on the values of short-, medium-, and long-term debt forgiven since 1993. Data are collected by the Capital Subdirector of the BCRD's International Department.

Financial Account

Direct investment

Data through 1994 included only reinvested earnings of the direct investment enterprises registered with BCRD. Starting in 1995, data on direct investment transactions are based on biannual surveys of direct investment enterprises. Data on free zone enterprises with foreign participation or ownership were first included in the 1995 balance of payments statement; such enterprises must register with the National Free Zone Council.

Portfolio investment

The data are based on biannual surveys of direct investment enterprises, and, therefore, coverage is restricted to transactions undertaken by these enterprises.

Other investment

Data are based on the records on short-, medium-, and long-term public and private external debt kept by the Capital Subdirector of the BCRD's International Department. Data are broken down into disbursements and repayments; unpaid amortization payments due are recorded with a corresponding contra-entry in the relevant financial account. Another data source is the financial statements of resident banks collected by the BCRD's Accounting Department.

Reserve assets

The BCRD's Accounting Department provides the data.

East Caribbean Currency Union

I. General

The Eastern Caribbean Central Bank (ECCB), in collaboration with the central statistical offices (CSOs) of member countries' ministries of finance, is responsible for the compilation of balance of payments estimates for all of its member countries. Data are obtained from the annual balance of payments survey of private and public sector establishments, conducted by the CSOs

and the ECCB. Other data include official statistics on trade and tourism from the CSOs and statistics on commercial banking, external debt, and official reserves from the ECCB. In addition, some ad hoc surveys are conducted to collect data on direct investment financial flows.

The balance of payments estimates are compiled on an annual basis and published by the ECCB in the *Balance of Payments Report*, which contains statistics for each individual member country, as well as for the ECCB region as a whole. The estimates are compiled using the guidelines outlined in the *BPM5*, with some minor adjustments being made, owing to the peculiarities of the region. The *BPM5* presentation was introduced in 1996 and, for consistency, the series from 1986 to 1995 was revised to reflect the *BPM5* methodology. The estimates are published in Eastern Caribbean (EC) dollars.

II. Specific Items: Balance of Payments

Current Account

Goods

Customs data are the primary source of information on imports and exports, with the export data being supplemented by information on exports of bananas obtained from the relevant banana growers' associations, and information on fish exports obtained from the fisheries departments. Estimates for this item are based on data compiled by the CSOs, which are the departments responsible for compiling official trade statistics. The imports data are adjusted to convert from c.i.f. to f.o.b. by deducting 12 percent of the total c.i.f. value. This percentage—an estimate of 2 percent for insurance and 10 percent for freight charges on cargo—was obtained from a sample survey of customs data. Further adjustments may be made, in some circumstances, to take into account smuggling and underreporting by the informal sector.

Services

Transportation

The debit entry for air and sea freight services records freight charges paid to nonresident shipping and airline companies for the transportation of imports. On the basis of a sample survey of customs data, 10 percent of the c.i.f. value of imports is used as an estimate. On the credit side, the value of air and sea freight services on outgoing cargo is obtained from the annual survey of domestic shipping companies, which is conducted by the CSOs and the ECCB.

The estimates for passenger services cover receipts and payments for the transportation of passengers. The

data are obtained from an annual balance of payments survey of airline companies and agencies, carried out by the CSOs and the ECCB.

Travel

On the credit side, this item covers total expenditures by visitors to countries in the East Caribbean region. It is derived by combining data on the number of visitors and their average length of stay (obtained from the immigration departments of member countries), with an estimate of the average daily expenditure per category of visitor. The latter component is obtained through benchmark surveys of visitor expenditures, which are conducted periodically and adjusted annually for inflation. Estimates of travel debits are obtained from commercial banking statistics on sales of foreign exchange for travel purposes, as well as official sources, which provide data on student maintenance overseas and on travel to attend international conferences.

Other services

Insurance. The debit entry for freight insurance is estimated as 2 percent of the c.i.f. value of imports. This percentage was derived from a sample survey of customs data. The data for other insurance services are derived from the annual survey of insurance agencies of nonresident insurance companies and domestic insurance companies.

Other business. This item covers receipts and payments for miscellaneous business services. Data are obtained from the annual balance of payments survey.

Government, n.i.e. The credit entry for this item covers receipts from services rendered to offshore companies, proceeds from the Economic Citizenship Program, and expenditures by embassies and consulates of foreign governments stationed in the domestic economy. The data are obtained from the Offshore Financial Authorities, the Ministry of Finance, and a survey of embassies and consulates. The debit entry represents government expenditure on embassies and consulates abroad; data are obtained from the official expenditure records of the central government. Other debit entries include the offsetting entries for technical assistance received by the resident public and private sector, which are obtained through a survey of international agencies operating in the country.

Income

Compensation of employees

The credit entry for this item is an estimate of the gross earnings of seasonal workers employed in the United States and Canada Farm Labor Program and is obtained from member-country labor departments, which are responsible for recruiting persons for the program. The debit entry represents the earnings of seasonal farm

workers, mainly from Guyana, to assist in the harvesting of the islands' sugar crop.

Investment income

Direct investment. The debit entries for income represent profits and interest earned by direct investment enterprises operating in the domestic economy and include estimates of reinvested earnings. The data are obtained from the annual survey of direct investment enterprises. For the commercial banks, the data are obtained from the statutory statistical returns of the commercial banks to the ECCB.

Other investment. The data on interest payments are obtained from the official records of external public and publicly guaranteed debt, as reported by the Ministry of Finance and the ECCB. These institutions use the Commonwealth Secretariat's Debt Recording and Monitoring System (CS-DRMS) to monitor and record their debt liabilities.

Current transfers

General government

The data on general government current transfers are obtained from the official records of revenue and expenditure of the member country central governments and government agencies and from an annual regional survey of international aid agencies.

Other sectors

Data on workers' remittances are based on the foreign exchange records of commercial banks.

Capital Account

Capital transfers

General government

Data on capital grants to member-country governments are obtained from the records of the member countries' central governments, as well as through an annual regional survey of international aid agencies.

Other sectors

Migrants' transfers are derived from long-term work permits issued. The data are obtained from the labor departments of member countries.

Financial Account

Direct investment

Data on new direct investment are obtained from the Planning Department, the Ministry of Trade and Industry, or the ad hoc surveys of new direct investors. Data on land sales are obtained from the land registry departments and also the inland revenue departments of

member countries, which collect taxes on land sales to nonresidents.

Portfolio investment

This item covers bonds floated outside the currency union by member governments and overseas investments of other public and private sector establishments. The data are obtained from the Ministry of Finance, the Eastern Caribbean Securities Exchange (ECSE), and annual surveys of public and private sector establishments.

Other investment

Loans

Data on loan disbursements and principal repayments are obtained from the official records of external public and publicly guaranteed debt, as reported by the Ministries of Finance of member countries and the ECCB. These institutions use the CS-DRMS to monitor and record their debt liabilities.

Currency and deposits

This item represents the transactions in net foreign assets of commercial banks, which are not included as part of official reserves, given that banks are not obliged to surrender these reserves to the ECCB. The data are obtained from statutory statistical returns of the commercial banks to the ECCB.

Reserve assets

Under the terms of the Agreement for members of the ECCB, foreign exchange assets are held collectively by the ECCB. Although these assets are not formally allocated among members, an imputed share of each member in the foreign assets of the ECCB is calculated using a special formula. Under the formula, the stock of foreign exchange assets of each country is approximated as the sum of the ECCB's liabilities to commercial banks in each country, plus the currency in circulation in each country, less ECCB net credit to the member governments in each country.

Ecuador

The following text was confirmed as current in 2004.

I. General

The Central Bank of Ecuador (CBE) is responsible for compiling Ecuador's balance of payments statistics, which are published on a quarterly and annual basis. The classification of the current, capital, and financial accounts, in general, complies with *BPM5*.

For balance of payments purposes, the coverage of the data comprises all the territory of Ecuador. The main sources for compiling the balance of payments are the Customs Office, the public corporation Petroecuador, the National Petroleum Gas Directorate (Dirección Nacional de Hidrocarburos), the National Defense Authority (Junta de Defensa Nacional), the Corporations Supervision Authority (Superintendencia de Compañías), the Bank Supervision Authority, administrative records, and surveys.

CBE releases data to all users on a quarterly basis, 70 days after the end of the reference period, through the monthly publication *Información Estadística Mensual* of the Central Bank of Ecuador, which is posted at <http://www.bce.fin.ec> and published in hard copy three business days later. The same publication and timing are used for annual reporting.

CBE compiles the balance of payments in millions of U.S. dollars. Most foreign transactions are originally recorded in dollars, as is the case for foreign trade, external debt, and international reserves. Until March 2000 (when Ecuador adopted the dollar as its currency), transactions in sucres were converted into U.S. dollars at the average of the buying and selling rates on the free or official market, depending on the type of transaction.

II. Specific Items: Balance of Payments

Current Account

Goods

CBE obtains merchandise exports and imports from customs declarations forms that it processes. The customs declarations include merchandise codes based on the Nandina tariff headings, data on physical volume, amount in the currency of origin, freight, insurance, means of transportation, and port of embarkation or entry. In addition, Petroecuador and foreign oil companies are required to report export data to the National Petroleum and Natural Gas Office, which then forwards data to the CBE for processing. Both exports and imports of commodities are recorded at f.o.b. values.

Adjustments for coverage and time of recording are made to the data provided by customs. CBE adds direct imports by foreign oil companies, Petroecuador, and the National Defense Authority to imports of goods. In addition, an adjustment calculated by the National Accounts Unit is made for exports and imports of goods under the heading of unrecorded trade.

Adjustments are made for over- and under-recording of exports and imports, owing to the following: different processing of trade statistics of countries with which Ecuador has trade relations; under-recording of exports

and imports due to price or volume issues; late filing of export and import forms; false declarations on exports and imports; and arms trade and undeclared trade (smuggling) in the exporter or importer country.

Finally, following the recommendations of *BPM5*, adjustments are made to include repairs on goods, and goods procured in ports by ships and aircraft, as declared by air and sea carriers. Ecuafuel likewise reports data on fuel procured by foreign companies at local ports and airports, which CBE adds to the core data.

Services

Transportation

For credits and debits on sea transport, CBE uses its quarterly and annual surveys of shipping companies operating in Ecuador. To supplement that data, it uses information on passengers and cargo from the Merchant Marine and Coastal Administration (*Dirección de la Marina Mercante y del Litoral*, DIMERC), which is the government regulatory authority for maritime traffic in Ecuador. For air transport, CBE compiles data through monthly surveys of domestic and foreign air carriers, supplemented by information supplied by the Civil Aviation Administration (*Dirección General de Aviación Civil*, DAC). The CBE also obtains data from its merchandise trade database, containing information about f.o.b. and c.i.f. goods imports.

Travel

The National Migration and Aliens Office (*Dirección Nacional de Migración y Extranjería*) supplies data on inbound and outbound tourism, obtained through nationwide surveys based on type of visa and place of entry/exit (ports and airports). Only nonimmigrant visas are considered for balance of payments purposes. These sources are supplemented by surveys of hotels, travel agencies, etc.

Data on travel expenditures are estimated from information derived from surveys on travelers and hotels on the length of stay and type of accommodation. The estimated average daily expenditure is applied to the number of visitors recorded. CBE also makes inquiries directly at accredited embassies and consulates in Ecuador.

Other services

Communications. The principal sources of information for this category are Andinatel and Pacifictel—the companies administering and providing communications services in Ecuador. For postal and courier services, CBE obtains data through surveys of the public corporation Correos Nacionales del Ecuador and private firms engaged in such services.

Insurance. The Bank Supervision Authority (*Superintendencia de Bancos*), which oversees the nation's financial system, supplies the data, which are supplemented by data gathered through surveys and direct interviews of domestic and foreign insurance companies.

Financial. CBE obtains the information from its own external debt data. Starting in 1999, this item includes external debt commissions paid by Ecuador to the rest of the world.

Other business services. Core data are obtained through surveys sent to companies and entities providing or receiving such services, supplemented by direct inquiries to companies engaged in such services.

Personal, cultural, and recreational. CBE obtains core data through surveys sent to television and radio stations, motion picture distributors, broadcasters, sports federations and associations, promoters of public performances, newspapers, and magazines.

Government, n.i.e. Expenditures relating to salaries, commissions, per diem, and moving expenses for resident diplomatic, military, and consular personnel accredited abroad are obtained from the foreign exchange balance of the CBE. Receipts are derived from surveys and direct inquiries to embassies, consulates, and other international organizations accredited in Ecuador.

Income

Compensation of employees

CBE obtains these data indirectly through the Ministry of Foreign Relations (*Ministerio de Relaciones Exteriores*) and the surveys sent to embassies, consulates, and international organizations accredited in Ecuador. Data on compensation paid to nondiplomatic personnel working in Ecuador's embassies and consulates abroad are obtained from the Ministry of Foreign Relations.

Investment income

Data on direct investment income, including reinvested earnings, are derived from the database of financial statements of companies reporting to the Corporations Supervision Authority, and from direct inquiries. For the financial system, CBE uses the balance sheets of foreign bank branches and financial institutions with foreign investors to estimate income on the basis of after-tax earnings for the year. Distributed dividends and reinvested earnings are distinguished through further, itemized analysis of the financial statements (balance sheets and income statements) of foreign bank branches. Data on nonresident portfolio investment in the national financial system entities are estimated from the banks' financial statements.

This item has included interest on Brady bonds since 1995, on Eurobonds since 1997, and on Global bonds

since September 2000. Data on interest paid on securities issued by the government are obtained from the CBE's External Debt Unit.

The credit side shows income from the international reserves (unrestricted since March 2000), as recorded by the CBE's Investment Office (*Dirección de Inversiones*). Such data are consistent with the CBE's financial statements. This item also includes interest receipts of residents on investments and monetary deposits abroad, as derived from data on private bank financial statements filed with the Bank Supervision Authority.

The debit side includes debt interest payable on foreign loans obtained by resident agents. The statistics that CBE compiles on external debt include a breakdown of interest received and paid, forgiven interest, refinanced interest, interest in arrears for the period, and default interest, thereby making it possible to record the counterpart entries. Given the magnitude of loans from the IMF and, in recent years, the Latin American Reserve Fund (LARF), which were used exclusively to fund external imbalances, interest data for each of these entities are presented separately. External debt commissions were classified in this item until 1998, although they should be included in the services component under financial services. The CBE's External Debt Unit has provided the amount of commissions since 1997. Data for previous years are estimated.

Current transfers

General government

The main data sources on general government current transfers are the United Nations Development Program (UNDP), the exchange balance prepared by the CBE, the Ministry of Foreign Relations, embassies, and international organizations. Since 2001, the Ecuadorian International Cooperation Institute (Instituto Ecuatoriano de Cooperación Internacional – INECI) of the Ministry of Foreign Relations has compiled information about non-reimbursable cooperation and grants.

Other sectors

The main data sources for estimating workers' remittances are the National Migration and Aliens Office, the Ministry of Foreign Relations, and surveys of exchange and financial houses throughout the country. Beginning in 2000, CBE has also collected information from mail services and couriers. Estimates are based on the approximate number of emigrants and the average monthly amount sent to beneficiaries.

CBE obtains data on other current transfers from the UNDP, Civil Defense, Red Cross, Ministry of Foreign Relations, and surveys of public and private institutions (embassies and international organizations).

Capital Account

CBE derives data on capital transfers from its External Debt Unit, the banks' balance sheets collected by the Bank Supervision Authority, and surveys, interviews, and reports in the national press.

Financial Account

Direct investment

Data on equity capital come from the following sources: the Corporations Supervision Authority, the Bank Supervision Authority, and the National Council on Modernization (*Consejo Nacional de Modernización*, CONAM), as well as information obtained directly from enterprises. The Corporations Supervision Authority periodically reports data on the establishment of, and increases in, the equity capital of nonfinancial direct investment enterprises. The report includes the period, company, and type of activity, country, investor, and capital invested. To ensure confidentiality, data are aggregated into flows by type of activity and country of origin. CBE obtains data on direct investment in the financial system (private banks, financial houses, insurance companies, etc.) from the reports provided by these institutions to the Bank Supervision Authority and from reports by foreign bank branches operating in Ecuador.

Data on foreign direct investment in the oil and gas sector are based on the budget execution (including costs and expenses), as reported directly to Petroecuador by the private enterprises responsible for exploring and exploiting Ecuador's oil and gas fields. The data become final once the National Petroleum and Natural Gas Office have performed the required audits.

The sources of information for reinvested earnings are the same as those for direct investment. Data on the sub-item "other capital" include the allocations by parent oil companies to their subsidiaries operating within Ecuador, which therefore appear as financial assets of the parent companies (accounts receivable) and liabilities of the subsidiaries (accounts payable).

Portfolio investment

CBE derives data on equity securities from the reports submitted by the Corporations Supervision Authority, which record the establishment of, and increases in, the equity capital of foreign capital companies. Only those amounts of capital invested, representing less than 10 percent of the company's subscribed capital, are included under portfolio investment. Also included in this item are the amounts of foreign investments representing less than 10 percent of the total value of the stock of entities reporting to the Bank Supervision Authority (private banks, financial houses, insurance companies, credit cards, etc.).

Data on debt securities include transactions in Brady bonds (IE, Discount, Par, and PDI), Eurobonds, and Global bonds, as reported by the CBE's External Debt Unit. Such liabilities are recorded as of their year of issue, together with the subsequent amortizations.

Other investment

Financial flows recorded in other investment are broken down following *BPM5*. The principal data source for trade credits is the "Suppliers" item of the external debt flow, as provided by the CBE's External Debt Unit. CBE classifies the data according to the institutional sector of the debtor in "monetary authorities, general government, banks, and other sectors." Other sectors are further broken down into private and public, which include public corporations. Trade credits are also broken down into actual loan disbursements, refinanced loan disbursements and capitalization of interest; and actual repayments (for the period and prior periods), forgiven repayments (for the period and prior periods), refinanced repayments (for the period and prior periods), and repayments in arrears for the period.

Data on foreign loans include public and private loans and use of IMF credit. The main data sources are the report on foreign debt statistics compiled by the CBE and information on the International Monetary Reserve, also compiled, until 1999, by the CBE. Data on foreign loans are broken down by sectors into monetary authorities, general government, banks, and other sectors, which include the private sector and public enterprises. Data on currency and deposits are derived from the balance sheets of the banks.

Consistent with *BPM5*, the other liabilities item records external debt entries, which are the counterpart entries to principal and interest refinanced and forgiven for prior periods, principal and interest in arrears for the period, and repayment of principal and interest in arrears. The principal source of information is the external debt record kept by the CBE's External Debt Unit.

Reserve assets

The principal data source is the CBE's balance sheet. Until 1999, data were obtained from the CBE's report on the International Monetary Reserve. Reserve asset components are monetary and nonmonetary gold (as of March 2000), SDRs, reserve position in the Fund, foreign exchange assets (consisting of currency and deposits and securities), and position with the Latin American Reserve Fund.

Until 1999, foreign assets in the International Monetary Reserve included, in addition to those described above, equity participations in international financial organizations and collateral for Brady bonds, but did not include nonmonetary gold. Monetary gold was not valued at

market prices, whereas the International Readily Available Reserve (Reserva de Libre Disponibilidad) values both monetary gold and nonmonetary gold at market prices.

III. Specific Items: International Investment Position

Data on the international investment position (IIP) are disseminated in millions of U.S. dollars showing the following components: (1) net international investment position and (2) assets and liabilities for (a) direct investment abroad, (b) portfolio investment, (c) other investment, and (d) reserve assets. Other investment liabilities are further broken down into trade credits, loans, currency and deposits, and other.

The main data sources are balance of payments, monetary, and external debt statistics.

CBE compiles data according to the methodology of *BPM5*.

Assets

Other investment

CBE derives data for currency and deposits from financial statements of the domestic financial sector available in the CBE's database, which is based on data obtained from the Bank Supervision Authority (Superintendencia de Bancos).

Reserve assets

CBE obtains data from its balance sheet and the exchange balance. The exchange balance contains detailed information on monetary gold, SDRs, reserve position in the Fund, foreign exchange, and other claims.

Liabilities

Direct investment in the reporting economy

Data are obtained from the same data sources used to compile direct investment for the balance of payments: the Corporations Supervision Authority, the Bank Supervision Authority, and the National Council on Modernization (Consejo Nacional de Modernización, CONAM), as well as data obtained directly from enterprises.

Portfolio investment

Data on equity securities are derived from the reports submitted by the Corporations Supervision Authority. Data on debt securities include stocks, disbursements, repayments, and exchange rate adjustments in Brady bonds (IE, Discount, Par, and PDI), Eurobonds, and Global bonds, as reported by the CBE's External Debt

Unit. These liabilities are recorded as of their year of issue, together with the subsequent amortizations.

Other investment

This account is broken down into trade credits, loans, currency and deposits, and other liabilities. The main data source for trade credits is the "Suppliers" item of the external debt report, provided by the CBE's External Debt Unit with a breakdown in initial stock, disbursements, repayments, and exchange rate adjustments. Data on foreign loans include public and private loans, and use of IMF credit. Consistent with *BPM5*, the other liabilities item includes external debt entries, which are the contra-entries to principal and interest refinanced and forgiven for prior periods, principal and interest in arrears for the period, and repayment of principal and interest in arrears. The main data source is the external debt record kept by the CBE's External Debt Unit.

Egypt

The following text was confirmed as current in 2004.

I. General

The compilation of Egypt's balance of payments statistics is based on the fifth edition of the *Balance of Payments Manual (BPM5)*. The Central Bank of Egypt (CBE) derives the data for most items in the current account and for direct investment mainly from the exchange records. Data on other investment and reserve assets are based on figures received from the Loans and External Debt Department (LEDD) and the Banking Supervision Department of the CBE. Egypt's balance of payments data include transactions of the enterprises operating in the free zones with the rest of the world since 1997.

II. Specific Items: Balance of Payments

Current Account

Goods

The entries for general merchandise exports f.o.b. cover the proceeds of exported goods reported by banks. They are adjusted to include petroleum exports reported by the Ministry of Petroleum. The entries for general merchandise imports f.o.b. cover the payments for imported goods reported by banks. They are adjusted to include imports obtained through grants, which banks do not cover.

Because import data reported by banks are valued on a c.i.f. basis, they are adjusted to an f.o.b. basis by deducting freight and insurance at an estimated rate of 12.5 percent of the c.i.f. value (i.e., 2.5 percent for insurance and 10 percent for freight).

The credit entries for goods procured in ports by carriers cover sales of bunker fuel to foreign ships and aircraft, whereas the debit entries cover purchases of bunker fuel by Egyptian ships and aircraft abroad.

Services

Transportation

The credit entries for transportation cover amounts received by Egyptian shipping and airline companies for freight and passenger services. Other transportation covers receipts of Suez Canal dues and receipts of the Suez Mediterranean oil pipeline for transporting foreign companies' oil through pipeline services.

The debit entries for transportation cover amounts transferred to foreign shipping and airline companies for freight and passenger services, as well as payments for freight on imports estimated from the c.i.f. value of imports (10 percent). The entries also include payments made for maintenance and repair of Egyptian ships and aircraft at foreign ports and airports.

Travel

Compilers base the credit entries for travel on the number of nights spent by tourists in Egypt (data from the Ministry of Tourism) and the average expenditure per night (estimates from the CBE based on a survey conducted by the Ministry of Tourism). Separate details are not available for business and personal travel.

The debit entries for travel cover expenditures of government officials and private employees traveling abroad, pilgrimage, expenditures of students studying abroad, training, technical and educational missions, and expenditures abroad for medical care.

Other services

Insurance. The debit entries include an estimated value for insurance on imports (i.e., 2.5 percent of imports c.i.f.).

Other business services. The credit and debit entries cover receipts and payments on account of miscellaneous services, as shown in the exchange records.

Government, n.i.e. The credit entries cover mainly expenditures of foreign embassies and international organizations located in Egypt. The debit entries cover mainly expenditures of Egyptian embassies abroad, and salaries and expenditures of government employees abroad. The data source is the exchange records.

Income

Investment income

Direct investment. The credit entries cover profits received from abroad and income from real estate abroad, whereas the debit entries cover profits transferred abroad by foreign direct investors in Egypt and income on real estate in Egypt remitted abroad. The data source is the exchange records.

Portfolio investment. The credit entries cover interest and dividends earned on bonds and securities invested abroad. The debit entries cover transfers of dividends on securities and interest paid on bonds.

Other investment. The credit entries include interest on deposits held abroad by the banking system and also interest on cross-border deposits of Egyptian nonbank residents. The debit entries cover mainly interest paid to nonresidents on bank deposits, and foreign loans and credits, and rescheduled interest. The information is provided by the LEDD. Contra-entries to rescheduled interest are recorded in *other investment liabilities*.

Current transfers

General government

The credit entries cover grants and donations received in cash and in kind by the government of Egypt. The entries also include receipts for social security contributions. The debit entries cover contributions to international organizations for administrative and budgetary expenditures, and grants and donations paid by the Egyptian government. Data sources for these entries include the exchange records and the Ministry of Foreign Affairs (International Cooperation Sector).

Other sectors

Workers' remittances. The credit entries cover remittances received from Egyptian nationals working abroad. The debit entries cover remittances abroad by foreign workers in Egypt. Compilers derive the data from exchange records.

Other. The credit entries cover grants and donations received, in addition to the signature bonus received from foreign oil companies. The debit entries cover pensions paid to nonresidents by Egyptian insurance companies as well as grants, donations, and gifts given by Egyptian residents to charitable and religious organizations abroad.

Financial Account

Direct investment

The entries for direct investment abroad cover amounts remitted abroad for investment and purchases of real estate. The data are drawn from the exchange records.

The entries for direct investment in Egypt cover cash inflows net of outflows as recorded in the capital and operation accounts of the joint venture companies operating in Egypt, as well as remittances received for the purchase of real estate in Egypt by nonresidents.

Portfolio investment

The entries for portfolio investment abroad cover amounts transferred abroad for the purchase of foreign securities. Portfolio investment in Egypt covers net transactions in foreign currencies (sales and purchases) of Egyptian securities by nonresidents as recorded by the Capital Market Authorities, net purchases of treasury bills by nonresidents drawn from the Stock and Loans Department of the CBE, and residents' or nonresidents' investments through 2003 in the dollar sovereign bonds issued abroad by the Egyptian government in July 2001.

Other investment

Trade credits

The amounts shown for liabilities of other sectors comprise drawings on and repayments of credits extended to the "other sector" by suppliers and buyers; they are derived from the LEDD. Short-term suppliers' and buyers' credits are registered on a net basis and are derived from the exchange records.

Loans

The amounts of drawings and repayments on loans received by the general government are derived from the LEDD.

Currency and deposits

The entries for liabilities of banks represent changes in deposits (liabilities) held by nonresidents in commercial banks, investment and business banks, and specialized banks. The compilers derive them from the balance sheets of the banking system.

The entries for assets of banks cover changes in the foreign assets of commercial banks, investment and business banks, and specialized banks. Compilers derive them from the balance sheets of the banking system.

Other assets and liabilities

The entries for the other assets of monetary authorities represent changes in payment agreement balances and subscriptions to international organizations. The entries for other liabilities of monetary authorities represent changes in payment agreement balances and other short-term obligations, as shown in the balance sheet of the CBE.

The entries for other assets of other sectors cover (1) net purchases and sales of foreign banknotes by banks from

individuals and foreign exchange dealer companies; (2) the difference between travel receipts reported by banks and travel receipts estimated by the Ministry of Tourism based on the number of nights and the average spending per night of tourists; (3) the counterpart to interest received on cross-border deposits of Egyptian nonbank residents, which were not recorded by banks; and (4) deposits transferred abroad by residents (individuals and companies).

Reserve assets

The entries for foreign exchange cover changes in the CBE's foreign exchange balances held with correspondents abroad, including changes in earmarked balances, and changes in the holdings of foreign securities and bonds as shown in the balance sheet of the CBE.

El Salvador

The following text was confirmed as current in 2004.

I. General

The Banco Central de Reserva (Central Reserve Bank of El Salvador—CRB) is responsible for compiling the country's balance of payments. The main sources are foreign trade statistics, the balance of international transactions, monetary and external government debt statistics, and surveys of the private sector, embassies, international organizations, and public sector institutions. Since 1998, El Salvador has adopted the methodology of *BPM5*.

CRB obtains and publishes the data in U.S. dollars. It compiles the detailed balance of payments on a quarterly basis.

II. Specific Items: Balance of Payments

Current Account

Goods

The CRB records general merchandise exports f.o.b. and imports c.i.f. data on the basis of customs clearance documents and forms. Electricity exports and imports are also included, with data provided by the Executive Hydroelectric Commission (Comisión Ejecutiva Hidroeléctrica). To derive the f.o.b. value of imports, the CRB obtains data on expenditure on freight and insurance and other expenditures from the foreign trade system.

Figures on goods for processing are obtained from export authorizations issued by the Export Processing Center (Centro de Trámites de Exportación—CEN-

TREX), which breaks down the value of exports between the total value and the value added: the difference is the imported value. This is not in line with the guidelines contained in the *BPM5* with regard to the time of recording.

Repair on goods covers work that residents perform on movable goods owned or not owned by residents (or vice versa). CRB obtains the data from customs forms, supplemented by surveys of enterprises operating in this field.

Goods procured in ports by carriers: For credits, CRB uses customs forms, supplemented with information from resident enterprises that sell to nonresident carriers. For debits, it uses data from business surveys.

Services

Transportation

The item includes *freight* and all modes of *passenger* transportation, including rental of transportation equipment with crew. For freight transportation, CRB derives the credit data from surveys of enterprises operating in this field. It obtains debit data from customs forms, after deducting freight transportation carried out by resident enterprises.

For *other* forms of transportation, the credit data correspond to expenditure in the country by nonresident carriers, and CRB obtains these data by means of surveys of these enterprises, supplemented with information from the Autonomous Executive Port Commission (CEPA). The debit data record expenditure abroad by resident enterprises.

For *land* and *air* transportation, CRB obtains the data from various resident and nonresident enterprises surveyed.

Travel

Credit and debt entries are based on travel surveys, conducted by a private enterprise, which, in turn, are based on the number of foreign visitors to the country and average stay and expenditure obtained from the travel survey.

Other services

CRB obtains the data from surveys of private enterprises, embassies, international organizations, and public sector institutions; these sources are supplemented with the records of the international transactions balance.

Communications. The item comprises data from business surveys.

Construction. The item contains data from the international transactions balance.

Insurance. Debit entries include insurance paid for the importing goods. The source for preliminary figures is the survey of insurance companies; the Financial System Superintendency provides final data. CRB obtains data for the insurance of goods directly from custom forms. Compilation of insurance services accords with *BPM5* guidelines.

Financial. The item covers financial intermediary and auxiliary services conducted between residents and nonresidents, including commissions and other fees associated with letters of credit, lines of credit, financial leasing, foreign exchange transactions, and consumer credit. The data sources are business surveys, banks' balances including the central bank, and public external debt records.

Other business. The main sources are surveys of the private sector, domestic enterprises, and foreign direct investment enterprises in the country, along with data from the exchange records.

Government, n.i.e. The data sources used are the survey of accredited embassies in the country, data from offices of international and regional institutions, and information requested from government institutions.

Income

Compensation of employees

On the credit side, figures are from surveys and cover the earnings of Salvadoran personnel working in embassies, foreign transport companies, and international organizations. On the debit side, data are from the National Budget and from enterprise surveys, in particular of enterprises dedicated to goods for processing.

Investment income

Income from direct foreign investment is from business surveys. CRB records other investment income on the basis of interest received and paid, as recorded by the banks. For the public sector, the CRB provides figures based on foreign exchange flows. For the private sector, the figures are compiled from data obtained by imputations.

Current transfers

Data for workers' remittances are based on the balance of international transactions records and the trade balance. Data for other transfers are based on data provided by embassies, consulates, and official organizations (AID) through surveys.

Capital Account

Capital transfers

CRB obtains data from surveys addressed to government institutions, embassies, consulates, nongovernmental or-

ganizations, and international and regional organizations and from the trade balance.

Financial Account

Direct investment

Data are from enterprise surveys of direct investment enterprises, included in the CRB database. CRB regularly updates the list of enterprises with records from the Ministry of Economy.

Portfolio investment

Data sources are business surveys, information from the stock exchange and Superintendency of Securities, and administrative reports of the CBR.

Other investment

Trade credits

Trade credits are obtained from business surveys.

Loans

Data on loans received and amortizations are obtained from foreign debt information the CRB collects from its own records and from the public sector, banks, and financial institutions, and surveys of the private sector.

Currency and deposits

CRB takes data on currency and deposits directly from its monetary statistics. They are sourced from the financial statements of banks and financial institutions located in the country, and also include an estimate of U.S. dollars (notes and coins) in circulation.

Reserve assets

The figures represent the change in CRB foreign assets and are obtained from the bank's analytical balance sheet.

III. Specific Items: International Investment Position

Sources of information on international investment position data are the same as those used for the balance of payments (surveys, public external debt records, monetary authority's balance, commercial bank balances, and administrative records of private external debt).

Estonia

I. General

The Eesti Pank (Bank of Estonia) is responsible for the compilation of Estonia's balance of payments and in-

ternational investment position statistics. The Balance of Payments and Economic Statistics Department (BOPD) of the Eesti Pank collects most of the data directly from data providers, using mixed (dual) balance of payments compilation systems, namely, surveys and the ITRS. Other main interagency data sources, besides the two statistical systems mentioned above, are the internal databases maintained by the Financial Stability Department and the Central Accounting Department, which provide initial data relating to external sector statistics on banking and the monetary authority sector. Data are supplemented with information from various sources and with estimates.

Other important data sources outside the Eesti Pank are as follows: (1) the State Statistical Office (SSO), which provides monthly external trade statistics; (2) the Central Business Register, which provides monthly updates on the register of legal entities, their owners, and main audited annual economic indicators; (3) the Central Register of Securities, which provides access to the official securities register, comprised of relevant information on portfolio investments; (4) special sample surveys (travel); (5) other institutions—the State Tourist Board, the Ministry of Finance, the Ministry of Foreign Affairs, Authors' Society, the State Privatization Agency; and (6) the media—press, Internet, etc.

Balance of payments statistics are compiled monthly, quarterly, and annually. International investment position statistics are compiled quarterly and annually. These statistics are published according to the Special Data Dissemination Standard requirements at the website address <http://www.bankofestonia.info> and in the media. They are also published in the Eesti Pank's bulletin *Estonian Preliminary Balance of Payments* (quarterly) and *Estonia Balance of Payments Yearbook*.

Beginning with the first quarter of 1993, the balance of payments data are reported to the Fund. International investment position statistics are available from the end of the first quarter of 1996. The balance of payments accounts are compiled to the extent feasible according to the principles of BPM5. Data are compiled in the Estonian kroon and are converted into U.S. dollar and euro equivalents at average rates for the appropriate balance of payments periods (quarter) and at end-of-period rates for the international investment position.

II. Specific Items: Balance of Payments

Current Account

Goods

Customs declarations are the basis for compiling the foreign trade data, following the special trade principle. After processing the customs declarations, the

SSO compiles and issues monthly totals. Data are collected at c.i.f. valuation, and imports are adjusted to f.o.b. levels using an average adjustment factor, presently 5 percent of imports c.i.f. The information for this adjustment is derived from a survey conducted by BOPD.

BOPD also makes other adjustments to the foreign trade data issued by the SSO to reflect balance of payments concepts. For example, some ocean liners operating between Estonia and foreign countries purchase, at foreign ports, goods for onboard shops that are not declared to Estonian Customs; BOPD adds the appropriate amounts to the data obtained from the SSO. Information on these transactions is obtained from the BOPD survey of the transportation companies.

Often adjustments are also effected for goods purchased abroad (e.g., fuel, lubricants, etc. for transportation vehicles) and for repairs on capital goods. Information on these items is also obtained from the transportation companies survey, and the appropriate amounts are added to the SSO import total.

In addition, an estimate is made for unidentified imports, which are increasingly less important. This adjustment is based on information provided by Customs and other sources. Imports and exports of goods also include foreign assistance and gifts given to and by Estonia in the form of goods.

Services

Transportation

The transportation services item is compiled mainly on the basis of the transportation companies survey and data from the ITRS. Information on resident passenger services rendered by nonresident companies is obtained mainly from the SSO. BOPD conducts the transportation survey each quarter with nearly 400 local transport companies that provide international freight and passenger services. Most of these companies are involved in road transport, followed in importance by sea transport, air transport, and rail transport.

Travel

The main sources of information for travel services are the travel border survey conducted by the Market Research Institute and SSO, in cooperation with the Eesti Pank and the Estonian Tourist Board, and border statistics (provided by the Board of Border Guard). These sources provide data on sales and purchases of travel packages, as well as on the number of foreign tourists visiting Estonia and the length of their stay. The same sources provide information on the number of Estonian residents visiting foreign countries and the length of their stay. Relying on results of sample surveys, BOPD compiles cost-per-day estimates of such visits.

As a result, the total amount of travel receipts and payments can be calculated.

The credit (receipts) entry for travel also includes 50 percent of the wages and salaries earned by nonresidents who have worked in Estonia for less than one year. Health-related and educational expenditures made by medical patients and students are treated as travel services.

Other services

Other services comprise those services important for Estonia such as construction, insurance, communications, leasing, and various others. Services obtained as a part of foreign assistance are also included. Information on insurance, construction, communications, and other services is obtained from the surveys of enterprises and of insurance companies.

Information on the income and expenses of Estonian foreign representations is based on data from the Ministry of Foreign Affairs. BOPD estimates the expenditures of the foreign representations located in Estonia. The Ministry of Finance provides data on services associated with technical assistance. Supplementary information on all services is obtained from the ITRS. Selected supplementary items of *BPM5* are not available for reasons of confidentiality.

Income

Compensation of employees

Data on compensation of employees are obtained from the enterprise surveys, the State Tax Office, and the ITRS.

Investment income

BOPD's quarterly enterprise survey provides most of the information on the income receipts and payments for direct investment and portfolio investment, and other investment. The survey covers selected Estonian legal entities carrying out large foreign economic transactions. In addition, other departments of the Eesti Pank provide data on the income of the Eesti Pank and the commercial banks. Data on interest paid on foreign official loans are obtained from the Ministry of Finance. Interest and other investment income are recorded on an accrual basis, except for transactions relating to general government, which are recorded mainly on a cash basis.

Current transfers

General government

This item consists primarily of foreign assistance received by Estonia in the form of goods and services. Information on goods is obtained from customs statistics. The data on aid in the form of services are largely

based on Ministry of Finance data and estimates. Also included under this item are membership fees paid by the government to various international organizations; this information is obtained from the ITRS.

Other sectors

Data on private transfers are based mainly on the ITRS.

Capital Account

This item consists mainly of government payments to migrants leaving Estonia permanently and capital transfers to the Estonian private sector.

Financial Account

Direct investment

The definition of direct investment in Estonia's balance of payments corresponds with that of *BPM5*, and Estonia follows the directional principle for direct investment. Stock positions and transactions are recorded at market prices and on an accrual basis. Information on direct investment by nonresidents in Estonia is derived from four main sources:

(1) The Estonian Business Register provides data on the registered owners' equity in established companies as well as changes in registered ownership; (2) the Estonian Privatization Agency supplies information on non-resident participation in the privatization of state-owned enterprises; (3) a BOPD enterprise survey provides data on direct investment stocks and flows to operating enterprises (this survey is the basis for data on reinvested earnings, on long- and short-term credits (including trade credits) drawn, and associated repayments by Estonian and foreign direct investment enterprises); and (4) the database of the Financial Stability Department of the Eesti Pank provides data on foreign direct investment for commercial banks.

The database of the Central Register of Securities provides data on transactions and stocks of listed or registered companies. These sources are supplemented by data from the ITRS.

Portfolio investment

The major part of data on transactions and stocks of portfolio investments is obtained from surveys of investment funds, other financial intermediaries, other enterprises, and from the Central Register of Securities. The Eesti Pank's Financial Stability Department provides information on portfolio investment related to Estonian commercial banks. Transactions are recorded at market prices. The market value is used for the stocks in case the instrument is listed. These sources are supplemented by data from the ITRS.

Financial derivatives

Definitions for financial derivative transactions are in line with the *BPM5*. Financial derivatives are recorded as a separate category in the financial account. The collection of data on financial derivatives is part of the general reporting system. Information on banking sector transactions is obtained from banking statistics data. In general, data are available on a gross basis. Futures, swaps, and options are identified separately in the banking statistics data about forwards. In the enterprise surveys the data are highly aggregated, and the types of instruments are not identified.

Other investment

BOPD treats the Eesti Pank as the monetary authority. Transactions in other investment assets and liabilities of the monetary authorities include the changes in the Eesti Pank's foreign liabilities and nonconvertible assets, which are not included in reserve assets. Loans from the Fund for balance of payments purposes are included under the general government sector. The Eesti Pank's Central Accounting Department provides the relevant information.

Transactions in other investment assets and liabilities of the government sector comprise transactions of the central government, local government loans taken directly, and repayments of such loans. Data are obtained from the Ministry of Finance and the ITRS. Trade credits are not available; they are negligible.

Banking sector statistics are derived from the data collected from banks by the Financial Stability Department of the Eesti Pank. The other investment asset and liability transactions of other sectors reflect mainly drawdowns and repayments of the short- and long-term loans that are transacted between resident and nonresident enterprises that do not have a direct investment relationship. Trade credits and deposits are included. The main sources of data are the enterprise survey and the ITRS. Loans guaranteed by the central government are reported under other sectors.

Reserve assets

The entries reflect changes in the Eesti Pank gold and foreign exchange holdings and transactions in SDRs during the reporting period. Data are based on the balance sheet and the income statement of the Eesti Pank.

III. Specific Items: International Investment Position

The Estonian international investment position is a statistical statement summarizing the stocks of Estonia's external assets and liabilities at the end of each quarter.

Data are compiled according to the IMF guidelines set out in the *BPM5*.

The data include (1) direct investment: equity capital, reinvested earnings, other capital; (2) portfolio investment: equity securities, bonds and notes, money market instruments; (3) financial derivatives; (4) other investments: trade credits, loans, foreign exchange and deposits, other items; and (5) reserve assets.

Data collection is a part of the general reporting system, based mostly on surveys. Real stocks are used for its compilation. Reconciliation exercises between international investment position stocks and balance of payments flows are carried out regularly. Adjustments relating to changes in exchange rates, prices, and other factors are generally taken into account. There has been no intention to harmonize historical data on the basis of a reconciliation of balance of payments flows and international investment position stocks because it is impossible to update stock data retroactively if flow data are revised.

Ethiopia

The following text was confirmed as current in 2004.

I. General

The Balance of Payments Division of the National Bank of Ethiopia (NBE) compiles Ethiopia's balance of payments statistics. Sources of information include the Customs Authority, the Ministry of Finance and Economic Development, the commercial banks, the International Banking Operations Department (IBOD) of the NBE, the Accounts Departments of the NBE, the Ethiopian Telecommunication Authority, and a survey of transportation companies. In general, the accounts are reported in accordance with *BPM5* classifications.

II. Specific Items: Balance of Payments

Current Account

Goods

The Customs Authority provides data on exports f.o.b. and imports c.i.f. Goods for processing, repairs, goods procured in ports by carriers, and nonmonetary gold are not included. A 10.33 percent adjustment, based on a statistical survey and analysis of customs import declaration forms, is deducted from the value of imports c.i.f. This allows for insurance, freight, and transit fees on imports, in order to derive imports on an f.o.b.

basis. Nonmonetary gold export data are obtained from IBOD of the NBE.

Services

Transportation

Data are obtained from transportation companies. A survey format prepared by the NBE's Balance of Payments Division is sent to these companies and compiled quarterly by the staff of the division. Data on freight (debit) are estimated as 9.24 percent of imports c.i.f., which is 8.95 percent for freight and 0.29 percent for transit fees on imports.

Travel

The NBE's IBOD provides data on travel receipts, while travel payment data reflecting payments made by residents to nonresident transport companies are obtained both from IBOD and Ethiopian Airlines (EAL).

Other services

The Ethiopian Telecommunication Authority and IBOD provide data on communication services receipts. Communication payments data, on the other hand, are obtained from IBOD, Ethiopian Telecommunication Authority, and EAL. Merchandise insurance debits are estimated at 1.09 percent of imports c.i.f. Certain categories of other business services such as commissions, advertisement, operational leasing, etc. are collected from transport companies. The remaining services data are obtained from the NBE's IBOD reports.

Income

Compensation of employees

The IBOD reports data on compensation of employees.

Investment income

The Ministry of Finance and Economic Development reports investment income data, constituting payments of general government and other sectors. Interest receipts and payments data, related to the external assets and liabilities of the monetary authorities and the commercial banks, are reported by the NBE and commercial banks, respectively.

Current transfers

The NBE IBOD reports cash transfer data on general government and other sectors, and franco-valuta imports. Data on food and other aid-in-kind are obtained from the Disaster Prevention and Preparedness Commission (DPPC).

Financial Account

Other investment

Trade credits

Short-term trade credits comprise the advance payment by nonresidents for future exports (on the liability side) and expected post-payments from nonresidents for exports (on the asset side). These data are obtained from the NBE's IBOD.

Currency and deposits

Currency and deposits of monetary authorities constitute all liabilities of the NBE to foreign banks. Liabilities of the NBE to international institutions are reported by the Accounts Department of the NBE. Currency and deposits of banks constitute foreign currency holdings, deposits in foreign banks, and foreign uncleared balances of commercial banks on the asset side. Deposits of nonresidents in the commercial banks denominated in Birr, plus deposits of nonresident banks in the commercial banks denominated in foreign currency, comprise the liability side. These data are obtained from the balance sheets of the commercial banks. Currency and deposits of other sectors include deposits of parastatals in nonresident banks that are reported from the respective organizations, on the asset side. Included on the liability side are deposits of nonresidents in the commercial banks that are denominated in foreign currency; these are obtained from the balance sheets of the commercial banks.

Euro Area

I. General

The concepts and definition of the euro area balance of payments statistics, statistics on international reserves, and international investment position statistics conform to (1) the methodology established in European Central Bank (ECB) Guideline No. ECB/2003/7, (2) the international statistical standards set out in the fifth edition of the IMF's *Balance of Payments Manual*, released in October 1993 (the *BPM5*), and (3) the European Commission's (Eurostat) documentation; for further information on the latter see the European Commission's website (<http://europa.eu.int/en/comm/eurostat/serven/home.htm>).

To compile the balance of payments and related statistics for the euro area as a whole by aggregating the transactions/positions of euro area residents with non-euro area residents, the ECB essentially relies on the national central banks (NCBs) and other national balance of payments compilers, which collect the statistical data as de-

fined in specific requirements in the field of balance of payments and related statistics in the ECB Guideline.

Information on the nature of these basic data, such as the compilation systems and the methodological particularities in individual member states, can be found in the summary methodology section of their Special Data Dissemination Standards (SDDS) country page on the IMF's Dissemination Standards Bulletin Board (DSBB) at <http://dsbb.imf.org/> and under the individual country pages in this publication. Furthermore, a methodological note on euro area balance of payments and international investment position statistics, as well as the publication entitled *European Union balance of payments/international investment position statistical methods*, are available on the ECB's website (<http://www.ecb.int>). Users may also find pages on the euro area on the DSBB.

II. Specific Items: Balance of Payments

In accordance with the ECB Guideline, the ECB publishes balance of payments statistics at two different intervals in respect of the corresponding reference period: monthly and quarterly. The scope, the underlying concepts, and the breakdown for the monthly balance of payments items differ from those for the quarterly data. Monthly data referring to the euro area's external transactions were published for the first time in the May 1999 issue of the ECB *Monthly Bulletin*; quarterly data have been published since the September 1999 issue. With regard to the transmission of data, the ECB requests the following deadlines: (1) monthly data by the 30th working day following the end of the month to which the data relate and (2) quarterly data within three months of the end of the quarter to which the data relate.

The monthly balance of payments statistics are confined to broad categories of transactions, showing the main items affecting monetary conditions and exchange markets. For these statistics, some deviations from the international guidelines set out in the *BPM5* are permitted. These include the recording of income on a cash basis, instead of on an accruals basis, and the provision of estimates, owing to the short deadline for compiling the data (six weeks after the reporting period) set for the participating member states of the euro area. No sectoral breakdown is at present compiled for financial derivatives.

The quarterly balance of payments breakdown required by the ECB conforms, to the greatest extent possible, to the standards set out in the *BPM5*. Exceptions from the application of *BPM5* standards are explained below.

From 1998 onwards, each broad category of transaction is broken down into credits and debits for the Current and Capital Accounts, and into assets and liabilities for

direct investment, portfolio investment, and other investment. The ECB compiles the figures for the euro area by aggregating the euro area member states' transactions vis-à-vis nonresidents of the euro area for the Current and Capital Accounts and for the Financial Account, except for the portfolio investment category and related income and the financial derivatives category. The compilation methods for portfolio investment and related income and financial derivatives are based on a different approach, owing to the difficulties in identifying the holders of securities issued by domestic residents. (See below.)

Current Account

The ECB compiles the Current Account data for the euro area by aggregating the euro area member states' transactions vis-à-vis nonresidents of the euro area, except for portfolio investment income transactions. (See below.)

Income

Compensation of employees

This category covers transactions involving compensation paid to nonresident workers or received from nonresident employers.

Investment income

This item covers transactions involving investment income accrued on external financial assets and liabilities of the euro area. Investment income includes income generated by direct investment, portfolio investment, and other financial instruments, and by the Eurosystem's reserve assets. Interest on derivatives is recorded under the financial derivatives category in the Financial Account.

Direct investment. The methodology used to compile the data on income on direct investment differs from the *BPM5* in that the ECB does not require the breakdown of income on equity into distributed and undistributed profits (i.e., dividends and reinvested earnings).

Portfolio investment. For portfolio investment income, euro area residents' income received on securities issued by non-euro area residents ("extra-euro area" credits) can be correctly identified. However, it is not possible to compile the corresponding payments to non-euro area residents ("extra-euro area" debits), as a direct result of the difficulties in identifying the residency of the holder of securities. Therefore, the amount of the euro area payments to non-euro area residents is calculated by subtracting the amount of receipts of euro area residents from residents of other euro area countries ("intra-euro area" credits), from the total amount of payments made by euro area residents to recipients outside their home

country (to residents of other euro area countries and to nonresidents of the euro area).

Capital Account

The ECB compiles the Capital Account data for the euro area by aggregating the euro area member states' transactions vis-à-vis nonresidents of the euro area. Only a lump-sum capital account is compiled, without any breakdown.

Financial Account

The ECB compiles the Financial Account data for the euro area by aggregating the euro area member states' transactions vis-à-vis nonresidents of the euro area, except for portfolio investment and financial derivatives.

Direct investment

In line with the international standards set out in *BPM5* and the third edition of the *OECD Benchmark Definition of Foreign Direct Investment*, the 10 percent ownership criterion is used for defining the euro area data on direct investment in both the balance of payments statistics and the international investment position. Moreover, the direct investment relationships of the euro area are recorded using the directional principle, meaning that the financial transactions between the euro area resident direct investor and the non-euro area direct investment enterprises are classified in the euro area balance of payments statistics as direct investment abroad, or as a disinvestment of direct investment abroad. Symmetrically, the financial transactions between resident direct investment enterprises and non-euro area direct investors are classified in the euro area balance of payments statistics as direct investment in the reporting economy.

The components of direct investment are equity capital, reinvested earnings, and other capital associated with various intercompany debt operations. Equity capital comprises equity in branches as well as all shares in subsidiaries and associates. Reinvested earnings consists of the off-setting entry to 1) the direct investor's share of earnings not distributed as dividends by subsidiaries or associates and 2) earnings of branches not remitted to the direct investor and recorded under investment income. Other capital covers all financial operations between affiliated companies (borrowing and lending of funds, including debt securities and suppliers' credits, i.e., trade credits).

Portfolio investment

The euro area portfolio investment account includes (1) equity securities and (2) debt securities in the form of bonds and notes and money market instruments, unless they are categories either as direct investment or as reserve assets. Financial derivatives are excluded from

portfolio investment and are shown in a separate category of the balance of payments Financial Account and the international investment position, in line with recent IMF recommendations. Transactions based on repurchase agreements involving debt securities are recorded in the other investment category.

In compiling the data on portfolio investment for the euro area, the aim is to record the net acquisitions by euro area residents of securities issued by nonresidents of the euro area ("assets"), and the net acquisitions by nonresidents of the euro area of securities issued by euro area residents ("liabilities"). The assets side can be measured directly, with a quarterly sectoral breakdown of the euro area residents undertaking the transactions. The liabilities side cannot be measured directly, because reporting agents in the euro area often cannot identify the holder of securities issued within the Monetary Union. Instead, the liabilities side is estimated as net issues of paper by euro area residents minus the net recorded acquisitions of such paper by residents of the euro area. For the time being, a sectoral breakdown of the euro-area issuers whose paper is taken up (or sold) by nonresidents of the euro area is therefore not possible.

Financial derivatives

Net flows associated with interest rate derivatives are recorded as financial derivatives, not as interest flows, in line with recent international agreement. Owing to practical problems involved in separating the asset and liability flows for some derivative instruments, all financial derivative transactions are recorded net by the participating member states and are aggregated to compile the euro area aggregate figures. A sectoral breakdown of this account at the euro area level cannot be compiled.

Other investment

Other investment is defined as a residual category that includes all financial transactions not covered under direct investment, portfolio investment, financial derivatives, or reserve assets. Other investment covers (1) trade credits, (2) loans/currency and deposits, and (3) other assets/other liabilities.

The presentation used in the other investment category is somewhat simplified by (1) not requiring any distinction between loans and deposits on each side of the balance of payments and (2) not requiring any maturity breakdown for the quarterly balance of payments. There is also a change in the presentation of the breakdown (i.e., the sector as first priority). This breakdown is compatible, but not identical, with the *BPM5*, in which instruments have priority.

As a peculiarity of the euro area balance of payments, the other investment category includes the temporary net positions of the Eurosystem with the national cen-

tral banks (NCBs) of member states not participating in the euro area. This relates to the operation of the TARGET (Trans-European Automated Real-Time Gross Settlement Express Transfer) clearance system. These intra-ESCB (European System of Central Banks) balances/accounts, which are denominated in euros, are similar to movements of the nostro/vostro accounts of monetary financial institutions (MFIs), and, therefore, a similar treatment is adopted.

All repo-type operations (i.e., repurchase agreements, sell/buyback operations, and bond lending) are treated in the euro area balance of payments as collateralized loans, not as outright purchases/sales of securities. They are recorded under other investment, under the sector of the euro area resident that carried out the operation. Data on other investment prior to 1999 are partly estimated, since some euro area member states did not receive information on the geographical breakdown from their respondents.

Reserve assets

Transactions in the Eurosystem's reserve assets relate to the international reserves of (1) the NCBs of the countries participating in the euro area and (2) the "pooled reserves" held by the ECB in accordance with Article 30 of the Statute of the ESCB. Since the agreed definition of reserves assets is applied consistently across the Eurosystem and at the national level, the Eurosystem's reserve assets are compiled by summing the reserve asset holdings of the participating NCBs and the ECB.

The Eurosystem's reserve assets must (1) be under the effective control of the relevant monetary authority—either the ECB or the NCBs of the euro area member states—and (2) refer to highly liquid, marketable, and creditworthy foreign (non-euro area) currency-denominated claims on nonresidents of the euro area, plus gold, SDRs, and the reserve positions in the IMF of the participating NCBs. Deposits with banks located in the euro area are therefore not considered part of the official reserves.

Data are compiled on a gross basis without any netting of reserve-related liabilities (with the exception of those reserve assets included in the sub-item of financial derivatives, which are recorded on a net basis).

Gold is treated in the Eurosystem's international reserves statistics as collateral in all reversible transactions (such as gold repos, gold swaps, gold loans, and gold deposits), implying that holdings of monetary gold remain unchanged during the life of such operations. This treatment corresponds to current European banking accounting directives and practices.

Reserve positions in the IMF, including the part denominated in SDRs, are classified under Reserve Position in the IMF, rather than under SDRs.

Claims on the IMF arising from IMF financing under the New Arrangements to Borrow (NAB) and General Arrangements to Borrow (GAB) are classified under Reserve Position in the IMF. At the same time, claims arising from the Poverty Reduction and Growth Facility (PRGF, previously the Enhanced Structural Adjustment Facility or ESAF) commitments are shown under foreign exchange, in accordance with the IMF recommendations. (NAB is a set of credit arrangements between the IMF and 25 members and institutions to provide supplementary resources to the IMF to forestall or cope with an impairment of the international monetary system, or to deal with an exceptional situation that poses a threat to the stability of that system. The GAB arrangements enable the IMF to borrow specified amounts of currencies from 11 industrial countries or their central banks, under certain circumstances, at market-related rates of interest. Through PRGF (previously ESAF), the IMF provides assistance to low-income member countries at concessional terms, in support of macroeconomic adjustment and structural reforms, to lay the basis for high and sustainable growth and external payments viability.)

Reserve asset flows before the end of 1998 relate only to the composition of the euro area before the joining of Greece in 2001. Moreover, they are aggregates of national data and include instruments issued by other residents of the euro area. The figures are therefore not fully comparable with the figures that relate to the Eurosystem's reserve assets from 1999 onwards, which are compiled according to the definition presented under the conceptual section of this methodological note. Pre-1999 data on portfolio investment and financial derivatives include instruments recorded as reserve assets by other member states.

III. Specific Items: International Investment Position

Since the December 1999 issue of the *Monthly Bulletin*, the ECB has published aggregated annual data on the euro area international investment position (IIP). Member states are required to make the data on the IIP available to the ECB within nine months after the end of the year to which the data relate.

This annual statement of the external assets and liabilities of the euro area reveals the structure of the euro area's external financial position and complements the balance of payments data for economic analysis. Periodic stock data also provide a check on the plausibility of balance of payments flows. The changes in the IIP between year-ends are partly explained by the balance of payments flows during the year. In addition, the stock data reflect valuation effects arising from changes in

asset prices and exchange rates and other changes (e.g., write-offs, reclassifications) not related to flows.

The breakdown is based on the standard components of the IIP, as adopted by the IMF, and on the structure of the quarterly euro area balance of payments. Concepts and definitions are consistent with those applied for the quarterly balance of payments statistics.

From end-1999, the IIP data are shown separately for assets and liabilities. Earlier data are compiled on a net basis by aggregating national IIP data.

Faroe Islands

The following text was confirmed as current in 2004.

I. General

The Faroese National Statistical Agency—Hagstova Føroya—annually compiles the balance of payments, in millions of Danish kroner. The main data sources are various surveys, as well as different administrative sources within the public sector (Treasury, Tax Office, etc.). Mainland Denmark and Greenland are not part of the Faroese balance of payments, even though both the Faroe Islands and Greenland are institutionally part of the Kingdom of Denmark. Similarly, the Faroese economy is not included in the balance of payments statistics of Denmark.

In late 2002, after completing a review of the existing methodology, Hagstova Føroya decided to follow more closely international statistical standards. For such a purpose, it decided to implement the conceptual framework of the balance of payments as stated in the fifth edition of the IMF's *Balance of Payments Manual (BPM5)*. The *BPM5* methodology will be implemented gradually, and because of a shortage of human resources, only the current account will be produced at the first instance, but there are plans to develop capital and financial account data in the near future. Hagstova Føroya will produce the latter in close cooperation with the Governmental Bank—Landsbanki Føroya—which is developing a new system for reporting its own and other Faroese monetary institutions' transactions.

The first attempt to compile the Faroese current account according to *BPM5* definitions and guidelines involved identifying data sources. Where data were available, they were entered directly in the appropriate accounts. However, it was also necessary to supplement data using auxiliary statistics to build and consequently test various economic models. At this stage of current account compilation, usage of economic models was found to be appropriate and irreplaceable in its

operational speed, but the intention is to rely less on such modeling in the future.

II. Specific Items: Balance of Payments

Current Account

Goods

Hagstova Føroya bases the compilation of merchandise trade on customs declarations delivered directly from the Toll- og Skattstova Føroya—the Faroese tax and customs authority. It observes, however, that some unrecorded exports (non-fish items) take place, which undervalue exports of goods. No estimates are made to compensate for such a shortcoming, as values are believed to be relatively small. At the moment, a review of the existing recording system is taking place with the aim of improving data on trade in goods.

Services

Transportation

For air, sea, and other transportation services, Hagstova Føroya records separate values, and because a very small number of nonresidents provide these services, the data are easy to collect. However, the agency makes appropriate adjustments when it calculates payments of passenger fares, because it needs to determine the resident status of travelers. The agency receives information on the numbers of passengers, their origin and destination, and average ticket prices either directly from airline companies or from local travel agencies. Other transportation services records mainly the charges for disloading fish in ports abroad, and estimates were created based on annual accounts and interviews.

Travel

The agency separates estimates for travel services into health, educational, and other. Both health and educational travel are very well documented by the Treasury (Fíggjarmálast_ri_) and the Faroese Student Grant Fund (Stu_ulsstovnurin), following the fact that Faroese residents undertake higher education abroad and also go for more advanced medical treatment abroad (mainly Denmark). For tourist and business travelers' expenditures, both in the Faroe Islands and abroad, information on number of arrivals, number of nights per nationality, and average accommodation prices is readily available and used to calculate estimates.

Other services

With regard to other services, both financial and insurance services are very well documented, owing to the small number of providers. Hagstova Føroya bases

construction estimates on surveys of construction companies, including fishing vessels and shipyards. Also, it bases information on other services—communication, computer and information, and government services—on surveys and administrative sources.

Income

Compensation of employees

The Faroese Tax Office is the main administrative source of data for recording compensation of employees. Data are very well recorded as far as wages and salaries are concerned, since different allowance schemes (fisherman on foreign-owned fishing vessels) make a differentiation between residents from nonresidents possible. However, owing to changes in the registration system from 2001, it was necessary to estimate fishermen income from abroad, and such estimates were based on figures from previous years.

Investment income

Owing to the lack of reliable and comprehensive data sources, it was necessary to estimate income on both the Faroese investment abroad and foreign investment in the Faroe Islands. The Faroese Tax Office recently commenced such recording, but because of a double taxation agreement with Denmark, such recording will not be sufficient for statistical purposes. The most useful point of reference is the annual accounts, which record investment income, as well as data from the central banks of Iceland and Denmark regarding the stock of foreign direct investment in the Faroe Islands. The figures for other investment income are survey-based information that covers interest receipts from abroad and payments to abroad on Faroese external claims and liabilities, respectively.

Current transfers

The recording of current transfers is an administrative based system and, as such, data were readily available from the Treasury. Data were available for all transfers classified under *general government* as well as *other sectors*. Some transfers abroad were in kind (clothes), and it was necessary to impute a monetary value, while others were easily identified, such as various pension funds and lotteries. No entries for gifts, inheritances, alimonies, and other support remittances were recorded.

Capital and Financial Accounts

There is no capital and financial account recording because of a shortage of human resources. There are plans to record such data. Close cooperation with the Faroese Governmental Bank, as well as other Faroese monetary institutions, is developing, which will further improve the balance of payments statement.

Fiji

I. General

The Fiji Bureau of Statistics (FBS) is responsible for the compilation and dissemination of the balance of payments statistics for Fiji. The conceptual framework of the Fijian balance of payments is consistent with *BPM4*, although some minor variations have been introduced to meet conditions of the Fijian economy. The Fiji balance of payments estimates are compiled in millions of Fiji dollars.

The FBS disseminates the balance of payments statistics in its quarterly BOP news releases, and its Current Economic Statistics contains balance of payments data on an annual basis. FBS also provides quarterly data to the Reserve Bank of Fiji (RBF) to be published in RBF's quarterly review. Sources of the data are the Fiji Customs Department, overseas exchange transactions records (OET) from RBF, administrative records of the Ministry of Finance (MOF), and FBS surveys of direct/nondirect investment enterprises, ports and airports, foreign airlines, etc.

II. Specific Items: Balance of Payments

Current Account

Goods

Merchandise data are derived from the records of the Fiji Customs Department's imports and exports warrants.

Exports are recorded on a shipping date basis and valued on an f.o.b. basis. Adjustments are made to exports to exclude ship and aircraft fuel and stores, which are classified under *other transportation*, and to record sugar exports at market value. Under the agreement with the European Union (EU), Fiji is paid up to three times the current market price of its sugar exports to the EU. The difference between the market value and the value paid by EU is removed from exports and included in *official current transfers*.

Imports are recorded in c.i.f. value and converted to f.o.b. value by excluding the estimated freight and insurance earned by nonresidents on Fiji's imports. The freight and insurance are estimated at 11 percent and 2 percent of imports c.i.f. respectively.

Services

Transportation

Data are derived largely from the FBS balance of payments survey covering resident and nonresident airlines, ports, and airports. Fiji's only resident airline, Air

Pacific, operating on international routes reports its passenger fare earnings from nonresidents, and ports and airport agencies provide aviation fees and charges, port dues, pilotage, and stevedoring. Foreign airlines provide figures on passenger fares earned from residents.

Travel

The credit entries are derived from estimates of tourist expenditures and the per diem information, obtained from the International Visitor Survey (IVS), conducted by the Ministry of Tourism and Civil Aviation. Until the IVS results become available, estimates of tourist expenditure per diem for the current reference period are derived by inflating the per diem derived from the last IVS results by an index (referred to as the tourism expenditure index [TEI]). This index is calculated using the results from a quarterly survey of hotels (TEI survey) conducted by FBS. Travel debits are sourced entirely from the OET system.

Other services

Insurance. The credit entries for nonmerchandise insurance are recorded as the sum of receipts of premiums for inward insurance and the claims for outward insurance. Likewise, the debit entries comprise the sum payments of premiums for outward insurance and claims for inward insurance.

Other business. The main sources for this item are the FBS quarterly balance of payments survey on direct/nondirect investment enterprises and the OET.

Government, n.i.e. Estimates of the credit entries for government services comprise payments to the government of Fiji's peacekeeping forces by the United Nations and its expenditures, foreign government remittances to the embassies and consulates, etc., and operating expenses of international organizations in Fiji. The two latter items are sourced from the OET system, whereas data for the first item are supplied by the MOF.

Income

Investment income

Estimates of income receivable and payable by the nonofficial sector are compiled from the balance of payments survey on direct investment. Information on income receivable and payable by the official sector is obtained from the RBF. Data on portfolio income are not collected separately yet.

Current transfers

General government

Data, obtained from MOF, cover aid in cash and in kind and the difference between the market price and the price paid by the European Union on sugar exports.

Other sectors

Data are sourced entirely from OET.

Financial Account

Direct investment

For purposes of the Fiji balance of payments compilation, a nonresident investor who owns 10 percent or more of the equity capital of an enterprise is regarded as a direct investor. The types of direct investment transactions included are additional capital or withdrawal of investments, reinvestments of earnings, and changes in long- and short-term capital. Real estate and other data are derived from OET.

Portfolio investment

Data on portfolio investment are not collected separately yet.

Reserve assets

Information on official reserves comes from the RBF, and, for government cash balances maintained abroad, from MOF. The RBF provides separate information on the stock of monetary gold, SDRs, the reserve position in the Fund, and foreign exchange assets. However, the change in position owing to revaluation is reported in aggregate under foreign exchange but is excluded from the balance of payments transactions.

Finland

The following text was confirmed as current in 2004.

I. General

The Bank of Finland (BOF) is responsible for the compilation of the balance of payments. The BOF obtains data from various surveys. Data for current account transactions are mostly derived from customs statistics on commodity trade and from Statistics Finland, which from 1999 provides data on services, current transfers, and the capital account. Until 1998, foreign settlement records were collected through domestic banks, which reported transactions effected on their own behalf and on behalf of their customers to compile the services account. For the financial account and investment income, surveys of banks, enterprises, and securities traders and custodians conducted by the BOF are the primary source of information. Data are prepared on a monthly basis; they are published in the monthly statistical bulletins and in the *Financial Markets, Statistical Review* of the BOF.

Data are compiled in euros. The average exchange rate for the period is used to convert transactions denomi-

nated in foreign currencies into euros. Trade data are also converted at the exchange rate prevailing at the end of the preceding month. In the case of surveys, transactions denominated in other currencies are converted into euros.

The concepts and classifications of the current, capital, and financial account generally correspond with those recommended as the international standard in *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

Extra-European Union (EU) trade data are derived from trade statistics, and data on trade with EU countries are collected according to the Intrastat system. The Board of Customs compiles the data and, for balance of payments purposes, adjusts them for coverage, valuation, and the time of recording. Classification adjustments to deduct freight and insurance are made to bring import c.i.f. values to an f.o.b. basis; freight and insurance are estimated at 5.9 percent of the value of imports. These estimates are obtained from a survey (see "Transportation" below). Data on goods for processing, repairs on goods, and nonmonetary gold are derived from the foreign trade statistics; they are deducted from exports and imports and classified separately under goods.

Services

Transportation

This category covers freight and passenger services by all modes of transport and port services. For sea transport, data are derived from a quarterly survey of shipping companies; the survey seeks information on freight earnings from foreign traffic, passenger transport, and port expenditures abroad. The estimates of freight that are deducted from imports in the trade statistics on the debit side (the cif-fob adjustment) are derived from a survey conducted by the National Board of Customs. For air transport and railway traffic, data are obtained from Finnair, the National Board of Aviation, and the State Railways, respectively.

Travel

From 1999 onward, the data are based on border interviews and other tourism statistics conducted and compiled by Statistics Finland. Until 1998, data were derived from settlements reported by domestic banks; they included purchases of foreign currency by residents at home and abroad and sales of Finnish markkas to non-residents in Finland and abroad. In addition, an estimate of foreign exchange transactions by Finnish residents abroad was added to travel income and expenditure.

Other sources of information on travel included the use of travelers' checks and credit cards.

Other services

Beginning in 1999, the data are based on the enterprise statistics and on surveys conducted by Statistics Finland. A survey conducted by Statistics Finland collects data on the following items of services: (1) communications; (2) construction (includes project planning, technical expertise, consulting payments, and know-how contracts); (3) insurance (covers reinsurance and primary insurance business); (4) computer and information (includes technical and management planning and installation services); (5) royalties and license fees (covers transactions with nonresidents involving intangible assets, proprietary rights, and manufacturing rights); (6) merchanting and other trade-related services; (7) operational leasing services; (8) other business services; and (9) personal, cultural, and recreational services.

Government, n.i.e. The entries, which are on a due-for-payment basis, cover transactions of Finnish and foreign diplomatic missions, trade missions, and agencies for cultural exchange and promotion of tourism. The receipts and expenditures of peacekeeping troops are derived from records of the Ministry of Foreign Affairs.

Income

Compensation of employees

Data on wages, salaries, and remuneration of a non-recurrent nature are collected by Statistics Finland and are based on the records of the tax administration.

Investment income

Direct investment. Dividends and other earnings on direct investment are recorded on a due-for-payment basis. Interest is recorded on an accrual basis. Data on reinvested earnings are derived from the annual direct investment surveys; estimates are used before the results of the annual surveys are available.

Portfolio and other investment. Data are derived from the monthly survey of banks, enterprises, and other relevant sectors on foreign assets, liabilities, valuation changes, and income. Interest is recorded on an accruals basis.

Current transfers

From 1999 onward, the data are based on various sources and are collected by Statistics Finland.

General government

The entries cover central and local government assistance, subscriptions to international organizations, international cooperation and development assistance, and EU payments (subsidies, membership fees, contributions to funds, customs duties, and taxes).

Other sectors

The entries include non-life insurance premiums and claims. Workers' remittances data are not available separately but are included in other current transfers.

Capital Account

Capital transfers

Debt forgiveness. Beginning in 1999, the data are based on various sources and are collected by Statistics Finland.

Financial Account

Direct investment

Direct investment enterprises are defined, in accordance with *BPM5*, as those enterprises in which residents or nonresidents have a 10 percent direct or indirect ownership of the equity capital. Data on direct investment flows, distributed earnings, stocks, and valuation items are obtained from the monthly survey of Finnish enterprises, banks, and other financial institutions on their foreign assets and liabilities. Stocks of equities and loans, reinvested earnings, and dividends are derived from the annual direct investment surveys. The annual survey on direct investment abroad is a partial-coverage survey with some 98 percent coverage, whereas the annual survey on direct investment in Finland is a stratified sample survey.

Portfolio investment

Data on transactions in securities on account of residents and securities held by custodians are obtained from a monthly census survey of securities brokers. The financial institutions, general government, and certain enterprises are surveyed for the stocks, flows, and valuation changes of, and income on, financial assets and liabilities, including the portfolio transactions of residents intermediated by nonresident brokers.

Other investment

Data are obtained from monthly surveys of enterprises, financial institutions, and general government.

Reserve assets

Data are derived from the records of the BOF.

III. Specific Items: International Investment Position

Data are obtained from the same surveys as the flow data. Grossing-up techniques are applied to partial coverage surveys to obtain the population level. Valuation items are reported in the surveys, divided into effects

from foreign exchange rate changes and other changes. Portfolio investments are valued at market value.

France

The following text was confirmed as current in 2004.

I. General

The Banque de France (BdF) is responsible for compiling the statistics on France's balance of payments and international investment position. This task was entrusted to the BdF by the Ministry of Economy and Finance as part of the law of 1993 granting independence to the central bank and confirmed in the Monetary and Financial Code.

The BdF compiles France's balance of payments primarily on the basis of an international transactions reporting system (ITRS). The ITRS collects monthly settlement reports from the banking sector, the monetary authorities and general government sector, and the direct reporting enterprises. As of January 2004, major enterprises with total international transactions in services and income exceeding 30 million euros a year are to report directly to the BdF, whether they use or not the resident banking system. In addition, above a one-million-euro monthly threshold, all economic agents operating through foreign accounts will have to directly report their transactions in the relevant codes. These changes originate in Decree 2003-196 of March 7, 2003 that revised the dispositions of the former regulation on the external financial relations (Decree 89-938 of December 29, 1989 as far as the balance of payments and the international investment position reporting is concerned). The other main sources for compiling the balance of payments are (1) exogenous data from the General Directorate of Customs and Indirect Duties for foreign trade statistics, (2) a monthly survey of 1,800 enterprises on trade credits, and (3) two surveys on inward and outward travel.

For balance of payments purposes, the economic territory of France comprises the departments of metropolitan France, the Principality of Monaco, the overseas departments (French Guiana, Martinique, Guadeloupe, Reunion Island), and the local governments of Mayotte and Saint Pierre and Miquelon. The overseas territories (French Polynesia, New Caledonia, its dependencies, and Wallis and Futuna) are no longer part of the French territory for statistical purposes according to the Decree 2003-196 of March 7, 2003.

BdF compiles the balance of payments in euros. It converts into euros the foreign transactions that are reported in the respective currencies. However, it calculates flows of long-term capital (lending to and from

foreign countries) and short-term capital of the banking sector, the monetary authorities, and the general government sector, by reconciling the stocks reported at the beginning and at the end of the period, expressed in the respective foreign currencies. The flows are then valued at the average monthly rate for these currencies against the euro.

Except for a limited number of items, the monthly balance of payments statistics are compiled in accordance with the methodology set forth in the *BPM5*. BdF produces the data under its own responsibility and then publishes the data in a joint press release with the Ministry of Economy, Finance, and Industry. For its part, the BdF publishes comments in its *Bulletin Mensuel (Monthly Bulletin)* and also on the Internet (SDDS). Final results for the year, in the form of stocks and flows, are analyzed in detail in an annual report entitled *la Balance des paiements et la position extérieure de la France (Balance of Payments and External Investment Position of France)*, under the joint signature of the Ministry of Economy, Finance, and Industry and the BdF.

II. Specific Items: Balance of Payments

Current Account

Goods

BdF derives the data for general merchandise from the foreign trade statistics published by the Customs. For balance of payments purposes, these data are subject to one main adjustment—for classification, which affects, in particular, freight and insurance costs included in the c.i.f. value of imports, and goods exported or imported for processing or repair without change of ownership.

Services

The data on services are derived from settlement records reported by the banks and by the direct reporting enterprises. However, since euro notes and coins gained legal tender in January 2002, BdF uses the data derived from credit card transactions and bank settlements on behalf of travel agencies, to check the results of the surveys on inward and outward travel.

Transportation

The data are broken down by sea, air, and other transport and when significant, passenger and merchandise transportation services. The latter comprise an estimate of the portion of costs of transportation included in merchandise payments.

Travel

Data on travel are derived from (1) bank transfers reported under this heading, mostly for travel agencies, (2)

payments by credit card, and (3) two surveys on inward and outward travel. Since 2003, a distinction is made between business and other travel.

Other services

Insurance. This category refers to general insurance transactions and to the portion of insurance costs relating to shipments and included in merchandise payments. BdF identifies separately the “service” component of premiums for merchandise insurance, and it records net premiums and claims in current transfers.

Merchanting and other business. Recorded under merchanting are payments relating to (1) merchandise purchases abroad, not followed by import, and their resale abroad; and (2) purchases and sales to foreigners of French merchandise not leaving the French customs territory. In accordance with the recommendations of *BPM5*, merchanting is shown net in the balance of payments.

General government, n.i.e. This category includes, in particular, various administrative revenue and expenditure items of diplomatic and consular missions and other civilian or military entities.

Income

Compensation of employees

BdF computes these data mainly from national data concerning both the number of workers and average wages.

Investment income

These transactions distinguish between direct investment, portfolio, and other investment income. This item shows, on the credit side, income from capital invested or lent abroad by residents and, on the debit side, income from foreign capital invested in France or lent to residents by nonresidents.

Estimates of reinvested earnings are included in the balance of payments. Portfolio investment income incorporates estimates of accrued (coupon) interest paid or received when securities are traded. The offsetting entries for these adjustments are deducted from the “portfolio investment” lines of the financial account.

Current transfers

General government

General government transfer payments are reported directly by the government departments involved, on the one hand, and by the banking sector, on the other, when transfers are made on behalf of customers. General government transfers refer to technical assistance expenditure, France’s contributions to the operations of international institutions, and transactions with institutions of the European Union (e.g., contributions to Community

budgets and the European Development Fund, and subsidies from various European funds).

Other sectors

These transfers include workers' remittances and the entry offsetting private transactions involving transfer of ownership but without payment, recorded by the Customs.

Capital Account

Capital transfers

The government departments making the payments report the data on capital transfers directly. For the banking sector, data come from settlement reports. Private sector debt relief (essentially banks) is offset by credit entries in "banking sector lending abroad." Losses on private sector claims correspond to the difference between the nominal value of claims and their sale value. General government debt relief (formerly the official sector) is offset by credit entries in "general government sector lending abroad." Investment grants from European structural funds are recorded in the capital account.

Financial Account

Direct investment

Two sources supply data on direct investment transactions: the direct reporting enterprises and the banks, which report their own direct investment with nonresidents and the direct investment of their customers (nondirect reporting enterprises). BdF records flows in gross terms, thus facilitating a clear distinction between investments and disinvestments. Since 2003, it has also classified flows on a directional basis; the main exceptions are equity capital flows lower than EUR 1 billion, which are classified on an asset/liabilities basis. Beginning with 1996 data, direct investment has included short-term lending and cash flows between affiliated enterprises. It also includes reinvested earnings. Trade credits between affiliates are not recorded separately and, therefore, continue to be included in *other investment*.

Portfolio investment

This item includes the transactions of all sectors (monetary authorities and general government, monetary financial institutions [MFIs], and others), distinguishing between resident transactions in foreign securities and nonresident transactions in French securities.

Nearly all of these data are derived from the banks' reports, which record the portfolio investment transactions made on their own behalf and on behalf of their clients. Moreover, the direct reporting enterprises report

the portfolio investment in foreign securities they make directly abroad. The monetary authorities also report their transactions in securities on their own behalf and on that of their customers. Securities transactions are reported monthly on a security-by-security basis using the ISIN code.

Since 1990, the value of accrued (coupon) interest has been estimated on the basis of flows of transactions in bonds. The portfolio investment series of the French balance of payments thus exclude accrued (coupon) interest, which are recorded under the investment income item. Beginning with 1996 data, money market securities are classified in portfolio investment. Through 1995, they had been recorded in short-term other investment flows of the banking sector and other sectors.

Financial derivatives

Transactions recorded net under derivatives include premiums on conditional instruments related to shares, stock market indices, interest rates, and exchange rates. They also include variation margins on futures and interest on interest rate swaps.

Other investment

Financial flows recorded in other investment are broken down following the *BPM5*. Data on trade credits are derived from an enterprise survey and are not split between affiliates and nonaffiliates. In the absence of a distinction between long and short-term credit, the data are classified as short-term capital flows.

The BdF or the relevant government entities directly report loans relating to monetary authorities and the general government sector. BdF records on the asset side the flows of advances or loans, in euros or in foreign currencies, granted by the monetary authorities and general government to nonresidents.

Since 1999, under monetary authorities, items are recorded for changes in BdF assets with the rest of the European System of Central Banks (ESCB), in particular those relating to the settlement of cross-border transactions through the TARGET system. Under government, items are recorded, in particular, for government contributions to the capital of international agencies.

Under liabilities of the monetary authorities and general government sector, BdF also records items for (1) foreign exchange deposits made by nonresident monetary institutions (including international agencies) at French monetary authorities and changes in BdF liabilities with the rest of the ESCB, in particular those relating to the settlement of cross-border transactions through the TARGET system, and (2) the net change in liabilities in euros of government entities to central banks and foreign institutions other than the Fund. These flows are recorded net.

MFI sector flows, including export credits, are derived from monthly and quarterly statements of stocks reported by banks and money market funds. Their statements relate to their claims and liabilities, by currency, on the accounts of foreign correspondent banks. The same applies to their claims and liabilities on nonresident customer accounts. For each quarter, there is a breakdown by country for the major currencies. MFIs are encouraged to report the geographical breakdowns on a monthly basis.

Other sector transactions include mainly deposits abroad and drawing and repayment of loans, whatever their initial maturities. BdF obtains data from payment records reported by banks or by direct reporting enterprises.

Reserve assets

Flows of reserve assets are recorded in gross claims. These flows correspond to the changes in the reserve assets including the accrued interest and the value at average monthly exchange rates, published each month by the Treasury and by the BdF.

Reserve assets in the French balance of payments are consistent with the harmonized definition endorsed at the Eurosystem level. They include only non-euro denominated claims on nonresidents of the euro area. The deposits with residents of the euro area are being recorded under the *other investment-monetary authorities* item.

They represent only the part of the French reserve assets not transferred to the ECB and managed by the BdF.

III. Specific Items: International Investment Position

Direct investment

The definition of direct investment accords with that adopted for the balance of payments; it covers equity investment exceeding 10 percent of capital, affiliated loans, and reinvested earnings. Since 2003, the stock of direct investment has been recorded according to the directional principle. The stock of direct investment for equity capital is calculated at book value. A market valuation is also available but so far only on a global basis with no geographical or sectoral breakdown.

For data on direct investment abroad, BdF uses a survey prepared on the basis of an accounting concept of direct investment. Equity investment abroad is limited to that recorded in the balance sheets of nonresident corporations directly held by resident direct investors. Also, the stock, by value, is equal to the share of the capital and reserves held in the nonresident corporation, plus the loans and advances granted by the resident direct investor (parent company) to the corporation in which the investment is made. As a result, in

accordance with international standards, only "direct" equity investment abroad is taken into account and the geographical breakdown of investment abroad on a book value is based solely on the locations of such direct equity investment.

For data on foreign direct investment (equity capital) in France, BdF uses the accounting data of the resident enterprises in which the investment is made. In accordance with international standards, indirect (secondary) equity investment is not recorded (for example, the investment of a resident corporation, itself the subsidiary of a foreign enterprise, in another resident corporation).

As far as other operations are concerned, stocks are collected directly from enterprises via an annual survey.

Portfolio investment

BdF bases data on portfolio investment of residents in foreign securities, on the stocks held by banks for their own account and on behalf of their clients. This includes all foreign securities, whether in euros or in foreign currencies, issued by nonresidents and held by residents, except for (1) securities that can be sold only with the agreement of the issuer, such as *bons de caisse* (savings bonds) issued by resident banks, and (2) foreign securities held directly abroad by non-bank residents.

The category of holders of foreign securities is broken down into (1) financial institutions for their own account and (2) resident customers, further broken down by category of depositor, namely, industrial and commercial corporations, households, monetary and nonmonetary mutual funds, insurance companies and pension funds, private administrations, and general government.

For data on nonresidents' portfolio investment in French securities, BdF computes data from securities accounts administered by resident banks. Moreover, for debt securities issued on international markets, the BdF calculates the liabilities vis-à-vis nonresidents by subtracting the amount held by residents (data reported by the resident banks) from the total amount issued (data available in the bond database managed by the Banque de France). The entries include securities in euros or in foreign currencies issued by residents (French securities), no matter where they were issued (France or abroad), and held by nonresidents. However, the entries exclude securities that can be sold only with the agreement of the issuer (in particular, *bons de caisse*). In addition, they exclude French securities held directly abroad by nonresidents. The reports are made annually on a security-by-security basis with the indication of the ISIN code. The portfolio investment assets and liabilities are valued at market prices.

Financial derivatives

The item covers the banking sector assets and liabilities on derivatives.

Other investment

The data source for trade credits is the same as for the balance of payments. Outstanding amounts in foreign exchange are valued at the exchange rates prevailing at the end of the month, and the survey results are grossed up, using a sectoral stratification procedure based on customs transactions.

BdF derives the deposit/loan position of enterprises from a sample survey of enterprises it carries out each year. The data are obtained from the balance sheets (or accounts) of the sampled enterprises. Amounts of claims and liabilities are reported in the respective currencies in which they were constituted. They are subsequently converted into euros at the exchange rates prevailing at the setting up of the balance. The data cover loans, borrowings, and investments, except for assets and liabilities included in direct investment and trade credits.

BdF also derives the deposit/loan position of monetary and nonmonetary mutual funds as well as depository financial intermediaries from a survey. The data include loans, borrowings, and deposits abroad (including those in the form of money market instruments) but exclude other securities.

The deposit/loan position of the monetary financial institutions (MFI) sector vis-à-vis the rest of the world is analyzed through short- and long-term claims and liabilities in euros and in foreign currencies of resident banks vis-à-vis nonresidents. Data sources on stocks are the same as those used for compiling the quarterly balance of payments. Repos and reverse repos are treated as financing operations and classified in monetary claims or liabilities.

Regarding the investment of the monetary authorities and general government not recorded elsewhere, BdF derives the data from the reports made by the government entities concerned or by the BdF on their behalf. This includes, in particular, (1) loans of the French Development Fund acting as a government entity, and the BdF, particularly within the framework of bilateral Paris Club consolidation agreements; (2) euro loans granted by foreign countries; and (3) France's contributions to multilateral development institutions (the World Bank and the International Development Association, in particular).

Reserve assets

Sources on stocks are the same as those used for compiling the balance of payments.

Gabon

I. General

The Bank of Central African States (BEAC) prepares the balance of payments in accordance with the methodology recommended by the Fund. This note is based on the recommendations of the fourth edition of the *Balance of Payments Manual (BPM4)* and rearranged according to the presentation of the fifth edition of the *Balance of Payments Manual (BPM5)*. The reforms introduced by the *BPM5* have been applied in Gabon since January 1, 1995, and the corresponding methodological note is being prepared.

It should be noted that the general balance of payments is prepared in collaboration with the government departments responsible for economic and financial issues.

II. Specific Items: Balance of Payments

Current Account

Goods

Like the majority of balance of payments transactions, goods transactions are derived from three main sources: (1) surveys of enterprises by the central bank (these constitute the main source of data); (2) reports from banks and the postal administration on foreign exchange transactions of other enterprises, retailers, and private individuals not covered by the enterprise surveys, which represent less than 1 percent of exports and about 20 percent of imports; and (3) the amounts of BEAC banknotes issued by Gabon and returned by other BEAC countries and of other franc-zone banknotes.

The f.o.b. value of goods is obtained by subtracting declared shipment costs for exports and a standard amount of 18 percent of the c.i.f. value for imports (excluding BEAC banknotes). This percentage was determined by a BEAC survey of large importing enterprises in Gabon.

Services

Transportation

Credit entries for freight refer to receipts from nonresidents by the resident carrier, Société Nationale de Transports Maritimes (Sonatram). Debit entries for freight represent shipment costs, which are estimated based on a central bank survey of large importers. The entries for passenger services cover earnings of air, sea, and land carriers.

Travel

This heading covers expenditures in Gabon by foreign travelers (credit) and expenditures of Gabonese residents traveling abroad (debit) for all purposes (tourism, business, study, holiday, medical care, official missions, etc.) and by any means of payment (banknotes, checks, credit transfers, money orders, etc.).

Other services

Insurance. This heading includes payments of premiums and claims on insurance and reinsurance, other than on merchandise, based on statistics provided by local insurance companies.

Other business. This item includes transactions relating to the provision of services, namely: commissions, particularly mining and oil study and research costs, patents, royalties, services included in major projects, technical assistance provided and received by enterprises, overheads, etc.

Government, n.i.e. The credit entries mainly cover expenditures in Gabon by foreign diplomatic representations, international organizations, and their staff. The sources for this information are bank reports on current transfers of embassies and international organizations and questionnaires sent to the French Development Fund (CFD), the Agency for Air Traffic Security (ASECNA), and the Paymaster-General of France (Payeur de France). The debit entries refer to expenditures of Gabonese diplomatic representations abroad.

Income

Investment income

This item covers, in addition to interest, profits deemed to be reinvested, because they are kept in companies' accounts or are waiting to be definitively allocated. It also records distributed profits and dividends.

Current transfers

General government

This heading records technical assistance grants and contributions and grants-in-kind. The information is obtained from the survey of the organizations concerned, namely, the UN, the CFD, the French Government Paymaster's Office (*Paierie de France*), the French Aid and Cooperation Mission (Mission d'Aide et de Coopération), ASECNA, etc., and from banks and postal payment records.

Other sectors

Workers' remittances. The entries cover savings kept abroad by technical assistance personnel who are residents of Gabon (for salaries paid in France) and transfers abroad through the banks (for salaries paid in Gabon).

Other current transfers. This item covers grants, aid, taxes, and various contributions received or made by the private sector (private individuals, charity missions, philanthropic works, etc.).

Financial Account

Direct investment

This item covers foreign capital contributions for investment in the country (creation or extension of subsidiaries, capital endowments, acquisitions of equity holdings, and loans and standing advances from parent companies to subsidiaries or branches).

Since 1979, changes in all current accounts between subsidiaries in Gabon and their parent companies or other subsidiaries abroad have been considered as direct investment, except where trade credits are concerned. Furthermore, the undistributed profits that are deemed to be reinvested, that is, those that correspond to the share of the capital held by nonresidents, are also included.

Other investment

Data for trade credits are derived from changes in companies' customer accounts, accounts receivable, supplier and companies' accounts payable, and foreign drafts.

The General Directorate of Government Accounting, which manages government debt, provides information on drawings and repayments on loans by general government.

Reserve assets

The entries for foreign exchange assets mainly cover changes in the Operations Account with the French Treasury.

The Gambia

The following text was confirmed as current in 2004.

I. General

The Central Bank of The Gambia (CBG) is responsible for compiling balance of payments statistics. It uses the following sources: the exchange record data and data collected by the Central Statistics Department (CSD), Customs and Excise, and other governmental institutions. Efforts to collect data through enterprise surveys have been of minimal success.

The CBG prepares balance of payments statements on an annual basis and publishes them in its *Annual Report* and *Quarterly Bulletin*. It compiles data in millions of dal-

sis. To convert transactions denominated in other currencies into dalasi equivalents, the CBG uses the exchange rate prevailing at the time of the transaction. It compiles and classifies the data in accordance with *BPM4*.

II. Specific Items: Balance of Payments

Current Account

Goods

The CSD compiles the data on the basis of import and export declaration forms provided by the Customs and Excise. Data on imports valued on a c.i.f. basis are adjusted to an f.o.b. valuation by reclassifying freight and insurance costs assumed to be 12.4 percent and 1.9 percent, respectively, of the value of imports c.i.f.; these ratios are based on a survey that the CBG's Economic Research Department carries out.

Data for re-exports are estimated by the Trade Division of the Ministry of Finance and Economic Affairs. The f.o.b. value of re-exports is estimated by adding all costs incurred, including freight-related charges of 7 percent, an average combined duty and sales tax of 19 percent, and a profit margin equivalent to 13 percent of the c.i.f. value. Goods imported for processing that will be subsequently re-exported are estimated using ratios, derived from a survey, of re-exported goods to imports.

Services

Transportation

This category covers freight and passenger services by all modes of transportation and port services. Data for transportation services are derived from returns provided by the Gambia Public Transportation Corporation, the Gambia Ports Authority, and the Civil Aviation Authority. Credit entries comprise services provided to nonresidents through the Trans-Gambia Ferry and the Banjul-Barra Ferry; airport fees, landing and parking fees, and sale of fuel to air carriers; and port services, including stevedoring and berthing and sale of fuel. Debit entries cover freight services acquired by importers estimated to be 12.4 percent of the value of imports c.i.f., remittances for air tickets and port services, and foreign expenditure of the above-mentioned enterprises.

Travel

Credit entries cover receipts from air charter tourists, cruise-ship passengers, and other travelers, calculated by applying an estimated per capita expenditure to the number of visitors in each category. The average expenditure of foreign travelers is based on a sample survey conducted by the CBG in collaboration with the

Tourism Department of the CSD. Debit entries, which include pilgrimage, tourism, business, and official travel, are obtained from commercial bank records and the government budget.

Other services

Insurance. Debit entries cover the estimated cost of insurance based on the fixed ratio of 1.9 percent of imports c.i.f., which was derived from a survey.

Government, n.i.e. Credit entries include the expenditure of foreign embassies and their diplomatic staff in the Gambia, which are estimated from the sale of foreign exchange by embassies to commercial banks. Debit entries include expenditure of Gambian embassies abroad and contra-entries for technical assistance services.

Income

Investment income

Direct investment. No data on direct investment income are available because of lack of response to enterprise surveys.

Portfolio investment. No data on portfolio investment income are available because of lack of response to surveys.

Other investment. Credit entries cover interest receipts on foreign assets held by the CBG and the commercial banks. Debit entries cover interest payments on public external debt, including Fund service charges and interest payments made by the CBG and the commercial banks. Data are obtained from the exchange record, the Ministry of Finance, and the CBG accounting records.

Current transfers

General government

Credit entries include technical assistance grants, development grants, and other grants, such as the UK fuel grant, USAID rice grant, European Union grants, etc. Government agencies and the United Nations Development Program (UNDP) office provide the data. Debit entries cover contributions to regional and international organizations.

Other sectors

Credit entries cover donations and assistance from charitable organizations (primarily nongovernmental organizations). Estimates of donations in cash and in kind are obtained from UNDP. This category of transfers also includes workers' remittances, support remittances, gifts, and other private transfers based on commercial bank records.

Financial Account

Other investment

Data on transactions on foreign assets and liabilities of the general government are obtained from the CBG and the Ministry of Finance and Economic Affairs. Data on transactions on foreign assets and liabilities of the commercial banks are derived from their returns. Data for other sectors are not available at the moment.

Reserve assets

Data on reserve assets are derived from the CBG. The entries show the changes in the CBG's foreign exchange holdings, SDR holdings, and reserve position in the Fund.

Georgia

The following text was confirmed as current in 2004.

I. General

The Balance of Payments Division (BOPD) of the State Department for Statistics (SDS) of Georgia has compiled the balance of payments statistics quarterly and annually since 1993. The data do not cover the Abkhazia and Tskhinvali regions. The compilation is in accordance with the *BPM5*. The main data sources are (1) the databases of the Customs Department (CD) on export and import transactions; (2) financial and monetary statistics from the National Bank of Georgia (NBG); and (3) data from ministries, departments, and other government institutions, such as information from the Ministry of Finance (MOF) data on foreign debt and interest payments, information from government institutions on business travel, grants, and aid received, and information obtained from the Georgian railways, the Georgian Post Limited, and the Georgian Telecom Limited on their cross-border transactions.

The BOPD also uses estimates to supplement the data obtained from primary information sources. It uses indirect estimation for those items for which no direct information is available.

The balance of payments statistics are compiled in U.S. dollars. Some transactions are converted from the national currency into U.S. dollars using the exchange rate prevailing at the time of the transactions, while others are converted using the average exchange rate for the reference period.

The balance of payment statistics are disseminated to all users simultaneously through a press release and are

also available on the SDS's website (www.statistics.ge). The quarterly data are also regularly published in the monthly bulletin of the SDS, as well as in the quarterly bulletin of the NBG. The annual data, together with comments and explanations, are published in the SDS's *Georgian Statistical Yearbook*.

II. Specific Items: Balance of Payments

Current Account

Goods

The main information source for goods is the Database of Customs Declarations (DBCD) received monthly from the CD. Additional information is obtained from the relevant sources on (1) natural gas imports and in transit, (2) electricity imports, exports, and in transit, and (3) external trade data on principal partner countries (Germany, Turkey, Armenia, Azerbaijan, Russia, and the Ukraine). Estimates are also made of nondeclared imports and exports of goods (shuttle trade) on the basis of surveys conducted by the SDS. In its balance of payments data, the SDS publishes exports and imports in f.o.b. prices, as recommended by the *BPM5* methodology. The difference between c.i.f. and f.o.b. prices, which consists of 8 percent of the value of total imports for international freight and 2 percent of the value of total imports for insurance, is recorded by transport type under transportation services—debit.

Services

Transportation

In addition to the estimates of freight and insurance referred to above, the main data sources are information from the Georgian Railway Limited and the ports and airports of Georgia. Indirect estimates based on information obtained from the Department of Border Defense, regarding the means of transport and numbers of persons entering and leaving the country, are also used as data sources.

Travel

The data on travel are compiled on the basis of information obtained from the regular household survey. Additional information on business travel is collected from government organizations (ministries, departments, the NBG, etc.), as well as from the banking sector. Indirect estimates based on (1) information obtained from the Department of Border Defense regarding the numbers of persons entering and leaving the country, (2) expenses abroad of those persons engaged in export-import operations in goods, and (3) expenses of those working abroad for less than one year, are also used as data sources.

Other services

The data on other services, involving consulting, construction, and others, are obtained directly from the enterprises receiving such services. The data for foreign embassies, diplomatic missions, and international organizations are estimated using indirect methods. The data on Georgian diplomatic missions abroad are obtained from the Ministry of Foreign Affairs of Georgia (MFAG). Information on financial services is provided by the Statistical Service of the NBG, according to the accounts obtained from commercial banks. Information on insurance services is provided by the Insurance Supervision Service.

Income

Compensation of employees

The data are primarily estimates based on the household survey data, which includes information on household members abroad that provide information on remittances from abroad. Data on income of residents employed by international organizations are also estimates based on the number of employees and their remuneration.

Investment income

The main data sources are (1) a report from the MOF on interest payments on state-guaranteed debt; (2) a report from the NBG on interest payments made by the banking sector; and (3) estimates of payments and receipts of other investment income based on information obtained from the NBG, commercial banks, and enterprises.

Current transfers

The data mainly comprise technical assistance provided to Georgia by foreign governments and international organizations, information of which is obtained from the reports of the MOF and from those international organizations and foundations that implement the technical and humanitarian assistance and have offices located in Georgia. Other data on current transfers are obtained from the following sources: (1) the MFAG for data on membership fees of various international organizations; and (2) the Ministry of Education and the household survey for estimates of the value of grants for education of Georgian students abroad.

Capital Account

Capital transfers

The data are based primarily on information provided by the MOF's Department of Grants and Technical Assistance. The data on migrants' transfers are based on information obtained from sample surveys conducted by the SDS.

Financial Account

Direct investment

The data on direct investment in Georgia cover authorized capital stock, or authorized funds of joint or foreign enterprises, reinvested profits, and other investments of nonresident direct investors. The data on enterprises are obtained from an enterprise survey, while the data on the banking sector are obtained from the NBG, and those for the insurance companies are obtained from the State Insurance Service.

The coverage of the data on direct investment abroad is considered to be incomplete.

Portfolio investment

The NBG provides data on the portfolio investments of the banking sector. Since 2000, brokerage firms registered at the Georgian Stock Exchange provide data on the nonfinancial sector as well. However, such investments are very small.

Other investment

The data cover all short- and long-term financial transactions except direct investment, portfolio investment, and reserve assets. The main data sources are information provided by the MOF, the NBG, and enterprise surveys.

Trade credits

The data are estimates based on information obtained from the enterprise surveys.

Loans

The data on loans for the monetary authorities, general government, and the banking sector are based on reports from the relevant divisions of the MOF and the NBG. The data on loans for the other sectors are estimates based on the information obtained from the enterprise survey, supplemented by additional information obtained from the relevant divisions of the MOF.

Currency and deposits

The data cover transactions of banks on their own account, except those involving direct investment or portfolio investment. The data are obtained from the NBG.

Reserve assets

The data source is the balance sheet of the NBG.

Germany

The following text was confirmed as current in 2004.

I. General

The Central Bank (Deutsche Bundesbank) is responsible for compiling the balance of payments and international investment position for Germany. The methodology used to compile Germany's balance of payments complies with the *BPM5*. Exceptions are noted below. Balance of payments data have been recompiled in accordance with the *BPM5* methodology back to 1971. Exceptions are noted below. Data for earlier periods dating back to 1949 have been revised for main aggregates only.

The major source used to compile Germany's balance of payments is an open international transactions reporting system (ITRS). The responsibility for reporting lies with the economic entity, bank, or the nonbank that carries out a transaction with a nonresident and/or the economic entity at which the change of ownership occurs. For some items, such as securities and travel, banks report on behalf of their customers. The term "transaction" is defined according to the *BPM5*. Reporting agents are obliged to report in euros.

In addition to the information from the ITRS, data are derived from five other principal sources: (1) the foreign trade statistics compiled by the Federal Statistical Office (FSO), for merchandise data; (2) monthly reports to the central bank on the external positions of banks and nonbanks for deriving short term items of the other investment account; (3) the accounts of the central bank for the reserve assets; (4) survey data on travelers for the travel item debit side; and (5) annual balance sheet data of direct investment enterprises for direct investment stock data and the corresponding reinvested earnings.

The German balance of payments is compiled on a monthly basis. It is published monthly as a press release on the Internet at http://www.bundesbank.de/statistik/statistik_sdds_zahlungsbilanz.en.php, in the *Monthly Report*, and in the *Statistical Supplement 3 to the Monthly Report "Balance of Payments Statistics."*

Quarterly and annual balance of payments data are published in the *Statistical Supplement 3* with a limited geographical breakdown. Furthermore, annual data are also published in the Special Statistical Publication 11, "*Balance of payments by region*," available each year in July (the English version in August) as well as in the *Annual Report* of the Deutsche Bundesbank.

Data are also made available on magnetic tapes and on zip-diskettes. All data, as well as an one-year advance release calendar showing the dates on which balance of payments' press releases are to be issued, are published on the Internet at http://www.bundesbank.de/statistik/statistik_sdds_zahlungsbilanz.en.php.

As a member of the European System of Central Banks (ESCB), the Bundesbank provides to the European Central Bank (ECB) the German contribution to the balance of payments of the euro area as required. It also provides balance of payments data to the International Monetary Fund (IMF), Eurostat, the OECD, UNCTAD, and the Bank for International Settlements (BIS) with the periodicity and level of detail requested.

Germany's IIP is published twice a year at http://www.bundesbank.de/statistik/statistik_sdds_auslandsvermoege.en.php and in the *Statistical Supplement 3* to the *Monthly Report*. A geographical breakdown is available for major partner countries. Stock data on direct investment are published in the context of the German IIP in the *Statistical Supplement 3*, and—in a more detailed presentation—in the Statistical Publication 10, *International Capital Links*, each year in May. The Bundesbank provides the IIP data to the ECB as well as to the IMF with the periodicity and level of detail requested.

External debt data are published quarterly solely at http://www.bundesbank.de/statistik/statistik_sdds_auslandsverschuldung.en.php

II. Specific Items: Balance of Payments

Current Account

Goods

The Bundesbank obtains general merchandise data mainly from the foreign trade statistics compiled by the FSO. These data value exports of goods on an f.o.b. basis and imports of goods on a c.i.f. basis. For conformity with the concepts of *BPM5*, adjustments are made for coverage and valuation, in particular to change imports to an f.o.b. basis. These adjustments are based on additional information available from trade statistics, special ITRS reports, and other sources.

The introduction of the Intrastat system (which was established to foster the collection of information relating to trade between Member States of the European Union [EU]) at the beginning of 1993 resulted in a decline in coverage. The FSO provides estimates of non-reported merchandise trade.

The foreign trade statistics include goods for processing, goods procured in domestic ports by carriers, repairs on goods, and transactions in nonmonetary gold. The ITRS provides data on repairs on mobile equipment, as well as expenditures in foreign ports. The balance of payments submitted to international organizations show all these categories separately.

Import data computed on an f.o.b. basis are published only on a quarterly and on an annual basis (although

f.o.b. figures on a monthly basis are calculated for the German contribution to the EMU aggregate).

Services

Transportation

The ITRS provides basic data on freight transactions. In particular, this source provides credits for air, sea, and rail transport. However, since the source data often include transportation services as part of the value of goods and not separately, the reported data are supplemented with estimates. Ratios of freight to total imports, broken down by mode of transport and country, are used to estimate freight debits.

As mentioned before, Intrastat was implemented in the foreign trade statistics conducted by the German FSO as of the beginning of 1993. As a result, necessary information for updating these ratios is no longer available. Therefore, the ratios referring to 1992 have been assumed constant and have been applied to the current figures since 1993. The ratios are broken down by mode of transport and by country. Data on passenger transportation and other transportation are obtained entirely from the ITRS.

Travel

Reports from the ITRS system capture only minor parts of the travel account. Before 2001, most travel transactions were estimated on the basis of bank reports on the purchase and sale of foreign currency (banknotes, traveler's checks) by residents and of domestic currency by nonresidents, reports on bank transfers by travelers and travel agencies, as well as credit card transactions of residents abroad and of nonresidents in Germany. Since 2001, the major source of information on travel debits is the outcome of a survey on travelers on the basis of household samples. It was implemented to compensate for the loss of information on the purchase/sale of Deutsche Mark (DM) banknotes with the introduction of the euro. In addition, partner country data and accommodation statistics data are also taken into account.

Adjustments are made to separate workers' remittances from travel data. The purchase of goods and services by border workers is included under travel, but their income is excluded from travel. For the debit side a breakdown between business travel and personal travel is available.

Other services

Communications. The data cover postal and telecommunication services, as well as courier services.

Construction. Most construction activities are recorded under services. Construction activities are recorded as direct investment only in those cases where a local sub-

sidary has been established (which permits its identification as a direct investment enterprise).

Insurance. Data are recorded separately for life insurance, freight insurance, other insurance, and reinsurance. Apart from reinsurance services, premiums and claims are collected separately. Service charges are estimated as a percentage of gross premiums and included in insurance services. The remaining premiums and reported claims are recorded as current transfers or in the financial account (for life insurance). Reinsurance transactions are included entirely in insurance services, in accordance with *BPM5*.

Financial. This item covers fees paid or received in connection with financial transactions. Fees related to the purchase or sale of securities are included in the financial account, because the transaction value as well as fees and commissions are generally reported as a lump sum in one figure. However, it has been arranged that some entities report them separately. These figures are used as a basis for estimations to separate fees and commissions from the transaction value.

Royalties and license fees. This item includes transactions related to royalties, trademarks, registered designs, franchise fees, and the supply of technological know-how. Generally, the data also cover transactions representing the acquisition or sale of patents, copyrights, etc., which should be classified in the capital account. If such transactions can be identified, they are allocated to the capital account.

Other business. Data are available with a breakdown corresponding to the detail recommended in the *BPM5*. In addition, a further breakdown is available, to record transactions in services between affiliated enterprises, like payments by subsidiaries and branches for current administrative costs and expenses of the parent company or subsidies by parent companies to subsidiaries and branches to finance current business operations.

Personal, cultural, and recreational. This item covers mainly the production costs of movies, radio and television programs, etc., fees for actors, and distribution rights. Other personal, cultural, and recreational services are included under the travel item.

Government, n.i.e. Transfers of funds to German embassies abroad are used as a proxy for their purchases from nonresidents. Salaries paid to local staff are deducted and classified under compensation of employees. Total expenditures of foreign embassies in Germany and the salaries paid to German residents are estimated and classified accordingly. Salaries paid to German residents by foreign troops, as well as salaries paid to German employees of international organizations, are also classified under compensation of employees.

Income

Compensation of employees

Compensation of employees consists of the gross income, before tax and other deductions, mainly of border workers, commuters, and seasonal workers. For commuters, the data are either derived from partner-country data or estimated on the basis of information from the Federal Labor Office. The data also include income of resident employees of foreign military agencies, embassies, and international organizations.

Investment income

Direct investment. For distributed earnings the basic source of information is the ITRS. Total earnings are derived from balance sheet information on assets and liabilities of direct investment enterprises in Germany and abroad, available within a time lag of 15 months. Until the balance sheet data become available, the current operating performance profits are estimated for the current year while the reinvested earnings are calculated as residual and allocated pro rata temporis. At present, for the exclusion of extraordinary profits, information is derived from publicly available balance sheet information or directly asked from reporting enterprises. Starting with the reporting period 2004, the annual balance sheet survey will be based on the current operating performance concept (COPC). All earnings arising from enterprises' participating interests, including reinvested earnings, are attributed to the year in which the earnings arose ("accruals principle").

Portfolio investment. Primarily, banks report outgoing income flows on German securities. Owing to substantial reporting gaps in the case of portfolio investment income on securities issued by nonresidents, estimates are made on the basis of stock data and assumed interest and dividend rates. Interest income is compiled partly on a due-for-payment basis and partly on an accrual basis.

Other investment. The basic source of data is the ITRS. Where these data are not plausible and where doubts exist on the reliability of reported information, data are supplemented by estimates derived from end-month stock data in loans and deposits of nonbanks and information on interest rates. The data on income from trade credits are incomplete, and no estimates are made. Data on the interest element of financial lease payments are also not captured.

Current transfers

General government

The bulk of the government transfers received and paid are transfers to and from the EU. Most of the payments to the EU are contributions to the EU budget and are, by

definition, classified as current transfers. Payments received from the EU are classified either as current or as capital transfers depending on their nature.

Estimates are made for the classification of public aid transfers into the current or capital account, respectively.

Other sectors

Data on workers' remittances are estimated using several kinds of data sources. Until 2004, data on workers' remittances for major countries in the Mediterranean area were derived from a survey conducted by a private institute. In addition, data on cash transfers via banks and post office branches are reported for the same and other countries. The Federal Employment Office holds available the number and origin of employed and unemployed foreign workers being subject to social insurance contribution. Using this information, annual transfers by foreign workers to their countries of origin can be determined, which are allocated pro rata temporis.

Capital Account

Capital transfers

General government

Capital transfers received from the EU are recorded consistently with the methodology set out in the *BPM5*. Capital aid transfer debits are estimated.

Debt forgiveness. Debt forgiveness by the government and by the private sector is recorded consistent with the methodology of *BPM5*.

Other sectors

Migrants' transfers. Little information is available on these transactions, which are combined with inheritances, legacies, and donations.

Acquisition/disposal of nonproduced nonfinancial assets

Transactions involving the acquisition/disposal of nonproduced nonfinancial assets are, in principle, not recorded separately. They are recorded along with patents and license fees and are classified under services. In the case of major individual transactions involving the purchase or sale of nonproduced, nonfinancial assets, these can usually be identified and are classified as capital account transactions.

Financial Account

Direct investment

Data on direct investment transactions for equity capital are obtained from the ITRS. In addition, an annual survey on assets and liabilities of direct investment enterprises in Germany and abroad is used for cross-checking purposes. Intercompany loans are derived from monthly

stocks statistics on assets and liabilities of affiliated companies. The data are compiled consistently with the methodology set out in *BPM5*. Since 1996, credit transactions are presented according to the directional principle. Before 1996, data were presented according to the assets/liabilities principle and did not include any short-term credit relations.

Portfolio investment

Data on portfolio investment are obtained from the ITRS and, from March 2002 onwards, based on a security-by-security data collection. In principle, banks report portfolio investment transactions for their own account and on behalf of their customers. For cross-checking purposes, annual data from custodians are used. Some estimations are made for resident private household transactions in securities carried out via non-resident banks. From 1999 onwards, securities sold for cash collateral, to be repurchased on a subsequent agreed date, are classified as loans.

Financial derivatives

Transactions in financial derivatives are obtained from the ITRS and are recorded on a net basis.

Other investment

Loans

Long-term loans and deposits are derived from the ITRS. Short-term loans and deposits as well as trade credits are obtained from monthly stock statistics of banks and nonbanks on their external assets and liabilities. Quarterly statistics from the BIS on the liabilities of nonresident banks to German nonbanks are used to complete missing reports of residents on private accounts held abroad. German *Schuldscheine* are also classified as loans.

Reserve assets

Data on flows are obtained from the accounts of the central bank and reported in accordance with the methodology set out in *BPM5*. From 1999 onwards, the reserves data are compiled in the framework of the ESCB requirements and include only claims denominated in non-euro currencies on non-euro-area residents.

III. Specific Items: International Investment Position

Direct investment

Information is obtained from annual balance sheet data of direct investment enterprises in Germany and abroad. Since this survey is only available after a minimum of 15 months, monthly stock data on assets and li-

abilities of affiliated enterprises are used for cross-checking purposes and to preliminarily approximate the development of stocks on other capital during the year. For equity capital, accumulated flows are used to bridge the time gap.

Direct investment data are entered in the IIP at book values.

Portfolio investment

In general, data are first obtained by accumulating transactions, adjusted for price and exchange rate changes, and then modified taking into account information on stock data from banks' balance sheets and securities deposits statistics.

Financial derivatives

Currently, no stock data for financial derivatives are available.

Other investment

Stock data are available from monthly positions on external assets and liabilities for the main sectors. In addition, data from the BIS are used to provide for missing information on residents' private accounts held with banks abroad. When the annual statistics on international capital links become available, they are used to adjust preliminary allocations of loans to direct investment or other investment.

Reserve assets

Data are obtained from the accounts of the central bank. The reserve assets are valued at market prices on a monthly basis.

Ghana

The following text was confirmed as current in 2004.

I. General

In Ghana, the International Finance Office of the Research Department of the Bank of Ghana (BOG) has the primary responsibility for compiling balance of payments statistics. Prior to 1982, the Ghana Statistical Service (GSS), formerly called Central Bureau of Statistics, was in charge of the compilation.

The BOG obtains data for the balance of payments estimates from various sources, including the international trade statistics, managed by the country's Customs authorities, the transactions reporting system of the banks (including BOG's own records), official sources (government agencies, in particular the Ministry of Finance,

and the entire administrative system), and international sources. These are sometimes complemented with periodic surveys of enterprises, managed by the compilation authorities. The BOG also incorporates in the statistics the data obtained from surveys of individuals and households reported by the country's tourism authorities. Data are currently published annually, although efforts are advanced to begin publishing quarterly data.

The BOG compiles balance of payments data for Ghana in millions of U.S. dollars. It converts transactions denominated in other currencies into U.S. dollars at the transaction rates where available, or it estimates them using period average exchange rates. The BOG publishes data mainly in its official Annual Report, as well as in reports to the IMF and other international financial institutions. The GSS publications also often include the data. Data will soon be available in electronic format on BOG's website www.bog.gov.gh.

Balance of payments data are currently compiled on the basis of the *BPM4* methodology, although attempts are made to use the *BPM5* report format. The BOG intends to change completely to reporting on the basis of the *BPM5* methodology by the end of the 2004 financial year.

II. Specific Items: Balance of Payments

Current Account

Goods

The primary source of international merchandise trade statistics data is the Customs authorities, who are mandated to measure the volumes and values of merchandise that move across the country's frontiers. The ASYCUDA system of customs data capture has now been completely retired in Ghana. Ghana has introduced a new customs data capture and management system, called the GCMS/TRADENET database. The system is managed on behalf of the customs authorities by a company, Ghana Community Network (GCNet). GCNet hopes to link both data providers and data users electronically to the database so as to make access to trade information quicker and easier. Additionally, the BOG undertakes surveys of main exporting and importing enterprises to complement the data obtained from the GCMS/TRADENET system.

The GCMS TRADENET system currently reports data on exports, but because it is new, and because compilers want to complement and validate the data, the BOG uses data reported directly by the major exporting companies or export monitoring agencies. These companies and agencies provide the data monthly. Exports of cocoa

and gold account for more than 70 percent of exports in value terms. The Ghana Cocoa Board reports exports of cocoa beans and cocoa products directly to the BOG. However, where there is a long lag in reporting, BOG estimates the volumes and values of exports from export returns (A2 forms) submitted to it at the time of export. The Minerals Commission, a monitoring agency for the mining companies, reports gold exports to BOG. Where these reports have long lags, BOG may estimate data from export returns, as in the case of cocoa.

The other important export products are coffee, sheanuts, diamonds, bauxite, timber, timber and timber products, residual oil, and electricity, on which the BOG can obtain data directly from the agencies in charge of exporting or monitoring

For imports, the customs data are reported as general goods based on the Harmonized System. BOG now generally obtains the information on imports from the GCMS/TRADENET system. Import declarations are done electronically through computer terminals provided for customs agents or declarants at convenient locations. BOG validates and processes the information provided electronically and stores it for subsequent use. BOG has direct access to the database.

Crude oil imports are not yet processed through the GCMS/TRADENET system. The Tema Oil Refinery (TOR), which imports the oil, reports the data on imports of crude and refined oil directly to BOG.

Services

Transportation

This category covers freight and passenger services by air, land, and sea transport, as well as services rendered and acquired at the ports. BOG's International Finance Office therefore derives entries for transportation services from information provided by the port authorities, airlines, and shipping companies, both local and foreign. Entries for freight debits are estimated based on merchandise imported into the country within a given period. Freight for non-oil imports are estimated using 9 percent (covering both freight and insurance) of c.i.f value of the imports. In the future, the BOG will source estimates for freight directly from the trade reporting system. For oil imports, the office collects information on freight on imported oil from TOR. It estimates freight credits based on information provided by transportation companies.

Travel

The Ghana Tourist Board is the regulatory and monitoring governmental agency for tourism. BOG makes entries for travel credits in consultation with the tourist authorities. No established system exists for capturing

information on travel debits, and these are estimated using historical information. The tourist authorities are currently working on a project to provide more reliable and comprehensive information on both tourism credits and debits, in a way that would be more useful for balance of payments reporting.

Other services

Entries for other services include commissions, management and agency fees, contract and professional charges, leasing of equipment, communications, and film rentals. They are estimated from reports under the administrative and regulatory system for foreign exchange.

Government, n.i.e. Debit entries cover expenditure of Ghanaian diplomatic personnel, diplomatic, and trade missions, etc. Data for debit entries are estimated from information from the Ministry of Foreign Affairs and from BOG's records of transfers to Ghana's diplomatic mission abroad. Credit entries are estimated from information provided by the Ministry of Foreign Affairs and from information on transfers to diplomatic missions located in Ghana. Surveys of embassies and diplomatic missions have often not received the required cooperation.

Income

Investment income

Data on reinvested earnings and undistributed branch profits are not available but are included in the aggregated category profits and dividends. Credit entries cover mainly interest from gross assets of the banking system, while debit entries are largely estimates of interest payments on foreign loans received by both the public and private sectors.

Current transfers

General government

BOG derives information on current transfer credits from various government agencies and the international community, the World Bank, the United Nations Development Program (UNDP), and other bilateral donors, in respect of disbursements of official grants to the government of Ghana.

Information is often not available on the general government transfer debits, and the BOG makes entries based on historical numbers reported in the balance of payments.

Other sectors

The BOG derives entries for current transfer credits from information reported by the banks on transfers to residents of Ghana (individuals and NGOs) that are captured by their systems.

Grants in kind are estimated from the trade reporting system. The debit entry reflects Ghana's membership contribution to international organizations and transfers to other countries, including the government's direct contribution to peacekeeping in other countries.

Capital Account

Capital transfers

Because the compilation is based on the *BPM4* methodology, data on transfers to Ghana do not separate current transfers from capital transfers. A substantial portion of current transfers are capital transfers, particularly for official grants used in acquiring capital equipment for development projects supported by foreign donors.

Financial Account

Direct investment

The BOG draws data on direct equity investment from reports of the Ghana Investment Promotion Council (GIPC), which is the official organization established to promote and monitor inflows of foreign direct investment into the country. With the government divestiture program, BOG compilers derive the information on foreign participation in diversified enterprises from the Ministry of Finance and Divestiture Implementation Committee and add it to the estimates from GIPC.

Other investment

BOG usually estimates the entries from its records and from the banks' data records on lending and borrowing, and on currency and deposits. It derives trade credits mainly from the operations of the Ghana Cocoa Board and TOR. The former utilizes export prefinancing facilities from nonresidents, while the latter has an agreement with the foreign supplier for a 90-day revolving credit on the purchase of crude oil.

Reserve assets

The BOG compiles the estimates from stocks, reported on its books, of the monetary authorities foreign assets and liabilities. The entries in monetary gold reflect mainly BOG's new acquisitions. However, since 1989, the BOG has not acquired gold as reserve assets. Entries for foreign exchange are foreign currency holdings with correspondence banks. The item also covers entries for BOG's holdings of foreign securities. The entries are changes estimated as differences in amounts outstanding and therefore include valuation changes.

Greece

The following text was confirmed as current in 2004.

I. General

The Bank of Greece (BoG) has compiled Greece's balance of payments statistics since 1929 and international investment position data since 1999. The balance of payments data collection system—in place since end-1998—is based on the *BPM5* conceptual framework and the European Central Bank (ECB) requirements (applicable to monetary union member states). Since January 1999, the BoG has produced monthly data.

The system is a closed international transactions reporting system (ITRS) based on banks' settlements reporting. Resident banks report resident/nonresident transactions and opening/closing balances of their external positions. Reporting banks undertake the coding of transactions and balances from a list of items that closely reflects *BPM5* standard components and ECB/EUROSTAT/OECD requirements. Monthly data are reported in euros on a transaction basis. Some items, such as emigrants' remittances, are reported in an aggregate form.

Bank settlements are the primary source of all current account data, with the exception of travel, where the results of a frontier travel survey have been used since May 2002. Supplementary information obtained directly from respondents is used to compile a large part of capital and financial account transactions.

BoG obtains capital account general government transactions from its departments and other administrative sources, while it obtains financial account data from resident custodians, stockbrokers, mutual funds, etc.

In principle, monthly data are revised when quarterly data are due for publication and supplementary information is available.

Balance of payments data are made available through the following publications: *Provisional Balance of Payments Summary Report* (monthly), *Monthly Statistical Bulletin*, *Bulletin of Conjunctural Indicators* (monthly), *Economic Bulletin* (biannual), *Monetary Policy* (biannual report submitted to Parliament), *Governor's Annual Report*, and *Budget Statement* (annual).

The *Monthly Statistical Bulletin*, the *Bulletin of Conjunctural Indicators*, and summary data for the Special Data Dissemination Standard (SDDS) are available on the BoG website at www.bankofgreece.gr

Balance of payments statistics, international investment position data, and international reserves tem-

plate data are disseminated on the BoG website soon after they are released to the ECB. An advance release calendar for these data categories is also available on the BoG website.

II. Specific Items: Balance of Payments

Current Account

Goods

BoG compiles the goods item on the basis of settlements, as recorded by the ITRS. The geographical allocation of transactions is based on the country of origin, although reporting agents are also requested to report the country of consignment. Supplementary information derived from oil refineries is used to compile data for the oil account. The c.i.f./f.o.b. rate is calculated automatically by the ITRS using the data from the respondent banks.

Services

Transportation

BoG compiles the transportation items on the basis of settlements, supplemented with estimates derived from the conversion of imports from c.i.f. to f.o.b. Data are broken down by means of transport (sea, air, rail, and other means) as well as by transportation category (freight and passengers). The main category is sea transport-cross trading activity.

Travel

Travel data prior to 2002 were compiled on the basis of settlements. The introduction of the euro called for methodological changes in the compilation of travel data for balance of payments purposes. A monthly frontier travel survey aimed at estimating travel expenditure started on a pilot basis in May 2002 and has been conducted on a permanent basis since January 2003.

Other services

A full breakdown of other services items is obtained through the ITRS. The breakdown is largely consistent with *BPM5* classification and EUROSTAT/OECD Trade in Services classification.

Income

Investment income

Direct investment. Income on equity is estimated using a proxy based on the rate of return of foreign direct investment companies listed on the Athens Stock Exchange. The BoG uses annual data for reinvested earnings obtained from the annual foreign direct investment questionnaire. Income on intercompany loans is not currently recorded. Data on reinvested earnings are

included only in the annual balance of payments after the publication of the annual statements of enterprises in May/June each year. Dividends are recorded as of the date they are paid.

Portfolio investment. Data on portfolio investment income is obtained from the ITRS. For plausibility checking of the ITRS data, BoG uses supplementary information on portfolio investment stocks obtained from custodians and on portfolio investment transactions supplied by stockbrokers and mutual funds, as well as by banks for their own account transactions. The geographical allocation of investment income is made according to the residency of the issuer of the asset, and of the first known counterpart in the case of liabilities. Full accrual reporting of this item is expected in 2004.

Other investment. BoG bases other investment data on the ITRS. Settlement data for loans and deposits are matched with changes in the banks' consolidated monthly external balance sheet position. The BoG does not record income on trade credits. Transactions in deposits by private individuals/enterprises with foreign institutions are recorded. Income on reserve assets is recorded on an accrual basis.

Current transfers

BoG obtains data for general government transfers from the ITRS. It uses data from the Ministry of National Economy and Eurostat to cross-check the split between current and capital transfers.

Emigrants' remittances are recorded under current transfers.

Capital Account

The reporting of capital account transactions is based on *BPM5* and ECB/EUROSTAT harmonization proposals. The main component is the entry for general government, which includes data on capital transfers under the EU budget, obtained from BoG departments, the Ministry of National Economy, and EUROSTAT for quarterly data.

Financial Account

Direct investment

Data on foreign direct investment flows, both inward and outward, are derived from the ITRS. In addition, BoG uses press reports and Athens Stock Exchange information to identify transactions and classify them appropriately on the basis of the 10 percent rule. Cross-border transactions in real estate are reported as a sub-item under FDI. After compiling a register of foreign direct investment (FDI) companies, the BoG started collecting FDI stocks data for the first time for

1995–98 using an annual questionnaire for both inward and outward FDI. Data are reported on the basis of the 10 percent rule and an additional 50 percent for foreign affiliates' trade statistics (FATS).

Portfolio investment

Data on portfolio investment assets and liabilities, both in terms of flows and stocks, comply with *BPM5* and ECB recommendations. Flows are reported on a monthly basis as part of the ITRS. BoG gathers supplementary information from its departments, monthly banks' balance sheets, resident stockbrokers, mutual funds, etc. Quarterly data are collected from resident custodians and other direct respondents. Data are reported security-by-security using ISIN codes. An annual survey is conducted among a sample of large non-bank enterprises, with the objective of estimating their external portfolio investment assets and liabilities, including debt equity issued abroad.

The geographical allocation criterion for assets is based on the country of residence of the issuer, and for liabilities, on the first known counterpart principle. A detailed country breakdown is available on quarterly and annual bases. Limited information is available for historical data prior to the introduction of the new data collection system.

Financial derivatives

Data on financial derivatives are obtained from settlements.

Other investment

Data are harmonized with *BPM5* and ECB requirements. Data sources are the ITRS, banks' monthly balance sheets, and administrative sources for general government debt. In addition, BoG has used an annual survey since 1998 to estimate the nonbank sector debt obligations to nonresident banks, where the loans have been granted without the intermediation of resident banks. BoG also collects trade credit data—assets and liabilities—through this survey.

In line with ECB requirements, the sectoral breakdown and the maturity breakdown for the monetary and financial institutions (MFI) sector are available on a monthly basis. The breakdown by instrument is available quarterly. BoG uses quarterly data available from the Bank of International Settlements (BIS) to compile assets of the nonbank sector items.

Reserve assets

Data comply with the recommendations set out in *BPM5* and ECB rules regarding Eurosystem reserve assets.

III. Specific Items: International Investment Position

Direct investment

Stock data are obtained from an annual enterprise survey on both Greek direct investment abroad and foreign direct investment in Greece.

Portfolio investment

Portfolio investment stock data are valued at market prices. BoG compiles data on a quarterly basis using information from its Foreign Exchange Department, residents' custodians, bank balance sheets for own investments, private banking departments of MFIs, stockbrokers, mutual funds, and investment companies in Greece.

In addition, an annual survey among public entities and large enterprises provides data on bonds issued abroad and portfolio investment assets.

Other investment

BoG derives stock data on assets and liabilities annually from its own records, the government sector, banks' balance sheets, and other sectors on the basis of a survey of private sector firms.

Reserve assets

Monthly data are compiled according to the Eurosystem definition of reserve assets, using information from the BoG's Foreign Exchange Department.

Grenada

See East Caribbean.

Guatemala

The following text was confirmed as current in 2004.

I. General

The agency responsible for compiling Guatemala's balance of payments statistics is the Balance of Payments Section of the Bank of Guatemala's (BOG's) Economic Research Department. The section obtains the data used to prepare the balance of payments from two sources: (1) BOG departments: Economic Statistics, Foreign Exchange and International, External Financing, and Economic Studies, and (2) the Ministry of Public Finance through its Trust and External Financing Department.

BOG publishes the balance of payments data annually in the *Annual Report of the Central Bank of Guatemala* (since 2002 the Annual Report is called *Estudio de la Economía Nacional*). The data, released about four months after the reference year, are also available on the Internet (<http://www.banguat.gob.gt>). The Monetary Board releases quarterly data informally to the media, usually within 30 days of the reference quarter.

The BOG's Economic Statistics Department compiles information on international trade transactions from customs declarations and conducts direct and personal interviews with Guatemala's producers' associations, business chambers, and port authorities. The same department compiles the information on foreign exchange inflows and outflows and summarizes it in the foreign exchange statistics.

The Foreign Exchange and International Department produces information through its Foreign Operations Section on movements in the Monetary Stabilization Fund (MSF), providing statistics on income from investments, on receipts and payments of the nonfinancial public sector, and on the BOG.

The Economic Studies Department provides information on changes in international monetary reserves, the external debt of the nonfinancial public sector, exchange rate developments, arrears, and other information relevant to compiling the balance of payments. Estimates are recorded in U.S. dollar terms.

The Economic Research Department prepares the data quarterly, compiled and presented according to the principles of *BPM4*. However, it has introduced several surveys to collect information according to the guidelines of the *BPM5*. Once this change is fully implemented, the department will use the foreign exchange statistics for cross-checking purposes only.

II. Specific Items: Balance of Payments

Current Account

Goods

The BOG bases the general merchandise statistics on the trade data recorded in customs declarations in f.o.b. terms for exports and imports. Compilers derive the information on certain traditional products (coffee, sugar, and bananas) largely from data compiled by the Foreign Trade and Markets Analysis Section of the BOG's Economic Statistics Department. For other products, the compiling department obtains information from the export lists drawn up by the Foreign Exchange Statistics Section of the Economic Statistics Department.

Services

Transportation

The BOG sources debit entries for freight from customs declarations. The source of the data for passenger services and other transportation services is the foreign exchange statistics.

Travel

The BOG compiles the credit and debit entries by combining the data on tourists arrivals and departures (provided by the Migration Directorate) with the following: estimates of their average daily expenditures and their average length of stay (provided by the Guatemalan Institute of Tourism, for credits) and information on the amounts carried by travelers (from the foreign exchange statistics, for debits). The foreign exchange statistics also provide information on business travel, travel for medical treatment, study abroad, and official travel.

Other services

Insurance. This item includes insurance and reinsurance related to trade, ships and aircraft, life, etc. For nonmerchandise insurance, the BOG collects data from the foreign exchange statistics. For merchandise insurance, it derives debit entries from customs declarations.

Other business. The BOG obtains information mainly from the foreign exchange statistics. The item's main components are services acquired by public and private enterprises from foreign firms, nonbanking commissions, etc.

Government, n.i.e. This item includes consular and diplomatic expenditures, contributions toward the administrative expenses of international organizations, pensions, etc. The foreign exchange statistics provide the data.

Income

Compensation of employees

The foreign exchange statistics provide the data.

Investment income

The BOG derives the entries from the foreign exchange statistics, the external debt statistics furnished by the Foreign Operations Section of the Foreign Exchange and International Department, the external public debt statistics produced by the Fiscal Section of the BOG's Economic Research Department, and the Ministry of Public Finance.

Also included are dividends and distributed branch profits; reinvested earnings; and interest on loans, securities, debt, and deposits abroad, both of the public and private sector.

Current transfers

Transfers in cash are obtained from the foreign exchange statistics plus the 5 percent of imports with no commercial value. Of this 5 percent, 90.1 percent are recorded as grants-in-kind, with the following distribution: 62 percent, current transfers and 38 percent, capital transfers. Current transfers include donations, family remittances, pensions, and other concepts.

Capital Account

Capital transfers

See note to current transfers.

Financial Account

Direct investment

The foreign exchange statistics provide data on direct investment in cash. To estimate investments in kind by foreign head offices, the BOG applies a coefficient to the total amount of imports not requiring a settlement in foreign exchange.

Portfolio investment

The BOG derives data from the foreign exchange statistics, the statistics of the BOG's Securities Regulation Fund, and the Ministry of Public Finance.

Other investment

For private sector transactions, the foreign exchange statistics mainly provide the data. For the public sector, the foreign exchange statistics provide loan disbursements in cash. Disbursements in kind (in goods and services) are obtained from the Ministry of Public Finance and the agencies carrying out the projects. Data on debt service include both payments made when due and arrears on payment of principal and interest.

Reserve assets

Compilers obtain data on a transaction basis from the Foreign Operations Section of the BOG's Foreign Exchange and International Department and from the balance sheet of the central bank.

Guinea, Republic of

The following text was confirmed as current in 2004.

I. General

The Department of Statistics and Balance of Payments of the Central Bank of the Republic of Guinea is responsible for compiling the balance of payments statistics for

Guinea. In addition, as the Ministry of Planning customarily prepares a summary balance of payments, a Balance of Payments Technical Committee is responsible for harmonizing the collection of statistics and supervising the preparation of Guinea's balance of payments. Established on July 15, 1999, the committee comprises a representative of the central bank (who chairs the committee), as well as representatives from the Ministry of Economy and Finance and the Ministry of Planning.

The data compilers derive balance of payments statistics essentially from central bank surveys as well as from questionnaires sent to various ministries, primary banks, mining companies, and semipublic corporations. Attempts to collect data by sending questionnaires to enterprises in which the government is not a shareholder have been comparatively unsuccessful. Furthermore, most accredited embassies in Guinea have not cooperated fully in this effort.

The Department of Statistics and Balance of Payments checks the incoming data for consistency and ensures that the coding is in conformity with the standard components of the *BPM5*.

Since 1996, informal sector "general merchandise" transactions that bypass banks and customs have been estimated.

The Department compiles the balance of payments on an annual basis, publishing the data in the central bank's annual report. Since 2000, balance of payments data have been collected quarterly, but they are not published on that basis.

Agencies report data to the central bank in Guinean francs and U.S. dollars.

II. Specific Items: Balance of Payments

Current Account

Goods

Customs data are the primary source of information for the *general merchandise* category. The National Directorate of Statistics at the Ministry of Planning, which obtains data on general and special trade, processes customs data in accordance with the nomenclature of the Standard International Trade Classification (SITC Rev. 3). The central bank processes the special trade data, treating the customs frontier as a statistical boundary, and makes further adjustments for the balance of payments (coverage, classification, valuation, or time of recording).

The customs declarations report exports on an f.o.b. basis, whereas they generally report imports on a c.i.f. basis. The central bank's adjustment to exclude freight

and insurance on imports is made by applying percentages estimated on the basis of reported data (c.i.f. and f.o.b.).

The central bank derives grants-in-kind and drawings on loans related to projects from the government flow of funds table (TOFE) provided by the Ministry of Economy and Finance. The central bank also uses statistics compiled by the UNDP from donor countries. In 1999, the central bank allocated 60 percent of TOFE grants to *goods* and 40 percent to *government services* (credits). With respect to drawings on project-related loans, the central bank breaks down the amount in question into goods (55 percent) and services (45 percent).

For data on gold exports, the central bank collects data from exporter firms and its own records. The central bank's own gold sales are classified as *gold held as a store of value*, whereas gold sales by companies and private individuals are reported under the heading *gold held for other purposes*. The National Directorate of Planning estimates exports of artisanal gold by private individuals outside official channels.

Services

Banks and mining companies are the main data source for the items in the *services* category.

Transportation

The central bank asks banks and mining companies to perform their own surveys to estimate freight and insurance for imports they have reported on a c.i.f. or cost & freight basis. Otherwise, the central bank makes the estimates.

With respect to other imports (chiefly grants and loans related to projects), compilers proceed in the manner described in *Goods* above.

Travel

The central bank uses this category to record over-the-counter exchange transactions conducted through the banking system, as well as mission expenses of civil servants and staff of the semipublic mining companies. When the travel purpose is not clear, the compilers list the amounts under *personal travel*.

Other services

Insurance. This category records the cost of insurance on imports (obtained in the manner indicated in *Goods* above), as well as other transactions reported by local insurance companies.

Other business. In this item the central bank records amounts reported by banks and semipublic mining companies. Also in this item the central bank classifies the transactions without clear designation.

Government, n.i.e. Efforts to collect data directly from embassies regarding their local expenditures have been unsuccessful. Credit entries therefore reflect purchases of Guinean francs from banks by international organizations and embassies accredited in Guinea. Debit entries are based on 1) foreign exchange payments made by the central bank to fund the expenditures of Guinea's embassies, 2) unspecified government expenditures, 3) 40 percent of grants included in the flow of funds table, and 4) 45 percent of drawings on government loans related to projects.

Income

Investment income

The central bank derives the amounts from questionnaires sent to banks and semipublic mining companies, as well as from the public external debt statements presented in the flow of funds table of the Ministry of Economy and Finance.

Current transfers

General government

The compilers record all grants (whether or not project-related) included in the flow of funds table, less debt relief on Guinea's public external debt, as a current transfer to the government. This item also includes fishing royalties paid to the government.

Other sectors

Data on private current transfers, provided by banks and semipublic mining companies, comprise the following: French pensions to Guinean veterans; savings from the wages of the expatriate personnel of banks and mining companies; and remittances of funds by Guineans residing abroad to provide financial support for their families.

Remittances of funds by the Guinean diaspora in 1999 were substantial, however, and appear to constitute a broader category than financial support for families. For this reason, the amount in question was allocated as follows: 10 percent to workers' remittances and 90 percent to liabilities to direct investors.

The central bank generally records as current transfers the transfers of very small amounts received or carried out with insufficient identifying information by banks on behalf of private individuals.

Capital Account

Capital transfers

Data correspond to the public external debt relief reported by the Ministry of Economy and Finance in the flow of funds table.

Financial Account

Direct investment

Semipublic mining companies and banks provide the data. Direct investment in other enterprises (in which no government shareholding is involved) is not currently identified. Payment orders processed through banks frequently bear such vague descriptors as "transfers received/made"; thus, the central bank generally records them under *other business services*.

In 1999, 90 percent of remittances of funds by Guineans abroad were imputed as direct investment in small- and medium-scale enterprises and industries, housing, etc. In previous years, the balance of payments did not include these investments (financed through the informal sector).

Portfolio investment

Since 1998, the central bank has been investing in foreign securities administered by Merrill Lynch. Changes in the central bank's securities holdings are recorded under debt.

Other investment

The central bank derives data on commercial credits, loans, and deposits from reports submitted by banks and semipublic mining companies, as well as from the balance sheets of banks. The central bank reports the financial transactions between itself and the government.

Reserve assets

The central bank obtains data on reserve assets from its balance sheet.

Guinea-Bissau

The following text was confirmed as current in 2004.

I. General

The Central Bank of Guinea-Bissau (CBGB) is the agency responsible for the compilation and preparation of the balance of payments. To the extent possible, the methodology for the *BPM4* is used in the compilation. Data for preparing balance of payments statistics are obtained mainly from five primary sources, namely, the CBGB, the Ministry of Finance, the Directorate-General of Customs, the Ministry of Planning and International Cooperation, and the Port of Guinea-Bissau (Guiport). Beginning in 1996, the data sources were expanded to include surveys of transactions by embassies, international aid agencies, hotels, the telecommunications company, airlines, shipping companies, and the Invest-

ment Support Office (Gabinete d'Ajuda d'Investimento—GAI) in accordance with the *BPM5*.

Balance of payments statistics are compiled in millions of U.S. dollars; all amounts denominated in other currencies are converted to dollars at the average exchange rate prevailing on the day of the transaction.

II. Specific Items: Balance of Payments

Current Account

Goods

The Directorate-General of Customs in Bissau City provides import statistics on a c.i.f. basis to the CBGB Directorate of Economic Research and Statistics for use in balance of payments and in trade statistics. Estimates of freight and insurance costs are made to obtain f.o.b. values. Trade data are reconciled with export/import value and volume figures collected by the Guiport merchandise loading and off-loading facilities, and adjustments are made when discrepancies arise. Trade data are further cross-checked with data from surveys of a limited number of exporters of the major products that are marketed internationally and from importers of goods.

Services

Transportation

This category covers freight and passenger services on all modes of transport, as well as port services. Debit entries are estimated on the basis of freight and insurance data obtained from the pre-import registration slip. Transportation costs are not usually declared on this slip. When necessary, expenditure on freight and insurance is estimated at 17.5 percent of c.i.f. imports.

Travel

Credit entries are derived from surveys of commercial banks and hotels concerning the expenditure of foreign visitors. Debit entries are derived from the records of banks and ministries.

Other services

Estimates are derived primarily from CBGB exchange records. However, beginning in 1996, new surveys have been implemented to obtain improved primary data on services such as commissions, communications, equipment rental, contractual and professional fees, etc.

Government, n.i.e. Data on government services are derived from information provided by ministries and international organizations located in Guinea-Bissau. Credit entries are derived from surveys of expenditure by embassies and international agencies. Debit entries refer to expenditure abroad by Guinea-Bissau em-

bassies and their diplomatic personnel and are obtained from the CBGB.

Income

Investment income

Direct investment. These data are obtained through the GAI of the Ministry of Planning and International Cooperation.

Other investment. The Ministry of Finance provides figures on a due-for-payment basis for scheduled medium- and long-term interest. The central bank provides figures for short-term interest.

Current transfers

General government

The source of information is the survey of bilateral and multilateral donors and nongovernmental organizations (NGOs) conducted by the Ministry of Planning and International Cooperation. The value of goods and services donated by these agencies to Guinea-Bissau is reported in U.S. dollars.

Other sectors

Grants of NGOs are classified as private transfer credits to other sectors, even if the NGOs are closely tied to government aid.

Capital Account

Capital transfers

Project grants from international agencies and NGOs, received in cash, capital goods, or equipment, are posted to this item. The data are furnished by the Ministry of International Cooperation, through monthly surveys of embassies and international organizations located in Guinea-Bissau.

Data on debt forgiveness are collected from the Ministry of Finance and refer to bilateral debt.

Financial Account

Direct investment

Data on direct investment are compiled by the GAI using their own records and surveys of a number of enterprises.

Other investment

Liability entries cover changes in trade credits and long-term loans obtained abroad by the central government and the monetary authorities of Guinea-Bissau. The data are entered from the records submitted by the Ministry of Finance and the central bank. Beginning in 1997, balance sheets of commercial banks will be used to obtain

changes in foreign deposits and loans of public enterprises and the private sector.

Reserve assets

Data come from the CBGB balance sheet.

III. Specific Items: International Investment Position

Sources of information on international investment position data are the same as those used for the balance of payments.

Guyana

The following text was confirmed as current in 2004.

I. General

The Central Bank of Guyana (BOG) is responsible for compiling and disseminating balance of payments statistics. The BOG compiles the data on a cash basis from reports submitted by the Guyana Revenue Authority (GRA), the Ministry of Finance, the Bureau of Statistics (BOS), and commercial banks. It also sources important data from the monthly survey of commercial banks' and nonbank cambios that report on the flow of foreign currency through these entities. BOG also conducts surveys of resident and nonresident enterprises to collect data on international transactions.

The conceptual framework and classification structure of Guyana's balance of payments are consistent with the guidelines of *BPM5*. BOG publishes data in millions of U.S. dollars in the quarterly *Bank of Guyana Statistical Bulletin* and in the *Annual Report of the Bank of Guyana*. They are also available on the Internet (www.bankofguyana.org.gy/).

II. Specific Items: Balance of Payments

Current Account

Goods

Data on imports and exports are sourced from customs declarations. The GRA serves as the basis for the primary data, which BOS processes before disseminating the data to the Research Department of the central bank.

Imports and exports are valued on an f.o.b. basis, and the GRA uses a standard method to adjust for insurance and freight.

Services

Transportation

Comprises passenger services provided by land, sea, and air.

Travel

Credit entries include all receipts from transactions in foreign currency, travelers' checks, and credit cards, as well as goods purchased by tourists and paid for in foreign currency, travelers' checks, or credit cards. Debit entries include payments for medical treatment abroad and other expenditure for students abroad.

Other services

This category includes royalties, postal and telecommunication charges, computer and information services, insurance services, and other financial services undertaken by the government.

Income

Compensation of employees

Includes wages, salaries, and other benefits for work performed by nonresident workers in Guyana during the maximum period of one year.

Investment income

This category includes interest on debt securities and income on money market instruments. The data sources are the responsible institutions and agencies.

Current transfers

Included are workers' remittances by migrants employed in other economies for one year or longer. Other current transfers include grants from foreign governments for financing current expenditures in Guyana, as well as gifts of food, clothing, or other consumer goods.

Capital Account

Capital transfers

Consists mainly of capital transfers in the form of debt relief under the Paris Club agreement, the original Heavily Indebted Poor Country Initiative, and the extended Heavily Indebted Poor Country Initiative. BOG collects the data from the MOF. Entries recorded for 1996 reflect Guyana's debt-stock reduction on Naples terms by Paris Club creditors.

Financial Account

Direct investment

Includes the transactions in equity, purchase and sale of real estate, and other flows among enterprises in direct investment relationships. The BOG collects the

data from a biannual balance of payments survey of major enterprises.

Portfolio investment

Covers transactions in securities, such as equity and long- and short-term debt securities, including money market instruments. Data sources are the responsible institutions and agencies.

Other investment

Includes loans, deposits in nonresident banks and other assets and liabilities.

Reserve assets

Reflects changes in official reserves held by BOG, which includes monetary gold and official foreign exchange holdings.

Haiti

The following text was confirmed as current in 2004.

I. General

The International Economy Division (IED) of the International Affairs Department at the Bank of the Republic of Haiti (BRH) compiles Haiti's balance of payments statistics. The IED obtains the data for its estimates from several sources, in particular, the Administration Générale des Douanes (General Customs Administration—GCA), OECD trade statistics, visits of its representatives to airlines, shipping agencies, the port and airport authorities, government departments and agencies, international institutions and embassies, exporters' and importers' associations, the Bureau of the Census of the U.S. Department of Commerce, Statistics Canada, and other bilateral country data. Certain data come from internal BRH sources, such as the Supervision of Banks and Financial Institutions Department, the Currency and Economic Analysis Department, and the Credit Control Department.

IED compiles the balance of payments data quarterly and annually and publishes them in the central bank's *Statistics Bulletin* (*Bulletin Statistique*) and in its *Annual Report* (*Rapport Annuel*). The division compiles the balance of payments in U.S. dollars; it converts data on domestic currency transactions obtained from certain sources into U.S. dollars at the average reference exchange rate calculated by the BRH.

The national presentation of the balance of payments accords with the *Balance of Payments Manual*, fifth edition (*BPM5*). However, the statistical coverage is inadequate, because some essential data are often unavailable

or become available only after a considerable lag and must be estimated or extrapolated to meet the statistical compilation deadline.

II. Specific Items: Balance of Payments

Current Account

Goods

IED bases the compilation of foreign trade statistics primarily on customs documents and supplements the compilation with data from Haiti's major trading partners. The division derives data on exports of primary products, such as coffee, cocoa, essential oils, and mangos, from customs records, exporters' associations, and the Ministry of Commerce. It obtains data on exports of goods manufactured by assembly industries from the Bureau of the Census of the U.S. Department of Commerce, because the coverage by customs records is not complete.

IED draws import data from information provided by Customs, generally covering Port-au-Prince. However, because the data are often late, and data from the provincial ports are systematically late, Haiti uses data from its main trading partner, the U.S., as a basis for estimates. IED adjusts import data to an f.o.b. basis by deducting an estimated 7 percent from imports.

For balance of payments compilation purposes, foreign trade statistics are subject to adjustments relating to coverage and valuation, to account specifically for smuggling and underinvoicing, and to exclude certain transactions not involving transfers of ownership.

Services

Transportation

Data on transportation services are estimated on the basis of information provided by the port and airport authorities and on the basis of annual surveys carried out at Haitian and foreign airlines and at shipping agencies. The debit entry for freight on imports includes insurance and is estimated at 7 percent of imports, c.i.f.

Travel

The Secretariat of State for Tourism gathers monthly statistics on the number of tourists in Haiti. IED distributes data for estimated income from travel under separate headings for tourists arriving by air, ship, and road, respectively. For those arriving by air, the division multiplies the number of tourists recorded during the period in question by the average duration of their stay and by their estimated daily expenditures. The division also uses data from the airport authority related to the number of international passengers. For those arriving by

ship and spending a maximum of 24 hours in Haiti (excursionists), IED multiplies the number by an estimate of the sum spent on the day in question. It obtains the number of tourists crossing the border from data on fees collected by government agencies. Travel debits are estimated based on the number of Haitians leaving the country.

Other services

Insurance. Data relating to insurance include mainly goods insurance.

Communications. The entries mainly cover receipts and payments on telephone settlements, satellite usage, and expenditure for calling cards printed abroad.

Other business. For these services, credit and debit entries correspond to overall estimates obtained by extrapolating past trends.

Government, n.i.e. IED bases the data on information supplied by the Ministry of Foreign Affairs, the BRH's International Operations Division, international organizations, and foreign embassies in Haiti. Credit entries correspond to estimates of the operating expenditure of foreign embassies and international institutions with offices in Haiti. Debit entries cover the operating expenses of Haitian embassies and consulates abroad.

Income

Investment income

Direct investment. IED derives data on investment income from financial surveys of certain enterprises and from data provided by the General Tax Directorate (Direction Générale des Impôts) and the Bank Supervision Department for branches of foreign banks.

Other investment. Debit entries relate to interest on the foreign public debt paid by the central government and public enterprises and to certain exceptional financing operations. The External Debt Division of the BRH provides the data.

Current transfers

General government

Credit entries cover grants in cash and in kind, grants in the form of technical assistance, and grants for budgetary support. IED derives the entries from information provided by foreign embassies, the European Union (EU), the United States Agency for International Development (USAID), the United Nations Development Program (UNDP), and the Ministry of Planning and Foreign Cooperation (MPFC). Because available data do not show current transfers and capital transfers separately, the total amount is included in current transfers.

Other sectors

The main entries under this heading consist of remittances by Haitian workers living abroad and bank transfers in favor of individuals in Haiti. The Foreign Exchange Division of the BRH forwards these data; it bases them on a sample survey of eight large transfer establishments.

Capital Account

Capital transfers

Debt forgiveness. The entries cover cancellation of interest and principal arrears. The BRH External Debt Service provides these data.

Financial Account

Direct investment

IED obtains the data on direct investment primarily from the report prepared by the BRH's Supervision and Financial Institutions Department, the General Tax Directorate, certain surveys of oil companies, and the Haitian Industries Association. Direct investment data are recorded at book value.

Other investment

Loans

General government. Every month the Foreign Debt Division of the International Affairs Department gathers the data on drawings and repayments relating to the central government's external debt.

Other sectors. The entries include drawings and repayments of the foreign debt of certain public enterprises. The data, compiled by the Foreign Debt Division, used to be recorded under "general government" in the balance of payments.

Currency and deposits

The data relate primarily to changes in the commercial banks' foreign assets and liabilities. The Currency Division provides these data. IED derives data on assets and liabilities for the nonbank sector from Bank for International Settlements (BIS) publications.

Other liabilities

The entries for the general government and the monetary authorities refer to changes in arrears and other exceptional financing transactions.

Reserve assets

IED obtains data on the reserve position in the IMF and the SDR holdings from IMF's records. Changes in monetary gold include revaluations, because the gold holdings are valued each month on the basis of the market rate. The foreign exchange deposit accounts show the

historical value. The BRH's Currency and Economic Analysis Department is the source for these data.

III. Specific Items: International Investment Position

IED compiles the international investment position (IIP) as a partial statement. Data on foreign direct investment abroad as well as those on portfolio investments (assets and liabilities) are not available. Sources of information for other components of the IIP are the same as those used for compiling the financial account of the balance of payments. IED converts data on positions obtained in national currency to U.S. dollars using the end-period reference exchange rate.

Honduras

The following text was confirmed as current in 2004.

I. General

The Economic Research Department of the Central Bank of Honduras (CBH) is responsible for compiling the balance of payments statistics for Honduras. The main data sources are the Executive Directorate of Income (EDI), certain departments within the CBH, government institutions, and, currently, the results of an annual survey conducted by the CBH on services, income, unilateral transfers, and private nonbank financial flows.

The CBH compiles the data monthly, quarterly, and annually in U.S. dollars and publishes the balance of payments annually; it also publishes data in its various reports. The classification of the accounts used in the balance of payments complies in general with the format recommended in the *BPM4*, and preparations are being made to adopt the recommendations set forth in the *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

The Economic Research Department prepares estimates based on import and export declarations provided by the EDI. Goods exported and imported are valued on the declarations on an f.o.b. and c.i.f. basis, respectively. Customs data record the physical movement of goods across Honduran borders; subsequently CBH adjusts them with respect to coverage, valuation, and timing for balance of payments purposes, includ-

ing, in particular, converting imports to an f.o.b. basis. It also adjusts them to include exports and imports of electrical energy.

Because of the long lag before the EDI reports the trade data, the CBH is currently processing its own statistics, based on the customs documents.

Services

Transportation

This category covers freight and passenger services by all modes of transport, plus port services. The Economic Research Department derives the credit entries for transportation services from information provided by airport and seaport authorities and annual surveys of Honduran airline and shipping companies. It obtains debit entries for freight from information on freight and insurance reported in customs declaration forms, which are received monthly. The department obtains debit entries for passenger transportation by a survey of foreign airlines.

Travel

Credit and debit entries for travel are based on surveys conducted by the Honduran Institute of Tourism and the General Directorate of Migratory Policy. Estimates are compiled by combining the number of foreign visitors with estimates of average expenditures.

Other services

Insurance. Credit entries include net premiums received for insurance and reinsurance. CBH obtains the data from Honduran insurance companies and the National Commission of Banks and Insurances. Debit entries include insurance premiums paid on imported merchandise, excluding insurance provided by resident insurers. The data are based on customs documents.

Other business. Entries include general commercial commissions; management, contract, and professional fees; equipment leasing; communications; and film rentals. The main source is an annual survey of services.

Government, n.i.e. Credit entries cover goods and services purchased in Honduras by diplomatic missions and international organizations with representative offices in Honduras. Debit entries include expenditures made abroad by Honduran diplomatic personnel and by diplomatic and trade missions operating abroad. The source for the data is the Ministry of Foreign Affairs and statistics obtained from banks.

Income

Investment income

The department obtains the data on direct investment income from the annual financial survey of private sector companies.

Current transfers

The currently available data do not distinguish between current transfers and capital transfers; consequently, all transfers are recorded as current.

General government

Credit entries reflecting transfers to the general government include grants received from various governments and international agencies. The main data sources for these entries are the representative agencies of these countries and the United Nations Development Program's annual report on Honduras.

Other sectors

These entries reflect workers' remittances. CBH obtains the data from banking data, supplemented by a survey, conducted at major airports, of Honduran nonresident travelers visiting their relatives during Christmas and summer vacations.

Capital Account

Capital transfers

Data on debt forgiveness are obtained from records on external debt maintained by the Ministry of Finance and Public Credit and from the External Debt Section of the CBH. As noted above, any entries applicable to capital transfers are currently included with current transfers.

Financial Account

Direct investment

The source is the annual financial survey of private sector companies.

Other investment

Entries cover transactions in short- and long-term loans and other assets and liabilities of banks, the monetary authority, and other sectors. Data sources are bank balance sheets and the annual financial survey of private sector companies. For external debt transactions of the general government and monetary authorities, CBH obtains the data from its International Department and its External Debt Section and from the Ministry of Finance and Public Credit.

Reserve assets

Data are obtained from the CBH balance sheet.

Hungary

The following text was confirmed as current in 2004.

I. General

In Hungary the central bank, Magyar Nemzeti Bank (MNB), is responsible for compiling balance of payments (BOP) statistics and the international investment position (IIP). The primary source of the balance of payments is the monthly report by the monetary institutions (credit institutions and MNB). Various other sources are the separate reports provided monthly by exchange offices (other than credit institutions), by enterprises directly borrowing/extending loans from/to nonresidents or holding accounts at nonresident banks, and by foreign direct investment (FDI) companies and resident direct investors. MNB compiles data on transactions in goods on the basis of customs data provided by the Hungarian Central Statistical Office (CSO). Compilers also use as a supplementary source the reports by security traders, Central Clearinghouse and Depository (Budapest) Ltd. (KELER), and Hungarian State Treasury (MAK).

The general legal background of BOP and IIP compilation consists of the Central Bank Act (Act LVIII of 2001) and the Act on Statistics (Act XLIV of 1993). The reporting obligation of other monetary institutions, exchange offices, and security custodians is specified in orders by the president of the MNB. The reporting obligation for accounts held at nonresident banks, for direct loans, for FDI of residents abroad, and for FDI of nonresidents in Hungary is prescribed in the annually revised Government Decree on the National Statistical Data Collection Program (OSAP registration numbers: 1644, 1910, 1807–9, 1597).

MNB publishes statistics in Hungarian forint and— from January 2000—in euros, as scheduled in the advance-release calendar, through the media, and on the MNB's website: <http://www.mnb.hu/>. MNB updates the advance-release calendar twice annually, in June and December. Hungary has subscribed to the IMF's Special Data Dissemination Standard (SDDS). The country posts a metadata page, summary methodology, and advance release calendar for the balance of payments, the international investment position, the external debt, and the international reserves and foreign currency liquidity. All these pages are also available at the IMF's website <http://www.imf.org/>.

MNB recalculates and aggregates monthly flow data, reported in aggregated form by currencies, to national levels in forint, at the workday weighted monthly average of the daily official MNB exchange rates. Cumulative flow data are the sum of monthly figures. The MNB also recalculates and aggregates end-month stock data, also reported by currencies, to national levels in forint, at the end-month official MNB exchange rates.

Four sectors are distinguished in BOP and IIP statistics: central bank, general government, other monetary institutions, and other sectors. The general government sec-

tor is comprised of the central and local governments, extrabudgetary funds, and social security funds. This sector also includes the State Holding and Privatization Company (ÁPV Rt.). The sector of other monetary institutions consists of credit institutions (commercial banks), special credit institutions, cooperative credit institutions, and building societies. Other sectors include nonfinancial corporations (corporations subject to the Act on Corporate Tax, except those with financial intermediation as their principal economic activity), other financial corporations (GIRO, KELER, insurance corporations and pension funds, other financial intermediaries, and auxiliaries), households, and nonprofit institutions serving households.

Pre-1995 statistics are published in *BPM4* format. Since then, classification of *BPM5* is applied. In respect of the pre-1995 period, because the lack of required information rendered it impossible to reclassify the data sets into *BPM5* structure, a break in the time series occurred for some of the data. Since 1995, MNB has split unrequited transfers—formerly recorded in the current account—into current transfers and capital transfers. The former has remained in the current account; the latter has been reclassified to the capital account. Labor and property income has ceased to form a separate item: the central bank classifies labor income as income (compensation of employees), whereas property income is either a service item or capital account item (nonproduced, nonfinancial assets), depending on whether the transaction covers the use or sale of nonproduced, nonfinancial assets. Net errors and omissions (NEO), published as a separate item since 1993, result from the use of different sources (e.g., consolidation of reports by enterprises and credit institutions, incorporation of customs statistics) and data aggregated during the compilation process.

II. Specific Items: Balance of Payments

Primary sources of information are reports by other monetary institutions and enterprises holding bank accounts abroad. For goods, MNB uses as its primary source the customs statistics, which register the physical crossing of merchandise across the frontiers. Since 1998, other monetary institutions must report all transactions separately above a simplification threshold. The threshold was set at US\$100,000 in 1998 and was lowered to US\$50,000 in 1999. Below the threshold, other monetary institutions report all their own and their clients' transactions affecting their claims and liabilities vis-à-vis nonresidents in aggregated form, broken down by currencies and balance of payments transaction types.

Enterprises holding accounts at nonresident banks fill out a balance of payments structured questionnaire, used for compilation of the monthly statistics. They submit the data in aggregated format, broken down by currencies. Below a threshold of HUF 200 million of total annual

current account transactions (either credit or debit), no detailed current account is reported except total credits and debits. MNB reestimates these totals among the current account items using the ratios of enterprises submitting a detailed current account report. (Before 1998, the threshold was as high as HUF 100 million).

MNB compiles monthly statistics from the reports of all other monetary institutions licensed to conduct foreign exchange transactions and from approximately 500 enterprises holding accounts abroad.

Current Account

Goods

Starting from the publication of the data for 2002, the central bank incorporates customs statistics into the balance of payments, with revisions of time series going back to 1995. (Before 2002, goods data were compiled at contractual value as they were reported by other monetary institutions and enterprises under this transaction code. There was no adjustment for f.o.b. parity.) The use of customs statistics involves replacement of former data on goods with data derived from the customs statistics because this procedure is more consistent with the accrual principle. In addition, MNB makes certain adjustments to meet international methodological standards:

- Exports and imports of goods are valued f.o.b./f.o.b. (i.e., the value at the customs frontier of the exporting economy); the c.i.f. value of imports recorded in the customs statistics is replaced by the f.o.b. value in the balance of payments.
- Certain items of goods (those not crossing the frontiers) are not included in the customs statistics and continue to be covered by the transaction codes of credit institutions.
- Financial leasing is recorded according to the imputed market value of the leased goods (and the f.o.b./f.o.b. terms of delivery stated in the customs statistics). In connection with financial leasing, the leasing fees paid are recorded, as a financing item, under the category of other claims/liabilities (also in accordance with the general standards for incorporating customs statistics). No (implicit) interest payment is recorded in connection with financial leasing.
- Gross transactions in goods for processing and net repairs are recorded under goods. Previously, these two items were recorded under services, but they have been reclassified under goods (beginning with the data for 1995) with the incorporation of customs statistics.

Services

Transportation

The primary source of data provides a breakdown by transportation category (passenger, freight, and other)

but does not distinguish the means of transportation (sea, air, or other). In addition to the primary information sources, which record transportation services on separate accounts, an adjustment (related to the change in the terms of delivery of goods) relies on the data derived from customs statistics. Transportation services are adjusted with a value equal to the adjustment in the terms of delivery of goods, but with the opposite sign. The estimation of the terms of delivery correction and its allocation between debits and credits for transportation services are based on bills of clearance. The CSO carries out the estimation and allocation, and the MNB uses the data obtained.

Travel

For the compilation of travel, the compilers use the monthly reports by exchange offices in addition to the primary information sources.

As of 2003, MNB has changed the method of recording travel receipts and expenditures. In the post-1995 data, the compilers recorded, under travel, the balance of cash transactions affecting households' foreign exchange (FX) accounts held at resident banks, as well as the balance of forint/foreign currency exchange transactions carried out at banks. As of 2003, relying on a direct survey of account holders (2000) and natural indicators, the MNB estimates separately the breakdown by various components (travel, income, current transfers, real estate investment) of the credit and debit entries for these cash transactions. It records the transaction values obtained under the appropriate items in the balance of payments. Simultaneously with the methodological switch, it has revised the time series going back to 1995. Before 1995, it recorded only the balance under current transfers (other sectors) in the current account.

MNB primarily classifies as travel the foreign exchange bought by exchange offices from residents. Compilers keep in mind that households' foreign exchange cash proceeds from travel are not deposited in a bank account but are converted into forint instead. Therefore, as of 1998, travel receipts include the excess of foreign currency purchased by exchange offices from residents over a "benchmark" value (of a similar item in 1997 for the period between 1998 and 2000, and from 2001, an amount equaling 5 percent of travel expenditures in the previous month). Before 1998, MNB treated these transactions as re-exchange of foreign exchange previously bought for travel purposes by residents and recorded them as correction entries to travel debit.

Since 1997, the central bank has recorded as travel receipts the forint amounts debited to nonresidents' accounts maintained in Hungary.

Other services

MNB publishes detailed classifications for other services. It records rental fees for real estate paid by legal

entities as technical and cultural services (those paid by individuals, such as tourists, are recorded as travel). It records as direct investment income the rental fees paid by resident tenants to the nonresident owner of real estate in Hungary and the rental fees paid by nonresident tenants to the resident owner of real estate abroad. From 2004, it records merchanting on a net basis, in accordance with international statistical standards. To ensure comparability of the time series, MNB has built into the balance of payments going back to 1998 the adjusted data on merchanting, accounted for on a net basis.

Income

The subcategories are compensation of employees (labor income) and investment income. Since 1995, labor income also covers compensation of resident employees for work carried out abroad and nonresident employees for work in Hungary, as estimated from households' foreign currency cash transactions. MNB further classifies the category of investment income according to the functional structure in the financial account. From 2004, income is recorded on an accrual basis in the balance of payments statistics. Accordingly, MNB records income on debt progressively, replacing the disclosure of actual payments in the quarterly current account. Income on equity includes reinvested earnings, and the central bank has made data comparable back to 1995.

Investment income

Since 1999, in line with the 1997 change in BOP methodology, MNB has recorded interest payments related to interest rate swaps and currency swaps in the financial account instead of under income in the current account.

Current transfers

MNB publishes separately the current transfers for the government sector and other sectors.

Other sectors

Since 1999, the central bank has recorded under current transfers the claims payable by resident insurance companies to nonresidents and claims paid by nonresident issuers to residents. Before 1999, insurance claims were recorded as business services.

From 1995 onward, the other sectors' current transfers include the value of transfers (gifts) received by residents and paid to nonresidents as estimated from households' foreign currency cash transactions. In the pre-1995 period, the balance of cash transactions affecting households' foreign exchange accounts held at resident banks was included in current transfers.

Capital Account

Capital transfers

As part of the harmonization with the methodology set out in the 1993 SNA, the MNB has published the capital account in its present form since 1995 as one of the standard components. Before 1995, relevant data are missing. Capital transfers are published for the government sector and other sectors separately.

Acquisition/disposal of nonproduced, nonfinancial assets

This data category emerged because of the split of property income of the pre-1995 current account between use and sale of intangible assets. MNB records transactions related to the latter under this heading. It publishes this item without a sectoral breakdown.

Financial Account

In addition to the primary information sources for several items, MNB uses the following supplementary sources: reports by enterprises directly borrowing/extending loans from/to nonresidents (other investment), reports by FDI companies and resident direct investors (direct investment), and reports by security traders and KELER (equity capital, equity securities, forint-denominated government bonds). In addition, since 1999, it has used the monthly report by the Hungarian State Treasury (MÁK) on the general government sector's foreign exchange-denominated liabilities vis-à-vis nonresidents, which are managed by institutions other than the MNB.

Direct investment

In line with the BPM5, MNB classifies any investment in equity capital, 10 percent or more, as direct investment. Since 1996, direct investment includes not only equity investment but also other nonequity capital transactions (other capital) between the parent company and affiliates. Before 1996, direct investment included the equity capital exclusively. Compilers recorded other capital as long- and short-term capital transactions. With the methodological changeover to accrual accounting in 2004, the balance of payments statistics (beginning with 1995 data) include reinvested earnings. With the inclusion of customs statistics, MNB records contributions in kind. It classifies private nonbusiness real estate investments under this heading, which (beginning with 1995 data) also includes values of real estate purchased by Hungarian residents abroad and by nonresidents in Hungary estimated from households' foreign currency cash transactions.

From January 2002 onward, MNB records financial transactions between nonfinancial corporations and affiliated financial special purpose enterprises (SPEs) as other capi-

tal in line with the international standards. (Before 2002, these transactions were treated as other investment.)

As opposed to other types of investments recorded in the financial account, direct investment is primarily recorded on a directional basis instead of an asset/liability arrangement. Thus, direct investment in Hungary and direct investment abroad are the two major subitems. Cross participation in equity is not recorded under direct investment. If an affiliated company acquires a claim on equity in its direct investor, the transaction is recorded either under portfolio investment ((10 percent) or as a separate direct investment transaction (≥ 10 percent). Nevertheless, as far as other capital is concerned—regardless of the direction of equity investment—both the direct investor and the direct investment company may acquire claims on each other.

MNB records settlement data for other capital in the statistics only after it has checked and supplemented the data with information from direct enterprise reports. The compilation method for other capital is identical to that for enterprise loans recorded under other investment.

In 1999, the MNB, together with the CSO, launched a joint set of four questionnaires aimed at statistical monitoring of the enterprise sector's direct investment transactions and positions. MNB and CSO use the quarterly questionnaires for transactions mainly to control the settlement data coming from the banking sector, to obtain more detailed figures for transactions (geographic breakdown, economic activity), and to supplement settlement data with noncash transactions. They use the annual questionnaires to obtain information on reinvested earnings and stock data.

Since 1999, MNB has classified subordinated loans of other monetary institutions, received from their own direct investor, as other capital. Before 1999, this item was recorded under equity capital.

Portfolio investment

Under this heading MNB records transactions in financial assets traded or tradable in organized or other financial markets (equity and debt securities). The central bank has published portfolio investment as a separate item since 1993. In the pre-1993 statistics, long- and short-term capital contained all capital transactions other than direct investment.

The central bank separately publishes the following subitems as portfolio investment: (1) equity securities ((10 percent); (2) bonds and notes; and (3) money market instruments, according to the asset/liability principle.

MNB compiles data for each category, except for forint-denominated government bonds, as other monetary institutions, and enterprises report them. As for forint-denominated government bonds, since July 1998, MNB

has derived transaction data from the change in stocks at nominal value, net of other volume changes.

The same rule is applicable for discount T-bills and 3-month securities issued by the MNB. Starting in January 2000, the central bank also derives transactions in equity securities, recorded in the financial account, from change in stocks—security-by-security at market price—net of valuation and other volume changes.

The central bank records a debit on the liability side of debt securities for transactions involving a purchase of foreign exchange-denominated bonds issued by residents abroad by residents on the secondary markets.

Financial derivatives

Since 1999, MNB has recorded interest payments—related to interest rate swaps and currency swaps—in the financial account as financial derivatives instead of the current account as income.

MNB records a transaction as a change in assets under financial derivatives in the following cases: 1) premium paid on purchased option (put or call), 2) trading in derivative positions, 3) transactions related to derivative positions having positive net present value at the time of transaction, and 4) closing derivative positions with net gains.

It records a transaction as a change in liabilities under financial derivatives in the following cases: 1) premium received on written option (put or call), 2) transactions related to derivative positions having negative net present value at the time of transaction, and 3) closing derivative positions with net loss.

Other investment

Under this heading the central bank records transactions in financial instruments other than direct investment, portfolio investment, and financial derivatives (e.g., syndicated loans, bank-to-bank loans, trade credits, etc.), broken down by instruments, sectors, and original—short-term (≤ 1 year) and long-term (> 1 year)—maturity.

Loans

For compiling transactions in assets and liabilities of the other sector, the compilers use as supplementary sources the reports by enterprises directly borrowing/extending loans from/to nonresidents, along with the primary information sources (approximately 1,700–1,800 reports per month).

In the pre-2000 statistics, the central bank published data from direct reports by enterprises, checked with the settlement data. The MNB recorded the difference between directly reported and settlement data computed by currencies as net errors and omissions. From 2000 onward, as far as the liabilities are concerned, the

frequency of monthly (stock and flow) reporting has remained unchanged only for those commitments reaching or exceeding US\$500,000. For loans below this threshold, the enterprise needs only to submit a report once annually at the end of the year.

There is no change in the frequency of reporting for loans guaranteed by the government; a monthly report is prescribed for these liabilities. Unlike in the past, starting from 2000, the publishing of the statistics includes settlement data checked with direct reports and supplemented by noncash transactions from these reports.

Within the framework of incorporating customs statistics, from 2002 (going back to 1995) MNB offsets the difference between transactions in goods as recorded in customs statistics and net settlements data by means of corresponding entries under other investment short-term claims/liabilities of the financial account. (Excluded from the customs statistics are the contributions in kind. Also excluded are the adjusted data corrected using additional information received from the CSO on goods for processing and by adding net repairs. The net settlements data are adjusted with reported fees of processing and repairs, as well as goods procured in ports by carriers.) This means that economic agents finance as a trade credit the difference between payment transactions and the balance of exports and imports recorded in the course of the physical movements of goods. This difference is recorded on the corresponding side (assets/liabilities), with the appropriate sign. Any additional difference is recorded as statistical error (NEO), as unidentified trade.

Until late 1999, the statistical treatment of loan transactions depended on the timeliness of the reported data. If the information was delayed until after the end of the year, MNB compilers recorded only other volume change in the international investment position and did not record the transaction in the balance of payments financial account. At the end of 1999, compilers revised retroactively, back to 1996, the time series for these late-reported transactions, according to the original (or the estimated) timing. From 2000 onwards, this correction has occurred regularly, revising the flow and stock at year-end retroactively.

Up to the end of 1999, compilers recorded repurchase agreements (repos) as transactions in underlying securities under portfolio investment (or change in international reserves). From 2000 onwards, they treat repos as collateralized loans under other investment (or change in international reserves).

Currency and deposits

MNB derives transactions affecting cash in foreign exchange, sight deposits, and current accounts of banks as changes in stocks, net of valuation and other volume

changes. The same applies for transactions by the enterprise sector in the form of cash in foreign exchange.

Reserve assets

Gross international reserves are external assets that are readily available to the MNB for 1) direct financing of payments imbalances, 2) indirect regulation of the magnitude of payment imbalances through intervention in foreign exchange markets to affect the forint exchange rate, and/or 3) other purposes. MNB computes change in international reserves as change in stock of comprising instruments, net of valuation and other volume changes.

III. Specific Items: International Investment Position

The MNB's Internet website publishes time series data on external positions consisting of the stock of external assets and liabilities of residents vis-à-vis nonresidents starting from 1990. Since 1992, stock data have been published by sectors as well.

Direct investment

For direct investment abroad, up to 2004, MNB sourced data from the aggregated flows by currencies and aggregated the data at the end-month exchange rates into forint. Since 2004, the bank recalculates direct investment stocks from data derived from the yearly FDI questionnaires, and these data include reinvested earnings as well. The central bank derives stocks of assets in other capital from cumulated flows.

For foreign direct investment in Hungary, since 1998, MNB has computed data as cumulated flows calculated and aggregated in forint and adjusted monthly to the rate of crawl. (Before 1998, data were derived from the aggregated flows broken down by currencies and recalculated at the end-month exchange rates into forint, similar to assets). Since 2004, MNB recalculates direct investment stocks from data derived from the yearly FDI questionnaires, and these data include reinvested earnings as well. Since 1996, the enterprises directly report the stock of liabilities in other capital.

Annual questionnaires launched in 1999 and filled out in 2000 provide information on the stock of owner's capital and reinvested earnings for the first time. Compilers derive stocks of contributions in kind from cumulated flows.

Since 1999, MNB has classified subordinated loans of other monetary institutions, extended to/received from their own affiliates/direct investor, as other capital. Before 1999, this item was recorded under equity capital.

Starting from January 2002, the compilers record stocks of claims/liabilities of nonfinancial corporations on/to affiliated financial SPEs under intercompany loans in

line with the international standards. (Before 2002, these stocks were recorded under other investment.)

Portfolio investment

For portfolio assets, the MNB and other monetary institutions submit reports on transactions and on their portfolio stocks. For other sectors, since stock data are not reported, compilers derive positions from aggregated flows. These reports link the currency in which the transaction is reported more to the denomination of the settlement than to the actual denomination of the securities. (Stocks computed from flows in national currencies of EMU member states are recorded in euros since January 1999.)

Before June 2001, the assets of the MNB and other monetary institutions in debt securities are valued at historic cost. From June 2001 onwards, they are valued at historic cost net of valuation changes. For the other sectors, compilers record stocks as cumulated flows at actual market price.

For portfolio liabilities (except for equity securities), the MNB and the other monetary institutions submit reports on transactions and on their portfolio stocks as well as the stock of the general government sector. For the other sectors, because of a lack of reports on portfolio equity stock data (except the KELER's report), compilers derive the positions from cumulated flows, aggregated, and recorded in forint. They revalue the figure by the change in the index of Budapest Stock Exchange (BUX) at the end of each month.

Debt securities of the MNB, other monetary institutions, and the general government sector are valued at face value. For the other sectors, compilers record these stocks as cumulated flows at actual market price. The compilers decrease the outstanding stock of foreign exchange-denominated bonds issued by residents abroad by the stock held by residents.

Financial derivatives

Since 1999, the MNB and other monetary institutions have reported the stock of financial derivative positions at market (replacement) value. In contrast to the transactions, no information exists on the derivative positions of other sectors. From 1996 to 1998, compilers recorded an asset/liability under financial derivatives if the total of nominal claims/liabilities of futures and swaps in forint—calculated from currencies at end-month forint exchange rates—exceeded the total of nominal liabilities/claims. The value of recorded assets/liabilities in forint was equal to the difference between the two totals.

Other investment

This item breaks down stock data by instruments, sectors, and original maturity. All sectors, except house-

holds, report stock data for the statistics. MNB computes the stock of trade credits recorded, owing to the incorporation of customs statistics, from cumulated transactions.

Reserve assets

MNB derives data from its balance sheet. It classifies its external claims deriving from financial derivative positions under the heading of other investment rather than reserve assets. Since 1992, gold has been valued at London fixing. Before that it was valued at a price of US\$320 per ounce. Up to 1999, securities were valued at historic cost. From 2000, securities are valued at market price net of accrued interest.

Iceland

I. General

The Central Bank of Iceland (CBI) is responsible for the compilation of Iceland's balance of payments and international investment position statistics. The Statistics Department of CBI collects data from a variety of sources, including foreign trade statistics from the Statistical Bureau of Iceland (SBI), foreign exchange transaction reports from commercial banks, and mandatory surveys and questionnaires for services, income, capital flows, and the international investment position. Data are prepared on a quarterly basis and published on the CBI's website [<http://www.sedlabanki.is>] and in the quarterly bulletins *Peningamál* and *Monetary Bulletin*. Data are compiled in millions of Icelandic kronur and published with reference to the prevailing exchange rate of the U.S. dollar. Beginning in May 1996, the balance of payments has been reported in accordance with the *BPM5* format, covering the period from the first quarter of 1990 to the present. Currently, the main methodological deviation from the *BPM5* format occurs in the income component of the balance of payments, as investment income is still compiled on a due-for-payment basis instead of an accrual basis.

II. Specific Items: Balance of Payments

Current Account

Goods

Merchandise exports and imports are compiled on an f.o.b. basis according to the foreign trade statistics reported monthly by the SBI. The data are derived from the Customs Authority, who records all physical movements of goods across Icelandic boundaries. The values of imports are adjusted for the estimated margin be-

tween buying and selling exchange rates, and corrections have sometimes been made for timing discrepancies that affect the purchase and repair of ships and aircraft.

Services

Transportation

The entries for transportation, freight, passenger, and port services are based on surveys of the main Icelandic airlines and shipping companies and estimates of other companies' data, based on bank reports on foreign exchange transactions.

Travel

Hospital, educational, and other travel services are estimated from the foreign exchange transactions reported by banks and payment card companies. Iceland is not able to distinguish between business and personal travel services from prevailing data sources.

Other services

These entries are mainly estimated from bank reports on foreign exchange transactions, supplemented with information obtained from direct reporting entities. Disaggregated service items are not published in CBI statistical bulletins but are available in the data bank maintained for the IMF and other users of balance of payments statistics.

Income

Compensation of employees

Information for this component is derived from bank reports on foreign transactions and direct reporting of entities.

Investment income

Data are either collected from banks and other direct reporting entities or estimated from the international investment position. The borrowers of foreign loans are surveyed at the end of each year for position data and actual interest payments.

Current transfers

General government

The Treasury provides data on general government current transfers.

Other sectors

Data are estimated from bank reports on foreign exchange transactions.

Capital Account

Capital transfers

Migrants' transfers. Data are estimated from bank reports on foreign exchange transactions.

Financial Account

Direct investment

Direct investment flows are estimated during the year from various sources. At the end of the year the FDI companies and foreign affiliates are surveyed, and data from those surveys on flows and positions are used to revise previous estimations.

Portfolio investment

Data on purchases and sales of foreign securities are collected monthly from financial intermediaries and large investors. Foreign investment in domestic securities is collected from the local custodians and estimated from bank reports on foreign exchange transactions.

Other investment

Other financial flows are either derived from data collected from banks and other direct reporting entities or estimated from the bank reports on foreign exchange transactions. New borrowings and repayments of long-term debt are calculated at monthly average exchange rates, but other capital flows are estimated from changes in the position of foreign assets and short-term liabilities.

Reserve assets

Data are derived from the monthly balance sheet of the CBI. Changes in foreign reserve positions, calculated at a fixed exchange rate, are used as a proxy for reserve flows.

III. Specific Items: International Investment Position

Direct investment

Data on direct investment position are collected by surveying the direct investment enterprises and investors and foreign affiliates in Iceland. Data on equity capital and loans are compiled by using the accounting value with detailed sectoral and geographical breakdown in accordance with the OECD benchmark for direct investment statistics.

Portfolio investment

The outstanding values of portfolio investment assets and liabilities have been estimated by correlating the flow figures, and at least once a year data are collected from domestic custodians and main investors.

Other investment

The values of other investment assets and liabilities are derived from data collected from banks and other reporting entities.

Reserve assets

Data on monetary gold, SDRs, IMF reserve position, and foreign exchange holdings are derived from the monthly balance sheet of the CBI.

India

The following text was confirmed as current in 2004.

I. General

The Reserve Bank of India (RBI) is responsible for compiling the balance of payments for India. The RBI obtains data on the balance of payments primarily as a by-product of the administration of the exchange control. In accordance with the Foreign Exchange Management Act (FEMA) of 1999, all foreign exchange transactions must be channeled through the banking system, and the banks that undertake foreign exchange transactions must submit various periodical returns and supporting documents prescribed under the FEMA. In respect of the transactions that are not routed through banking channels, information is obtained directly from the relevant government agencies, other concerned agencies, and other departments within the RBI. The information is also supplemented by data collected through various surveys conducted by the RBI.

Data are prepared on a quarterly basis and are published in the *Reserve Bank of India Bulletin*. The data are compiled in crores of rupees (one crore is equal to 10 million) and are broadly in conformity with the recommendations of the *BPM5*. The data are also expressed in millions of U.S. dollars.

II. Specific Items: Balance of Payments

Current Account

Goods

The RBI compiles data on merchandise transactions mainly as a by-product of the administration of exchange control. Data on exports are based on export transactions and the collection of export proceeds as reported by the banks. In the case of imports, exchange control records cover only those imports for which payments have been effected through banking channels in India. Information on payments for imports not passing through the banking channels is obtained from other sources, primarily government records and borrowing entities in respect of their external commercial borrowing. Since 1992–93, the value of gold and silver brought to India by returning travelers has been added to the imports data with a con-

tra-entry under *current transfers, other sectors*. Exports are recorded on an f.o.b. basis, whereas imports are recorded c.i.f. The Fund adjusts imports, for publication in this yearbook, to an f.o.b. basis by assuming freight and insurance to be 10 percent of the c.i.f. value.

Services

Under the exchange control rules, authorized dealers (i.e., banks authorized to deal in foreign exchange) are required to report details in respect of transactions, other than exports, when the individual remittances exceed a stipulated amount. For receipts below this amount, the banks report only aggregate amounts without indicating the purpose of the incoming remittance. The balance of payments classification of these receipts is made on the basis of the "Survey of Unclassified Receipts" conducted by the RBI. This sample survey is conducted on a biweekly basis.

Transportation

This category covers all modes of transport and port services; the data are based mainly on the receipts and payments reported by the banks in respect of transportation items. In addition to the exchange control records, the survey of unclassified receipts is also used as a source. These sources are supplemented by information collected from major airline and shipping companies in respect of payments from foreign accounts. A benchmark Survey of Freight and Insurance on Exports is also used to estimate freight receipts on account of exports.

Travel

Travel data are obtained from exchange control records, supplemented by information from the surveys of unclassified receipts. The estimates of travel receipts also use the information on foreign tourist arrivals and expenditure, received from the Ministry of Tourism as a cross-check of the exchange control and survey data.

Other services

The insurance category covers all types of insurance (i.e., life, nonlife, and reinsurance transactions). Thus, the entries include all receipts and payments reported by the banks in respect of insurance transactions. In addition to information available from exchange control records, information in the survey of unclassified receipts is also used. The benchmark survey of freight and insurance is used to estimate insurance receipts on account of exports.

Other services also cover a variety of service transactions on account of software development, technical know-how, communication services, management fees, professional services, royalties, and financial services. Since 1997–98, the value of software exports for onsite development, expenditure on employees, and office maintenance expenses has been included in *other services*. Transactions in other services are captured through ex-

change control records and the survey of unclassified receipts, supplemented by data from other sources. For example, information on issue expenses in connection with the issue of global depository receipts and foreign currency convertible bonds abroad is obtained from the details filed by the concerned companies with the Foreign Exchange Department, RBI.

Income

Investment income

Information on investment income transactions is obtained from exchange control records and foreign investment surveys, supplemented by information available from various departments of the RBI. Interest payments on foreign commercial loans are also reported under the RBI Foreign Currency Loan reporting system. The data on reinvested earnings of foreign direct investment companies are based on the annual Survey of Foreign Liabilities and Assets, conducted by the RBI. Details of investment income receipts on account of official reserves are obtained from the RBI's internal records. Interest accrued during the year and credited to nonresident Indian deposits is also included under this category.

Current transfers

General government

The data are obtained from the Controller of Aid Accounts and Audit, government of India, whereas data on PL-480 grants are obtained from the U.S. Embassy in India.

Other sectors

Transactions relating to workers' remittances are based on the information furnished by authorized dealers regarding remittances received under this category, supplemented by the data collected in the survey of unclassified receipts regularly conducted by the RBI. Redemption, in India, of nonresident dollar account schemes and withdrawals from nonresident rupee account schemes has been included as *current transfers, other sectors* since 1996–97.

Financial Account

Direct investment

Basic data are obtained from the exchange control records, but information on noncash inflows and reinvested earnings is taken from the Survey of Foreign Liabilities and Assets, supplemented by other information on direct investment flows.

Up to 1999/2000, direct investment in India and direct investment abroad comprised mainly equity flows. From 2000/2001 onward, the coverage has been expanded to include, in addition to equity, reinvested earnings, and debt transactions between related entities.

The data on equity capital include equity in both unincorporated business (mainly branches of foreign banks in India and branches of Indian banks abroad) and incorporated entities. Because there is a lag of one year for reinvested earnings, data for the most recent year (2003/2004) are estimated as the average of the previous two years. Because of this change in methodology, data for years before 2000/2001 are not comparable with those for data since then. However, as intercompany debt transactions were previously measured as part of *other investment*, the change in methodology does not make any impact on India's net errors and omissions.

Portfolio investment

Basic data are obtained from the exchange control records. These are supplemented with information from the Survey of Foreign Liabilities and Assets. In addition, the details of the issue of global depository receipts and stock market operations by foreign institutional investors are received from the Foreign Exchange Department, RBI.

Other investment

Most of the information on transactions in other investment assets and liabilities is obtained from the exchange control records, supplemented by information received from the departments of the RBI and various government agencies. Entries for transactions in external assets and liabilities of commercial banks are obtained from their periodic returns on foreign currency assets and rupee liabilities. Data on nonresident deposits with resident banks are obtained from exchange control records, the survey of unclassified receipts, and information submitted by the relevant banks to the RBI.

Reserve assets

Transactions under reserve assets are obtained from the records of the RBI. They comprise changes in its foreign currency assets and gold, net of estimated valuation changes arising from exchange rate movement and revaluations owing to changes in international prices of bonds/securities/gold. They also comprise changes in SDR balances held by the government and a reserve tranche position at the IMF, also net of revaluations owing to exchange rate movement.

Indonesia

The following text was confirmed as current in 2004.

I. General

The agency responsible for compiling Indonesia's balance of payments is Bank Indonesia (BI). BI obtains primary data from a variety of sources, including customs

data, an international transaction reporting system (ITRS), administrative data from the ministries and other government agencies, and surveys of banks and private sector enterprises. Data are prepared on a quarterly basis and are published in the monthly bulletin "Indonesia Financial Statistics," the *Quarterly Review*, and in the *Annual Report* of BI. Transactions denominated in other currencies are converted to U.S. dollar equivalents at the exchange rate prevailing on the transaction dates or the average exchange rate for the period. The balance of payments compilation is in principle in accordance with the concepts set out in the *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

Data on goods consist of general merchandise and non-monetary gold. Data on exports and imports are compiled by the BI on the basis of customs documents and other sources. Goods exported and imported are valued in the customs documents on an f.o.b. and c.i.f. basis, respectively. Imports are converted to an f.o.b. basis by subtracting freight on imports.

Services

Transportation

This category covers freight, passenger, and other by all modes of transport. Entries for the value of freight debits are mainly estimated on the basis of information on freight furnished in customs declaration forms. The data on passenger service credits and freight credits are collected from ITRS. Data on passenger transportation debits are estimated based on a survey of travelers and average air fares derived from a survey of travel agencies. Other transportation includes foreign exchange receipts for use of seaport and airport facilities. These data are reported by the seaport and airport authorities.

Travel

Entries for travel credits and debits are derived from census and surveys conducted by the Ministry of Tourism and the Central Bureau of Statistics. Estimates are made by combining the number of foreign visitors and the number of Indonesian travelers abroad with estimation of their average expenditures. Entries for travel debits are derived from information provided by other ministries. It should be noted that part of the travel debit item is accounted for by *hajj* pilgrimages.

Other services

Communications. Data cover telecommunications, postal, and courier services, which are obtained from ITRS.

Construction. Data cover construction and installation projects that have been done either abroad or in the compiling economy. The data are obtained from the ITRS.

Insurance. This category covers freight insurance and reinsurance. Data are compiled on the basis of information from the customs documents and from the annual reports of insurance companies and ITRS.

Financial. Data include commissions and fees of financial intermediation. The data are obtained from the ITRS.

Computer and information. Data cover hardware consultancy, software implementation, maintenance and repair of computers, and information services, including data processing and news agency services. The data are obtained from the ITRS.

Royalties and license fees. Data cover receipts and payments for the use of trademarks, copyrights, patents, processes, franchise, etc. The data are obtained from the ITRS.

Other business services. Data cover miscellaneous business, professional, and technical services, etc. The data are obtained from the ITRS.

Personal, cultural, and recreational. Data include services associated with the production of motion pictures on films or video tape, radio, and television programs, and musical recordings, etc. The data are obtained from the ITRS.

Government, n.i.e. Data on these transactions are derived from information provided by relevant ministries, as well as international organizations. The credit entries include expenditures of foreign embassies, foreign diplomatic missions, international organizations in Indonesia, nontax revenue of Indonesia's embassies, and visa on arrival (VOA). The debit entries cover the expenditures abroad of Indonesian embassies.

Income

Investment income

Direct investment. Data on direct investment income are estimated on the basis of reports on external debt, submitted by foreign direct investment enterprises.

Portfolio investment. Data on portfolio investment income are derived from the accounting records of BI.

Other investment. Data on other investment income are derived from the Ministry of Finance data on the external debt of the government, other sectors' external debt data compiled by BI, and the monetary statistics.

Current transfers

General government

Data are derived from information provided by the Ministry of Finance and National Development Plan-

ning Agency. The entries include grants in cash and in kind received for development, including technical assistance.

Other sectors

The entries for this item consist of data on worker's remittances and other current transfers such as premiums (minus service charges) and claims for non-life insurance and reinsurance. The data on worker's remittance debits are derived from the relevant ministry's reports on the number of Indonesian workers abroad and their average wages and salaries. The data on worker's remittance credits are derived from relevant ministry's reports on the number of foreign workers and their average wages and salaries.

Capital Account

Capital transfers

It is not yet possible to break down unrequited transfers into current transfers and capital transfers, and all such transfers are classified under current transfers.

Financial Account

Direct investment

Data on direct investment in Indonesia consist of equity capital and other capital. Data on equity are derived from the survey results, and data on other capital are obtained from foreign debt report of enterprises.

Portfolio investment

This component covers inward portfolio investment data on equity securities traded on the Jakarta Stock Exchange, and debt securities. The data on debt securities, including bonds, notes, and money market instruments, are obtained from the BI and custodian banks' reports.

In addition, domestic and international publications are used to monitor the issuance of debt securities of Indonesian enterprises in the international market.

Other investment

Other investment entries consist of drawings and repayments of loans received by residents. These data are obtained from the BI external debt statistics.

Reserve assets

Data are derived from the accounting records of BI and include changes in foreign exchange holdings of BI. These changes are estimated as differences in amounts outstanding and therefore include valuation changes. Starting from the first quarter 2004, the reserve asset component covers only transaction data and excludes the valuation changes.

Iran, Islamic Republic of

The following text was confirmed as current in 2004.

I. General

The Economic Research and Policy Department at the Bank Markazi Jomhouri Islami Iran (Central Bank of the Islamic Republic of Iran—CBI) is responsible for compiling Iran's balance of payments, which is prepared on a monthly basis and published quarterly. The department obtains data from a variety of sources, including the banking system, the Customs Department, the Ministry of Petroleum, and the Ministry of Economic Affairs and Finance.

The banking sector provides monthly reports showing detailed data on foreign exchange receipts and payments. These reports are the primary data source for services, income, and the financial account. The banking sector data are not strictly classified according to the resident and nonresident principle. However, given that nonresidents undertake most of the foreign exchange transactions, those transactions are considered to be a reasonable proxy for transactions between residents and nonresidents.

Iran's external debt management is based on an extensive banking data system, which provides details of each transaction related to external debt. The transactions in external debt instruments shown in the financial account are derived as changes in stocks of the reported external debt.

The CBI is taking measures to adopt the methodology recommended in *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

Transactions in goods are based mainly on Customs declaration forms. The CBI values the goods exported and imported on an f.o.b. basis. The Customs Department compiles trade data on a monthly basis; these statistics do not record transit items. Customs publishes trade statistics on an annual basis but reports monthly data to the central bank.

Owing to the importance of the oil sector in Iran, the CBI divides export data into two subsectors (i.e., oil and other goods). The CBI obtains statistics related to oil exports, including oil and gas and oil products, from the Ministry of Petroleum, which reports data to the Economic Research Department of the Central Bank on a

monthly basis. Oil exports include crude oil sold under refining agreements, but adjustments are done for the crude oil delivered under buy-back contracts. Adjustments are also made to include exports from free-trade zones and estimated smuggled goods.

Customs is also the main data source for imports. However, since foreign trade statistics released by Customs do not cover all imports, adjustments are done to include imports of refined oil products in free-trade zones for defense purposes, nonmonetary gold, ships, airplanes, goods imported by travelers, and estimated smuggled goods. Given that Customs values data on imports on a c.i.f. basis, an adjustment is done to reclassify freight and insurance and derive imports f.o.b. Freight and insurance are estimated.

Services

The entries for transactions in services cover passenger services, freight and insurance, travel, and other public and private services—most of which are derived from the foreign exchange records of the banking system and from reports on receipts and payments provided by banks. The largest debit items are freight, other business services, and insurance, whereas the largest credit items are government and other business services.

Freight and insurance services are estimated based on the information on transportation undertaken by residents, which the central bank obtains from the foreign exchange records of the banking system. The CBI uses reports from the major land transportation companies to compare and adjust this figure. This item also includes an adjustment on the basis of statistics supplied by maritime transportation companies.

The central bank obtains data for other services items from the foreign exchange records of the banking system, which are recorded on a cash basis. Other services items include travel (university students and patients), other transport services (transportation companies), public services (including membership fees paid to international organizations), commissions, financial services, and cultural services (purchase of books and articles from abroad). The CBI uses statistics released by the Iran Touring and Tourism Organization (prepared for the World Tourism Organization) and a household budget questionnaire to derive the travel entries.

Income

Compensation of employees

These data cover revenues received by seasonal workers.

Investment income

The credit entries comprise income received from deposits, holdings of securities, and profits received from investment abroad. Data are limited to public sector

transactions, since data on private investment income are unavailable.

The debit entries consist of interest payments on loans and credits received, plus the profits earned from investments by foreigners in Iran.

Current transfers

The data on workers' remittances are estimated based on the number of Iranians residing abroad, especially in Persian Gulf countries and Japan, and the value of their transfers.

Current transfers of the private and public sectors of Iran to nonresidents include payments under grants in aid and grants to other countries. These statistics are derived from the foreign exchange reports of the banking system. The item also records grants in aid received from international organizations. The CBI bases other current transactions on the foreign exchange statistics of the banking system.

Capital Account

Acquisition/disposal of nonproduced, nonfinancial assets

The CBI obtains data on the purchase of nonproduced and nonfinancial assets from the Budget Department at the Ministry of Foreign Affairs.

Financial Account

Direct investment

The data source is the report received from the Organization for the Attraction and Protection of Foreign Investment (within the Ministry of Economic Affairs and Finance). The CBI uses this report also as a source for reinvested earnings. Data on investments related to buy-back contracts, which are executed with the participation of public and nonpublic sectors, are provided by the Export Development Bank, the Ministry of Petroleum, and the Foreign Debt Department of the CBI.

Portfolio investment

Financial market transactions are limited in Iran. Thus, liabilities are negligible. In addition, Iran's balance of payments does not record private sector investment in foreign securities, owing to the unavailability of data. The investment of banks in foreign securities is recorded under capital account of banks (foreign assets of banks).

Other investment

The main data source for government loans is the Debt Department of the Central Bank. The trade credit category contains data on imported goods financed with trade credits, including the issuance of term letters of credit. Other investment also includes mid-term exter-

nal financing of productive projects and payments related to prepayments and installments due on maturity. The data source for these transaction is the banking system report.

Reserve assets

Iran's reserves include holdings of monetary gold, SDRs, the reserve position in the Fund, foreign currency, and securities held by the Central Bank. The source of these data is the Central Bank's balance sheet.

Ireland

I. General

The Central Statistics Office (CSO) is the national office responsible for compiling and publishing official balance of payments (BOPS) and international investment position (IIP) statistics for Ireland.

Quarterly BOPS data compilation in Ireland is based on statutory CSO statistical surveys, combined with administrative data, and is closely integrated in the CSO with the compilation of the national accounts. IIP statistics are collected by the CSO as part of the ongoing quarterly BOPS collection arrangements. The annual data have been supplied to the IMF over recent years and were first published nationally by the CSO in 2002.

The statutory quarterly survey collection system for financial enterprises requires transaction data on services, income, and transfers. Transactions and position data (together with the reconciliation items) are required for assets and liabilities. Manufacturing and nonfinancial services companies are required to supply current, capital, and financial account data on a transactions basis each quarter, together with quarterly stock data. Geographic details for nonresident counterparts and (resident) sectoral information are also collected. To reduce the reporting burden, companies with lower levels of activity report on an annual basis.

Quarterly surveys of enterprises operating in the International Financial Services Center (IFSC) in Dublin are designed to collect complete information relevant for compiling the balance of payments and international investment position statistics and for wider national accounts purposes. The surveys are customized on the basis of the main types of IFSC activity, namely: (1) collective investment schemes (including money market funds, which now are separately identified and categorized under *monetary financial institutions* for the balance of payments statistical purposes; (2) insurance (distinguishing between life and non-life insurance); (3) other financial services (including leasing, factoring, and other financial services).

guishing between life and non-life enterprises) and reinsurance; (3) stand-alone treasury activity; and (4) banking, asset financing, securities trading, and agency and captive treasury activities. The enterprises that are covered also include administration and management companies, as well as custodians and trustee companies; the main interest in these latter "service provider" companies concerns transactions in financial service fees, although full details are required. The system is designed to ensure complete coverage of all IFSC activity over the entire year.

The data collection requirements for non-IFSC entities are designed to meet the needs of both the balance of payments statistics and the national accounts. As a result, Irish resident investment managers report on both assets and liabilities, with a breakdown between resident and nonresident investments. In addition, the collection system covers activities of life and general insurance companies and credit institutions. The aim is to achieve complete coverage.

The survey information required from all types of financial and nonfinancial enterprises is essentially the same for all. It covers services, income flows, assets and liabilities, and the reconciliation of positions and flows, along with the necessary geographic detail.

Besides collecting information from surveys, the CSO obtains information on merchandise trade and travel statistics from its own relevant compiling divisions. It also uses administrative data from government departments (or their agencies) and from the Central Bank of Ireland.

Apart from data obtained through direct collection, internal CSO sources, or external administrative sources, the CSO also uses ancillary support information to assist with compiling results. This largely consists of: Irish Stock Exchange listings; Reuters market information concerning equities and bonds, currency exchange and interest rates; Central Bank of Ireland statistics; and industry associations or any other relevant statistical information. The CSO obtains qualitative information useful for statistical register purposes from its Central Business Register and from other sources. In addition, it uses information from Department of Finance, Central Bank of Ireland, and Companies Registration Office (CRO) sources. It uses individual company data from the internal CSO trade statistics database, along with any useful information from newspapers, periodicals, etc., as inputs into the statistical register system. It does not use securities databases, since the portfolio investment data are compiled on an end-investor, aggregate basis.

A new integrated computer processing system using relational database technology was introduced in late 2001. As a result, a standard processing approach now applies to all surveys and administrative data. The new

system is designed to streamline the entire operation and provides a more powerful prepublication analysis tool than was formerly available. Further developments of the system, are, however, required to address the very detailed requirements of users.

II. Specific Items: Balance of Payments

Current Account

Goods

Trade in goods is based on customs declarations and, since January 1, 1993, on the Intrastat system for intra-EU trade. Merchandise exports and imports are valued on an f.o.b. basis for balance of payments purposes. (Imports are valued on a c.i.f. basis in the official external trade statistics, and this valuation was used in the balance of payments statistics until 1998.) Some further adjustments are also made to the official merchandise trade statistics to conform to the balance of payments principles, particularly those relating to change of ownership and market valuation. In addition, certain export sales of software licenses, which were formerly included in merchandise exports, are now recorded as service exports.

Services

Transportation

Because merchandise imports have been valued on an f.o.b. basis since 1998, the freight element of the c.i.f. to f.o.b. adjustment on merchandise imports is now split and included under the transportation and insurance service headings. Apart from this, data are primarily collected by means of quarterly inquiries to resident airline and shipping companies. Passenger fares paid in Ireland to foreign transport companies generally cannot be distinguished and are instead included in the travel item. Disbursements in Irish ports and airports by foreign carriers, time charters, and other receipts from abroad by Irish carriers are included in the air and sea transport items. These data are collected from administrative sources.

Travel

Data are based on estimates of the number of travelers and their per capita expenditures, provided internally by the Tourism Section of the CSO. These estimates of the number of travelers cover those traveling by public carriers (based on information supplied by sea, air, and land transport companies operating in international traffic) and those traveling privately by road across the Northern Ireland border. Expenditures by Irish residents abroad and by foreign visitors to Ireland are estimated from sample surveys of travelers conducted by the CSO. See also information given under *Transportation* above.

Other services

Other services largely relate to business services but also include government services and personal, cultural, and recreational services. Information on business services is collected primarily by means of the enterprise surveys referred to above, while data on the remaining services are compiled on the basis of administrative information supplied by government departments and other agencies.

Communications. The data are compiled from survey information supplied by companies on receivables and payables for international telecommunications services.

Insurance. Data are based on direct surveys of companies. In the case of resident insurance providers, the insurance service credits are estimated on the basis of premiums and claims data supplied, together with supplementary data on investment income generated from insurance technical reserves. These also include adjustments for changes in technical reserves as appropriate. The freight insurance element of the c.i.f. to f.o.b. adjustment on merchandise imports is also recorded under insurance as a debit.

Financial. Based on direct surveys of companies, data include credits and debits relating to all types of financial service fee charges and receipts (fund administration, investment management and advice, securities trustee and custodial fees, brokerage, foreign exchange dealing charges, commissions, bank charges, etc.).

Computer and information. The computer services item does not include exports and imports of computer software that is embedded in hardware or carried on other physical media; these are included under the *goods* component. Sales and purchases of software transmitted electronically, as well as exports of certain software licenses, are now recorded under computer services (formerly, the value of such licenses was included under the *goods* component). The item also includes payables and receivables relating to computer hardware and software and consultancy. These data are based on direct surveys of companies.

Royalties and license fees. The information is taken from a direct survey of companies and covers payables and receivables for the use of patents, copyrights, and other intangibles.

Other business services. This component covers receivables and payables for (1) merchanting and other trade-related services, (2) operational leasing, and (3) miscellaneous business services. Merchanting consists of the sales net of purchases by Irish merchants of foreign goods bought from and sold to nonresidents without entering or leaving Ireland. Other trade-related services consist of commissions earned by resident agents or

paid to nonresident agents in connection with imports or exports. Operational leasing covers rental receivables and payables in respect of leasing (other than financial leasing) and charter without operators of aircraft, ships, and other transport or other equipment and plants. Miscellaneous business services covers legal, accounting, management consulting, public relations, advertising and marketing, research and development, and other professional and technical services. It also covers interaffiliate management fees. The data in these components are based on direct surveys of companies.

Personal, cultural, and recreational. This component includes educational services, as well as fees and royalties for film, television, and musical recordings and performances. The data are derived from administrative and official sources.

Government, n.i.e. Data include nonlabor expenditures incurred in the host country in the provision of embassy and consular services and receipts in respect of collection of Ireland's budgetary contributions to the European Union. The data are derived from official sources.

Income

Compensation of employees

The information for this component is based on official and administrative sources, survey data, and other internal CSO sources.

Investment income

Direct investment. Data are obtained quarterly and annually from direct surveys of companies to facilitate compilation on a *BPM5* basis. Both the inward and outward income flows include reinvested earnings. The component excludes income arising from realized or unrealized capital and exchange gains/losses, as well as any profit (or loss) arising from abnormal circumstances. Geographic detail is allocated on the basis of the debtor/creditor principle.

Portfolio investment. Data are obtained quarterly and annually from direct surveys of companies and from official sources. On the credit side, the bulk of the income recorded relates to investments made by financial enterprises (predominantly collective investment institutions, but also including banks and pension funds, as well as institutional investors). On the debit side, collective investment institutions account for most of the outflow, but earnings by nonresident investors in Irish government-issued securities are also significant.

Other investment. Quarterly and annual data are obtained from direct surveys of companies and from official sources. Interest flows are requested on an accruals basis on loans, deposits, financial leases, trade credits, etc. The resulting information principally relates to bank interest credit and debit flows.

Current transfers

General government

The entries, compiled from information received from government departments, include EU transfers to the official sector and official overseas aid.

Other sectors

The main components of these entries are EU transfers to the private sector, pensions and allowances, taxes, and overseas aid donated by nongovernment organizations. This information is compiled from data received from administrative and from survey sources. The components also include non-life insurance transfers compiled from the quarterly and annual surveys.

Capital Account

Capital transfers

The entries include EU and International Fund for Ireland transfers, migrants' transfers, and the outright acquisition or disposal of nonproduced, nonfinancial assets. Debt forgiveness is insignificant for Ireland. The information is obtained from official sources and from survey information.

Financial Account

Direct investment

The information comes from quarterly and annual surveys of financial and nonfinancial companies. The information provided to the CSO identifies equity investment and interaffiliate transactions/positions with regard to loans, trade credits, bonds/notes, money market instruments, and financial derivatives. Reinvested earnings abroad and in Ireland are shown separately. In the case of transactions between financial intermediary affiliates (including credit institutions), direct investment is limited to those transactions associated with permanent debt and equity investment. The directional principle for recording direct investment has been adopted (but the data are collected in a way that also permits classification according to assets and liabilities if required).

Portfolio investment

Quarterly and annual information comes from direct surveys of financial and nonfinancial companies and from official and administrative sources. The latter relate to (1) nonresident investment in Irish government securities and (2) investment in foreign securities (nonreserve assets) by the Central Bank of Ireland. Collective investment institutions (such as mutual funds and unit trusts) account for the major part of both the inward and outward investment recorded. Other financial enterprises, including banks, pension funds, and institutional investors, are also significant outward portfolio investors.

Financial derivatives

The CSO compiles this information from data received from quarterly and annual direct surveys of companies and from official and administrative sources.

Other investment

Other investment data are collected from a combination of quarterly and annual surveys of enterprises and administrative data. Banks account for most of the transaction values recorded, although trade receivables and payables for nonbanks are significant. Also included is Irish Government borrowing from foreign lenders, as well as the assets and liabilities of the Central Bank of Ireland.

Reserve assets

This component covers transactions in non-euro denominated foreign currency assets of the Central Bank of Ireland, where the instruments are issued by residents outside the euro area. The Bank provides quarterly information on a *BPM5* basis to the CSO.

Israel

The following text was confirmed as current in 2004.

I. General

Israel's balance of payments is compiled following the concepts outlined in *BPM5*. Data reported in foreign currencies are converted to U.S. dollars at the period average exchange rate. Transactions are valued at market prices. Transactions with residents of the West Bank and Gaza Strip are included in the balance of payments.

II. Specific Items: Balance of Payments

Current Account

Goods

The four major sources needed to complete the goods category are (1) the Excise and Customs Department (for import and export entries), (2) the Ministry of Defense, (3) shipping and aviation companies (for purchases and sales of seacraft and aircraft), and (4) the V.A.T. authorities (for transactions with residents of the West Bank and Gaza). Export trade data are based on records of the movement of goods passing through Customs. The data are based on the definitions and the administrative rules of Customs, which have been adapted to conform as closely as possible to the definition of the balance of pay-

ments (i.e., change in ownership). Imported goods are recorded upon their release from customs points, whereas exported goods are recorded according to the date they were loaded for transport. Imports and exports of goods do not include transactions that do not involve a change of ownership, such as imports for exhibitions. The Ministry of Defense estimates direct defense imports of military equipment, by multiplying the price per item by the number of items for large items (such as planes) and on the basis of payments made for small items. Estimated defense imports are calculated at quarterly intervals during the year and are included only in the balance of payments (i.e., they are not included in the current statistics for foreign trade).

Expenditures on pier and portage fees, which are included in the customs data, have been deducted from the imports c.i.f. since 1960. Since 1967, the data include goods transactions with residents of the West Bank and Gaza. The source of these data are special V.A.T. invoices, used only for transactions with residents of these areas. In addition, data are included on the value of electricity exported, the value of sales of old vehicles (obtained from licensing data from the Licensing Department), and data on the value of bunker oil to those areas. According to the foreign trade compilation rules, goods entering bonded warehouses are not recorded in foreign trade statistics, except for a small number of bonded warehouses. Sales to foreign ships and aircraft from these latter warehouses are recorded as exports, and imported goods that arrived at these warehouses are listed in the balance of payments as imports, contrary to the current statistical records of foreign trade. Equipment imported to be leased for a period of more than one year is listed as imports. These imports are offset as financial flows, as part of foreign investment in Israel. Charter hires are recorded as transportation services. Bunker oil and food supplied to ships and aircraft are recorded as goods. Exports of software are listed in the balance of payments as exports of services.

Although an attempt is made to adjust the current merchandise data to suit balance of payments definitions, the problem of timing remains unsolved: the flow of imports is recorded when the goods are released from Customs, and the financial flow is recorded when the payment occurs in the banking system. Any timing discrepancy is reflected in the item *net errors and omissions*, with no possibility of locating the direction and size of the error.

Services

Transportation

The major sources for freight and transportation are Israeli companies that operate ships and aircraft on international routes, foreign shipping and aviation companies that operate in Israel, the Ports Authority in Israel,

ship and aircraft repair companies, companies that supply food and bunker oil to ships and aircraft, and the Civil Aviation Service of the Ministry of Transport. Transactions include receipts resulting from the transport of cargo by foreign carriers that are temporarily leased by Israeli companies. The data also include receipts and payments by ships owned by Israeli subsidiaries under a foreign flag (convenience flag), operated by Israeli agents only.

Some reports of Israeli shipping and aviation companies include a detailed breakdown of expenditures according to type of currency and not according to the location of the expenditures—in Israel or abroad. The item of “other expenditures” in these reports, which includes information from other sources, is corrected or adjusted (such as the purchase of tickets for travel abroad by Israelis in foreign currency, or the purchase in Israel of bunker oil in foreign currency). Beginning in 1971, repairs of Israeli ships and aircraft performed abroad by foreign insurance agents have been included in expenditures of Israeli shipping and aviation companies. At the same time, these expenditures have been recorded as income from insurance claims in the insurance item. Until 1971, this listing, as well as that included in the insurance item, was a net figure.

Travel

Credit entries are estimated using a semiannual survey of foreign tourists, conducted by the Ministry of Tourism and under the supervision of the Central Bureau of Statistics (CBS). The survey provides the average expenditure per tourist during each half year, while the total expenditure of foreign tourists is estimated according to the average expenditure and the total number of tourists leaving Israel each quarter. (This latter figure is obtained from the statistics of the Demography Department in the CBS.)

Debits are estimated on the basis of a quarterly updated survey conducted by the CBS for the year 1997 regarding the average expenditure per tourist and on current data on departures abroad of Israel residents published by the CBS.

Other services

Sources include (1) data reported by the Foreign Exchange Activity Department of the Bank of Israel; (2) reports of shipping, aviation, and insurance companies that operate in Israel and of companies engaged in leasing imported equipment; (3) V.A.T. reports on transactions with the West Bank and Gaza Area provided by the CBS; (4) the Employment Service; (5) the Ministry of Communications; (6) Bezek; and (7) the Post Authority.

Insurance. Insurance transactions are derived from premiums less claims paid. The data also include estimates of payments by residents of the West Bank and Gaza to

social funds in Israel. (The data were estimated according to reports provided by the Employment Service.) The principal sources are reports from (1) the insurance companies operating in Israel (provided by the Superintendent of Insurance); (2) Israeli shipping and aviation companies; and (3) the Employment Service. The data are collected annually by the Superintendent of Insurance; there is no quarterly information available on transactions made during the year. Calculations of income and expenditure on premiums (other than life insurance) are made prior to the allocation for the insurance fund.

The item also includes insurance performed directly abroad, mainly by Israeli shipping and aviation companies. Claims include the change in pending claims. This charge was also recorded as a counterpart in the financial accounts. The component of savings in the capital movement (premiums and claims) is listed under life insurance. Also included are imputations for the repair of ships on account of insurance companies when these repairs are carried out directly by the insurance companies and not through the Israeli shipping and aviation companies. The imputations are made to protect the rule of recording premiums, less claims. Payments and receipts of interest, commission, advertising, and administration by insurance companies are included under *investment income* and *other services*.

Income

Compensation of employees

The two main components of this item are wages paid to foreign workers and to residents of the West Bank and Gaza.

Statistics on foreign workers are based mainly on data from the National Security Institute on average wages and on estimations of total foreign workers, provided by the CBS.

All foreign workers are treated as foreign residents on the Israeli balance of payments statistics, despite the considerable growth in their number during recent years. This treatment is not in line with *BPM5* recommendations regarding residence. (According to those recommendations, foreign workers living in the host economy for more than one year are considered residents of the economy.) Efforts are made by the Demography Department of the CBS to compile more precise statistics on these workers, according to the length of their stay in Israel.

As of 1967, compensation of employees includes estimates of wages received in Israel by residents of the West Bank and Gaza. Data on this item are based on estimations of the CBS on total employees from this area working in Israel and on average wages paid to them, according to the Employment Service.

The data on wages received by residents of the West Bank and Gaza are calculated before various deductions have been made. Tax payments on these wages are classified as transfer payments.

Incomes earned by Israelis in overseas countries are recorded on a net basis, after taxes have been deducted.

Investment income

Since 1995, this item has been presented in the Israeli balance of payments statistics according to the full breakdown of financial instruments, types of investment, and institutional sectors, as required by *BPM5*.

In 1995, a change in methodology was also implemented. The principal sources for investment income are the Ministry of Finance, the Bank of Israel, Israeli shipping and aviation companies, insurance companies, and estimates of the CBS based on balances and relevant interest rates related to certain types of investments.

Transactions in this item include estimates of undistributed earnings and simultaneous recording of these earnings under the financial account, as direct investment.

All entries for interest include accrued interests, with simultaneous recording of new financial assets or liabilities of the same type as the original asset.

Some data included in this item are net of income tax paid to Israel.

Current transfers

General government

Included are receipts of the Israeli government from grants of foreign governments. The principal sources for this item are the Ministry of Defense and the Ministry of Finance.

Other sectors

The principal sources are data from the Foreign Exchange Activity Department in the Bank of Israel, national institutions, and nonprofit organizations. The data include receipts of Israeli residents in the framework of the German Personal Restitution Law, that were transferred to Israel. Receipts deposited abroad are not recorded.

Capital Account

Capital transfers

This category consists mostly of migrants' transfers. For the purpose of compiling the balance of payments statistics for Israel, persons who have received an immigrant visa are regarded as immigrants as well as people who are immigrants. This category also includes residents who have been out of the country for a long pe-

riod. All deposits from abroad into immigrants' accounts were classified as immigrant transfers until 2000. Since 2001 only data provided by the Bank of Israel on transfers to accounts of immigrants who have been in Israel for a maximum period of three years are classified as capital transfers. Transfers to accounts of immigrants who have been in Israel for more than three years are considered to be withdrawals from deposits abroad. Data series for the period prior to 2000 have also been revised in line with this methodology. Financial transfers abroad by emigrants are not included.

Financial Account

Some financial flows are estimated as changes between the balance at the beginning and the balance at the end of the reporting period. As these changes include revaluations resulting from fluctuations in the exchange rate, the balances, which are broken down by the currency, are used to estimate the revaluation amounts. The principal sources include (1) the Foreign Exchange Activity Department and the Supervisor of Banks at the Bank of Israel; (2) the Ministry of Finance; (3) the Ministry of Defense; (4) shipping, aviation, and insurance companies that operate in Israel; (5) companies that import equipment for rental or leasing; and (6) estimates by the CBS.

Direct investment

According to the international standards, the basic criterion for defining direct investment enterprises/direct investors is a 10 percent ownership, regardless of whether the investor has an effective voice in management. However, all nontraded enterprises having a cumulative percentage of foreign investors greater than 10 percent are treated as direct investment enterprises, regardless of the percentage of ownership of each non-resident investor. Unincorporated enterprises are excluded from the direct investment data.

For direct investment in Israel, the data are compiled primarily from an international transactions reporting system (ITRS). Secondary sources are information from a direct reporting system (DRS) and data from the Israeli Securities Authority. Press reports are used for cross-checking the data.

For direct investment abroad, the data are compiled from the ITRS and the DRS. Press reports are used for cross-checking the data.

The data include ownership of land and buildings abroad/in Israel by residents/nonresident enterprises and individuals.

Geographic and industrial breakdowns of direct investment are available, based on data obtained from the DRS and the Israeli Securities Authority. The geographic allocation of the data is based on the debtor/creditor principle.

The "Fully Consolidated System" (FCS) regarding the treatment of indirectly owned direct investment enterprises is not fully applied. Also, the "Current Operating Performance Concept" (COPC) regarding earnings calculations is not fully applied.

Portfolio investment

Regarding portfolio investments of residents abroad, purchases of foreign securities through local banks are reported in the ITRS. Securities purchases through residents' foreign accounts are reported in the DRS.

Portfolio investments of nonresidents in Israeli shares traded abroad are reported through information obtained from the Israeli Securities Authority on direct investors and from the banking system on holdings of foreign securities by residents. The difference between the total market value of Israeli shares traded abroad and these two items is calculated as being the estimate of portfolio investments of nonresidents in shares traded abroad.

Data on foreign securities held abroad by residents are not available and are not deducted from the estimate.

New securities issuances abroad are considered to be purchased only by nonresidents.

The main sources for the data on portfolio investments of nonresidents in Israel are the ITRS and data from the Israeli Securities Authority.

Other investment

Currency and deposits

The data on currency and deposits are based on banks' reports to the Supervisor of Banks. Additional information sources are the ITRS and DRS. The source data do not include information on receipts and payments, and, therefore, the estimation of differences resulting from fluctuation in exchange rates is calculated according to the monthly balances rather than daily balances.

Reserve assets

The definition of Israel's reserve assets conforms to the concept outlined in the *BPM5*, and the data include only those foreign assets that are readily available to and controlled by the monetary authorities. Reserve assets are valued at current market prices, with the exception of gold. The foreign exchange component includes accrued interest on securities. The data are obtained from the balance sheets and records of the Bank of Israel.

Italy

The following text was confirmed as current in 2004.

I. General

The balance of payments is compiled and published monthly by the Central Bank (Banca d'Italia—BI) and the Italian Foreign Exchange Office (Ufficio Italiano dei Cambi—UIC). The compilation is performed on the basis of statistical data collected by the UIC, the Italian National Statistical Institute (Istituto Centrale di Statistica—ISTAT), and on the basis of other minor sources. The main data sources are the foreign exchange reports collected by the UIC from banks, monetary authorities, enterprises, and households.

On a monthly basis, banks and monetary authorities report to the UIC all their claims and liabilities vis-à-vis residents and nonresidents. The information is broken down by type of assets/liabilities, currency, maturity, and debtor/creditor country. Assets in securities are reported on a security-by-security basis with an International Securities Identification Number (ISIN). Banks also report to the UIC their own and their clients external transactions on a monthly basis with a breakdown by type of transactions, currency and country. The flows reports are transmitted in the frame of the “Matrice Valutaria” (MV system). As of January 2002, an exemption threshold of EUR 12,500 applies for the data reported within the MV system.

Nonbanks (enterprises, households, and other financial intermediaries) are required monthly to report their own cross-border transactions exceeding the threshold value, either directly to the UIC or through the resident bank, if settlement takes place in this way. The data are transmitted in the frame of the “Comunicazione Valutaria Statistica” (CVS system). They are broken down by type of transaction, country, currency, and variables used to classify the operators (type of operator, type of enterprise, branch of economical activity, last financial year's turnover, number of employees). Transactions in securities are reported on a security-by-security basis with the ISIN code. The system also collects the gross value of those transactions that are settled net, provided that the net amount, or at least the gross amount, exceeds the threshold value. As of January 2002 an exemption threshold of EUR 12,500 applied to the data reported within the CVS system. (Until the end of 2001, the exemption threshold was EUR 10,000).

For some items, the UIC conducts sample surveys: (1) Since 1996, it has conducted a sample survey of travelers to compile the travel service account; (2) since 1998, it has used an enterprise survey to measure the international transportation services; and (3) since 1998, it carries out a survey of portfolio investment assets and direct investment assets and liabilities, including questions regarding reinvested earnings.

Data for trade in goods, government services, insurance services, and interofficial transfers are supplemented and adjusted using information from additional sources, mainly from ISTAT.

Through 1988, as part of its former foreign exchange control supervisory responsibilities, the UIC collected data on the stocks of external financial assets and liabilities of the nonbanking sector. Following the abolition of those controls, such information is no longer available. Since 1989, the external position of the nonbanking sector has been calculated by adding net flows to the end-1988 stocks and by adjusting for exchange rate fluctuations and price changes. For portfolio investment assets, the benchmark is based on the 1997 IMF Coordinated Portfolio Investment Survey.

Italy's international investment position is currently compiled semiannually and published in the *Statistical Bulletin* issued monthly by the Ufficio Italiano dei Cambi (<http://www.uic.it>). Annual data on the international investment position are also published in the *Annual Report* of the Banca d'Italia.

Italy's balance of payments methodology is described in country pages of the *European Union Balance of Payments/International Investment Position Statistical Methods*, published by the European Central Bank (<http://www.ecb.int>).

II. Specific Items: Balance of Payments

Current Account

Goods

General merchandise data are based mainly on foreign trade statistics compiled and published by ISTAT. Merchandise exports and imports are compiled on an f.o.b. basis. Adjustments for valuation, coverage, and time of recording are made based on additional information provided by ISTAT and UIC. Transactions related to goods for processing are classified in accordance with the recommendations of the *BPM5*. Transactions related to repairs on goods are recorded gross. Nonmonetary gold data are based on trade statistics. Data on goods procured in ports by carriers are based on trade statistics in the case of credit entries and on banks' records in the case of debit entries.

Services

Data on international service transactions are classified in accordance with the recommendations of the *BPM5*. Data on these services are compiled from information provided in the foreign exchange reports of banks, enterprises, and households. Data on government services

and on insurance services are supplemented with data provided by ISTAT.

Transportation

Merchandise transport items are estimated on the basis of a sample survey of transport enterprises. The survey is conducted with the aim of establishing average unit costs of merchandise and passenger transport. The estimates are also based on corresponding data about volumes of imports and exports (from the foreign trade statistics). Together with information about the market shares of the Italian carriers obtained from a survey of transport enterprises, it is possible to estimate credits and debits. UIC has conducted the sample survey yearly since 1998. For the years 1989–97, time series data have been revised in accordance with the new methodology.

Passenger transport items are estimated on the basis of the sample survey of transport costs and the UIC sample survey of international tourism (for data on the number of passengers). UIC has conducted this survey monthly since January 1996.

Travel

Up to 1989, the data were compiled from (1) transfers related to international trips for tourism, business, health, and education purposes; (2) credit card transactions; (3) remittances of Italian banknotes; (4) receipts and payments in foreign currency for tourism purposes for amounts in excess of 20 million lire not settled through resident banks; and (5) transactions in banknotes, coins, and other means of payment in foreign exchange and lire between residents and nonresidents (travelers' checks, automatic cash withdrawals, personal checks) valued at less than 20 million lire. A monthly sample survey of travelers introduced in 1996, covering about 60 border points, has now become the main source of data for travel services. The survey provides a detailed breakdown by purpose of the travel, according to the supplementary items indicated in *BPM5*. Historical data for the period 1990–95 have been revised and adjusted in a linear manner with the results of the survey.

Other services

Communications. This category has been divided into postal services, telecommunications, and other communications services since 1990.

Construction. This item includes settlements (advances, intermediate installments, balances on acceptance, etc.) related to building activities (public works, industrial buildings, private sector construction, etc.). Until the 1998 data, it also included settlements related to research (geological, oil prospecting, etc.). Goods exported from Italy to the building site are excluded from construction credits and are recorded as exports of goods. Goods imported into Italy from contractors or from third countries are excluded from construction credits and are recorded as imports of goods.

Insurance. Until the 1998 data, information was collected on (1) gross premiums received by resident enterprises from nonresident policyholders, or paid by resident policyholders to foreign insurers (separately available for freight, life, and other types of insurance and reinsurance) and (2) gross claims and other forms of insurance payments disbursed by resident insurers to foreign policyholders, or received by resident policyholders from foreign insurers (also separately available for life and other types of insurance and reinsurance). The distinction between life and other insurance has only been possible since 1990.

From the 1999 data onwards, service charge coefficients for life and other insurance services have been estimated only on the credit side, using information on the Italian insurance companies obtained from an annual ISTAT survey. The estimated coefficients have been applied to the debit side also. For life and other insurance, except freight insurance, the estimated service charge coefficients have been applied to premiums collected through the settlement system. For freight insurance, the service charge coefficients have been applied to the premium estimation for coherence with the c.i.f.-f.o.b. conversion method. For all types of insurance services an estimation of the premium supplements has been undertaken, and an offsetting entry in the income account has been made. All claims received/paid and the residual part of the premiums have been also entered under the category of private current transfers or of other investment (for non-life and life insurance, respectively).

Income

Compensation of employees

This category of *income* covers gross earnings of employees for work performed for residents of other economies, including employers' contributions to social security schemes. The data are based on receipts and payments related to wages and salaries and on expenditures by foreign embassies in Italy or Italian embassies abroad and are obtained mainly from the foreign exchange reports. Salaries of Italian employees working for international institutions located in Italy are not currently covered. These data are supplemented with estimates based on information from the Organization for Economic Cooperation and Development (OECD) on the tax and social security systems in member countries. Further adjustments are made on the credit side only, since an estimated proportion of remittances from abroad is attributed to wages and salaries earned by Italian employees.

Investment income

This item covers receipts and payments associated with foreign financial assets and liabilities respectively. Portfolio investment income on bonds and notes and on money market instruments is compiled on the basis of

the accruals principle. Reinvested earnings are recorded under direct investment income.

Direct investment income does not include income on trade credits between affiliated enterprises or income from intercompany loans. Other investment income does not include income on trade credits or interest on financial leases. Moreover, it includes intercompany loans.

Current transfers

General government

These data are classified according to the nonresident counterparts (i.e., the European Union, other international organizations, national entities and institutions, and other nonresidents). Information on interofficial transfers is derived from quarterly ISTAT statistics based on data from the Ministry of Treasury. Debit entries for transfers from/to other nonresidents include (1) pensions paid by Italian pension schemes to private nonresidents, based on foreign exchange reports, and (2) transfers (estimated) made by the Italian government to nonresidents employed in Italy by resident enterprises. Credit entries, which are partly estimated based on data provided by the Ministry of Labor, include (1) voluntary or compulsory contributions paid by foreign workers in Italy and by their employers to Italian welfare institutions and (2) all duties and taxes paid by private nonresidents to Italian tax authorities.

Other sectors

These data are partly estimated based on the foreign exchange reports. The entries comprise (1) workers' remittances; (2) pensions paid by foreign pension schemes to private Italian residents; (3) cash transfers, such as subsidies, alimony, donations, inheritances, annuities, bequests, and gifts in general; (4) indemnities or fines received or paid by private residents to nonresidents; (5) contributions (voluntary or compulsory) paid by Italian employees and their employers to foreign social security entities; (6) duties and taxes paid by private Italian residents to foreign tax authorities; (7) amounts (estimated) of transfers received abroad by Italian workers from nonresident government agencies; and (8) receipts and expenditures related to insurance claims (see note on *insurance services*).

Capital Account

Capital transfers

General government

These data, derived from quarterly ISTAT statistics based on data from the Ministry of Treasury, are classified according to the nonresident counterparts (i.e., the European Union, other international organizations, and national entities and institutions).

Other sectors

These data include migrants' transfers, as measured by cash transfers recorded in the foreign exchange reports. Transfers in kind that determine a change in ownership of fixed assets (machinery and equipment) are considered to be capital.

Acquisition/disposal of nonproduced, nonfinancial assets

These data, compiled from the foreign exchange reports, cover patents, know-how (inventions, processes, and other techniques of economic importance to production that are not legally protected and therefore constitute industrial secrets), and trademarks.

Financial Account

These data are derived from foreign exchange data reported by banks and nonbanks. Until 1997, net financial transactions in assets and liabilities of banks and the monetary authorities are derived by adjusting the change in stocks for exchange rate and valuation changes in the reference month. Since 1998, banks and nonbanks are required to report data on their foreign transactions (pure flow data), with a breakdown by type of operations, currency, and country.

Direct investment

Italy complies with the recommendations of the *BPM5*. Until 1998, a cross-border investment was classified as "direct" if the investor owned 20 percent or more of the equity capital, or if the reporter declared that it was a lasting relationship. Starting from 1999, an investment is classified as direct if the shares owned represent 10 percent or more of the equity capital. Furthermore, direct investments are calculated according to the directional principle. Reinvested earnings are included and are calculated using the information collected by the UIC survey on direct investment assets and liabilities. Financial derivations between affiliated enterprises are included in financial derivatives.

Portfolio investment

This category includes all foreign transactions related to negotiable financial instruments, in particular, transactions in listed shares not classified as direct investment fund units and transactions in money market instruments. Adjustments for accrued interest on debt securities are made monthly.

Financial derivatives

Italy collects data on (1) daily margins for derivatives; (2) premiums earned/paid for derivatives; and (3) net payments at the close of the derivatives operations. All these data are collected by the general reporting system. Securities traded in the context of financial derivatives contracts ending with the actual delivery of the underlying

instruments are recorded under portfolio investment for the full amount finally settled (strike price). The notional difference between strike and market price cannot be allocated to the item for financial derivatives.

Other investment

Trade credits

It is frequently impossible to match each settlement related to merchandise trade (recorded by UIC) with the corresponding border-crossing of goods (recorded by ISTAT). When settlements take place more than two months before, or after, the date on which the goods cross the border, the connection is derived from foreign exchange reports. Presently, these data are used only to estimate medium- and long-term trade credits (more than 12 months). Short-term trade credits are also estimated.

Loans

The item *loans (general government)* under *other investment* also includes some foreign transactions that initially constituted trade credits but that have subsequently been reclassified as financial loans. An example is when foreign purchasers default, and Italian exporters receive compensation from the Italian Export Credit Insurance agency, which becomes the new creditor.

Currency and deposits

All banks' financial transactions, except direct and portfolio investment (see comments above), are recorded under this item. Data on currency and deposits held by residents in nonresident banks are obtained either from the domestic bank reports or from enterprise and household reports when settlements do not take place through domestic banks.

Other assets and liabilities

This item includes initial margins on financial derivatives, Italy's capital subscriptions to nonmonetary international organizations, and other nonallocable financial assets and liabilities.

Reserve assets

These data are derived from the balance sheet of the BI. Italy complies with the recommendations of the *BPM5* and with the national definition of reserve assets approved by the ECB Governing Council in March 1999.

III. Specific Items: International Investment Position

Direct investment

Adjustments for direct investment are based on Italian and foreign stock exchange indices and on exchange rates. For real estate, the adjustments refer only to the exchange rates.

Portfolio investment

Adjustments are based on Italian and foreign stock exchange indices, on market price indices of various financial instruments, and on exchange rates.

Other investment

Exchange rate and valuation adjustments for trade credits are assumed to be nil. Valuation adjustments for loans and for Italy's capital subscription to nonmonetary international organizations (included in other assets) are assumed to be nil.

Jamaica

The following text was confirmed as current in 2004.

I. General

The Economic Information and Publications Department of the Bank of Jamaica (BOJ) is responsible for compiling the balance of payments of Jamaica. The department obtains primary data from various sources, including the Statistical Institute of Jamaica, the Jamaica Tourist Board, government ministries and agencies, remittance companies, and authorized foreign exchange dealers. In addition, the BOJ conducts annual surveys of businesses to collect information on services, income, transfers, and private capital flows. It also obtains information on foreign exchange reserves from its own records.

The department's statisticians compile data in U.S. dollars and convert the transactions denominated in other currencies to U.S. dollar equivalents at the rate prevailing at the time of the transaction or at the average exchange rate for the period. The department prepares detailed balance of payments data on an annual basis and publishes them in the BOJ's *Balance of Payments Annual Report*. It also reports the data to the Fund annually on diskettes in the *BPM5* format. It publishes preliminary monthly data in summarized format in the BOJ's *Monthly Statistical Digest* and *Economic Statistics*.

Beginning with 1994 data, the presentation of accounts used in Jamaica's balance of payments is consistent with the international standards recommended in the *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

The main source of data is the trade statistics compiled from customs documents by the Statistical Institute of Ja-

maica. The trade statistics cover general merchandise, goods for processing and for repairs, and nonmonetary gold. In conformity with the requirements of the *BPM5*, adjustments have been made to include the exports and imports of the free zones and to show separately goods procured in ports by international carriers. The BOJ obtains data on goods procured in ports by carriers from a survey of the oil companies, the national airlines and agents of foreign airlines, and shipping companies. Imports are valued on a c.i.f. basis and adjusted to an f.o.b. basis (see note to transportation). Exports are valued on an f.o.b. basis.

Services

Transportation

This category covers freight and passenger services by all types of transportation. The Port and Airport Authorities of Jamaica provide data for port services. The BOJ also derives data from annual surveys of the national airlines, foreign airlines, and shipping companies. It obtains information on passenger services from surveys of national airlines and foreign airlines. Data for freight are estimated at 15 percent of non-oil imports (c.i.f.) and 3 percent of oil imports (c.i.f.).

Travel

Compilers derive travel credits from expenditure surveys carried out by the Jamaica Tourist Board. Credit data also come from immigration statistics on the number of visitors and their average length of stay. Travel debits are compiled from banking records and from data supplied by the Ministry of Labor.

Other services

Insurance. Compilers obtain the data from annual surveys of insurance companies and foreign exchange authorized dealers. Freight insurance is estimated at 1 percent of total imports (c.i.f.).

Financial. The data cover commissions and other financial services provided or received by the financial sector. Estimates are obtained from annual surveys of the financial sector.

Computer and information. BOJ obtains data for these items from the annual survey of the relevant enterprises.

Royalties and license fees. This item covers transactions involving intangible nonfinancial assets and property rights. Data are obtained from the annual survey of business enterprises and from banking records.

Other business services. The entries for this item include commissions, management and agent fees, and advertising. BOJ gathers information from the annual survey of business enterprises and from banking records.

Government, n.i.e. Data for government services receipts come from the annual survey of embassies, consulates, and international organizations located in Jamaica. BOJ compilers obtain debit entries from the relevant government ministries and the Jamaica Defense Force.

Income

Compensation of employees

The BOJ acquires data from relevant government institutions, bank records, and the annual survey of embassies, consulates, international organizations, and the national and foreign airlines.

Investment income

The entries cover income receipts and payments associated with direct investment, portfolio investment, and other investment, as well as income receipts for reserve assets. Data are derived from the annual survey of business enterprises, bank records, Ministry of Finance, the BOJ, and the Accountant General's Department. The estimates include an allowance for the reinvestment of earnings of direct investment companies.

Current transfers

General government

The Ministry of Finance and bank records supply the data. Data include grants in cash and in kind, payments of pension, and contributions to administrative budgets of international organizations.

Other sectors

The entries include gifts in cash and in kind, workers' remittances, pensions, premiums, and claims relating to non-life insurance. BOJ derives the information from bank records, remittance companies, post offices, building societies, the annual survey of nonprofit voluntary organizations, and insurance companies.

Capital Account

Capital transfers

General government

Data for this item come from the Ministry of Finance and annual surveys.

Other sectors

Data come from the customs department and the annual survey of nonprofit organizations.

Financial Account

Direct investment

Compilers collect the data through the annual survey of companies, the Jamaica Investment Promotion Com-

pany (JAMPRO), and commercial bank records. The definition of direct investment enterprises conforms to that in the *BPM5*.

Portfolio investment

The Jamaica Stock Exchange, stockbrokers, commercial banks, and money market brokers provide the data.

Other investment

This item includes loans to the government and to the private sector, trade credits, premiums on life insurance, and other assets and liabilities. The BOJ obtains data from its records, the Ministry of Finance, the Export/Import Bank (EXIM), commercial bank records, building societies, and the annual survey of business enterprises.

Reserve assets

The BOJ takes data on SDR holdings and reserve position in the Fund from the Fund's records. It obtains data on changes in foreign holdings from its own records, the EX-IM Bank, and various government agencies.

Japan

I. General

Japan's balance of payments and international investment position statistics are compiled in the framework prescribed by the Foreign Exchange and Foreign Trade Law (the law). In this framework, the Ministry of Finance (MOF) is responsible for the compilation of the statistics, but the actual preparation of statistics, including data collection, is entrusted to the Bank of Japan (BOJ). The law directs the Minister of Finance to prepare these statistics and to report the annual balance of payments and end-year international investment position to the Cabinet by the end of May every year. The law also authorizes the Minister to collect the necessary information to compile the statistics, in the form of reports from the government agencies, companies, and individuals concerned. Most underlying data are collected through these reporting requirements prescribed under the law; the rest are collected by means of supplemental surveys (e.g., on trade credits) and other statistics (e.g., statistics on tourists) prepared by government agencies.

Balance of payments statistics are compiled and released to the press monthly, whereas international investment position statistics are compiled and released once a year. A regional breakdown of the balance of payments is also prepared and released to the press semiannually. The BOJ publishes these statistics in the *Balance of Payments Monthly* and on the Internet as well. The MOF reports the data to the Fund.

Both the balance of payments and international investment position statistics are compiled in yen, whereas the underlying source data are reported in yen, U.S. dollars, or the original foreign currencies. Data on transactions reported in foreign currencies are converted to yen using the average market exchange rate applicable to the period when the transaction was conducted. Stock data are converted to the yen equivalent using the market exchange rate at the end of the year.

The classification and definitions used to compile Japan's balance of payments generally correspond with the methodology recommended in the *BPM5* (as of 1996). There are, however, some modifications made to accommodate Japan's domestic practices. Variations from the *BPM5* include the following: (1) Transactions in non-monetary gold (associated with gold investment accounts/savings accounts) are included in *financial account (other investment)* instead of *goods*; these transactions are regarded as financial transactions, because they receive fixed interest and there is no physical movement of gold involved; and (2) the sectoral breakdowns "monetary authorities" and "general government" are merged into "official sector." The international investment position statistics have been compiled in conformity with *BPM5* beginning with data from end 1996.

Some adjustments in the classification methodology have recently been made to correspond with the methodology recommended in *BPM5* and the IMF's Committee on Balance of Payments. These adjustments relate to (1) financial derivatives and (2) the classification and valuation of loans sold to nonresidents at a discount: (1) In line with the *BPM5 Supplement on Financial Derivatives*, data on interest rate swaps and forward rate agreements (FRAs) have been included in the Financial Account since January 2002 instead of Portfolio Investment Income. *Financial Derivatives* have also been classified under a separate item in the *Financial Account*, rather than as part of *Portfolio Investment*. The data back to January 1996 have also been revised to reflect these changes. (2) An adjustment to the classification and valuation methodology regarding loan sales between residents and nonresidents was made in the balance of payments statistics in January 2001. Now when loans are sold to nonresidents at a discount, only the selling price is recorded under *Other Investment* in the Financial Account.

II. Specific Items: Balance of Payments

Current Account

Goods

General merchandise

The main source of data is statistics on foreign trade of commodities (the trade statistics) prepared by the MOF.

Because the trade statistics are compiled on a customs clearance basis, several adjustments are made for compiling balance of payments statistics. The most important of these adjustments relates to deducting insurance and freight costs from the import figures in the trade statistics. Timing adjustments reflecting change of ownership are also made. The information necessary for these adjustments is obtained from the survey on the components of import prices, other customs statistics, and reports on payments or receipts (payments reports). Residents submit payment reports for every payment to, or receipt from, nonresidents or residents staying abroad by means of bank remittances, nettings, or payments via deposit accounts abroad. Reported data are categorized and compiled in the relevant balance of payments item.

Goods for processing

Data on goods crossing Japanese customs for processing are obtained from the trade statistics and from the payments reports.

Repairs on goods

Data for repairs on goods are obtained from the payments reports.

Goods procured in ports by carriers

Data on goods procured in ports by carriers are obtained from reports submitted by international shipping and airline companies, as well as from the payments reports.

Nonmonetary gold

Data on transactions are obtained from the trade statistics and the payments reports. Entries relating to transactions in nonmonetary gold associated with gold investment/savings accounts are made in the *financial account, other investment*. On the other hand, transactions related to trading in gold that involve purchases and sales of gold abroad within a short period of time and where the gold does not cross the Japanese customs frontier are recorded net under *services (merchandising and other trade-related services)*.

Services

Transportation

The data are obtained from reports submitted by international shipping and airline companies, as well as from the payments reports. This item includes the value of freight deducted from the value of imports in the trade data. Distinctions between subitems, such as between sea and air transportation, are based on the original data collected separately from shipping and airline companies.

Travel

The main sources of data used to estimate travel credits and debits are the reports on the buying and selling of foreign currencies submitted by banks, plus the pay-

ments reports. The payments reports submitted by credit card companies also cover the use of credit cards. The distinction between business and personal travel is based on the statistics on tourists issued by the Ministry of Justice.

Other services

Communications. The data are obtained from the payments reports.

Construction. The data are obtained mainly from the payments reports.

Insurance. Estimations for the insurance items are made mainly from the payments reports and from the reports on international cargo insurance submitted by insurance companies in Japan. This item also includes commissions paid to insurance agents.

Financial. Data are obtained from the payments reports and the reports on business income submitted by financial institutions. Other sources of data are reports on financial derivatives transactions and securities issuance.

Computer and information. The data are obtained from the payments reports.

Royalties and license fees. Data related to these transactions are obtained from the payments reports.

Other business. Data are obtained from the payments reports. Payments and receipts for goods and nonmonetary gold not crossing Japanese customs are classified as merchandising and are included in the merchandising and other trade-related services item.

Personal, cultural, and recreational. Data on these transactions are obtained from the payments reports.

Government, n.i.e. These data are obtained from the payments reports and information from government agencies.

Income

Compensation of employees

Data related to the compensation of employees are obtained from the payments reports. Data on wages, salaries, and other benefits received by Japanese crews on foreign ships and aircraft, as well as those paid to nonresident crews on Japanese ships and aircraft, are obtained from the reports from shipping and airline companies. The definition of residence, applied in the Japanese balance of payments statistics, follows the rule set by law. The law classifies all personnel working in offices located in Japan as residents, and all those working in offices outside Japan as nonresidents, irrespective of length of stay. Therefore, by definition, no entry for the compensation of seasonal workers is made in the Japanese statistics.

Investment income

Direct investment. The data on payments and receipts of interest and dividends between direct investment enterprises

and direct investors are obtained from the payments reports. Information on reinvested earnings is obtained from annual reports on retained earnings submitted by the resident companies concerned (relating to both outward and inward direct investments). Beginning in January 1996, data for reinvested earnings are included in this item.

Portfolio investment. Information on payments and receipts in portfolio investment income is obtained from the payments reports, reports on business income submitted by financial institutions, and reports on financial derivatives. Additional estimates of income on security holdings are made to take into account the data derived from the reports on securities transactions. Interest accruing from the holding of zero-coupon bonds is estimated on the basis of the report on the value of such holdings and yields on zero-coupon bonds.

Other investment. The data are obtained from the payments reports and reports on business income submitted by financial institutions. The survey on trade credits is also taken into account.

Current transfers

General government

The data are obtained mainly from government agencies, supplemented by the payments reports.

Other sectors

Data on nonlife insurance claims paid to nonresidents are obtained from the reports from insurance companies. Other data are obtained mainly from the payments reports, supplemented by other information on foreign aid.

Capital Account

Capital transfers

Data on general government capital transfers are obtained mainly from government agencies, supplemented by the payments reports. With respect to capital transfers of other sectors, data on debt forgiveness are obtained from reports submitted by the residents concerned. Other data are obtained from the payments reports.

Acquisition/disposal of nonproduced, nonfinancial assets

Data on acquiring and disposing of nonproduced, nonfinancial assets are obtained from the payments reports.

Financial Account

Direct investment

The definition of direct investment in Japan's balance of payments follows the rule set by the law and generally corresponds with that of *BPM5*. There is a slight difference, however, in that the flow of inward direct investment includes all investments by nonresidents in unlisted

resident companies' stocks. Some of these inflows would be claimed as portfolio investment under *BPM5*.

The main source of data on inward and outward direct investment flows is the payments reports. Data on reinvested earnings are obtained from the annual reports on retained earnings submitted by the resident companies concerned (relating to both inward and outward direct investments). Beginning with January 1996, data on reinvested earnings are included in this item.

Portfolio investment

The major part of data on transactions in bonds and notes is obtained from reports on securities transactions, which are submitted by securities companies, banks, major institutional investors, and government agencies. Reports on the issue and redemption of securities and on securities lending are also used to compile the data for this item. Beginning with January 1996, the transactions of securities issued by nonresidents are, in principle, classified as assets, and those issued by residents as liabilities.

Financial derivatives

The major part of the data on financial derivatives is obtained from reports on derivatives transactions submitted by securities companies, banks, and major institutional investors. Data on financial derivatives, including the sectoral distribution, have been included in the *Financial Account* since January 2001 instead of under Portfolio Investment Income.

Other investment

Trade credits

The main source of data is the survey on trade credits, which covers major trading and manufacturing companies in Japan.

Loans

Data on transactions in loans are obtained from the reports on loans submitted by the banks and from the payments reports. Offset entries for securities-lending transactions are made in this item.

Currency and deposits

Data are obtained from the reports on assets and liabilities submitted by the banks and from the payments reports.

Other assets and liabilities

The sources of data on assets and liabilities included in this category are the reports on assets and liabilities, submitted by the banks, and the payments reports. This item also includes transactions in nonmonetary gold associated with gold investment/savings accounts.

Reserve assets

The MOF submits the data used to compile this item.

III. Specific Items: International Investment Position

Direct investment

The data are obtained from the position reports on direct investment and retained earnings, which are submitted annually by the Japanese companies concerned. The payments reports supply additional information.

Portfolio investment

Data are obtained mainly from position reports on securities holdings, which are submitted annually by the securities companies, banks, and major institutional investors.

Other investment

Data on trade credits are obtained from the survey of major trading and manufacturing companies. Data on loans and on currency and deposits are obtained mainly from reports submitted by banks.

Reserve assets

This item is compiled from the data provided by the MOF.

Jordan

The following text was confirmed as current in 2004.

I. General

The Central Bank of Jordan (CBJ) is responsible for compiling Jordan's balance of payments and international investment position (IIP) statistics. The CBJ obtains primary data from various sources, including the Department of Statistics (DOS), the Ministry of Finance, and other government agencies. It also obtains information internally from its various departments and from banking sector institutions using the International Transactions Reporting System (ITRS) forms.

The CBJ compiles the data in millions of Jordanian dinars. It compiles balance of payments data both on a quarterly and annual basis and publishes them in its *Monthly Statistical Bulletin* and *Annual Report*.

Beginning in the June 2004 issue of the *Monthly Statistical Bulletin*, CBJ published balance of payments data accord-

ing to the methodology of the IMF's *Balance of Payments Manual*, fifth edition (BPM5).

II. Specific Items: Balance of Payments

Current Account

Goods

The DOS derives and compiles trade statistics principally from the customs declarations. For balance of payments purposes, CBJ makes adjustments for coverage, valuation, and time of recording, using information obtained from certain exporting and importing companies.

The central bank converts imports data, compiled on a c.i.f. basis, into an f.o.b. basis by excluding the freight and insurance costs. The data compilers record the amounts deducted for freight and insurance services provided by nonresidents under *transportation: freight* and *other services: insurance* respectively.

Services

Transportation

For credit and debit entries for transportation services (freight and passenger), CBJ derives data from information provided by Aqaba Port Authority and by airline shipping and land companies, respectively. The compilers record entries for freight credits on the basis of data on freight and other transportation extracted from ITRS forms. The breakdown between "passengers" and "other transportation" is estimated based on available information and indicators from the main transportation companies. Entries for freight debits are estimated at 9 percent of c.i.f. imports.

Travel

CBJ bases entries for travel on the number of departures and arrivals provided by the Public Security Directorate and on the results of tourism surveys conducted by the DOS. These surveys provide information on the average expenditure of foreign tourists coming into Jordan and resident tourists traveling abroad, and on the average duration of stay. The compilers use data on the number of Jordanians studying abroad—sourced from the Ministry of Higher Education—to estimate education expenditures abroad, and they include these estimates in the travel debits.

Other services (net)

This item includes all services not classified in the above-mentioned items. The most important items are insurance, communication and computers, construction, trade, finance, and trademarks and licensing fees.

Government, n.i.e. The credit entries cover mostly income derived from services rendered by Jordanian embassies and Jordanian diplomatic and political missions abroad as well as services provided by public sector institutions. The debit entries cover expenditures of the Jordanian military, the government, and public institutions for settlement of commercial payments and for the purchase of services. The central bank obtains the data from ITRS forms.

Income

Compensation of employees

Receipts represent income and benefits obtained by resident workers, including seasonal and cross-border workers, as a compensation for being employed abroad by nonresidents.

Payments represent income and benefits obtained by nonresident workers, including seasonal and cross-border workers, as a compensation for working in the Kingdom.

Investment income

Receipts represent the returns and accrued interest acquired by resident investors from their equity and financial assets (such as bank deposits, loans, securities, and stocks) issued by nonresident institutions. Coverage includes general government, CBJ, commercial banks, and private sector investments.

Payments represent the returns obtained by nonresident investors from their equity and financial assets in the Kingdom.

Current transfers

These refer to the contra-entries of real flows of goods and services, as well as financial and nonfinancial assets that do not result in transfer of ownership of fixed assets or forgiveness of a liability by a creditor. These transfers include the following:

General government

Comprises grants and funds received or paid by the government from and to nonresidents.

Other sectors

Workers' remittances. The receipts side represents inward transfers from nonresident Jordanians working abroad, for the purpose of current expenditures in Jordan. These remittances are estimated on the basis of the ITRS forms every month. The payments side represents outward transfers made by non-Jordanians residing and working in Jordan. These remittances are estimated on the basis of data from the Ministry of Labor on foreign workers, and the average monthly transfer per single worker in Jordanian dinars.

Other transfers. Consists of grants and funds given to residents, except for public sector transfers and workers' remittances from nonresidents, or grants and funds given from residents, except for public sector transfers and workers' remittances to nonresidents. It also includes United Nations compensations.

Capital Account

This account consists of both capital transfers and acquisition or disposal of nonfinancial nonproduced assets, where capital transfers represent the offsetting entries of forgiven debt and other capital transfers, including the value of capital grants.

Financial Account

Direct investment

Abroad. This item represents residents' investment abroad broken down by equities, reinvested earnings, and net other claims on nonresident subsidiaries.

In Jordan. This item represents nonresidents' investment in Jordan broken down by equities, reinvested earnings, and net other claims on resident enterprises.

Portfolio investment

On the asset side, data cover residents' ownership of foreign equity, foreign debt securities, and foreign financial instruments, other than those included in foreign direct investment and reserve assets.

Portfolio investment liabilities cover nonresidents' ownership of domestic equity, debt securities, and financial instruments, other than those included in foreign direct investment and reserve assets.

Other investment

On the asset side, data cover all financial transactions related to residents' assets abroad and not included in direct investment, portfolio investment, or reserve assets. The instrument classification of this investment comprises trade credits, loans, currency, and deposits.

Other investment liabilities include all financial transactions related to nonresidents assets in Jordan and not included in direct investment, portfolio investment, or reserve assets. The instrument classification of this investment comprises trade credits, loans, currency, and deposits.

Reserve assets

Consists of external assets available and controlled by the CBJ and for use in financing BOPS imbalances. It includes monetary gold, SDRs, reserve position in the IMF, and foreign exchange assets (currency and deposits, and securities).

III. Specific Items: International Investment Position

CBJ compiles the IIP on an annual basis, consistent with the recommendations of the *BPM5*. Jordan's IIP is a partial statement comprising data on international reserves, foreign assets and liabilities of the banking system, and public sector debt.

The main data sources for the IIP are those used in compiling the balance of payments. Additional data are sourced from Jordan's monetary and external debt statistics.

Kazakhstan

The following text was confirmed as current in 2004.

I. General

The National Bank of Kazakhstan (NBK) is responsible for compiling the Kazakhstan's balance of payments and international investment position statistics. The NBK obtains primary data from various sources, including internal sources, the Agency for Customs Control (ACC), the Agency of the Republic of Kazakhstan for Statistics (ARKS), the Ministry of Finance, other governmental agencies, commercial banks, and enterprises.

The NBK prepares the data on a quarterly and annual basis in U.S. dollars and publishes the data quarterly in its *Statistical Bulletin* and *News of the NBK* as well as annually in its *Economic Review* and *Annual Report*. Data are also available at the internet address www.nationalbank.kz.

The balance of payments of Kazakhstan is compiled in accordance with the international standards recommended in the *BPM5*. The data are broken down by regions into the Commonwealth of Independent States (CIS) and non-CIS countries. The international investment position of Kazakhstan is compiled with the same timeliness as the balance of payments, and both data sets are published together.

II. Specific Items: Balance of Payments

Current Account

Goods

General merchandise data are based on external trade statistics compiled by the ACC from customs declarations. The data are adjusted for coverage, classification, and valuation for balance of payments purposes. The main adjustments are to exclude the cost of freight and insurance

from imports valued on a c.i.f. basis, include "shuttle" trade, and adjust for barter operations. These incoming goods are declared as transit but are not recorded as exiting Kazakhstan.

Exports and imports of goods registered by customs are also adjusted to include transactions in goods that, owing to several reasons, were not captured in customs statistics. In particular, these are exports and imports of goods by individuals (so-called shuttle traders). The "shuttle" trade adjustment is based on data for the number of individuals crossing frontiers and their average expenses abroad on goods.

Customs statistics report, as a rule, that barter exports to the rest of the world do not coincide with barter imports. Entries on barter operations are reconciled by an adjustment for nonequivalent barter.

Services

Transportation

This category covers all modes of transport and port services. Data on passenger fares and port charges are based mainly on reports collected by the NBK from marine shipping, airline, railway, and road companies. The credit entries for freight consist mainly of transit fees from neighboring countries. The debit entries for freight are estimated as 5 percent of imports c.i.f. for the CIS countries and 11 percent of imports c.i.f. for the rest of the world; debits are assumed to represent services provided by non-resident carriers.

Travel

Data on travel are estimated on the basis of estimated average expenditures, number of residents traveling abroad and nonresidents traveling in Kazakhstan, and the estimated duration of their stay. Information on travelers by country of origin or destination, and type of travel is also available.

Other services

Other business services. Data on other business services, except for government services, are derived from quarterly enterprise surveys. These services consist mainly of construction and geophysical services and services of foreign consultants. Data on construction services on the debit side also include payments to nonresident construction companies for services provided by their branches operating in Kazakhstan. Data on financial services are obtained also from reports of commercial banks and financial intermediaries.

Government, n.i.e. Data are derived from quarterly surveys of public authorities and the banking system. Credit entries include the expenditures (operating expenses in particular) of foreign embassies and consulates located in Kazakhstan. Debit entries cover all expenditures abroad by Kazakhstan's embassies and consulates.

Income

Compensation of employees

From 2000 onward, data on compensation of employees are obtained from quarterly reports submitted by enterprises. An additional source of information is the data provided by the Ministry of Labor and Social Safety on the number of the imported labor force and the average salary.

Investment income

Direct investment. Direct investment income covers dividends/distributed branch profits, reinvested earnings on equity capital, and interest on other capital. Dividends are recorded on the date they are paid, reinvested earnings are reflected on the date they are earned, and interest is recorded on an accrual basis. Data are collected from quarterly surveys of foreign direct investment enterprises.

Portfolio investment. Portfolio investment income covers payments of interest on Kazakh debt securities issued abroad and receipts of interest on foreign assets (including National Oil Fund assets) held by the NBK, commercial banks, and enterprises. Data are obtained from reports of the Ministry of Finance, Monetary Operations Department of the NBK, commercial banks, financial intermediaries, and enterprises.

Other investment. Other investment income covers interest receipts and payments on long- and short-term loans, deposits, other commercial and financial claims and liabilities, loans from the Fund, and the Fund's SDR holdings. These data are obtained from quarterly reports of the NBK, Ministry of Finance, commercial banks, and enterprises.

Current transfers

General government

The credit entries include technical assistance from multilateral and bilateral donors, estimated by the NBK on the basis of data from the Ministry of Economy and Budgetary Planning. They also include humanitarian aid data collected by the ACC from customs statistics, and taxes received from nonresidents. The debit entries cover data on current contributions to international organizations.

Other sectors

Data are obtained from commercial banks with respect to private remittances.

Capital Account

Capital transfers

The entries cover migrants' transfers and grants in the form of capital goods received under programs of humanitarian aid and technical assistance. The estimates on

migrants' transfers are based on the number of different categories of migrants and average transfers.

Financial Account

Direct investment

Direct investment enterprises are defined as enterprises with a foreign equity participation of more than 10 percent, except the branches of foreign construction and drilling companies considered as nonresidents. Data on direct investment in Kazakhstan and abroad are based largely on quarterly reports of commercial banks and enterprises. The Ministry of Finance provides information on sales of shares and property of privatized enterprise that were in public ownership. Supplemental sources of information are the data on licenses granted by the NBK for capital outflows and information from investment approval authorities.

Portfolio investment

Data on portfolio investment are derived from the Monetary Operations Department of the NBK and surveys of nominees, commercial banks, the Central Depository, and nonfinancial enterprises. Information on private non-bank portfolio assets and liabilities has been collected, starting from the first quarter of 2000, through report form "Report on financial assets and liabilities to nonresidents." Enterprises submit this report quarterly to the NBK. Information also comes from report form "Report on international securities operations involving nonresidents," filled in by nominees. The Ministry of Finance provides data on the Eurobonds issued by the government sector abroad.

Other investment

The Ministry of Finance provides data on the external public debt. Data on other assets and liabilities are derived from banking reports, reports of enterprises, and records of the NBK.

Reserve assets

All data on reserve assets are derived from the Monetary Operations Department in the NBK. Flows are calculated monthly and valued at average monthly exchange rates or, for IMF transactions, at rates on the day of the transaction.

III. Specific Items: International Investment Position

In 2001, the NBK began compiling and publishing quarterly international investment position (IIP) statistics according to the *BPM5* recommendations for all sectors of the economy. Sources of information on IIP data are the same as those used for the balance of payments.

Kenya

I. General

The agency responsible for compiling the balance of payments for Kenya is the Central Bureau of Statistics (CBS). The CBS collects data from various sources, including the Customs Department, the Central Bank of Kenya (CBK), quasi-government corporations, and the Ministry of Finance and Planning (MOFP). The CBS also conducts annual balance of payments surveys of various institutions and enterprises in the private sector and international organizations to collect data on services, income, and transfers. The CBS is also responsible for analyzing, publishing, and disseminating this information.

From 1999, the classification of the accounts used in the balance of payments in Kenya generally complies with the format recommended in *BPM5*. Balance of payments estimates are compiled in Kenya shillings on an annual basis and published in the yearly *Economic Survey and Statistical Abstract*. Transactions denominated in other currencies are converted to Kenya shillings using the exchange rate prevailing at the time. Prior to 2001, CBS publications were compiled in Kenya pounds (£). A Kenya pound is equal to 20 Kenya shillings.

II. Specific Items: Balance of Payments

Current Account

Goods

Merchandise data are derived from international trade statistics compiled by the Customs Department of the Kenya Revenue Authority (KRA). Data on imports are valued on a c.i.f. basis, which are adjusted to an f.o.b. basis by deducting freight and insurance. The adjusted imports on a c.i.f. basis are obtained after including military and electricity imports and excluding transactions in monetary imports, cinematographic films, and newspapers and periodicals. Exports are valued on an f.o.b. basis. Data on goods procured in ports and on repairs on goods are sourced from a shipping survey, an airlines survey, and customs data.

Services

Transportation

This category covers passenger fares, freight services by all modes of transport, and port services. The credit entries are derived from information obtained from Kenya Railways (KR), sea transport, air road, inland waterway (Lake Victoria) and pipeline transport firms. Data on passenger fares, port services, and leases are obtained from Kenya Airways (KA), the Kenya Airport Authority

(KAA), Nairobi Airport Services (NAS), bus companies, and Kenya Ports Authority (KPA). Port services include services to shipping lines.

Travel

Data are obtained from CBK returns on invisible transactions. Plans are underway to conduct a sample survey of departing visitors, to which regular monthly data on travel receipts from the foreign exchange record of the CBK can be benchmarked.

Other services

Communications. This item covers postal and telecommunications services. Data are provided by the Kenya Postal Corporation, TelKom Kenya, and mobile phone service providers (Safaricom and Kencell).

Insurance. This item covers nonmerchandise insurance. Data are obtained from the Commissioner of Insurance and KA.

Financial. This item includes brokerage, service fees, and commissions. Data are mainly obtained from KA and foreign shipping agents. This item covers foreign airlines office expenses, brokerage and commissions (including bank charges), management, consultancy, and director's fees, professional and technical services, newspapers and periodicals. The sources of data are KA, CBK, and the Treasury.

Royalties and license fees. This item covers royalties and the joint venture arrangements between KA and other airlines.

Other business services. This item covers mainly operational leasing services. Data are obtained from KA on flight equipment leases.

Government, n.i.e. This item includes receipts by foreign embassies and international organizations in Kenya and funding of Kenya's embassies abroad; expenditures for printing and minting of notes and currency; payments to preshipment inspection companies; and purchases of technical assistance. Information is obtained from CBK, the Ministry of Foreign Affairs, and the MOFP. It also includes aircraft landing fees and seaport taxes. The former is obtained from the KAA and KA while the latter from a shipping survey.

Income

Investment income

Direct investment. Includes reinvested earnings, undistributed branch profits, dividends, distributed branch profits, and interest due for payment. Data on dividends and profits are obtained from the foreign exchange record of CBK. Data on interest payments are obtained from quasi-government corporations. Data on interest paid by the Government are obtained from the Treasury.

Current transfers

General government

This item includes program grants. Data are derived from the Treasury budget out-turn.

Other sectors

This item includes workers' remittances and transfers to nongovernmental organizations. The information is obtained from the foreign exchange record of CBK and is supplemented with data from an annual nongovernmental organizations survey.

Capital Account

Capital transfers

This item includes project grants, debt forgiveness, investment grants, and migrants' transfers. Data are obtained from the MOFP.

Financial Account

Direct investment

The source of the data is the CBK and the Nairobi Stock Exchange. Plans are underway to carry out a Foreign Direct Investment Baseline Survey.

Portfolio investment

The source of the data is the CBK and the Nairobi Stock Exchange.

Other investment

This category includes disbursements and repayments on long-term loans received by the central government from foreign governments and international organizations. It also includes repayments on long-term loans received by local government. Sources of the data are the budget of the government and the External Resources Department. Disbursements and repayments on long-term loans received by other sectors include loans received by quasi-government corporations, but borrowed through the government. Sources of the data are the CBK, quasi-government corporations, and the Treasury.

Reserve assets

The source of the data is the CBK.

position (IIP) for the Republic of Korea. The BOK obtains data for the balance of payments and IIP from various sources, such as (1) the BOK's own surveys, (2) the Korean foreign exchange receipts and payments statistics (KFX) compiled by the BOK, (3) import-export statistics from the Korea Customs Service (KCS), and (4) other administrative sources, including those of the Ministry of Commerce, Industry, and Energy (MOCIE).

The data are compiled in U.S. dollars. As far as possible, transactions denominated in other currencies are translated into U.S. dollar equivalents at the rates prevailing at the time of the transaction.

The BOK has compiled balance of payments statistics in accordance with the methodology recommended in the *BPM5* since January 1998 and has revised previous data for 1980–97. In March 2002, the BOK released its first annual IIP statistics for 2001. The balance of payments data are prepared on a monthly basis, while IIP statistics are compiled and released once a year. The balance of payments data are published in the BOK's *Monthly Balance of Payments*, and both the balance of payments and IIP statistics are available on the BOK's website <http://www.bok.or.kr>.

The definitions and classifications used in Korea's balance of payments and IIP statistics generally correspond with those recommended in the *BPM5*. There are, however, slight differences. The criteria for defining residents and nonresidents is based on the definition contained in the Foreign Exchange Transactions Act, which defines residents as (1) any private person who has a domicile or residence in the Republic of Korea, (2) organizations, agencies, or other equivalent entities located in the Republic of Korea, including branch offices or other offices of nonresidents, and (3) any foreigner who has stayed in the Republic of Korea for more than six months. Nonresidents are defined as (1) any private person and any juristic person other than residents, (2) organizations, agencies, or other equivalent entities located in foreign countries, including foreign branch offices or other offices of residents, (3) nationals of the Republic of Korea who have worked in business offices or other offices abroad, and (4) nationals of the Republic of Korea who have stayed abroad for more than two years. In addition, *banks* in the sectoral breakdown for financial account items include only domestic deposit money banks. Other banks such as merchant banks and development institutions are classified under *other sectors*.

Korea, Republic of

I. General

The Bank of Korea (BOK) is responsible for compiling the balance of payments and international investment

II. Specific Items: Balance of Payments

Current Account

Goods

Exports and imports of goods are based on import-export statistics compiled by the KCS. The trade data

record the physical movement of goods across Korea's customs boundaries. For balance of payments purposes, the data are adjusted to correct for timing discrepancies that arise when exports or imports of goods are reported to the Customs Service in one period but are actually shipped or received in another; this adjustment is based on surveys of shipbuilders, airlines, etc. There are also structural adjustments for coverage and valuation to bring the trade data into conformity with balance of payments concepts.

Services

Transportation

Entries for transportation services are derived from the KFX and from surveys of resident airlines and shipping companies. The KFX data provide a breakdown by transportation category (i.e., passenger transportation, freight, or other transportation).

Travel

The KFX data include both nonresidents' sales of foreign currency in Korea and residents' purchases of foreign currency in Korea. The KFX also covers the use of traveler's checks and credit cards. Business and personal travel are not distinguished.

Other services

Communications. The KFX and a survey of communications companies are used to compile this item.

Construction. Since 1999, the BOK has started to make a distinction between construction contracts of less than one year (recorded as services) and contracts with a duration of one year or more (recorded as direct investment). The data are obtained from the International Contractors Association of Korea and construction companies. Previously all foreign construction activities were recorded under direct investment, even when the duration of the project did not exceed one year.

Insurance. Credit entries comprise the net of premiums received and claims paid. Debit entries comprise the net of premiums paid and claims received. The data are obtained from the Financial Supervisory Service and the Korean Insurance Development Institute.

Financial. The data cover: (1) transfer charges, commissions, and other financial fees provided or received by banks in Korea; and (2) commissions and other financial fees associated with the purchase and sale of Korean securities paid by nonresidents to Korean securities brokers. These data are obtained from the KFX and the Financial Supervisory Service.

Royalties and license fees. The data include transactions with nonresidents involving the use of intangible assets and proprietary rights. The data are obtained from the KFX.

Government, n.i.e. Data are obtained only from the KFX. Money transfers to Korean embassies abroad and to foreign embassies in Korea are taken as a proxy for expenditure by these institutions and their staff, and are included in this item.

Income

Compensation of employees

The KFX is the data source for receipts and payments associated with compensation of employees.

Investment income

Data on receipts and payments of investment income are mainly obtained from the KFX and recorded on a payment basis. The BOK also obtains information on financial lease payments from a monthly survey of several airlines and shipping companies. Currently reinvested earnings are not compiled except for the net profits/losses of overseas branches of domestic banks.

Current transfers

Data on general government transfers are derived from information provided by the KFX and a relevant government agency (KOICA). The main sources of data on other current transfers are the KFX and import-export statistics.

Capital Account

Capital transfers

Migrants' transfers. The entries cover transfers of migrants' property from the KFX and the value of freight on migrants' shipments from the trade statistics.

Financial Account

Direct investment

While data on direct investment abroad are based on the KFX, data on inward direct investment are derived from the administrative records of the MOCIE. A direct investment enterprise is defined by applying the 10 percent rule recommended in *BPM5*. Prior to April 1999, however, a 20 percent ownership criterion was used to define outward direct investment. The direct investment data do not include trade credits or short-term loans with affiliated entities, which are recorded as part of *Other Investment*.

Portfolio investment

The data cover net purchases of foreign securities and net foreign purchases of Korean securities on the basis of data obtained from the KFX and the BOK's own survey.

Financial derivatives

The data on financial derivatives are recorded on a payments basis.

Other investment

The main sources of data are the KFX and balance sheet data provided by foreign exchange banks. For the banking sector (and merchant banks and development institutions), the data on transactions relating to currency and deposits, loans (partly), and other assets/liabilities are derived from changes in balance sheet positions between two months, excluding valuation changes.

Reserve assets

Data on reserve assets are obtained from the BOK records. The entries for transactions in the foreign exchange assets of the BOK are derived from changes in the outstanding amount of foreign currencies during the period, and exclude any valuation gains or losses.

III. Specific Items: International Investment Position

Direct investment

Information is collected by means of a survey of selected direct investment enterprises in Korea and abroad.

Portfolio investment

Data are obtained from the IMF's Coordinated Portfolio Investment Survey and the external debt statistics of the BOK.

Other investment

Other investment is the residual category that includes all financial transactions not covered in direct investment, portfolio investment, or reserve assets and is subdivided into loans, trade credits, currency and deposits, and other assets or liabilities. The data on other investment are obtained from the BOK.

Reserve assets

The data on reserve assets are obtained from the BOK records.

Kuwait

The following text was confirmed as current in 2004.

I. General

The Central Bank of Kuwait (CBK) is responsible for compiling the balance of payments for Kuwait. The central bank obtains data from various sources, including its own records, government ministries and agencies,

local banks, other sectors (including companies dealing with investment, insurance, and exchange), international institutions located in Kuwait, and other domestic enterprises.

Through 1996, the CBK prepared the data on an annual basis, and estimates were compiled in millions of Kuwaiti diners in accordance with the *BPM4*. Beginning in 1997, the CBK uses the methodology set forth in the *BPM5* to the largest extent possible and has compiled annual data in millions of Kuwaiti diners back to 1993. It publishes data in its quarterly *Statistical Bulletin*, which is also displayed on its home page on the Internet at <http://www.cbk.gov.kw>.

The CBK has also been preparing quarterly balance of payments data beginning with 1997 and working on the compilation of the international investment position (IIP) for Kuwait beginning with 1995 data, also using *BPM5* methodology and the same sources. Data are also expressed in millions of Kuwaiti diners.

II. Specific Items: Balance of Payments

Current Account

Goods

The Ministry of Oil provides data on oil exports (and exports of related products). The Central Statistical Office of the Ministry of Planning extracts relevant information from customs forms to provide data on non-oil exports (f.o.b.) and imports (c.i.f.), including nonmonetary gold. The import data are adjusted to add some goods imported and not reported to customs and to deduct the cost of freight and insurance, which is allocated to the corresponding service items: 15 percent of the c.i.f. value of imports is deducted—14 percent is allocated to freight and 1 percent to insurance service. CBK compiles data on goods procured in ports from questionnaires and reports provided by the Kuwait Airways Corporation and the Kuwaiti shipping companies.

Services

Transportation

The Kuwait Airways Corporation provides information on passenger tickets. For the freight component, estimates are calculated as a percentage of imports. The CBK's estimates for shipping services on imports allocate 95 percent of estimated freight services and 80 percent of estimated insurance services as balance of payments flows to foreign carriers and providers. For credit entries, CBK compiles estimates for services provided to nonresidents from reports provided by the Kuwait Oil Tankers Company and other shipping companies.

For the *other transportation* item, CBK compiles estimates of expenses abroad on the basis of data provided by the Kuwait Airways Corporation and Kuwaiti shipping companies. On the credit side, CBK compiles estimates from questionnaires and reports provided by the Kuwait Airways Corporation, Kuwaiti shipping companies, the Kuwait Ports Authority (for port dues), and the General Directorate of Civil Aviation (for airport dues).

Travel

The central bank compiles estimates of travel debits on the basis of questionnaires answered by travel agencies, surveys it prepares, the last of which took place during the period March-September 2000, and reports submitted by government agencies on expenses paid for education, conferences, trainees, medical treatment, and official missions abroad. For credit entries, the CBK calculates estimates on the basis of the number of nonresident visitors to Kuwait and their average expenditures. The Immigration Department provides a figure on the number of nonresident visitors.

Other services

Receipts and payments in this item reflect various components, that is, financial services, fees, commissions, and other banking services, obtained from information in the CBK, and estimated expenses paid by the private business sector for foreign contractors' services, to the extent possible.

Communications. The Ministry of Communications provides the data.

Construction. CBK obtains the data from government ministries and agencies on payments to contracting firms operating in Kuwait. (Under services, it reports only short-term contracts; under direct investment in Kuwait, it reports data on long-term contracts.)

Insurance. CBK compilers obtain the data on receipts from a survey of all insurance companies operating in Kuwait (local companies and foreign company branches and agencies). Data on payments are estimated as 1 percent of the c.i.f. value of imports.

Government, n.i.e. CBK derives data on government services from information provided by relevant ministries and foreign diplomatic missions in Kuwait. It derives expenses of Kuwaiti diplomatic missions abroad from reports provided by the Ministry of Finance and the Ministry of Foreign Affairs.

Income

Investment income

CBK derives receipts and payments data from its records on investment income of reserve assets and reports provided by government agencies, local banks, and other sectors. Investment income of the nonfinan-

cial private sector is estimated indirectly by applying the LIBOR rates during the period to estimated foreign assets and liabilities.

Current transfers

General government

The central bank derives the value of general government transfer payments from information provided by the Ministry of Finance and the Zakat House. For credits, it draws data from information provided by the Ministry of Finance on taxes collected from foreign companies on their operations in Kuwait. Official current transfers consist of Kuwaiti current grants and contributions to other countries and international organizations.

Other sectors

CBK calculates estimates of workers' remittances on the basis of the number of foreign residents working in Kuwait. Obtaining the number from relevant ministries and government agencies, CBK multiplies it by an average remittance value that it estimates on the basis of sample questionnaires answered by expatriate residents working for the government and the private sector. Also, it considers transfer payments of nongovernmental charitable agencies as part of other sectors' current transfers abroad.

Capital Account

The central bank has compiled capital account data as of 1997 and recalculated the data for the previous four years (1993-96); the data cover capital transfers.

Capital transfers

General government

CBK obtains data on grants for foreign capital projects from the Kuwait Fund for Arab Economic Development (KFAED). These grants are for feasibility studies on capital projects in other countries to be financed by loans from the KFAED. This item also includes compensation paid by the Kuwaiti government to other countries, as recorded by the Ministry of Finance, and end-of-service gratuity paid by ministries and government agencies to expatriates when leaving Kuwait for good.

Other sectors (credit)

Data cover transfers received by Kuwaiti nationals from the UN committee in compensation for damages and losses incurred by the Iraqi Invasion in 1990.

Financial Account

Direct investment

CBK derives data on direct investment abroad from reports provided by the general government (Kuwait In-

vestment Authority [KIA], KFAED, Kuwait Petroleum Corporation [KPC], Kuwait Airways Corporation, and the Public Authority for Social Security), local banks, and other financial institutions (including companies dealing with investment, insurance, and exchange).

Kuwait's direct investment entities reflect institutional holdings of equities abroad. A direct investment enterprise is defined mainly by applying the 10 percent rule recommended in *BPM5*. CBK includes outward reinvested earnings to the extent possible. Data on foreign direct investment in Kuwait are limited for the time being. CBK is making efforts to obtain more data by surveying direct investment enterprises identified by the Ministry of Finance, also applying the 10 percent rule.

Portfolio investment

There are no data on foreign portfolio investments in equities or bonds by the Kuwaiti nonfinancial private sector. The data reported under other sectors cover only transactions by investment companies. CBK derives data on reported portfolio investment transactions from the sources used to obtain information on direct investment transactions.

Other investment

For trade credits related to oil exports (oil shipments during a reporting period that have not been settled by the end of the period), CBK derives data from information provided by the Ministry of Oil. This item also covers advance payments for imports. Regarding long-term loans, CBK obtains data for both disbursements and repayments from information provided by the general government, local banks, and other sectors (including investment companies). It also obtains from the above-mentioned entities the data on currency and deposits and changes in other foreign assets and liabilities. It excludes valuation changes to the extent possible. The "other (net)" item, also called "net errors and omissions," implicitly includes net capital flows of the nonfinancial private sector that are not included elsewhere.

Reserve assets

CBK derives data from its records. Excluded are transactions in accounts of the KIA, KPC, and other various foreign assets that constitute official positions reported elsewhere. The data cover transactions in foreign exchange and monetary gold assets of the CBK and the transactions in SDRs and Kuwait's reserve position in the Fund, as administered by the CBK on behalf of the government.

Kyrgyz Republic

The following text was confirmed as current in 2004.

I. General

The National Bank of the Kyrgyz Republic (NBKR) compiles the balance of payments for the Kyrgyz Republic on a *BPM5* basis. NBKR bases the compilation on data received from the following: internal sources of the national bank, commercial banks, the National Statistics Committee (NSC), the Ministry of Finance, the Department of Customs of the Committee for Revenue under the Ministry of Finance of the Kyrgyz Republic, the Ministry of Transport and Communications, the Ministry of Foreign Affairs, the Government Commission for the Securities Market, and other organizations and enterprises. NBKR compiles the data on a quarterly basis in terms of U.S. dollars.

In 1997, NBKR introduced an international transactions reporting system (ITRS) at commercial banks and uses the data derived from the ITRS to compile some items of balance of payments, including services, income, and direct, portfolio, and other investments.

Three months following the reference period, NBKR publishes the balance of payments data, external debt data, and international investment position (IIP) data, together with commentary, supplementary tables, and charts, in its quarterly publication *Balance of Payments of the Kyrgyz Republic*. It also publishes balance of payments data in its monthly *Bulletin* and *Annual Report*. Further, balance of payments and international investment position (IIP) statistics are placed on the NBKR's website every quarter.

II. Specific Items: Balance of Payments

Current Account

Goods

The NSC compiles data on exports f.o.b. and imports c.i.f. from customs documents; it supplements these data with information it collects from enterprises through questionnaires. It compiles trade statistics in U.S. dollars and in the national currency by type of product, volume, and country of origin.

The NSC also collects, separately from the trade statistics, data for goods acquired in the Kyrgyz Republic by foreign airlines and for goods acquired at foreign airports by domestic airlines. In addition, the NSC uses customs data on the number of people crossing the border to estimate data on the "shuttle trade" (goods transported by individual travelers), which are not covered by customs in trade statistics.

To convert the import data from the c.i.f. to f.o.b. basis, the NBKR estimates the freight and insurance components, separately, by country and type of product. On

average, the adjustments are 9.59 percent for freight and 0.155 percent for insurance.

Services

Transportation

The NSC collects data from domestic airlines, railway, and road transportation companies. NBKR supplements these data with information it collects from enterprises and ITRS. It derives freight on imports provided by non-residents from the estimated freight included in the c.i.f. value of imports and adjusted to exclude transportation provided by resident carriers.

Travel

The NSC assesses travel services on the basis of the estimated average per diem expenditures, number of residents traveling abroad and nonresidents traveling in the Kyrgyz Republic, and the estimated duration of their stay. The State Customs Inspectorate provides data on the number of travelers, country of origin (for foreign travelers), country of destination (for domestic travelers), and types of travel (private, business, etc.).

Other services

Communications. The NBKR collects data on communication services from the Ministry of Transport and Communications.

Construction. The NSC collects data on construction services from enterprises contracting with nonresident construction companies and from resident construction organizations doing work abroad.

Insurance. The NBKR derives insurance on imports provided by nonresidents from the estimated insurance included in the c.i.f. value of imports and from the ITRS. The compilers also collect data from the ITRS on insurance provided by residents.

Financial. The NBKR collects data from the ITRS and enterprises.

Other business services. The NSC collects data from enterprises. The NBKR collects data through the ITRS and uses estimates of the IMF on technical assistance.

Government, n.i.e. The NBKR derives data on expenditures of the Kyrgyz Republic's embassies abroad from its own records and information from the Ministry of Foreign Affairs. It derives data on expenditures of foreign embassies from the ITRS.

Income

Compensation of employees

NBKR compilers obtain information on compensation of employees from joint ventures and foreign-owned enterprises as well as from the ITRS and the NSC.

Investment income

NBKR derives data on (1) direct investment income, from the survey of joint ventures and foreign-owned enterprises conducted by the NSC, (2) direct investment income in the banking sector, from commercial bank reports to the NBKR; and (3) portfolio investment income, from internal sources and commercial banks. Other investment income credits cover mainly interest received by the private sector and the NBKR. Other investment income debits mainly represent interest paid by the government and the private sector on their external debt, including the use of Fund credit.

Current transfers

General government

Credit entries mainly cover grants in the form of imports of humanitarian aid and grants for balance of payments support. Sources of data are trade statistics, IMF estimates, and nonprofit organizations. The debit entries cover contributions to budgets of international organizations, as reported by the Ministry of Finance.

Other sectors

These entries cover workers' remittances received from and remitted abroad, as reported by the Ministry of Transport and Communications.

Capital Account

Capital transfers

The credit entries mainly cover offsets to imports of capital goods under aid programs and technical assistance. The NBKR calculates respective amounts by identifying capital goods within the total volume of grants in the form of goods registered by the NSC in the trade statistics. The NSC estimates migrants' transfers on the basis of the number of migrants and the average value of assets exported by migrants.

Financial Account

Direct investment

NBKR derives data from the survey of joint ventures and foreign-owned enterprises conducted by the NSC. For direct investment in the banking sector, NBKR derives data from reports sent by the commercial banks. For data on stocks of Kyrgyz enterprises purchased by nonresidents, it collects data from the NSC.

Portfolio investment

NBKR draws these data from its financial statement, commercial banks, the Government Commission for the Securities Market, and joint-venture enterprises.

Financial derivatives

NBKR gathers these data from the financial statements of joint-venture enterprises.

Other investment

The Ministry of Finance provides data on drawings and repayments on loans received by the government and enterprises with government guarantee. The NBKR obtains information from its internal records on its own foreign borrowing. It derives data on foreign assets and liabilities of commercial banks from commercial bank reports. The NSC collects (through enterprise surveys) data on other investment transactions of the private nonbank sector (trade credits). NBKR collects data on nonguaranteed private debt and other assets and liabilities.

Reserve assets

NBKR derives the data from its balance sheets.

III. Specific Items: International Investment Position

Sources of information on international investment position data are the same as those used for the balance of payments.

Lao PDR

I. General

The Bank of the Lao PDR (BOL) is responsible for compiling the balance of payments statistics of the Lao PDR and publishes quarterly and annual balance of payments statistics in U.S. dollars in its *Annual Report*. Data are obtained from various sources including the banking system (i.e., the commercial banks and various departments of the BOL itself), the Ministry of Finance, and private sector enterprises such as Assurances Generales du Laos (AGL), Lao Postal Company, and Lao Communication Company.

The classification of accounts used in the national presentation of Lao PDR's balance of payments statistics closely follows the presentation of the fourth edition of the Fund's *Balance of Payments Manual (BPM4)* and will be adjusted gradually to conform with the methodology set out in the fifth edition (*BPM5*).

II. Specific Items: Balance of Payments

Current Account

Goods

The BOL compiles data on exports and imports on the basis of customs documents. Goods exported are valued in the customs documents on an f.o.b. basis, and goods imported are valued in the customs documents on a c.i.f.

basis. Imports are converted to an f.o.b. basis using an 8 percent adjustment factor.

Services

Transportation

This item covers overflights, freight, and passengers. The BOL's Operation Department provides data on overflights, and the remaining elements are based on BOL staff estimates.

Travel

Credit entries are derived from information in surveys conducted by the National Tourism Authority of Lao PDR, including estimates of the number of visitors, the number of overnight stays, and the estimated average expenditure. Debit entries are derived from data from the Receipts and Payments reporting system provided by the Foreign Currency Department of BOL.

Other services

Communications. The data in this item are primarily derived from information provided by the Lao Postal Company, and the Lao Communication Company on communication transactions with nonresidents. Credit entries cover international telephone charges and other fees related to communication and postal transactions. Debit entries cover charges for satellite connections and various fees paid.

Insurance. The data in this item are primarily derived from information provided by the Assurances Generales du Laos (AGL) on insurance transaction with nonresidents. Credit entries cover direct insurance premiums and reinsurance claim payments received. Debit entries cover direct insurance claim payments and reinsurance premiums.

Income

Investment income

Credit entries relate to interest received on the BOL's reserve assets and the Nostro accounts of commercial banks. Debit entries cover interest payable on the public external debt, and interest paid abroad by the BOL and banks. The data are obtained from the agencies concerned and from reports received from banks.

Current transfers

This item covers both private and public transfers, and the data are based on information provided by banks and the Ministry of Finance. At present, it is not possible to break down the transfers data into current and capital transfers.

Capital Account

No distinction is made between current and capital transfers, and all transfers are recorded under the item for current transfers.

Financial Account

Direct investment

The data cover only foreign capital inflows and are derived from information provided by the BOL. (In accordance with the regulation of foreign direct investment in Lao PDR, direct investment enterprises must declare to the BOL the amounts of capital inflows received each year through the banking system and nonbanking systems.)

Other investment

For the general government sector, the Ministry of Finance provides data on the public external debt and, in particular, data on drawings made and repayments outstanding. For the monetary authorities sector, the BOL provides data on its foreign liabilities, in particular the use of Fund credit. For the banking sector, the BOL provides data on banks' foreign assets and liabilities.

Reserve assets

The data on reserve assets are obtained from the BOL's statement. The data cover gold, holdings of SDRs, the reserve position in the Fund, and foreign exchange.

Latvia

The following text was confirmed as current in 2004.

I. General

Latvia's balance of payments has been compiled and published every quarter since 1992. In the period from 1992 until 2000 this was done by the Central Statistical Bureau of Latvia (CSB). Starting with the data for 2000, Latvia's balance of payments has since been compiled and published by the Bank of Latvia (BOL). Since 2001, the BOL has also been publishing the monthly balance of payments.

Latvia's balance of payments collection system is a mixed system, with surveys supplemented by the International Transaction Reporting System (ITRS) and administrative sources. For the quarterly balance of payments compilation, surveys are the main source of information for other sectors. There are two quarterly surveys: (1) survey on foreign investment covering data on direct investment stocks in Latvia and abroad and related income flows broken down by country, and data on portfolio investment and other investment stocks and related income flows; and (2) survey on transportation and intermediary services covering transportation services rendered/received by mode of transport.

The survey on foreign investment uses a sampling method. Enterprises are sorted in descending order by the total amount of their cross-border settlements and are subdivided into three groups according to size. All enterprises in the first (largest) size group are included in the sample. Stratified simple random sampling is applied to select enterprises from the second and third size groups. The list of enterprises for the quarterly survey on foreign investment is drawn up using the data from the State Enterprise Register, the register of enterprises maintained by the ITRS, and the annual survey on foreign investment.

The list of enterprises for the survey on transportation and intermediary services is drawn up using the register of enterprises involved in foreign settlement maintained by the ITRS.

Data from surveys are supplemented by monthly information from the ITRS, which is the main data source for compiling the monthly balance of payments other sectors items. The ITRS is an open, settlement-based system comprising indirect reporting from banks registered in Latvia and direct reporting from enterprises. The indirect reporting collects information from all banks registered in Latvia on nonbank residents' debit and credit settlements with nonresidents via domestic banks. Information received from domestic banks is reconciled with the information from nonbank residents, who report directly to the BOL on credit settlements via their accounts in domestic banks as well as nonbank residents, who also report debit and credit settlements with nonresidents via their foreign bank accounts. When submitting information, reporters must specify the code of the external settlement in accordance with the List of External Payment Codes, as well as the country and currency codes. During the consolidation of data received from domestic banks and nonbank residents, the statistics on nonbanks' external payments are compiled.

The BOL also uses data collected by the Ministry of Foreign Affairs, the Ministry of Finance, the State Treasury, the Financial and Capital Market Commission, etc. In addition, the BOL receives foreign trade statistics and labor statistics (wages and salaries paid to nonresidents) from the CSB.

Information on the monetary authorities and reserve assets is provided by the BOL. These data are broken down by country and currency. Information on the banking sector is derived from the banking statistics compiled by the BOL, which provides the residency split and the country and currency breakdowns for the main items of the balance sheet of credit institutions.

The household sector is covered by aggregated data from the CSB on persons entering and leaving the country; data from the State Social Security Agency on the pensions received/paid in accordance with intergovern-

mental agreements; data from the State Revenue Service on social taxes paid by foreign embassies in Latvia for their local staff; and the monthly BOL survey of enterprises rendering intermediation services related to job contracts for working abroad. The ITRS includes data on natural persons' debit and credit settlements with nonresidents via domestic banks.

Monthly data are subject to revision when quarterly data are published. Data for the reporting quarter may be subject to revision in the publication of the next quarter's balance of payments. Publication of the fourth quarter may include revised quarterly data for the respective year, whereas the publication of the second quarter balance of payments may include revised quarterly data for the previous three years (primarily to ensure longer term data comparability upon making methodological adjustments).

A monthly bulletin entitled *Latvia's Balance of Payments (Key Items)* publishes the monthly key items. A quarterly bulletin entitled *Latvia's Balance of Payments* publishes quarterly and annual balance of payments statistics, international investment position data, foreign direct investment stocks in Latvia broken down by kind of activity and investing country, and external debt data. These publications are first made available on the BOL's website at <http://www.bank.lv/eng/main/pubrun/>. Hard copies are available on a free subscription basis (by sending an e-mail request to info@bank.lv). Balance of payments and international investment position data are also disseminated on the BOL's website at <http://www.bank.lv/eng/main/statistics/lbfinfo/imf/>, in accordance with the IMF's Special Data Dissemination Standard.

II. Specific Items: Balance of Payments

Current Account

Goods

Goods cover exports and imports of general merchandise, goods for processing, repairs on goods, goods procured in ports by carriers, and nonmonetary gold. The data source for general merchandise is the foreign trade statistics compiled by the CSB.

Foreign trade data are compiled in accordance with the Special Trade System. This means that when goods produced abroad are imported to and exported from customs warehouses, such imports and exports are excluded from the total. Exports include goods listed in customs declarations for exports and re-exports (i.e., exports of goods previously imported for domestic consumption) and humanitarian and similar aid. Imports include goods declared for domestic consumption and humanitarian and similar aid.

In customs cargo declarations, exported goods are valued f.o.b., whereas imported goods have been valued on a c.i.f. basis since 2000 (up to 2000, the latter were given on both an f.o.b. and a c.i.f. basis). In compliance with *BPM5*, which requires the recording of exports and imports of goods on an f.o.b. basis, data for imports of goods have been adjusted every month by the CSB since January 2000. Adjustments are made using ratios giving the average relationship between f.o.b. and c.i.f. values in 1998 and 1999. To ensure that imports of goods are broken down by country and to obtain correct information on freight, adjustments are made for each mode of transport and for each country of origin of the goods, separately identifying resident and nonresident carriers.

Where the price of goods in a customs cargo declaration is stated in a foreign currency, it is translated into LVL, applying the BOL's exchange rate on the day that the customs cargo declaration was filled out.

Foreign trade statistics also include CSB data from reports on exports and imports of electricity and natural gas.

In addition to foreign trade statistics, the following data sources are used: reports on extraterritorial trade by shipping vessels (compiled by the CSB), CSB information (valuation adjustment) on goods produced in Latvia and exported from customs warehouses (such goods are stated at the prices they have upon entering customs warehouses), information on banknotes production and coinage costs from the BOL's profit and loss statement, and statistics on nonbanks' external payments in the ITRS.

Data on goods for processing are derived from foreign trade statistics, which the CSB compiles on the basis of customs cargo declarations. The data for repairs on goods is derived from custom cargo declarations by the CSB, as well as the quarterly survey on transportation and intermediary services, and the statistics on nonbanks' external payments in the ITRS is used. The data source for goods procured in ports by carriers is the quarterly survey on transportation and intermediary services. The data source for exports and imports of nonmonetary gold is the statistics on nonbanks' external payments in the ITRS.

Services

Transportation

Data are obtained from the quarterly survey of transportation and intermediary services and the statistics on nonbanks' external payments in the ITRS. They cover transportation services rendered/received by mode of transport. Foreign trade statistics are also used to obtain—in accordance with the methodology described in section *Goods*—the difference between c.i.f. and f.o.b. values of imported goods. The share of transportation is

distinguished from the calculated figure and included under transportation in the balance of payments.

Data on passenger transportation by air are calculated using data on the number of departing passengers by airlines (submitted by the Riga international airport), the CSB data on the monthly number of residents and non-residents crossing the state border by air, and information on the average prices of airline tickets.

Travel

Data on travel are derived from the CSB aggregated data on persons entering and leaving the country. Travelers are polled at border control points four times a year to obtain information about nonresidents' spending in Latvia and residents' spending abroad. The average spending of a traveler is calculated using mathematical methods, and, thereafter, total travel expenditure is obtained. The number of travelers is available from the State Border Guard of the Republic of Latvia, which registers all persons entering and leaving the country.

Estimates on expenditures of students for personal travel credit entries are made using data submitted by Ministry of Education and universities on number of foreign students in Latvia. For debit entries, information submitted by foreign embassies in Latvia on the number of Latvia's students and average expenditures by country is used.

Other services

Data on other services are derived from statistics on nonbanks' external payments in the ITRS. In addition, a number of other sources are used: banking statistics; aggregated data on revenue and expenditure of the Republic of Latvia's embassies, representative offices and consulates abroad, submitted by the Ministry of Foreign Affairs; data on reinsurance premiums and claims paid, submitted by the Financial and Capital Market Commission; data from the BOL's profit and loss statement; and foreign trade statistics submitted by the CSB. Data on expenditure by foreign embassies, representative offices, and consulates in Latvia are derived from the State Revenue Service's information on the value-added tax repaid to foreign embassies, representative offices, and consulates.

Income

Compensation of employees

Debit entries are based on labor statistics (wages and salaries paid to nonresidents) submitted by the CSB and data on revenue and expenditure of the Republic of Latvia's embassies, representative offices, and consulates abroad submitted by the Ministry of Foreign Affairs.

Credit entries are based on data from the State Revenue Service on social taxes paid by foreign embassies in Latvia for their local staff; information from foreign em-

bassies in Latvia on work permits issued to Latvia's residents; and monthly surveys on job contracts concluded by natural persons for working abroad.

Investment income

Direct investment. Data sources are the quarterly survey on foreign investment, nonbanks' external payments in the ITRS, and banking statistics. Data are broken down by country and instrument, distinguishing between income from debt and income from equity. Reinvested earnings are recorded when they are reinvested. The all-inclusive concept is used instead of current operating performance concept (COPC) to measure the reinvested earnings. Nonbanks therefore provide data on the retained profit or loss for the reporting quarter, which allows the calculation of the reinvested earnings item for each enterprise separately. For the banking sector, calculations are made separately for each bank on a monthly basis, using the banking statistics (the retained profit or loss for the reporting month is given in the Monthly Financial Position Report) and information from the Financial and Capital Market Commission on the distribution of equity capital among shareholders. In addition, data on the distribution of the bank's audited profits for the preceding year is used when estimating dividends. Adjustments to reinvested earnings are made upon receiving information on the audited profit and its distribution. Dividends are recorded when payable.

Portfolio investment. Data sources are the quarterly survey on foreign investment, statistics on nonbanks' external payments in the ITRS, banking statistics, the BOL's profit and loss statement, and data on government external debt provided by the State Treasury. Data are broken down by income on equity, bonds and notes, and money market instruments. Interest on debt securities is recorded on an accrual basis.

Other investment. Data sources are the quarterly survey on foreign investment, statistics on nonbanks' external payments in the ITRS, banking statistics, the BOL's profit and loss statement, and data on government external debt provided by the State Treasury. Income is recorded on an accrual basis.

Current transfers

Data are obtained from the State Treasury (use of funds for assistance programs received from foreign countries and international organizations) and the Ministry of Finance (the amount of funds committed under registered technical assistance projects financed by foreign countries and international organizations). Debit entries record contributions of governmental institutions to international organizations.

Other data sources are statistics on nonbanks' external payments in the ITRS, aggregated data on international cash transfers (compiled by the CSB), banking statistics,

the BOL's profit and loss statement, foreign trade statistics (compiled by the CSB), information on pensions paid by foreign governments to Latvian residents, and pensions paid to nonresidents (compiled by the State Social Security Agency).

Capital Account

Data are obtained from the State Treasury (use of funds for assistance programs received from foreign countries and international organizations) and the Ministry of Finance (the amounts of funds committed under registered technical assistance projects financed by foreign countries and international organizations). These data are supplemented with statistics on nonbanks' external payments in the ITRS.

Financial Account

Direct investment

Data sources for direct investment are the quarterly survey on foreign investment, banking statistics, data from the State Enterprise Register (on recently established enterprises with nonresident capital participations), and statistics on nonbank external payments in the ITRS. Direct investment data comprise equity capital, reinvested earnings, and other capital, which includes long- and short-term loans, debt securities between affiliates, and trade credits. The 10 percent ownership criterion and the directional principle are followed. Data on transactions are derived from stocks data on an aggregated basis. The geographical allocation is based on the debtor/creditor principle.

Portfolio investment

Data sources for portfolio investment are the quarterly survey on foreign investment, banking statistics, statistics on nonbanks' external payments in the ITRS, data from the State Treasury, and the BOL's balance sheet. Data on transactions are derived from stocks data on an aggregated basis. The BOL also uses data from the monthly survey on securities traded in the secondary market carried out by the Financial and Capital Market Commission, which includes aggregated transaction data and breakdowns by sector (for assets) and instrument using market values. Data on portfolio investment are broken down by sector and instrument in accordance with the *BPM5*. For the reconciliation with portfolio stocks, exchange rate changes are excluded on the basis of the data available on foreign currencies when transactions are compiled for the monetary authorities, general government, and banking sector.

Financial derivatives

Financial derivatives are excluded from portfolio investment. The data sources are the BOL's balance sheet, the

banking statistics, monthly survey on securities traded in the secondary market conducted by the Financial and Capital Market Commission, and statistics on nonbank's external payments in the ITRS. Transactions are recorded on a gross basis.

Other investment

Data sources for other investment are the quarterly survey on foreign investment, banking statistics, data from the State Treasury, and the BOL's balance sheet. Transaction data are derived from stocks data. An additional data source is the statistics on nonbanks' external payments in the ITRS. Data on other investment are broken down by sector, instrument, and maturity in accordance with the *BPM5*. For the reconciliation with other investment stocks, exchange rate changes are excluded on the basis of the data available on foreign currencies when transactions are compiled for the monetary authorities, general government, banking sector, and other sectors' long-term loans.

Reserve assets

Data on reserve assets are sourced from the BOL's balance sheet submitted by its Accounting Department. Data are broken down by instrument, maturity, country, and currency. Data on reserve assets are compiled on a monthly basis. Transactions data are derived from stocks data. Exchange rate and price changes are excluded on the basis of the data available on foreign currencies when transactions are compiled.

Reserve assets refer only to highly liquid, marketable, and creditworthy foreign-currency-denominated claims on nonresidents, gold, SDRs, and the reserve position in the IMF. The BOL controls reserve assets, and positions of the central government and/or the State Treasury are not included. Reserve assets are compiled in accordance with the gross concept. Reversible gold transactions are not excluded from loans and deposits. A separate category for financial derivatives has been introduced.

III. Specific Items: International Investment Position

Direct investment

Data sources for direct investment are the quarterly survey on foreign investment, banking statistics, data from the State Enterprise Register (on recently established enterprises with nonresident capital participations), and statistics on nonbanks' external payments in the ITRS. Direct investment data comprise equity capital, reinvested earnings, and other capital, which includes long- and short-term loans, debt securities between affiliates, and trade credits. The 10 percent ownership criterion and the directional principle are followed. Data on direct

investment are collected as stocks and refer to book values for liabilities. A reconciliation exercise between international investment positions (stocks) and balance of payments flows is carried out on the basis of exchange rate changes (for long-term loans) and other adjustments. The geographical allocation is based on the debtor/creditor principle.

Portfolio investment

Data sources for portfolio investment are the quarterly survey on foreign investment, banking statistics, statistics on nonbanks' external payments in the ITRS, data on government external debt from the State Treasury, and the BOL's balance sheet. Data on portfolio investment are collected as stocks and refer to book values for liabilities, except for data on securities traded in the secondary market. A reconciliation exercise between international investment positions (stocks) and balance of payments flows is carried out on the basis of exchange rate changes and other adjustments.

Financial derivatives

The data sources are the BOL's balance sheet, the banking statistics, monthly survey on securities traded in the secondary market conducted by the Financial and Capital Market Commission, and statistics on nonbanks' external payments in the ITRS. Financial derivative stocks of other sectors are derived from accumulated flows.

Other investment

Data sources for other investment are the quarterly survey on foreign investment, banking statistics, data from the State Treasury, and the BOL's balance sheet. Data on other investment are collected as stocks. An additional data source is the statistics on nonbanks' external payments in the ITRS. A reconciliation exercise between international investment positions (stocks) and balance of payments flows is carried out on the basis of exchange rate changes and other adjustments.

Reserve assets

The data source for reserve assets is the BOL's balance sheet submitted by its Accounting Department. Reserve assets refer only to highly liquid, marketable, and credit-worthy foreign-currency-denominated claims on non-residents, gold, SDRs, and the reserve position in the IMF. The BOL controls reserve assets, and positions of the central government and/or the State Treasury are not included. Data on reserve assets are compiled on a monthly basis in accordance with the gross concept. Reversible gold transactions are not excluded from loans and deposits. Gold and debt securities denominated in convertible foreign currencies are valued at the prevailing market prices. Gold is valued at market prices on a daily basis. Debt securities denominated in convertible foreign currencies are revalued on a daily basis. A sepa-

rate category for financial derivatives has been introduced. A reconciliation exercise between international investment positions (stocks) and balance of payments flows is carried out on the basis of exchange rate changes and price changes.

Lesotho

I. General

The Research Department of the Central Bank of Lesotho (CBL) is responsible for the compilation and analysis of Lesotho's balance of payments statistics. CBL obtains primary data from various sources, including the Ministry of Finance's Customs and Excise Department, the Treasury Department, the Lesotho Highlands Development Authority (LHDA), parastatal enterprises, international organizations, and the private sector. Where necessary, periodic surveys supplement the data.

The CBL prepares the data on a quarterly basis and publishes them in its *Quarterly Review*. The classification of accounts closely follows the presentation of the fifth edition of the *Balance of Payments Manual (BPM5)*. Conversion of the accounts, including all the historical data from the fourth edition (*BPM4*), was carried out during the first quarter of 1999.

Data are compiled in maloti. Transactions denominated in foreign currencies are converted to maloti using period-average exchange rates.

II. Specific Items: Balance of Payments

Current Account

Goods

Estimates of goods transactions are based on data compiled by the Research Department of the CBL. The data record the physical movement of goods across Lesotho's customs boundaries and are adjusted for coverage, valuation, and timing for balance of payments purposes. Goods exports and imports are valued on an f.o.b. and a c.i.f. basis, respectively. Data on imports by the Lesotho Highlands Water Project (LHWP) are obtained from LHDA. The Customs and Excise Department records all imports from the Common Customs Area (CCA), including imports by enterprises, cross-border shoppers, and migrant workers. At the same time, the South African Customs and Excise records imports from outside the CCA and transmits them to the Customs and Excise Department in Lesotho. The Customs and Excise Department records exports to the CCA and to other countries.

Services

Transportation

Data on passenger services/air travel are obtained through a continuous survey covering travel agencies in Lesotho. Data on port services are obtained from the Department of Civil Aviation.

Travel

Data on expenditure by foreign visitors to Lesotho are obtained from the Lesotho Tourist Board. Data on expenditure by Lesotho residents on trips abroad are obtained from foreign exchange declaration forms. Data on expenditure by Basotho students studying abroad are obtained from the National Manpower Development Secretariat. The National University of Lesotho and the Center for Accounting Studies provide data on foreign students studying in Lesotho.

Other services

Royalties and license fees. Data for the major component, water royalties, are obtained from LHDA. Data for the other components, which mainly cover non-rand transactions, are obtained from the CBL's Policy and Exchange Control Division.

Other business services. The item includes management fees, advertising, and brokerage. Data on these components, which mainly cover non-rand transactions, are obtained from the Policy and Exchange Control Division.

Government, n.i.e. The Treasury Department provides data on Lesotho government expenditure abroad. This is mainly expenditure by Lesotho embassies abroad. Receipts from international organizations located in Lesotho are derived mainly from data obtained from published annual reports of the respective organizations.

Income

Compensation of employees

Compensation of employees is estimated based on data from recruiting agencies and the Chamber of Mines and the findings of a survey—the Survey of Basotho Migrant Workers—conducted in 1992–93.

Investment income

Data on interest receipts are obtained from both the CBL and the commercial banks. Data on payments are obtained from the commercial banks, the LHDA, and the Income Tax Department.

Current transfers

General government

Estimates are based on data submitted quarterly by the Lesotho government operating agencies. Where nec-

essary, the reported data are adjusted for timing; the adjustments are based on supplementary information and the financial and operating records of government agencies.

Other sectors

Data sources for workers' remittances and other current transfers of other sectors include the Customs and Excise Department, the Post Office, and the Exchange Control Department at the CBL.

Capital Account

Capital transfers

Data on grants to the government are obtained from the government budgetary operations. Data on grants to the LHWP are obtained from the LHDA.

Financial Account

Direct investment

Direct investment in Lesotho is estimated using data on pipeline projects as reported by Lesotho National Development Corporation (LNDC). The department is undertaking a foreign direct investment survey to capture the capital flows between Lesotho and the rest of the world.

Other investment

The Lesotho Highlands Water Project is a joint undertaking between the governments of Lesotho and the Republic of South Africa. The project involves building reservoir dams and water transfer tunnels to transfer water from Lesotho highland areas to the industrial heartland of the Republic of South Africa. This project is financed through a special agreement between the two governments. As such, capital flows destined for the implementation of the project do not fall under the standard balance of payments items. It has been found necessary to create a special line item under which all such financial flows are recorded.

Reserve assets

The entries reflect changes in foreign assets of the CBL. These changes include valuation changes.

Lithuania

I. General

The Bank of Lithuania (BOL) is responsible for compiling the balance of payments for Lithuania. BOL obtains data for the balance of payments estimates from vari-

ous sources, including official agencies, commercial banks and other financial institutions, selected private nonbanking enterprises, and the Central Statistics Office. The Lithuanian balance of payments compiling system is based on a survey system.

The balance of payments of Lithuania is compiled quarterly and annually. Since 2002, key items of the balance of payments are compiled monthly. Balance of payments data are published following the Special Data Dissemination Standard (SDDS) requirements at the Internet address and in BOL's *Quarterly Bulletin* and monthly publication. Balance of payments data are reported to the government, the main ministries, the IMF, the World Bank, EUROSTAT, and the European Central Bank (ECB).

Balance of payments estimates are compiled in millions of litai and are converted into U.S. dollars and, since 2002, also into euros. Data are compiled in accordance with several guides—the fifth edition of the IMF's *Balance of Payments Manual (BPM5)*, the EUROSTAT classification (*Balance of Payments Vademecum*), and the ECB guidelines on statistical reporting requirements for the balance of payments, the template on international reserves and foreign currency liquidity, and the international investment position statistics.

II. Specific Items: Balance of Payments

Current Account

Goods

The primary source is the foreign trade statistics prepared by the Department of Statistics of Lithuania. The statistics are based on data of import and export declarations for goods collected by the Customs Department. The entry also includes temporary exports and imports, repair of goods, leasing, and humanitarian aid goods. Adjustments are made to customs data to include the results of trade with electricity and natural gas.

Goods exported and imported are valued on an f.o.b. and c.i.f. basis, respectively. Foreign trade data are compiled according to the classification and requirements of the general foreign trade system. Imports are adjusted to an f.o.b. basis in the balance of payments statement, using an estimate of freight payable on imports. Freight charges are estimated at 8 percent of total imports c.i.f. (excluding energy products).

Services

Transportation

Data are compiled mainly on the basis of quarterly surveys of Lithuanian transport and port service enterprises. These surveys cover more than 90 percent of enterprises

engaged in rail, air, sea, and road transport activities. The debit entries for freight cover estimates of freight earnings on imports by nonresident carriers. Monthly data are compiled through monthly surveys applied to a sample of major enterprises engaged in the different means of transport and port services. The sample is updated to reflect changes in the population of businesses.

Travel

Estimates are based on the following: 1) the Border Police Department's compilation of the number of travelers, 2) quarterly surveys of enterprises providing accommodation services (hotels, health spas, etc.) and selling tourism packages, and 3) the Lithuanian State Tourism Department's surveys of visitors, which provide information on their average expenditures and average length of stay in Lithuania. Travel services also include the expenditures in Lithuania by nonresidents who worked in the country for less than one year.

Other services

The main source of information is the Department of Statistics' quarterly survey of nonfinancial enterprises. The survey reports receipts and payments abroad for the following categories of services: construction, communication, financial, computer and information, royalties (fees), insurance, other business, and other services.

Government, n.i.e. Data on government services are obtained from the Ministry of Foreign Affairs. Information is based on the data on expenditures abroad by Lithuanian embassies and salaries paid to Lithuanian officials serving abroad. Information on foreign missions' expenditure in Lithuania is based on these missions' requests for refund of value-added taxes and social security contributions (which are also monitored by the Ministry of Foreign Affairs). Additional information on various services is collected from other official sources. Monthly data are compiled through monthly surveys applied to a sample of major enterprises providing different relevant services. The sample is updated to reflect changes in the population of businesses.

Income

The main sources of information on the compensation of employees are the survey of nonfinancial enterprises and data from the Ministry of Foreign Affairs (for local staff working in Lithuanian missions abroad). The main sources of data on investment income are the nonfinancial enterprise survey, the survey of the banking sector, and reports on interest paid on official loans and debt securities from the Ministry of Finance.

Current transfers

General government

Various government agencies and the banking sector provide information from which the data are derived:

The Department of Statistics compiles and provides data on humanitarian aid. The Ministry of Finance and the Ministry of Foreign Affairs supply information on membership fees paid by government to various international organizations. The Ministry of Finance supplies the main information on technical assistance projects carried out by foreign countries and by international organizations and funds

Other sectors

The Ministry of Foreign Affairs records foreign aid received from nongovernmental sources. The Ministry of Communications collects information on remittances to and from abroad.

Capital Account

Capital transfers

This item includes official grants of capital goods and foreign technical assistance investment projects. Data are derived from the Ministry of Finance.

Financial Account

Direct investment

Direct investment in Lithuania. Sources of information on direct investment are the quarterly surveys of nonfinancial enterprises, the Central Securities Depository and Commission of Securities of Lithuania, and the banking system. Information is also received on foreign participation in privatization of State-owned enterprises. The State Land and Cadastre Registration Enterprise records the registration of new enterprises with foreign equity participation. The surveys meet the requirements of the *BPM5* as well as the OECD benchmark definition of foreign direct investment.

Investment in the form of equity capital includes investment in share capital, group contributions, and other transfers of equity capital. Reinvested earnings (change in accumulated retained earnings of direct investment enterprises) are equal to the following: the investor's share in the income of the direct investment enterprise (before adjustment items, but after tax) minus the investor's share in the dividends paid by the direct investment enterprise during the accounting period. All loans between the foreign and Lithuanian units of the direct investor's group are regarded as direct investment. The basis for valuation is in principle market price, but for those enterprises whose shares are not quoted on the stock exchange market, book value is used.

Portfolio investment

Data are derived from several sources: the survey of nonfinancial enterprises, commercial banks, the survey of the Central Securities Depository of Lithuania, and the Ministry of Finance.

Financial derivatives

Data are obtained from the banking sector. Financial derivatives are off-balance sheet items: Amounts receivable are shown as off-balance sheet claims, and amounts payable are shown as off-balance sheet liabilities. Financial derivatives are accounted for when created or sold, or when underlying actions are affected. Purchase (sale) transactions are accounted for at market prices.

Other investment

Monetary authorities. The entries, derived from the records of BOL, cover changes at the BOL in inconvertible assets and liabilities.

General government. The Ministry of Finance provides data on drawings and repayments on loans received and/or guaranteed by the government.

Banks. Information is derived from commercial banks' quarterly surveys and balance sheets.

Other sectors. Data on trade credits and loans are derived from surveys of the financial and commercial activities of the enterprises.

Reserve assets

Data are derived from the balance sheet of the BOL. Data on reserve assets are disaggregated by instrument. The transactions data exclude exchange rate and price changes.

III. Specific Items: International Investment Position

The data sources on the international investment position (IIP) are the same as those used in compiling the balance of payments.

Luxembourg

I. General

Until December 31, 2001, information on external payments in Luxembourg was collected by the Institut belgo-luxembourgeois du change (IBLC), which compiled data mainly from credit institutions. These data served to prepare balance of payments statistics for the Belgian-Luxembourg Economic Union (BLEU). From January 1, 2002 onwards, with the beginning of Stage Three of the Economic and Monetary Union, the governments of Luxembourg and Belgium decided to terminate the activities of the IBLC and to establish separate balance of payments statements.

The legislation applicable to compiling data on international payments is, however, maintained and based on

three main regulations: the amended Grand-Ducal Decree of November 10, 1944 on exchange controls, the Grand-Ducal Execution Regulation of July 19, 1997 on foreign payments and balance of payments, and the Ministerial Decree of November 13, 1998 pertaining to IBLC publications.

In 2000, the Grand-Ducal Decree was amended with provisions giving a joint responsibility to the Banque centrale du Luxembourg (BCL) and to the national statistical agency, the Service Central de la Statistique et des Etudes économiques (STATEC), for compiling and disseminating balance of payments statistics. Henceforth, both institutions elaborated a common data collection system and devised a shared set of concepts, definitions, and compilation methods through a joint agreement.

The agreement provides that the BCL is responsible for establishing Luxembourg's financial accounts in the balance of payments and the international investment position, as well as for the estimates of the investment income. For its part, STATEC is responsible for establishing the current and the capital accounts (with the exception of the investment income item) and for running the survey on foreign direct investment positions. The BCL is in charge of managing the common database.

Balance of payments data are compiled using an international transactions reporting system (ITRS) of the open type, which is largely based on the collection of monthly settlement reports from banks and other financial institutions on payments to and from nonresidents on behalf of their customers and for their own account. Residents who make external transactions that are not settled through resident banking institutions are mandated to report these transactions either to the BCL (reporting agents belonging to the financial sector) or to STATEC (other sectors).

Administrative sources are used to complement the ITRS for current account transactions:

- data from the social security institutions for compensation of employees;
- official transactions to and from the European institutions; and
- insurance data from the supervisory authority for insurance companies.

II. Specific Items: Balance of Payments

Current Account

Goods

Trade statistics are adjusted and completed in order to meet *BPM5* recommendations. STATEC estimates missing data and adjusts import data to an f.o.b. basis.

Services

Travel

The main sources are surveys, other statistics, and administrative data. Personal expenditures on goods and services by nonresident cross-border workers are recorded under business travel.

Other services

Construction. These services are not broken down between construction abroad and construction in the compiling economy.

Insurance. Services are estimated by applying a ratio to gross premium. Remaining premiums and claims are recorded under current transfers/other sectors, except for life insurance (financial account).

Financial. Services are based on bank settlement data and supplemented with monthly estimates for commissions and administrative fees imputed on transactions with nonresident investors in relation to their holdings in resident collective investment institutions.

Income

Compensation of employees

Social security data are the main source to compile this item on a gross basis.

Investment income

Direct investment. The annual survey of foreign direct investment is used to estimate reinvested earnings.

Portfolio investment. Monthly benchmark yields, broken down by country and instrument, are applied to detailed stock positions. In addition, the transactions of resident collective investment institutions undergo the following treatment: on the liability side, all income on foreign as well on domestic instruments is assigned to the investors, regardless if it is distributed or not.

Current transfers

General government data are mainly based on administrative sources.

Capital Account

Data are collected as part of the data collection system. For public transfers, extensive use is made of administrative sources.

Financial Account

Direct investment

Direct investment flows are collected through the data collection system. Transactions on equity capital made without any settlement are registered directly using

data from official publications, specialized media information, and stock exchange data.

Portfolio investment

Data on portfolio transactions are collected through the data collection system. For the bank sector, flows are derived from the assets and liabilities statements, while for the general government sector, data are obtained from the Treasury administration of the Ministry of Finance.

Financial derivatives

The data are taken from the data collection system, where ad hoc transaction codes are identified in order to isolate those components.

Other investment

Trade credits

Estimates for trade credits are based on a specific survey of a representative sample of enterprises. Trade credits between related enterprises are also identified.

Loans

The data collection system provides data to the different institutional sectors. Loans to the IMF are estimated on the basis of the balance sheet statistics of the BCL as reported by the Accounting Department.

Currency and deposits

The data collection system provides data to the different institutional sectors. Currency and deposits for the IMF sector are estimated on the basis of the balance sheet statistics.

Reserve assets

Transactions are obtained from the BCL's Accounting Department and are cross-checked with data reported in the template on international reserves and foreign currency liquidity.

III. Specific Items: International Investment Position

Luxembourg will produce its first international investment position statement in September 2003 based on end-2002. A fully updated methodology and processing system is under development and will become fully operational in 2003.

Macedonia, FYR

The following text was confirmed as current in 2004.

I. General

The National Bank of the Republic of Macedonia (NBRM) is the institution responsible for compiling the Republic of Macedonia's balance of payments in accordance with the Law of National Bank. The main data sources used for compiling the balance of payments are (1) the single administrative documents (SAD) for foreign trade, (2) the international transactions reporting system (ITRS), which is compiled by the NBRM and records all transactions settled through the banking system, (3) the external debt reporting system, (4) the records of the deposit money banks, and (5) the NBRM's reports on stocks and flows of foreign reserve assets.

Balance of payments data are prepared on a monthly basis and are published in the NBRM's *Quarterly Bulletin* and *Annual Report*. In general, the balance of payments statistics of Macedonia are compiled in conformity with the methodology set out in *BPM5*. Data are compiled in U.S. dollars. Transactions denominated in other currencies are converted into U.S. dollar equivalents at the rates prevailing at the time of the transactions to the extent possible.

A partial international investment position statement is produced on an annual basis. Where such data are available, they are sourced mainly from the reports used for balance of payments compilation. Data for direct and portfolio investment are not included, because there are no reliable data sources for these areas.

II. Specific Items: Balance of Payments

Current Account

Goods

Goods are compiled from the SAD, collected by the Customs Administration of the Republic of Macedonia, and processed on an f.o.b. basis for exports and a c.i.f. basis for imports by the State Statistical Office of the Republic of Macedonia. Coverage adjustments are made for goods returned and goods for repair. From 1998 onward, the c.i.f./f.o.b. factor is calculated following established methodology based on the SAD data on freight and insurance of appropriate goods with a destination in Macedonia and applied to overall imports.

Services

Transportation

Data on transportation are obtained from the ITRS, which allows disaggregation by type of transportation (air, sea, rail, and road) and by category of services (freight, passenger, and other). An adjustment is made to freight debits based on the c.i.f./f.o.b. factor, and an adjustment is made to freight credits based on the difference between the statistical and the invoice value of exports.

Travel

The source of the data is the ITRS.

Other services

The components of this item (telecommunication services, construction, insurance and reinsurance, lease of equipment, and financial, other business, and government services) are compiled from the ITRS data. An adjustment to insurance service debits for the insurance on goods transported is made based on the c.i.f./f.o.b. factor.

Income

Investment income

Direct investment. The data include receipts and payments of dividends derived from the ITRS. Data on reinvested earnings are not included.

Other investment. The data include interest paid and received on deposits; short-, medium-, and long-term loans; and credits. Interest received comprises inflows of interest on foreign currency deposits (foreign exchange reserves and the foreign exchange assets of the banks). The data sources are the ITRS and the NBRM's reports on the foreign reserve assets. Interest paid refers to the due current liabilities on disbursed medium- and long-term foreign loans and credits. The data are obtained from external debt reports (compiled within the NBRM).

Current transfers

Official transfers data are sourced from the ITRS (financial assets) and the SAD (transfers in kind). The data source for private transfers is the ITRS. According to *BPM5*, cash currency exchanged in the foreign exchange market should be classified to the financial account. However, the major part of these assets originates from residents' receipts from nonresidents in payment for goods and services (unrecorded transactions) and transfers received in cash foreign currency. Thus, an adjustment is made to include these transfers.

Capital Account

Capital transfers

The data source is the ITRS.

Financial Account

Direct investment

The sources of data are the ITRS for investment in the form of financial assets and the SAD for investment in the form of goods. Reinvested earnings are not included. Trade credits between affiliated entities are not recorded separately and are included in the *Other Investment* category of the balance of payments.

Portfolio investment

The data source for portfolio investment is the ITRS.

Other investment

Trade credits

Estimates of trade credit assets are derived, using information from customs records and foreign exchange settlements, as the difference between the invoice value of exports/imports (derived from the SAD) and the corresponding settlements (from the ITRS).

Loans

Disbursements and amortization of medium- and long-term loans and credits are recorded. Principal and interest arrears are also recorded (shown as a shift from long-term loans to other liabilities, short-term). Data are based on the reports of medium- and long-term public and private external debt that are compiled by the NBRM.

Currency and deposits

The data refer primarily to changes in the commercial banks' foreign exchange assets and liabilities. The data sources are the monthly bookkeeping reports of the deposit money banks and the ITRS. Transactions in foreign exchange assets and foreign exchange liabilities of the banks are estimated excluding valuation changes. Transactions in foreign exchange assets of individuals include net cash deposited in foreign exchange accounts with the banks, reduced for the imports of goods by the individuals. The source of data for net cash deposited in foreign exchange accounts with the banks is the ITRS and for imports is the SAD.

Reserve assets

Transactions in reserve assets are derived from the NBRM reports on the stock of reserve assets and are obtained as differences in the amounts outstanding, adjusted for valuation changes.

III. Specific Items: International Investment Position

Other investment

Data on other investment assets and liabilities are obtained from the NBRM reports on medium- and long-term public and private external debt and the bookkeeping reports of the deposit money banks. Stocks of trade credit assets and liabilities are not included.

Reserve assets

The data are obtained from the NBRM report on the stock of foreign reserve assets.

Malawi

I. General

The Statistics Act (December 1967) assigns to the National Statistical Office (NSO) the primary responsibility for collecting, processing, and disseminating balance of payments statistics.

Since the primary data sources (surveys and/or ITRS reports) are not sufficient and not fully dependable to compile balance of payments statistics, they are complemented with information from secondary data sources, such as foreign trade statistics obtained from the Malawi Revenue Authority (MRA), monetary movements relating to government transactions from the Reserve Bank of Malawi (RBM), and transactions on external debt and grants in cash and kind from the Ministry of Finance (MOF), among others. A new Private Capital Survey (PCF Survey) has been launched in 2003 to fill the gap for balance of payments statistics compilation purposes.

Balance of payments data are prepared on an annual basis. The NSO publishes balance of payments statistics in its Statistical Yearbook through one official summary table, accompanied by tables with data on foreign trade. The RBM and the Ministry of Economic Planning and Development (MEPD) also publish annual balance of payments statistics data. The publications of the RBM and the MEPD include a summary table of the balance of payments and an analytical segment in the main text. A succinct quarterly balance of payments presentation (excluding current account balance) is encompassed in the last quarterly bulletin of the RBM. The classification of accounts in the national presentation of the balance of payments is based on the framework of the *Balance of Payments Manual* (4th edition). Progress has been made in the transition to the methodology of *BPM5*. The NSO has prepared a preliminary balance of payments statement in broad compliance with the classification/sectorization recommended by *BPM5* for the period 1994–2002 and plans to release these data in its annual publication at end-October 2003.

Balance of payments statistics are compiled in millions of Malawi kwacha. When the actual date of the transaction is not available, the annual average exchange rate is used. The exchange rate prevailing on the day of transaction is used for exports and imports, and daily exchange rates are used for the transactions obtained through the ITRS reports. Disbursements and debt service payments are converted into local currency using the currency exchange rate at the time of the transaction.

Transactions are valued at market prices when they are available. Services are valued at the price paid for the services provided. Goods are valued on an f.o.b. basis. Goods for processing may not always be at market

prices, as recommended by *BPM5*, but based on inter-company use of transfer prices.

II. Specific Items: Balance of Payments

Current Account

Goods

The primary data source is the foreign trade statistics prepared by the NSO's Foreign Trade Section on the basis of data on import and export declarations for goods received from the Malawi Revenue Authority (MRA). In the case of tobacco, which represents about 60 percent of total exports, the data are adjusted to include information on unrecorded exports (smuggling to neighboring countries) obtained by comparing the customs data with two other sources: (1) the tobacco production level provided by the Tobacco Control Commission (TCC), a government agency that regulates the market and conducts planter surveys; and (2) tobacco sales in Malawi provided by the Auction Holdings Limited (AHL), the sole auction company. Volume adjustments for other main exports, such as tea, coffee, and sugar, are made when major differences are detected by obtaining data from large exporters of these products.

Exports are captured on an f.o.b. basis, whereas imports are captured on a c.i.f. basis. A study of Malawi's imports was carried out in 1999 to determine an adjustment factor to use for converting imports from a c.i.f. basis to an f.o.b. basis; it established a ratio at 15 percent, which is currently being used in the adjustment process.

Services

Transportation

The main subcomponents of transport are passenger, freight, and landing fees. Credits on passenger and freight transportation relate mostly to air transport, collected from the sole domestic airline operator, Air Malawi. Debits are derived from the adjustment of imports c.i.f. to f.o.b. by applying a 15 percent fixed factor for freight and insurance, which is fully attributed to air freight. In the medium term, the 15 percent will be split between freight and insurance so that the latter can be classified under insurance services in accordance with *BPM5*. Statistics on landing fees are obtained from the Civil Aviation Department for the credit side, and from Air Malawi for the debit side.

Travel

Data on travel debits are obtained from the exchange control records through forms that are completed for purchases and sales of foreign currency from authorized dealers. Credits are compiled on the basis of exit cards completed by tourists returning abroad to their

original economies. The data tend to underestimate credits on travel.

Other services

The debit data on other services are compiled from exchange control records. The data cover insurance (non-merchandise), royalties and licence fees, operational leasing services, miscellaneous business, professional and technical services, and personal, cultural, and recreational services.

Income

Compensation of employees

Plans are under way to obtain data on compensation of employees from the Ministry of External Affairs, foreign embassies, and international organizations in Malawi.

Investment income

Debit entries for income on debt comprise interest paid on external debt by the private sector, statutory bodies, central government, and the central bank, while credit entries relate to interest receipts for the central bank, private sector, selected institutions, and statutory bodies. Debit entries for income on equity represent dividends and profits remitted to foreign shareholders. In the medium term, estimates will be compiled using a revised exchange control methodology, consistent with *BPM5* classifications, and will distinguish between income from direct investment, portfolio investment, and other investment. In addition, the new PCF survey will provide a good source of information on reinvested earnings for 2000 and 2001.

Current transfers

Credit entries for current transfers comprise mostly aid in cash and kind received by the central government. Transfers to general government have not yet been split into current and capital, and all transfers are classified under current transfers. Debit entries comprise contributions to international agencies, gratuities, director's fees, and other transfers, captured through the exchange control records.

Capital Account

Data on capital account items are not yet compiled. There are plans to compile data on debt forgiveness using data on the HIPC debt relief.

Financial Account

Direct investment

The main source of data on direct investment is the RBM, based on approvals of investment in Malawi. The 2003 PCF survey is intended to fill a significant gap in

information available for compiling these data, such as transactions from direct investment enterprises, including profits reinvested and distributed.

Other investment

The data cover external loan disbursements to the central government and other public enterprises for government-guaranteed external debt. The data are compiled by the MOF's Debt and Aid Management Division, in conjunction with the RBM's External Debt Section. Also included are data on debt reimbursements captured by the monetary authority. The 2003 PCF survey is expected to provide data on the private external debt of nonfinancial private sector enterprises.

Reserve assets

The data, provided by the RBM, include net reserve assets of the monetary authorities along with net foreign assets of commercial banks and the treasury balance with Crown Agents. The data include exchange rate variations.

III. Specific Items: International Investment Position

Malawi does not yet compile an international investment position (IIP) statement. However, the 2001 survey on foreign private investment, capturing private sector outstanding stocks for 1999 and 2000, has provided a suitable starting point for compiling the country's first IIP; the data are consistent with the *BPM5* classification categories of direct investment (abroad and in Malawi), portfolio investment (by instrument and sector, namely, banks and other sectors), and other investment (trade credits for other sectors and long- and short-term loans by sector for banks and other sectors). This survey was conducted for the second time in 2003, covering the years 2000 and 2001. The data obtained from (1) this 2003 survey, (2) the implementation of the revised exchange control methodology for the transactions component, and (3) the requests to general government and the monetary authorities for data on other specific transactions are expected to facilitate the compilation of the first IIP for Malawi within the next two years.

Malaysia

I. General

The Department of Statistics, Malaysia (DSM) is responsible for the compilation of the balance of payments for Malaysia. The DSM obtains data for the bal-

ance of payments estimates from various sources, including Bank Negara Malaysia (BNM), government ministries and other government agencies, other administrative sources, and the quarterly survey covering limited companies in Malaysia with significant external transactions (conducted by DSM). Data are prepared both on a quarterly and annual basis; they are published in the DSM's *Balance of Payments Report* and in the BNM's *Quarterly Economic Bulletin*. The DSM reports the data published in the *Balance of Payments Report* to the Fund. Balance of payments estimates are compiled in millions of ringgit and are, as closely as possible, in accordance with the international standards recommended in the *BPM5* since 1999). The *BPM5* concept of residency is followed.

II. Specific Items: Balance of Payments

Current Account

Goods

The DSM compiles data on trade in goods based on export and import declarations submitted by the Department of Royal Customs and Excise. Goods exported and imported are valued on an f.o.b. and c.i.f. basis respectively. For imports, foreign currency values are converted to ringgit at the prevailing exchange rates provided by BNM to Customs. The customs data record the physical movement of goods across the Malaysian customs boundary but are adjusted in respect of coverage, valuation, and timing for balance of payments purposes. These adjustments include the exclusion of returned goods and personal effects of travelers, and the inclusion of exports of water. Adjustments are also made to imports to exclude imports of secondhand vehicles for personal use and to include imports of military goods, commercial ships, and aircraft. In addition, a classification adjustment is made to imports valued on a c.i.f. basis to exclude the cost of freight and insurance.

Services

Transportation

This category covers freight and passenger services by all modes of transport and port services. Entries for transportation services are derived from information provided by airport and seaport authorities, and annual surveys of Malaysian airline and shipping companies and foreign airline companies in Malaysia. Entries for freight and insurance debits are estimated on the basis of the import value, and these expenses are estimated at between 5 to 8 percent of the value of imports c.i.f. Freight and insurance estimates are further supplemented with information derived from other relevant agencies.

Travel

Entries for travel credits are derived from expenditure surveys of foreign visitors carried out by the Malaysia Tourism Promotion Board. Estimates are compiled by combining the number of foreign visitors with estimates of average expenditures. Entries for travel debits are derived from the BNM's records, supplemented with information provided by the Pilgrimage Fund Board and other ministries and agencies.

Other services

Entries for other services follow the classification in *BPM5* and include *communications, construction, insurance, financial, computer and information, royalties and licence fees, and other business services*. The data are derived from the BNM's records.

Government, n.i.e. Data are derived from information provided by relevant ministries and international organizations based in Malaysia. The credit entries include services under aid programs, and expenditures of foreign diplomatic missions and international organizations in Malaysia. The debit entries cover the expenditures abroad of Malaysian diplomatic personnel, diplomatic and trade missions, statutory bodies, and Malaysian students' departments.

Income

Compensation of employees

The data are derived from the BNM's records.

Investment income

Direct investment. Data on direct investment income are derived from the Quarterly Survey of International Investment and Services, which covers Malaysian companies with external transactions.

Portfolio and other investment. The data on portfolio and other investment income are derived from a quarterly survey, as well as the BNM's records and information obtained from the Ministry of Finance.

Current transfers

General government

Data are derived from information provided by various government agencies, as well as the BNM's foreign exchange records. The entries include grants in cash and in kind received for defense, development, and training of personnel. Payments of pensions and contributions to the administrative budgets of international organizations are included as well.

Other sectors

The data are derived from the foreign exchange records of the BNM and information provided by the Post Office. The credit entries indistinguishably include workers' remittances and also include migrants' transfers.

Capital Account

Capital transfers

Migrants' transfers. Estimates for migrants' transfers are included under current transfers.

Financial Account

Direct investment

Direct investment in Malaysia. The DSM collects data through the Quarterly Survey of International Investment and Services, covering Malaysian companies with external transactions. The survey, designed in accordance with *BPM5* guidelines, collects information on assets, liabilities, and reinvested earnings.

Portfolio investment

The data on portfolio investment are derived from the quarterly survey, as well as from the records of the BNM and the Ministry of Finance. The data also include financial derivatives.

Other investment

The data on other investment are derived from the quarterly survey, as well as from the records of the BNM and the Ministry of Finance.

General government. The entries include capital subscriptions to international institutions and international commodity agreements, as well as the foreign assets of federal and state governments and statutory bodies.

Monetary authorities. The data are derived from the BNM's records. The entries for liabilities of the monetary authorities cover changes in the accounts held by foreign official agencies.

Banks. The entries cover changes in the foreign assets and liabilities of commercial banks and are derived from a quarterly survey.

Other sectors. The data are derived from a quarterly survey.

Reserve assets

The data are derived from the BNM's records. The entries for foreign exchange reflect changes in the monetary gold and foreign exchange holdings of the BNM. These changes are estimated as differences in amounts outstanding and, therefore, include valuation changes.

III. Specific Items: International Investment Position

The stock positions of external assets and liabilities compiled in the IIP estimates are consistent with the standard components recommended in the *BPM5*. The descrip-

tion of data sources and methodology is similar to that applied in compiling the financial account of the balance of payments, where the main data source is the Quarterly Survey of International Investment and Services.

Maldives

The following text was confirmed as current in 2004.

I. General

The agency responsible for compiling the balance of payments statistics is the Economic Research and Statistics Division (ERSD) of the Maldives Monetary Authority (MMA). ERSD obtains primary data from various sources including the Ministry of Finance and Treasury (MOFT), Ministry of Tourism (MOT), Maldives Customs Service (MCS), other government agencies, commercial banks operating in the country, and other administrative sources. In addition, it conducts its own surveys for services, and for income and financial flows relating to direct investment.

Data on international trade, overall balance (as denoted by monetary movements), and reserve assets are reported on a monthly basis. All other data are compiled on an annual basis.

Data are compiled in U.S. dollars; transactions denominated in other currencies are converted to U.S. dollar equivalents. The exchange rate prevailing at the end of the reporting period is used for converting stock values, and the average for the period exchange rate is used for flows.

The classification of the balance of payments accounts used in the Maldives follows the presentation format of the *BPM5*; however, more work is being undertaken to improve the coverage and classification of data to fully fit into this format. Where there are major gaps in the statistics, estimates are made at an aggregate level, using available reliable information.

II. Specific Items: Balance of Payments

Current Account

Goods

General merchandise. ERSD compiles the data on the basis of export and import declarations submitted by MCS. Goods exported and imported are valued on an f.o.b. and c.i.f. basis respectively. Imports f.o.b. are estimated by applying a 12 percent reduction to imports

c.i.f. This 12 percent estimate is the result of a random survey of customs invoices. Adjustments for coverage are made to MCS data, where applicable.

Goods procured in ports by carriers. Data on goods procured in Maldivian ports (aviation fuel) by foreign carriers are obtained from Maldives Airports Company Ltd. (MACL).

Services

Transportation

This category covers transportation of passengers, freight, and other items. Data on passenger services and on port services are obtained from MACL, Maldives Port Authority, and Maldives National Shipping Limited (MNSL). Information on freight related to imports is derived from customs declarations, assuming (based on a survey of customs records) that 10.8 percent of imports c.i.f. is freight. Freight is reported on an aggregate basis, because data on air and sea freight are not available separately. At present, freight is reported on an aggregated basis.

Travel

Travel credits (receipts) are estimates by MMA based on data obtained from MOT regarding tourist arrivals, tourist bednights, and room rates in resorts and hotels. Estimates are adjusted for seasonality. Travel receipts are calculated in three parts: receipts by tour operators, purchases at resorts, and expenditure outside of resorts. Receipts by tour operators are calculated by multiplying bed nights by an estimated average daily expenditure. The other two items are aimed at covering the cost of incidentals, souvenirs, and similar—that is, any expenditure other than what is spent on the tour package. Purchases at resorts are calculated on the basis of a per diem estimate, while estimates of expenditure outside of resorts are based on numbers of arrivals.

Estimates of travel debits are obtained from various sources. Business travel covers expenditures relating to government travel and travel for tourism fairs, data for which are obtained from the foreign exchange records maintained by MMA and the MOT, respectively. For personal travel, the health-related expenditure component is also obtained from the foreign exchange records of MMA and includes social security releases made for medical treatment. Estimates of expenditure on education-related travel are obtained from the Ministry of Employment and Labor (MEL), which provides information on expenses associated with scholarships under the Education and Training project. The estimates for other travel are derived as the sum of total expenditure on hajj travel (obtained from hajj tour organizers and relevant government authorities) and the residual between the estimate of

total expenditures by Maldivian travelers and travel under the other categories.

Other services

Insurance. Insurance on imports is estimated as 1.2 percent of total imports c.i.f.

Royalties and license fees. Information on royalties and license fees is obtained from the fiscal statements on non-tax revenues.

Other business services. Other business services include commissions, management and agency fees, consultancy fees, etc. Data on these services are currently obtained from the MOFT, MEL, and the foreign exchange records of MMA.

Government, n.i.e. Credit entries for government services n.i.e. cover data obtained from foreign embassies and international institutions on their spending in the Maldives. These data were obtained from a past survey of foreign embassies and institutions, and estimates have been made since then on the basis of the original results of the survey. The debit entries cover remittances to Maldives diplomatic missions abroad and contributions made to international organizations, derived from the foreign exchange records of MMA.

Income

Compensation of employees

This category covers the compensation received by Maldivian workers on foreign vessels, and vice versa. Data are currently obtained from the Ministry of Transport and Civil Aviation and MNSL.

Investment income

Coverage of the data on investment income is incomplete, because accurate data on private sector activities are not available at present. Information on income from and on account of government investments and debt is obtained from the MMA's foreign exchange statement, and estimates are made for private sector transactions.

Current transfers

At present, all transfers are recorded as current transfers.

General government

This component includes cash grants, project aid, grants in kind, and other grants. Data are obtained from the Department of External Resources. Also included are data on transfers made to nongovernmental organizations.

Other sectors

Estimates of workers' remittances are prepared on the basis of the number of workers in various categories of employment and the average salaries for each category. Data are obtained from MEL.

Financial Account

Direct investment

Data on foreign direct investment equity capital inflows are inadequate. Current estimates of investment are based on information obtained from various government ministries including the Foreign Investment Services Bureau of the Ministry of Trade and Industries.

Other investment

Data on general government external debt are obtained from the Financial Institutions and Debt Management Section (FIDMS) of the MOFT and reflect medium- and long-term borrowings and repayments. Data on commercial banks' transactions are obtained from these banks. Banking records are used to estimate the net flows of private capital.

Reserve assets

These comprise changes in the foreign assets of MMA; they are obtained from the MMA balance sheet.

III. Specific Items: International Investment Position

Data on the international investment position are incomplete, with data available only on public sector external debt stock and the assets and liabilities of the monetary authority and commercial banks. These data are obtained from FIDMS and the balance sheets of MMA and the commercial banks. Data on the external investment position of the private sector are not available.

Mali

The following text was confirmed as current in 2004.

I. General

The Central Bank of West African States (BCEAO) is responsible for compiling Mali's balance of payments statistics. Under the provisions governing financial relations with the rest of the world, the central bank is authorized to request any individual or legal entity to provide any information necessary for the compilation of the balance of payments. For validation, compiled data must be approved by Mali's Balance of Payments Committee, chaired by the Minister responsible for Finance. On Mali's behalf, the BCEAO provides the secretariat of the Balance of Payments Committee.

The central bank currently bases its data collection on surveys of economic transactors. It is testing a method of compiling data from settlements by banks, financial institutions, and the Office des Postes (postal service) with the rest of the world.

II. Specific Items: Balance of Payments

Current Account

Goods

In the goods account, exports are posted as credits and imports as debits. The central bank prepares estimates on the basis of the *Statistiques Douanières du Commerce Extérieur* (Customs Statistics on Foreign Trade), published annually by the National Directorate of Statistics and Data Processing (DNSI).

Exports are valued f.o.b. The central bank converts imports, valued c.i.f., to their f.o.b. value (see section on transportation services). Customs statistics cover the physical movement of goods crossing the Malian custom borders. For balance of payments purposes, exports are adjusted in terms of their coverage, valuation basis, and time of recording. These adjustments of special trade statistics make it possible to include, in the balance of payments, re-export and consumption operations arising from flows of goods in bond. They also make it possible to incorporate statistics on informal trade in the balance of payments.

Furthermore, valuation adjustments are made to the exports or imports data to correct the differences between official prices (posted value) and local market prices. Information obtained from economic operators provides the basis for these adjustments.

Valuation adjustments, like time-of-recording adjustments, are made to the official data on certain major products, not on all goods traded.

By reclassifying trade operations using the balance of payments approach, it is possible to separate some specific transactions from the goods account, such as supplies for ships, purchases by travelers for their own use, and direct subscriptions to journals and periodicals. These transactions, initially entered as official foreign trade statistics, are posted to the various headings of the balance of payments.

Services

Transportation

Credit entries for freight largely comprise the receipts of resident transportation companies. Data on railway freight are obtained from surveys of the railway authority—the Régie des Chemins de Fer du Mali (RCFM). Road freight, however, is estimated.

Debit entries for import freight by sea and road are obtained by applying a freight rate coefficient to imports c.i.f. determined through a survey carried out by the BCEAO. Data on railway freight are obtained from the company operating the Dakar-Niger line. Data on air freight are obtained from companies operating in the country. The rate of freight on imports has been 22–26 percent for the last five years. Data on passenger services are collected from national and foreign airlines.

Travel

The amounts posted as credits to this account are determined from the results of surveys of the Tourism Commissioner's Office and of hotels concerning arrivals of foreign tourists and hotel occupancy. The debits posted are mainly expenditure by non-Malian residents on leave. This expenditure is estimated on the basis of the income of expatriates working in the private sector, compensation of technical assistance personnel and non-Malian permanent staff in international organizations, as well as the length of leave of these groups of persons. However, the figures pertaining to government missions are sourced from the National Directorate of the Treasury and Public Accounting. Expenditure by Malian students abroad is estimated from scholarships. Data on these scholarships, whether foreign or granted by the Malian government, are basically collected from the Ministry of Higher Secondary Education and Scientific Research.

Other services

Insurance. Credits under this heading include reinsurance claims paid to national insurance companies. Amounts posted as debits correspond to reinsurance premiums paid by these companies. The insurance companies provide information on this item. Insurance on imports is calculated as a ratio of 1 percent applied on the c.i.f. value of imports.

Financial. Data are taken from annual surveys of nonfinancial enterprises by the BCEAO.

Other business. Data are taken from surveys of nonfinancial enterprises and financial institutions carried out by the BCEAO.

Government, n.i.e. Credit entries refer to the value of goods and services acquired in Mali by foreign embassies and governments and by international organizations based in Mali, as obtained through the annual surveys by the BCEAO. Data are compiled mainly on the basis of surveys on Mali conducted by the BCEAO in these institutions.

Amounts posted as debits refer to expenditure by the Malian government abroad. The National Directorate of the Treasury and Public Accounting reports these data. Debits also include income earned in Mali by foreign embassies and governments.

Income

Compensation of employees

Credits are estimates of the wages paid by nonresident entities to residents. Conversely, debits pertain to compensation of nonresidents by residents. Data are obtained from a survey carried out by the BCEAO.

Investment income

Direct investment. Data on direct investment income come from annual surveys of enterprises by the BCEAO regarding their industrial and commercial profits. Debits refer to the transactions of subsidiaries and branches of foreign companies established in Mali.

Portfolio investment. Investment flows posted to this item pertain to transactions of national companies. Data are also compiled from the annual survey of enterprises by the BCEAO.

Other investment. This investment comprises mainly interest due on the external public debt. Data on this income come from the government flow-of-funds table. Data on other sector income are from the BCEAO survey.

Current transfers

General government

Data on financial public foreign aid are drawn from the government flow-of-funds while those on nonfinancial aid come from the DNCC, the declarations of relevant foreign embassies, the UNDP, and the FED. Debit flows pertain to technical assistance costs defrayed by Mali and Mali's contributions to international organizations. These categories of data are drawn from the government flow-of-funds table.

Other sectors

Debits are estimates of remittances by non-Malian resident workers.

Credits are remittances by Malian expatriates and other gifts received by Malian residents. Workers remittances are estimated from inflows of foreign banknotes and other information collected from the banking sector. The gifts include mainly foreign scholarships to Malian students, veteran's pensions paid by France, and transfers between private individuals. These figures are compiled mainly from embassies, international organizations, and nongovernmental organizations.

Capital Account

Capital transfers

Data on capital transfers come from the relevant government administrations (general government) and from a BCEAO survey (other sectors).

Financial Account

Direct investment

The BCEAO collects data through annual enterprise surveys. For this survey, foreign-controlled enterprises are taken to be those in which at least 50 percent of the capital is held by nonresidents.

This item also contains the amount of undistributed profits of direct investment companies, recorded as investment income.

Portfolio investment

Data on portfolio investment are taken from the annual enterprise survey.

Other investment

Assets and liabilities

General government. The government flow-of-funds table is the main source of data on general government assets. Figures for public debt repayment and rescheduling come from the Directorate General of Public Debt.

Monetary authorities. These data pertain to changes in BCEAO assets and liabilities.

Banks. Data pertain to changes in the foreign assets and liabilities of commercial banks and postal debts and claims of the Office National des Postes (ONP).

Reserve assets

Data are derived from BCEAO accounting statements.

Malta

The following text was confirmed as current in 2004.

I. General

The National Statistics Office (NSO) is responsible for compiling the balance of payments statistics. The three main sources of information are trade statistics (compiled by the NSO), banking data compiled by the Central Bank of Malta (CBM), and extensive quarterly surveys covering major sources of foreign transactions. These comprise general companies, domestic airlines and shipping lines, shipping agencies, airline agencies, insurance agencies, and ship repairers/builders.

BOP statistics are published in detail in the annual *Balance of Payments* publication. Quarterly summary statistics are also published in the NSO news release, *Malta's Economic Indicators*, the *Economic Survey*, and the *Quarterly Review* of the CBM.

In March 2000, the NSO started disseminating an analytical presentation of the balance of payments statistics fully in line with the recommendations of *BPM5*. Data have been revised back to 1995; therefore, figures are not fully comparable to those pertaining to previous years.

II. Specific Items: Balance of Payments

Current Account

Goods

General merchandise. The main source of data is the trade statistics, which the NSO compiles from data received from the Customs department. Adjustments for coverage are made from the detailed breakdown of the compiled list and from ad hoc letters requesting data not captured by Customs. Ship repair and shipbuilding in progress by local shipyards are also included with the exports (and then adjusted when the actual export is made).

Repairs on goods. These data are derived from the quarterly questionnaire.

Goods procured in ports by carriers. Exports are extracted from trade statistics, whereas the expenses made abroad are obtained from the quarterly questionnaire to resident shipping and airline companies.

Nonmonetary gold. Data are extracted from trade statistics. A further breakdown is not available.

Services

Transportation

The source for passenger transportation, separated by mode of transport, is the quarterly survey of airline and shipping companies. Data on revenue from freight are derived from the same survey. However, for freight payments, where shipment data (insurance and freight) are not available separately, an estimate of 10 percent of the value of imports (c.i.f.) is made. Of this estimate, 90 percent is allocated to freight and the remainder to the insurance payments item (which is included in the current transfers account). A statistical adjustment is made for freight on imports carried by domestic carriers.

Other transportation services are obtained from the balance of payments quarterly enterprise survey together with specific data requests sent to entities such as the Malta International Airport, Malta Air Traffic Services, and the Malta Maritime Authority.

Travel

Gross earnings from tourism and gross expenditure by residents traveling abroad are derived from foreign currency transactions that banking institutions and other authorized dealers report to the CBM on a monthly basis. A joint review undertaken by the NSO and the

CBM in 1989 revealed that there was a significant and persistent under-recording of tourism-related foreign exchange transactions reported through the local banks. Foreign consultants carried out a study to identify the extent of the underreporting. Following recommendations made by these consultants, it was decided to increase the figures as provided by the banks by a mark-up of 15 percent.

Other services

Communications. This information is obtained through quarterly questionnaires.

Insurance. Separate data on premiums received and claims paid out are obtained through a quarterly questionnaire to all insurance agencies. The insurance service charge is worked out based on the information provided.

Other business services. Beginning with 1994 data, further breakdowns of these services are being requested through the annual surveys so as to cover, as much as possible, the details requested in *BPM5*.

Government, n.i.e. Information on diplomatic and other government expenditure abroad and official receipts from abroad is supplied by the CBM.

Income

Compensation of employees

This information is partly supplied by the CBM, while the rest is obtained through the quarterly questionnaires.

Investment income

Reinvested earnings, dividends, and interest relating to the private sector are obtained from the quarterly surveys. The Treasury Department supplies information on interest paid on foreign loans taken by the government. The CBM provides information on interest receipts and payments by the banking sector, as well as information on property income.

Current transfers

Following the adoption of the methodology recommended in *BPM5*, emigrants' capital repatriation and debt forgiveness, previously recorded here, are now recorded in the Capital Account.

General government

The CBM supplies data on official transfers.

Other sectors

The CBM provides information for personal remittances, pensions, and other transfers. Other sources are the quarterly surveys, mainly for non-life insurance premiums and claims.

Capital Account

As from 1995, current and capital transfers have been separated. Emigrants' capital transfers and debt forgiveness, as well as grants received by the government, are recorded here.

Financial Account

Direct investment

The quarterly questionnaire furnishes information on equity capital, reinvested earnings, and other capital of the private sector. The CBM forwards information on the banking sector. Acquisition of immovable property in Malta is also included under direct investment, with data obtained from the Inland Revenue Department.

Portfolio investment

The quarterly questionnaire furnishes the information. The CBM forwards information relating to the banking sector.

Other investment

Quarterly questionnaires provide the information. The CBM forwards information relating to the banking sector.

Reserve assets

The CBM is the source of total official external reserves, which are then netted of valuation changes.

III. Specific Items: International Investment Position

The international investment position is compiled annually to show positions at the end of the calendar year. However, not all financial account items for each sector are compiled. The following is a breakdown by sector of the financial account items that are compiled: (1) banking sector data are compiled for all financial account items including financial derivatives, which are compiled as from October 2003; (2) nonfinancial enterprise data (including those for public companies) are based on the top 700 companies and are compiled for all financial account items except for financial derivatives; (3) household data are restricted to the amount of borrowing/lending with nonresidents; (4) general government data are compiled from central government data (compiled for all financial account items with the exception of trade credits and debits) and extrabudgetary units, which are now being shown under government in line with *ESA95* methodology; and (5) reserve assets data are available. A direct reporting data collection system—introduced in 2004—requires that reporters provide more comprehensive international investment position data, including sepa-

rate information on financial derivatives, as well as price and exchange rate changes.

Direct investment

Banking sector data are compiled by instrument. The main sources of data are the money and banking statistical reports submitted to the Statistics Office of the CBM. There are no significant deviations from *BPM5*. The valuation criteria used for equity securities are market values, but book values are used for the equity of banks that are not listed on the Malta Stock Exchange (MSE). However, all other direct investment instruments such as intercompany loans are recorded at end-of-period exchange rates. A reconciliation exercise is carried out taking into account actual price movements in the equity of listed banks. Banks report revaluation values owing to exchange rate movements for all their financial accounts. An estimate is then made to allocate these values to the different financial accounts and the various financial instruments.

The direct investment stock of nonfinancial enterprises (including public companies) is compiled by instrument. Data are compiled from the quarterly balance of payments surveys submitted to the NSO.

Stocks of long-term financial instruments, except for loans from abroad, are derived from accumulated flows. Short-term instruments are compiled from real stock positions. Equity securities are valued at book values, but all other direct investment instruments are recorded on the basis of market values. A reconciliation exercise is carried out for the loans of the public entities. No data are available for the household sector.

Portfolio investment

Banking sector data are compiled by instrument. No maturity breakdown is available. Positions are available from the money and banking statistical reports submitted to the Statistics Office of the CBM. Trading securities are valued at the lower book value or market value, but investment securities are based on book value. As in the case of foreign direct investment, an estimate to apportion the total revaluation amount is made.

Stock positions for the nonfinancial enterprises (including public companies) are compiled by instrument. No maturity breakdown is available. Data are compiled from the quarterly balance of payments surveys submitted to NSO. The initial stock position is compiled in accordance with *BPM5*. However, subsequent stock data are based on accumulated flows. No reconciliation exercise is carried out for portfolio investment.

Government sector data are available by instrument, but there is no maturity breakdown. Stock positions are collected using the government's *Annual Financial Report* and from quarterly data requests to the MSE on government

securities held by nonresidents. Market valuation criteria are used, and the compilation of the government's positions is in line with the definitions of *BPM5*. A reconciliation exercise is carried out, taking price changes into consideration.

As from 1999, collective investment schemes are being included for the first time. The initial stock position is being taken as other adjustments to the 1999 end-position, since the exact transaction periods are not available.

Household sector data are obtained through an investment registration scheme launched by the government in 2002. This had not been previously available.

Financial derivatives

Data on financial derivatives are only available as from the last quarter of 2003.

Other investment

Banking sector data are compiled by instrument. No maturity breakdown is available. Positions are available from the money and banking statistical reports submitted to the Statistics Office of the CBM. Market valuation criteria are used. An estimate to apportion the total revaluation amount is made.

Stock positions for the nonfinancial enterprises (including public companies) are compiled by instrument. No maturity breakdown is available. Data for this sector are compiled from the quarterly balance of payments surveys submitted to NSO. The stock of long-term financial instruments, except for loans from abroad of public enterprises, is derived from accumulated flows. However, short-term assets and liabilities reflect real stock positions. A reconciliation exercise is carried out for the loans of the public sector enterprises.

General government sector data are compiled by instrument, with the exception of trade credits and debits, which are not available for the central government. Data for loans are available, but there are no maturity classifications. The Ministry of Finance and the CBM provide the data. Market valuation criteria are used, and a reconciliation exercise is carried out, taking exchange rate movements into consideration.

Household sector loans from nonresidents are compiled on a quarterly basis and are based on exchange control forms submitted to the CBM's Capital Flows Section. Data obtained through an investment registration scheme launched by the government in 2002 are another source for household sector information. This had not been previously available.

Reserve assets

The source of data is the CBM's Finance Office. A reconciliation is made for price and exchange rate movements.

Mauritius

The following text was confirmed as current in 2004.

I. General

The Bank of Mauritius (BOM) is responsible for the compilation of the balance of payments statistics for Mauritius. The main sources of information are the trade statistics published by the Central Statistical Office (CSO), surveys of enterprises relating to transportation services, and returns submitted by the Category 1 banks. Until July 1994, when the Exchange Control Act was suspended, the exchange control records from BOM were a major data source.

The statistics are compiled on a quarterly basis in millions of Mauritian rupees in accordance with the *BPM5* and are published in the BOM's *Monthly Statistical Bulletin* and *Annual Report* each year, although in a different format than that recommended in the *BPM5*. The CSO also publishes the official balance of payments statistics in its *Bi-Annual Digest of Statistics*. Where imports are reported in foreign currencies, these are converted to Mauritian rupees at the prevailing exchange rates supplied by BOM to Customs each week. Other transactions that are measured in foreign currencies are converted to Mauritian rupees at the prevailing market rates. Transactions with the rest of the world of the domestic financial institutions holding a global license are only partly covered in the balance of payments statistics.

II. Specific Items: Balance of Payments

Current Account

Goods

General merchandise. The main source of data is the trade returns, which are published by the Customs and Excise Department of the CSO. Goods exported are valued on an f.o.b. basis and goods imported on a c.i.f. basis. Imports are adjusted to an f.o.b. basis by excluding the freight and insurance components, which are then entered in the items *transportation, freight and insurance services*. Effective from January 2002, international trade statistics compiled by the CSO include imports and exports of the freeport zone.

Goods procured in ports by carriers. In accordance with *BPM5*, these are included as part of merchandise trade. Data on goods procured in Mauritian ports are obtained from the trade statistics published by the CSO, and data on goods procured abroad by Mauritian residents are obtained from a survey of airline and shipping companies (a quarterly survey since 1999; a half-yearly survey prior to that date).

Services

Transportation

The main data sources are the survey of airline and shipping companies (quarterly since 1999; half-yearly prior to then), and the CSO. Transportation credits measure receipts by domestic carriers from passenger fares, freight on exports and on shipments between other countries, and other port disbursements. Transportation debits measure payments made to nonresident carriers for passenger fares, freight on imports, and other port disbursements.

Travel

Travel credits are estimated from purchases by Category 1 banks of foreign exchange from tourists, business travelers, hotels, and traders. Travel debit estimates are derived from the banking records of Category 1 banks.

Other services

Data on other services are derived from the returns of the Category 1 banks and from the quarterly survey of airline and shipping companies.

Income

Investment income

Direct investment. Until July 1994, data were obtained from the exchange control records at BOM. After this date, data have been based on the returns submitted to BOM by the Category 1 banks. Information on reinvested earnings is not available.

Other investment. Debits cover interest payments and other charges on foreign loans of the government, parastatal bodies, and the private sector. Credits measure the interest receipts on foreign investments of the Category 1 banks and BOM. Data are derived from the records of these institutions.

Current transfers

Data on private current transfers are derived from banking records and information provided by the Post Office. For government current transfers, data are derived from the records of the Accountant General's Office of the Ministry of Finance (MOF).

Capital Account

Capital transfers

Migrants' transfers. Estimates are derived from banking records.

Financial Account

Direct investment

Data are derived from the returns of the Category 1 banks, and since July 2002, the data coverage has been extended to the Category 2 banks.

Portfolio investment

Data are obtained from the Stock Exchange of Mauritius, Category 1 banks, and other financial institutions.

Other investment

Data on drawings and repayments of loans on account of the government and parastatal bodies are obtained from MOF's Public Finance Unit. Data on the investment activities, in both assets and liabilities, of the Category 1 banks are derived from banking records. Transactions are estimated as the differences in amounts outstanding at the end and the beginning of each reporting period and therefore include valuation changes. Data on the investment activities of BOM are derived from BOM's records. Data for all other enterprises' other investment transactions are derived from banking records, supplemented by information provided by nonbank financial institutions.

Reserve assets

Data are derived from BOM's records. Effective from the first quarter of 2001, valuation changes are excluded from reserve asset transactions.

Mexico

The following text was confirmed as current in 2004.

I. General

The Bank of Mexico is responsible for compiling the balance of payments statistics. The central bank prepares the data on a quarterly basis, in U.S. dollars, and publishes the data on its website: www.banxico.org.mx.

Where methodological guidelines are concerned, Mexico is in transition between the *BPM4* and the *BPM5*. Some recommendations from the *BPM5* have been implemented. These include incorporating goods for processing into the goods account, grouping income items in a single section, and including the Bank of Mexico's liabilities with the International Monetary Fund under other investment. Major recommendations yet to be implemented include breaking down the services account into more detail and identifying and subdividing capital transfers.

The main sources of information for compiling the balance of payments statistics are the customs documents for goods trade; surveys for travel, other services, and direct investment income; official records for direct investment capital; and statistics concerning the public debt, provided by the Secretariat of Finance and Public Credit, and concerning the banking sector, compiled by the Bank of Mexico.

II. Specific Items: Balance of Payments

Current Account

Goods

The Bank of Mexico bases the data on customs declarations, subject to the appropriate adjustments. For example it replaces customs data on crude oil and salt exports with data obtained directly from the exporting companies, to meet the time-of-recording criteria. Customs records exports of some agricultural and fishery products at arbitrarily determined prices, because exporters do not know the future sale prices for their products when they clear customs. Accordingly, an adjustment is made to these items by applying international market prices to the known volumes. Finally, the customs data are adjusted to exclude merchandise for trade fairs, or expositions, and samples with no commercial value.

The central bank computes foreign trade statistics on an f.o.b. basis in terms of U.S. dollars. As recommended by the *BPM5*, the goods include exports and imports of goods for processing into Mexico and their subsequent re-export.

Services

Transportation

For passenger fares, the central bank estimates the entries from information provided by the resident airlines on their total earnings on international transportation. It supplements these estimates with information from migration statistics on the number of residents and nonresidents traveling by air and from travel surveys on expenditures on ticket purchases by travelers.

For other transportation services credits, the central bank obtains data directly from national transport companies (shipping lines, airlines, and railroads), as well as from Mexico's port and airport authorities, who charge foreign carriers for the services provided to them. For other transportation services debits, the central bank derives the entries from the survey of resident transportation companies.

For freight, the debit entries cover freight on imports. The central bank obtains information from customs documents.

Travel

The Bank of Mexico bases credit entries on the immigration authorities' reports on the number of nonresidents visiting Mexico and on its own sample surveys on travelers' average expenditure. It obtains the debit entries using a similar procedure.

Travel is broken down into tourists and excursionists (one-day visitors). Tourists are defined as those who have spent at least one night in the host country and as

those who, having not spent at least one night in the host country, have visited it beyond the border area; excursionists are defined as those who have not spent the night in the host country. No distinction is made between business and personal travel.

Other services

Communications. This item includes revenue and expenditure for services provided abroad and obtained from providers outside of Mexico. The central bank obtains the data from the telephone companies, the satellite company, and the Ministry of Communications and Transportation.

Insurance. The entries include receipts and payments on account of reinsurance transactions. The central bank obtains the data from the National Commission on Insurance and Sureties, which monitors these accounts monthly. The debit entries also include insurance premiums on imports. The data are derived from customs documents.

Other business. The central bank derives this item from the annual foreign direct investment survey. Part of this item is the residual information of all other revenues and payments received and paid abroad by the firms. PEMEX, the national oil company, provides information on its external revenues and expenditures related to the company's foreign trade.

Personal, cultural, and recreational. This item includes transactions related to exports and imports of movies, television series, and other kinds of television programming. The central bank obtains the data from the main film distributors in the country and from the two largest television networks.

Government, n.i.e. The credit entries are estimated as follows: The U.S. Embassy data on expenditure in Mexico are adjusted to account for the personal expenditures of the U.S. diplomatic staff. Expenditure by the other embassies is derived from the proportion of staff working at the U.S. Embassy to total embassy staff in Mexico (the latter data are obtained from the Ministry of Foreign Relations).

The debit entries cover expenditures by Mexican diplomatic missions abroad, provided by the Ministry of Foreign Relations. The entries also include data on operating and advertising expenditure by Mexico's tourism offices abroad, provided by the Ministry of Tourism.

Income

Compensation of employees

Starting with the data for 2000, this item is based on a new methodology. Once a year, the Bank of Mexico conducts a survey for an entire week at the main border crossing points with the United States. It applies this

survey to those persons entering Mexico who are workers in the U.S. with residence in Mexico. The survey asks respondents about number of working hours per day, number of working days per week, and after-tax wages, among other things. Also, the central bank takes a sample count to estimate the number of workers that enter Mexico every week.

Investment income

Direct investment. The Bank of Mexico obtains data through a survey of enterprises with foreign direct investment and includes reinvested earnings.

Other investment. The Bank of Mexico records interest income on an accrual basis, with the exception of public sector interest, which it records on a payments basis.

The credit entries cover interest earned by the Bank on its reserve assets, interest accrued on bonds acquired by the government and held as collateral under debt restructuring agreements, interest received by commercial banks, and interest received by the private nonfinancial sector.

The debit entries cover interest paid on loans and securities issued by the government and other public entities, the commercial banks, and the private nonfinancial sector.

The Secretariat of Public Credit provides data for the public sector. For commercial banks, the Bank of Mexico estimates interest by applying appropriate market rates to the stocks of foreign assets and liabilities shown in the banking statistics it compiles.

For the private nonfinancial sector, the central bank uses the same procedure, obtaining the relevant outstanding stocks, in the case of assets, from the external liabilities reported to the Bank for International Settlements (BIS) by foreign banks vis-à-vis Mexico and, in the case of liabilities, from the sources listed in the corresponding sections of portfolio investment and other investment.

Current transfers

Other sectors

The credit entries cover mainly workers' remittances by Mexican nationals resident in the United States to their families resident in Mexico. The central bank obtains the data from the enterprises that directly provide the fund transfer service. These enterprises are obliged by a decree to provide such information. See also note on compensation of employees.

Financial Account

Direct investment

The central bank draws data on direct investment in Mexico for the most recent periods from the regulatory authority for foreign direct investment. It obtains final

data from the financial statements that the direct investment enterprises are obliged to submit annually to the Ministry of Trade and Industrial Development. Foreign direct investment also includes, for both the more timely and the final figures, the imports of capital goods by processing enterprises with foreign ownership. Direct investment enterprises are defined as those having foreign equity participation of 10 percent or more.

Portfolio investment

This item can be broken down into three categories: The first comprises Mexican equity capital acquired by nonresidents, for which the Bank of Mexico obtains data from the National Commission on Banking and Securities. The data cover American depositary receipts (ADRs) and investments in Mexico by foreign investment funds. Shares are valued at their average price on the day of the transaction.

The second category comprises securities issued by residents and placed in foreign markets. For public sector securities the source of information is the Ministry of Finance and Public Credit. For commercial bank securities, another department in the Bank of Mexico reports the amounts outstanding for securities held by nonresidents. The central bank obtains data for nonbanking private sector securities through specialized news services that provide a continuous follow-up of Mexican securities placed in international markets.

The third category refers to securities, in Mexican pesos, issued and placed locally and purchased by nonresidents. The breakdown between residents and nonresidents is estimated from a survey of financial intermediaries that the Bank of Mexico conducts and is based on the nationality of the holder of the security.

Other investment

The entries for assets cover loans and deposits abroad by resident banks and the nonbanking sector. For the banks, the Bank of Mexico calculates entries as the changes in the stocks outstanding, as shown in the banking statistics it compiles. For the nonbanking sector, the entries include export financing provided by a special fund.

For the private nonbanking sector, the Bank of Mexico derives estimates of deposits abroad from the table "External Positions of Reporting Banks vis-à-vis Individual Countries: Liabilities" published by the BIS in its *International Banking and Financial Market Developments*.

The entries for liabilities cover loans received by the government, the rest of the public sector, the Bank of Mexico, commercial banks, and the private nonfinancial sector. They also include nonresident deposits in the banking sector. The Secretariat of Finance and Public Credit provides data for the public sector. For the bank-

ing sector the source is the banking statistics of the Bank of Mexico.

For the private nonfinancial sector there are two sources of data: (1) a survey conducted by the Bank of Mexico of foreign creditor banks on direct financing provided to Mexican enterprises and (2) the financial statements of direct investment enterprises, which provide information on suppliers' credits received by such enterprises (information is not available on trade credits received by other resident enterprises).

Reserve assets

The coverage of reserve assets corresponds to the item in the official Bank of Mexico balance of payments presentation denominated "net international reserves." This item is defined as the total amount of foreign assets of the Bank of Mexico, minus its foreign currency-denominated liabilities to residents with a maturity of less than six months. (These are mainly foreign exchange deposits of the federal government and Petróleos Mexicanos S.A.)

Because changes in such liabilities do not represent balance of payments transactions, the Bank of Mexico makes contra-entries to these changes in the financial account under other investment to avoid the creation of net errors and omissions. It derives the entries as changes in stocks outstanding and, therefore, includes changes resulting from currency revaluations.

III. Specific Items: International Investment Position

Sources of information on international investment position data are the same as those used for the balance of payments.

Moldova

The following text was confirmed as current in 2004.

I. General

The Balance of Payments Department (BPD) of the National Bank of Moldova (NBM) is responsible for compiling the balance of payments and international investment position statistics. These statistics do not cover the part of the Republic of Moldova that is called Transnistria. The main data sources are the Department of Statistics and Sociology (DSS) (for data on merchandise trade, services, and direct investment); the banking sector (i.e., the commercial banks, foreign exchange offices, and various de-

partments of the NBM); government ministries (e.g., the Ministry of Finance (MF), the Ministry of Economy, the Ministry of Education); various institutions, both public and private, for data on transportation, insurance, and travel; and surveys of international organizations.

These data are supplemented by data from an international transaction reporting system (ITRS). Under this system, two categories of respondents are obliged to report to NBM: (1) domestic banks that undertake international transactions both for their own accounts and on behalf of their clients and (2) resident enterprises that have opened foreign accounts outside the domestic banking system. For some balance of payments items, the data collected from primary sources are complemented by estimates.

The accrual basis of recording is employed in the balance of payments and international investment position, except for loans, which are recorded on a due-for-payment basis.

The balance of payments is compiled in U.S. dollars. Some transactions are converted from the original currency to U.S. dollars, using the exchange rates prevailing at the time of the transaction, and other transactions are converted using the average quarterly exchange rates for the reporting period. The stock of assets and liabilities in the international investment position is converted from original currencies to U.S. dollars using the exchange rates prevailing at the end of the reporting period.

The balance of payments and international investment position statements are compiled quarterly and annually in accordance with the *BPM5*. These statements, together with commentaries, analytical tables, and methodological notes, have been published regularly since 1994 in the *Quarterly Bulletin* of the NBM and are available on a quarterly basis on the website of the NBM (www.bnm.org). The annual balance of payments and international investment position of Moldova are issued as a separate NBM publication once a year.

Regional balance of payments of Moldova are produced for the Commonwealth of Independent States (CIS) and the rest of the world. Balance of payments statements are also produced for the main trade partner countries such as Belarus, Germany, Romania, Russia, and Ukraine.

II. Specific Items: Balance of Payments

Current Account

Goods

The NBM receives quarterly trade data from the DSS, which maintains a database of the customs trade declarations for exports and imports. Initially, the Customs

Department tabulates the declarations and transmits the data to the DSS. The BPD and the DSS adjust the data for transactions not recorded by the Customs Department. Such transactions are related mainly to imports of electricity, coal, gas, and other forms of energy, where the data are obtained directly from the enterprises that are the main importers of energy resources.

The NBM further adjusts the trade data in accordance with balance of payments methodology: (1) The c.i.f.-based imports data are converted to an f.o.b. basis. For imported goods, an estimate for freight is made in the range of 10 percent of the c.i.f. value of the imports for the CIS countries and of 6 percent for the other countries; and (2) estimates are made for exports and imports of goods undeclared to Customs by individuals. These estimates are based on customs declarations for imports and exports by individuals. The data on repairs of goods and goods procured in ports by carriers are obtained from the ITRS.

Services

Transportation

Besides the estimates made for transportation payments related to imported goods, referred to above, additional data are obtained from other sources. The main source is the ITRS. The Railways Office provides data on the use of railway services. The DSS provides data on transportation services, which are collected from companies that provide motor transport services.

Travel

Data on travel are compiled using information provided by the DSS, the banking system, institutions that provide travel and hotel services. Estimates of expenditures abroad by persons engaged in the export/import of goods, by business travelers, and by workers residing abroad for less than one year are also calculated. Estimates of students' travel expenditures are made from data provided by the Ministry of Education.

Other services

Communications. This comprises international telephone and surface mail services. Telecommunications companies and the Post Office of Moldova supply the figures.

Insurance. Data are provided by the DSS and also derived from the ITRS. Estimates are based on customs trade declarations for imports of goods.

Financial. Data are derived from the ITRS and from the records of various regulatory departments within the NBM.

Government, n.i.e. Credit entries for foreign diplomatic staff and for representatives of international organizations located in Moldova are obtained from the ITRS. Debit entries include data on expenditures of Moldovan

diplomatic missions abroad and are obtained from the MF and the Ministry of Foreign Affairs, as well as estimations of services imported under technical assistance programs by the government.

For other services, such as *consulting, construction, etc.*, data are obtained from the ITRS.

Income

Compensation of employees

Estimates for compensation of Moldovan employees working in foreign economies are derived from ITRS data on transfers from abroad. The latter are adjusted by taking into account domestic activities relating to real estate and consumer goods where unobserved foreign cash flows are revealed. Estimates of compensation of foreign employees working in Moldova are based on information from questionnaires completed by international organizations operating in Moldova and data of the State Migration Department on the number of foreign workers in Moldova under short-term contracts.

Investment income

Direct investment. Estimates of dividends and reinvested earnings are based on the results of quarterly inquiries to companies, except banks, carried out by the DSS; the NBM surveys the banking sector. Interest on loans and credits to subsidiaries from foreign direct investors is obtained from the Debt Management and Financial Analysis System (DMFAS).

Portfolio investment. Estimates for dividends are based on quarterly inquiries carried out by the DSS and the NBM. Income payments related to bonds and notes and money market instruments come from the DMFAS.

Other investment. Data sources are the ITRS and the DMFAS (data on external debt, except direct investment intercompany lending). Data on income on reserve assets come from the regulatory department within the NBM.

Current transfers

This item consists chiefly of technical assistance provided by foreign governments and international organizations. These data are obtained from the Ministry of Economy, the MF, and the records of international organizations and foundations that maintain offices in Moldova. Data on humanitarian aid are obtained from the database of customs trade declarations. The MF provides data on member dues paid to different international organizations. Estimates on the value of scholarships granted to Moldovan students by foreign governments are made from data from the Ministry of Education.

Workers' remittances are estimated using the same methodology as for compensation of employees, taking

into account the remittances of persons who work abroad for a period of one year or more.

Capital Account

Capital transfers

Migrants' transfers. Estimates of migrants' transfers are made from data from the Department of Information Technology on the number of emigrants from Moldova and data from the State Migration Department on the number of immigrants to Moldova. The NBM also uses data from the ITRS on transfers by emigrants and immigrants and other capital transfers.

Financial Account

Direct investment

Data on direct investment in Moldova include the original equity capital or statutory funds of joint ventures and foreign enterprises, reinvested earnings, and other capital. The DSS collects the available data from enterprises with foreign capital.

Data on equity capital of banks are obtained from the appropriate department of the NBM; data on insurance companies are obtained from the office of the State Insurance Supervision. Data on reinvested earnings are based on the results of quarterly inquiries to companies, except banks, carried out by the DSS; the NBM surveys the banking sector. Balance of payments records that include data on loans received or granted by the parent enterprises to the direct investment enterprises in Moldova are obtained from the banking statistics and the DMFAS.

Some data on Moldovan direct investment abroad are available from the ITRS, but they are not comprehensive.

Portfolio investment

Because the securities market in Moldova is still in a developmental stage, portfolio investment is relatively small. Data on portfolio investments are obtained from the MF, the appropriate departments of the NBM, the National Securities Commission, and the DSS. Data on banks' portfolio investment in foreign securities are obtained from the ITRS.

Other investment

This item includes all short- and long-term financial account transactions other than direct investment, portfolio investment, and reserve assets.

Trade credits

Data on trade credits consist of several different transactions. The most significant of these are export earnings that are not repatriated within the statutory required period and prepayments on imports. The

appropriate departments of the NBM process data on these credits, using customs declarations and payments information from commercial banks. The DSS submits data on prepayments received or granted by the enterprises. These data are collected from the balance sheets of the enterprises.

Loans

Almost complete data on loans granted to all sectors are obtained from the records submitted by the MF and the appropriate department of the NBM. The data are processed using the DMFAS computerized system. Added information is obtained from commercial banks and enterprises with foreign loan liabilities.

Currency and deposits

This item reflects all banks' financial transactions for own account, except for direct and portfolio investments. Data are obtained from the NBM departments and the commercial banks. This item also includes information from exchange offices on the volume of foreign exchange bought and sold.

Other assets and liabilities

These items cover all transactions other than trade credits, loans, and currency and deposits. The main components are arrears for debt-service payments and arrears for imports of energy resources. The latter are obtained from the reports of energy importers.

Reserve assets

The data source is the balance sheet of the NBM.

III. Specific Items: International Investment Position

Direct investment

The data on the stock of direct investment include statutory and other capital. The main sources of information on foreign direct investment in Moldova are the quarterly reports submitted by the enterprises to the DSS and the monthly reports submitted by the commercial banks to the NBM.

Portfolio investment

Data on liabilities reflecting the ownership of domestic bonds and shares by nonresidents are collected from the appropriate departments of the NBM, commercial banks, the MF, and the National Securities Commission. Data on banks' portfolio investment in foreign securities are obtained from the ITRS.

Other investment

Data on the foreign assets and liabilities of banks and other sectors are derived from the balance sheets of the NBM and commercial banks, DMFAS records, state-

ments on the external position of the banking sector, enterprise surveys, statements on government assets and liabilities, and other sources.

Reserve assets

The data source is the balance sheet of the NBM.

Mongolia

The following text was confirmed as current in 2004.

I. General

The International Department (ID) of the Bank of Mongolia (BOM) compiles and disseminates Mongolia's balance of payments statistics. The department employs a variety of data sources, such as foreign trade statistics, international transactions records, specialized surveys, administrative records of government agencies, and its own records.

The BOM obtains data from various institutions, including Customs General Administration, commercial banks, government ministries and agencies (e.g., the Ministry of Finance and Economy (MOFE), Ministry of External Relations, Foreign Investment and Foreign Trade Agency (FIFTA), state and private sector enterprises, and international organizations in Mongolia.

For some balance of payments items, the data collected from primary sources are complemented by estimates.

Balance of payments data are compiled and presented in U.S. dollars. Stock data are converted into U.S. dollar equivalents using the exchange rate prevailing at the end of the reporting period. Some transactions are reported in original currencies and converted to U.S. dollars at the average quarterly exchange rates.

Mongolia's balance of payments is compiled quarterly and annually in accordance with the recommendations of *BPM5*. Annual data are published in BOM's *Annual Report*. Quarterly BOP data have been compiled regularly since the beginning of 1997. A complete international investment position statement will be available at the end of 2004.

II. Specific Items: Balance of Payments

Current Account

Goods

The primary source of data is the foreign trade statistics compiled by the Customs General Administration on a

monthly basis from customs trade declarations for export and import. The customs data record the physical movement of goods across Mongolia's boundaries; they include aid-in-kind and goods shipped between Mongolia and foreign countries. Customs declarations for goods accompanying passengers are not processed.

The BOM adjusts the trade data to include nonmonetary gold sent abroad for processing. Data on imports include an adjustment for imports by individuals. Imports c.i.f. are converted to an f.o.b. basis by excluding freight and insurance estimated at 10 percent of the c.i.f. value of imports.

Services

The primary sources of data in the services account are reports of resident and nonresident service enterprises and other institutions submitted.

Transportation

Mongolian Railways and Mongolian Airlines (MIAT) report information for the credit and debit entries for passenger fares and other distributive and auxiliary services. The port services credit entries are derived from the report of Mongolia's Civil Aviation Authority, and the debit entries, from the MIAT. The credit entries for port services represent payments by foreign airlines for the use of facilities at the airport in Ulaanbaatar.

Travel

Up to 1996, the credit and debit entries for travel were derived from the foreign exchange record. From 1997 onward, travel is estimated on the basis of information on the number of travelers combined with an estimate of the average duration of stay and an estimate of the per capita expenditures. Data on the number of travelers are compiled by the Frontier Guards Administration of Mongolia, while the average number of nights per visit and the average daily expenditure are estimated on the basis of information provided by the MOFE (for Mongolian residents traveling abroad) and various hotels (for nonresident visitors).

Other services

Communications. Data are provided by the Mongolian Telecommunication Company.

Insurance. Data for insurance services are collected mainly from the local insurance companies.

Other business. Data for other business services, covering financial services, computer and information services, royalties and license fees, operational leasing, and other services not included elsewhere are derived from foreign exchange record.

Government, n.i.e. The Ministry of External Relations provides data on embassy expenses/receipts abroad, which cover the expenditures of Mongolian diplomatic mis-

sions abroad and the proceeds from visas issued by Mongolian embassies. Expenditures of foreign embassies and international organizations in Mongolia are estimated on the basis of information obtained through a survey and from the Ministry of External Relations.

Income

Investment income

Direct investment. Data for direct investment income outflows are derived from the tax submissions of the major joint-venture enterprises.

Other investment. Data on other investment income are derived from the foreign exchange record and records of the BOM and MOFE. The debit entries for other investment income cover actual interest payments on debts of government and the BOM, including guaranteed debts. Data on investment income payments of commercial banks are derived from the foreign exchange record. The credit entries for interest on bank deposits cover interest receipts of the BOM and commercial banks.

Current transfers

General government

Data are obtained from the Ministry of External Relations and MOFE for grants in cash and the Customs General Administration for grants in kind. Other sources are the records of international organizations and foundations with offices in Mongolia. Data on the membership fees paid to international organizations are derived from the MOFE.

Other sectors

Workers' remittances. Data cover inflows of Mongolians working abroad and outflows from foreign (mainly from Russia and China) employees in Mongolia. Data are collected from the commercial banks' records and from money transferring companies (e.g., Moneygram).

Other transfers. Data on transfers provided directly to non-government organizations are estimated as a difference between the customs figure on transfers in-kind and the official grants received in kind recorded on the budget.

Financial Account

Direct investment

Data on foreign direct investment in Mongolia are provided by the FIFTA, which covers foreign investment commitments. These data cover the registered capital of joint-venture enterprises only.

Portfolio investment

Data for outward portfolio investment are provided by the commercial banks. Regarding data for inward port-

folio investment, the Mongolian Stock Exchange is not yet available to foreign traders.

Other investment

Trade credits

Data on short-term capital flows cover (1) import credits (advance payments associated with the oil imports), (2) prepayments for imports under the grants, (3) inflows and outflows associated with copper and cashmere exports, and (4) nonreceived payments for exports of copper concentrate. The BOM estimates data on the basis of information obtained from the MOFE and major joint-venture enterprises.

Loans

Data on medium- and long-term loan disbursements are derived from the records of the MOFE and include disbursements made directly by donors to foreign suppliers. These data cover loans received by the government and loans received by state enterprises, guaranteed by the Mongolian government. Data on amortization payments on medium- and long-term loans received cover amounts scheduled for repayments.

Currency and deposits

This item covers the changes in net foreign assets of the commercial banks, derived from the balance sheet of the commercial banks.

Reserve assets

Data are derived from records of BOM and pertain to changes in stocks. Data on reserve assets are adjusted to exclude changes in exchange rates of currencies in which various assets are denominated.

Montserrat

See East Caribbean.

Morocco

The following text was confirmed as current in 2004.

I. General

In Morocco, the Foreign Exchange Office (FEO), an organization operating under the authority of the Ministry of Finance and Privatization, is responsible for compiling foreign trade, balance of payments, and international investment position statistics. FEO derives the data primarily from three different sources: (1) customs

declarations submitted at the time of import and export, for trade statistics; (2) bank reports drawn up for each foreign exchange transaction, for statistics on payments between Morocco and other countries; and (3) information on foreign financial operations gathered directly from various public and private organizations.

FEO derives foreign trade data from declarations submitted by the operators concerned to the various customs offices in the Kingdom. Receiving copies of all these declarations, the office processes them to establish the statistics in accordance with current international standards.

The FEO requires banks to report on each foreign exchange transaction between Morocco and other countries. Information on these transactions includes the beneficiary or originating country, transaction type, currency, the foreign currency amount and its dirham equivalent, the beneficiary or the originator, etc. Centralizing these reports at the end of each ten-day period, the FEO uses the data to prepare statistics on payments between Morocco and the rest of the world for the various balance of payments components. These statistics include payments made through banks and those made by mail or using foreign banknotes. With the resulting data, the FEO compiles a monthly Statement of Exchange Transactions (SET) and a statement of operations involving foreign banknotes. These two documents show credits and debits classified by transaction type.

To complete this information derived from customs declarations and bank reports, the FEO gathers other data directly from economic agents, public organizations, and various participants involved in foreign transactions.

Since 1995, as part of the efforts to harmonize external sector statistics with the prevailing international standards, Morocco has presented the balance of payments in accordance with the recommendations of the fifth edition of the IMF's *Balance of Payments Manual (BPM5)*.

The FEO publishes the balance of payments on a quarterly basis within 90 days after the end of the reference quarter. It publishes the balance of payments data for the entire year initially in preliminary form and subsequently in final form in a detailed annual report. The data are expressed in millions of dirhams.

Information on Morocco's balance of payments data and on foreign trade in general is available on the FEO's website at www.oc.gov.ma.

II. Specific Items: Balance of Payments

The presentation of the balance of payments, in accordance with the recommendations of *BPM5*, comprises the current, capital, and financial accounts.

Current Account

This account is divided into four headings: goods, services, income, and current transfers.

Goods

This item includes all merchandise transactions between Morocco and other countries, whether or not the transactions involve a change of ownership. FEO derives data for these transactions from customs declarations. For each import or export transaction, Customs requires economic agents to submit a declaration that includes complete information: type of product and Harmonized System (HS) code, value, volume, country of origin or destination of the goods, etc. The FEO receives a copy of all declarations from the various Moroccan customs offices. The office records commercial transactions when the goods pass through customs, regardless of the corresponding method of payment. The transactions include operations involving immediate payment, as well as those involving credit facilities or goods imported without payment and then re-exported after processing. FEO compiles foreign trade statistics on a c.i.f. basis for imports and an f.o.b. basis for exports. In the balance of payments, it reports both exports and imports on an f.o.b. basis.

Services

FEO derives trade in services from the reports prepared by banks on the payments pertaining to these operations. For the transactions recorded between Morocco and other countries, the balance of payments includes seven services items: transportation, travel, communications, insurance, royalties and license fees, other business services, and government services not included elsewhere. The Exchange Office is adopting the full classification for trade in services, providing greater detail on various items as recommended in *BPM5*.

Transportation

This item records, on both the credit and debit sides, payments relating to the transportation of goods and passengers, broken down by means of transportation: sea, air, and other.

Travel

Travel credits correspond to receipts from abroad received by tourism sector operators (travel agencies, hotels, clubs, tourist transportation, etc.). Receipts include encashment of travelers' checks and international credit card payments, as well as foreign currency banknotes paid into the banking system by tourists during their stay in Morocco. These credits also include part of the foreign currency banknotes exchanged by Moroccans residing abroad that are used to cover their board and lodging in Morocco.

Debit entries cover the various allocations of foreign banknotes to residents when they travel for purposes of tourism, business, education, medical care, training and missions, or pilgrimages. Debits also cover bank or postal transfers made to cover expenses incurred during this travel.

Other services

On both the credit and debit sides, FEO derives data for other services items from the SET prepared on a monthly basis using the bank reports.

From 2002 onward, the office records private technical assistance operations in the *Other business services* item rather than in the *Royalties and license fees* item. This change was also made for 2000 and 2001 data.

Income

Income includes, on the credit side, investment income and income from private loans, including reinvested earnings, and, on the debit side, external public debt service (interest). FEO derives the data on external public debt service from the SET and supplements the data with information it collects from the Ministry of Finance and relevant government organizations.

Current transfers

This item primarily records remittances of funds by Moroccan nationals living abroad and unrequited transfers received by the public sector including grants. Repatriations by Moroccans living abroad include bank transfers, postal money orders, and foreign banknotes channeled through the banking system during their stay in Morocco (the portion not covered under travel credits).

Capital Account

The capital account mainly records transfers by migrants who leave Morocco permanently. It also occasionally records debt forgiveness granted to the public sector.

Financial Account

This account records direct investment operations, including reinvested earnings, portfolio investments (equity securities, debt securities, and money market instruments), and other investments (trade credits and medium- and long-term loans).

Direct investment

For operations financed by the sale of foreign currency, the FEO derives data from movements of funds between Morocco and other countries. For operations financed by means other than foreign currency inflows (debt/private equity swaps, incorporation of reserves or profits, etc.), the office derives data from declarations that entities submit to it for recording purposes. A dis-

tinctive feature of direct investment operations is the lasting interest the foreign investor shows in the resident enterprise. Such operations also include lending between affiliated enterprises (partner loans and current account advances).

Portfolio investment

FEO derives data on portfolio investment in the same manner and supplements these data with information on operations carried out by nonresidents on the Casablanca Stock Exchange.

Other investment

This item records external public and private debt operations and private sector trade credits, which FEO calculates as the difference between physical flows of goods (customs statistics) and payments related to them (banking statistics). The office supplements the statistics on the debt of government agencies, monetary authorities, banks, and other sectors with data that the involved agencies provide. Loans between affiliated enterprises are considered to be direct investments and are not included in this item.

Reserve assets

The office derives data on changes in reserve assets from the statement of external assets prepared by the monetary authorities (Institut d'émission). This calculation takes into account the effects of exchange rate fluctuations of currencies that make up the reserve assets.

III. Specific Items: International Investment Position

FEO prepares the international investment position (IIP) of Morocco in accordance with the principles of *BPM5*. The IIP has four parts: direct investment, portfolio investment, other investment, and reserve assets.

Direct investment

In accordance with international standards, the stock of direct investment, on the asset side, relates to assets held by residents (Moroccan investments abroad), and on the liability side, to assets held by nonresidents (foreign investment in Morocco). A direct investment is found to exist when the investor holds at least 10 percent of the capital of the investment enterprise.

FEO derives data on Moroccan direct investments abroad from the declarations it obtains from the entities involved. It records stocks at book value. It prepares the list of the entities queried based on the authorizations it issues to conduct investment operations abroad.

The office derives data on the stock of foreign direct investment in Morocco from flows of credits (including

reinvested earnings) and debits recorded in the balance of payments from 1960 to end-2003. The series was limited to 1960 because until 1959 Morocco was part of the franc zone. Accordingly, the flows recorded in the balance of payments do not convey all transactions between residents and the rest of the world for the years prior to 1960 (exclusion of the North zone and the Tangiers international zone).

Regarding valuation of the initial stock, for the years prior to 1960, authorities deemed it necessary to value the stock of foreign direct investment in Morocco as at December 31, 1959. The valuation was based on the average capital income transferred for the years 1960 to 1963, at an average rate of return of 10 percent. Balance of payments flows were discounted based on the GDP deflator (the relationship between GDP measured in current prices and GDP measured in constant prices). This index measures changes in the general price level, including the prices of durable goods purchased by resident producer units.

Foreign investments in Morocco are classified into two subheadings: *equity capital*, which includes direct investment per se; and *other capital*, which covers partner loans and current account advances. FEO enters figures on equity investments by direct investors in listed companies at their list prices on the Casablanca Stock Exchange at the end of the current year, after deducting the relevant amounts recorded in the balance of payments flows. The office draws data on these equity investments from the arrangement implemented jointly by the FEO and the Securities Ethics Council (CDVM—Conseil Déontologique des Valeurs Mobilières, the agency responsible for regulating the financial market). This arrangement tracks portfolios of listed securities held by nonresidents. The data on stocks derived from the balance of payments flows include liabilities resulting from unlisted securities.

Portfolio investment

Portfolio investment covers equity securities and debt securities purchased by investors for purposes of realizing a return. Investments are deemed portfolio investment when the investor's interest represents less than 10 percent of the equity of the company in question. On the asset side, these investments consist of foreign securities held by Moroccan residents and, on the liability side, Moroccan securities held by nonresidents. Like direct investment, data on assets are derived from declarations by entities authorized by the FEO to carry out investments abroad. FEO records assets at book value. In contrast, it derives data on liabilities as follows.

1) For *listed securities*, the office collects data from the financial institutions providing security custodian services, through the arrangements implemented jointly with the CDVM. It records these securities at their list prices as at end-December 2003 and breaks them down

into shares, on the one hand, and bonds and other debt instruments (negotiable securities), on the other hand; and 2) for *unlisted securities*, FEO uses flows of credits and debits in the balance of payments—excluding transactions involving listed securities. It also discounts these flows through applying the GDP deflator.

Other investment

This item covers all financial assets and liabilities not considered direct investment, portfolio investment, or reserve assets. It includes trade credits, loans between nonaffiliated enterprises, stocks of external public and private sector debt, and deposits. The FEO derives the data on stocks of trade credits, in assets and liabilities, on the one hand from a multiyear comparison of the values of physical flows of goods, as reported on customs declarations. On the other hand, it derives the data from payments related to them, according to bank report data, with various adjustments to physical flows (gifts, customs procedures not involving payments), as well as payments (deduction of freight charges, etc.). Stocks of central government loans (Treasury) and public sector loans (secured debt) correspond to the stock of external public debt as established by the Ministry of Finance and Privatization. For the private sector, FEO determines the stock of loans recorded in the international investment position via its arrangements to track private external debt. That arrangement records all loans with maturities greater than six months. The office records trade credits and partner loans and current account advances elsewhere under the appropriate items.

The *currency and deposits* item records only assets and liabilities relating to deposits in the banking system. The asset side comprises the credit balances of foreign currency accounts opened in the name of residents (exporters of goods and services) at Moroccan banks. FEO records currency assets (foreign banknotes) held by the banking system under reserve assets. The liability side records the gross liabilities of the central bank and the credit balances of convertible dirham accounts held by nonresidents and foreign correspondents at Moroccan banks. The office does not take account of currency liabilities (dirham banknotes held by nonresidents abroad), because current legislation prohibits the export of dirham banknotes. FEO values the components of the *other investment* item at market prices and records foreign exchange assets and liabilities at the year-end exchange rate.

Reserve assets

Reserve assets comprise external assets available to finance transactions with other countries. In the international investment position, FEO derives data on stocks of reserve assets from central bank data. The data comprise the gross external assets of the monetary authority and the deposit banks. These assets are valued at market prices.

Mozambique

The following text was confirmed as current in 2004.

I. General

The central bank, the Banco de Mozambique (BM), is responsible for compiling the balance of payments statistics for Mozambique. The main data sources are monthly reports presented by the commercial banks on external transactions of the bank itself and its customers, exchange bureaus, other financial institutions, the central bank, government institutions, and other economic entities (public and private), under a strict guarantee of confidentiality of data for individual businesses, organizations, and government ministries.

Data may be supplied monthly or quarterly, according to the source. The BM prepares these data on a quarterly basis and publishes them in its *Quarterly Report*, *Annual Report*, and on its website.

Data are compiled on the basis of *BPM5*. Conversion to *BPM5* of the historical database has been completed. Balance of payments statistics have been published according to the *BPM5* methodology since the first quarter of 2002.

All data are compiled in U.S. dollars. Where transactions are reported in currencies other than U.S. dollars, they are converted using monthly or quarterly average exchange rates, as appropriate.

International investment position statistics are not compiled as yet.

II. Specific Items: Balance of Payments

Current Account

Goods

The Directorate General of Customs produces monthly data on imports and exports of goods and forwards it to the National Statistics Institute (INE). The INE processes the data and then sends to the BM the summary tables broken down by major commodity and by country of origin and destination. The National Statistics Institute (INE) compiles those statistics, supplemented by direct contact with the major exporters.

Imports and exports are reported on an f.o.b. basis. The INE data or the Central Statistics Office data have been used since 1996 for exports and imports. The Customs initially compiles the trade data, and subsequently the National Statistics Institute validates the data and compiles statistics on external trade. To improve the collection and timely basis of acceptable quality data, the authori-

ties have established a panel on foreign trade statistics, comprising representatives from the Directorate General of Customs, National Statistics Institute, and BM.

Services

Transportation

Data on transportation services are compiled from reports presented by the commercial banks and balance of payments surveys. Various surveys have been introduced to collect specific BOP data from hotels, transportation companies (railways, national airlines, and shipping), large projects, communications companies, and foreign firms. To date, the response rate has been very low. However, the balance of payments unit of BM is in the process of improving the collection of these data through the introduction of additional questionnaires.

Travel

Data on travel credits and travel debits are based on reports presented by the commercial banks and exchange bureaus. A specific survey has been instituted in various hotels in the country. However, the response rate is very low.

Other services

Data on other services are compiled from the reports of commercial banks and exchange bureaus. Other services comprise international service transactions not covered under transportation and travel. These include administrative, professional, commissions, construction, communication, insurance, financial, computer and information, royalties and licenses, government services, and so forth.

To improve data on services, BM introduced a survey to construction enterprises and telecommunication enterprises operating in Mozambique.

Income

This item covers mainly compensation of employees, direct investment income, portfolio investment income, and other investment, including interest payments on external debt (public and private debt).

Compensation of employees

Compensation of employee's credits includes wages of nationals working abroad for one year. Compensation of employee's debits includes the wages paid to nonresident workers by resident entities (compiled from data supplied by the commercial banks).

Investment income

This item, compiled from data supplied by BM and the Ministry of Planning and Finance (MPF), comprises interest paid on external debt. It also includes interest on bank accounts held abroad by BM, interest paid on external private debt, and dividends distributed.

Current transfers

General government

Current transfer credits comprise grants for public sector import support, in-kind grants, special programs, and private current transfers received from abroad.

Data on grants from international organizations and foreign governments are obtained from various public agencies, mainly from the Ministry of Cooperation and Home Affairs, Ministry of Industry and Commerce, Ministry of Planning and Finance, and BM.

Other sectors

The data include wages of national miners working in South Africa (compiled from data collected by the BM).

Capital Account

Capital transfers

This component includes government capital operations, particularly debt forgiveness and grants for investment programs. It also includes private sector operations and other private transfers (grants in cash received from non-residents). To improve the collection of these data, BM recently introduced a quarterly questionnaire to NGOs.

Financial Account

Direct investment

Direct investment in Mozambique is compiled from data obtained from investment projects registered with BM. Because of the exchange control, by law, investment projects must be registered at BM. However, BM is in the process of improving the collection of these data. Annual and quarterly surveys of direct investment operating in Mozambique have introduced a collection of data on the international payments and receipts of these enterprises.

Portfolio investment

Data on portfolio investment are compiled from data supplied by the commercial banks and the central bank (BM).

Other investment

Data on official loan disbursements and repayments are obtained from BM and the Ministry of Planning and Finance and direct contact with companies (private and public). Transactions of the monetary authorities cover currency and deposit liabilities and short- and long-term loans received. The source of the data is BM and the Mozambican government.

Transactions of banks include currency and deposits and are obtained from bank reports to BM.

Other external asset statistics in Mozambique are compiled from data also obtained from commercial banks.

Reserve assets

Transactions in reserve assets are derived from the accounts of BM.

The largest component of reserve assets represents holdings of other foreign exchange. Other items under this component include SDRs, reserve position in the Fund, and certain other claims.

Myanmar

I. General

The Central Bank of Myanmar (CBM) is responsible for compiling the balance of payments statistics. The balance of payments data are obtained from the banks authorized to deal in foreign exchange transactions through foreign exchange returns from the international transactions reporting system (ITRS) and various government agencies, such as the Budget Department, the Foreign Economic Relations Department, the Central Statistical Organization (CSO), the Customs Department, the Directorate of Investment and Company Administration (DICA), and the CBM itself. For some balance of payments items, estimates complement the data collected from primary sources.

The balance of payments is prepared annually, both on a financial-year and calendar-year basis. Data on a financial-year basis are published in the *Statistical Yearbook* by the CSO, Ministry of National Planning and Economic Development. The CBM reports to the Fund the calendar-year data with a breakdown on a quarterly basis.

Balance of payments data are compiled in millions of kyats, generally in accordance with the standards recommended in the *BPM5*. Transactions in foreign currencies are converted to kyats using the period average exchange rates.

II. Specific Items: Balance of Payments

Current Account

Goods

The main sources of these data are foreign exchange reports by banks and foreign trade statistics tabulated by the Customs Department and the CSO. Exports and imports data are valued on an f.o.b. basis.

Services

Transportation

This category includes freight and passenger services for all modes of transport and port services. The source is the ITRS.

Travel

The ITRS source is used in compiling the travel item. This item is supplemented with estimates derived from data from the Immigration and Population Department for the number of tourists and from the Ministry of Hotels and Tourism for total travel expenditure.

Other services

Communications. Data are obtained from the ITRS, and the entries reflect receipts and payments for postal settlements, including radio, telephone, and telegraphic settlements.

Insurance. Data are obtained from the ITRS. Entries for insurance cover insurance on exports and imports.

Other business. Entries for other business services include royalties and license fees, management fees, and professional and technical services fees for lawyers, architects, engineering surveys, etc. The DICA provides these data.

Personal, cultural, and recreational. The entries reflect fees for correspondence courses, training and examination fees, and film rentals. Data are obtained from the ITRS.

Government, n.i.e. The source of the data is a monthly bank report. Credit entries comprise expenditures of diplomatic missions in Myanmar. Debit entries are the expenditure abroad of Myanmar embassies and consulates.

Income

Investment income

Investment income covers interest receipts and payments on long- and short-term loans, deposits, other commercial and financial claims and liabilities, and the Fund's SDR holdings. These data are collected from the Budget Department and other official sources.

Current transfers

General government

Data are derived from information provided by the Budget Department and the ITRS. The entries include grants in-cash and in-kind received for financing current expenditure, training of personnel, investment, and payment of membership fees to international organizations. Data on pension payments are also derived from the ITRS.

Other sectors

Both debit and credit entries for workers' remittances are derived from the ITRS.

Capital Account

Capital transfers

Capital transfers are included in current transfers, because the ITRS does not distinguish between the two.

Financial Account

Direct investment

Data on direct investment by all foreign-controlled resident enterprises, registered under the Foreign Investment Law, are obtained from the DICA. This includes resident enterprises in which 35 percent or more of the equity is held by nonresidents.

Other investment

Data on loans received by the general government are derived from records of the Budget Department, while data on transactions of the monetary authorities are derived from the records of the CBM.

Reserve assets

Data are obtained from the CBM and domestic banks dealing in foreign exchange operations. Reserves cover monetary gold, SDRs, reserve position in the Fund, and the foreign exchange assets held by the CBM and the domestic banks.

III. Specific Items: International Investment Position

The stock position of external assets and liabilities included in the international investment position (IIP) is consistent with that used in the financial account of the balance of payments. The data sources for the IIP are the same as those used in compiling the balance of payments.

Namibia

The following text was confirmed as current in 2004.

I. General

The Bank of Namibia (BON) is responsible for compiling the balance of payments for Namibia. Since 1990, the BON has been developing surveys to collect information under a strict guarantee of confidentiality of data on individual businesses, organizations, and government entities. The concepts, principles, and classifications used in these surveys are largely in accordance with the methodology set out in the fifth edition of the

Balance of Payments Manual (BPM5). The various surveys conducted by the BON constitute the basic source of information for compiling data on both the balance of payments and the related international investment position (IIP). The collection of both transactions and stock data allows a reconciliation that enhances both the editing process and the quality of the data. These data are prepared on a quarterly and an annual basis and are published in the BON's *Quarterly Bulletin* and *Annual Report*. All data are compiled in Namibia dollars (N\$). The exchange rate prevailing at the end of the reporting period is used for compiling data on the IIP items, whereas average exchange rates for the period are used for the balance of payments items.

II. Specific Items: Balance of Payments

Current Account

Goods

Data for this component are based on trade statistics and balance of payments surveys conducted by the BON's Research Department (RD). The main source of data for major exports is the various balance of payments surveys, supplemented by direct contact with the major exporters and marketing organizations. Adjustments are made for undercoverage and nonresponse to the surveys and for smuggled items such as diamonds and other commodities. For imports, the most important source used to compile the data is the international trade statistics compiled by the Central Bureau of Statistics (CBS). Imports are reported on both a c.i.f. and f.o.b. basis. The CBS data have been used since 1993 for imports. The trade data are initially compiled at Customs and Excise using the ASYCUDA system. Subsequently, CBS validates the data and corrects mistakes using EUROTRACE software. Various adjustments are made to place the trade data on a balance of payments basis.

Services

Transportation

This component is estimated from the external trade data. In 1995, a specific survey was instituted, but the response rate has been very low, owing to a lack of cooperation from the reporting units (i.e., the national airlines, railways, and road transport operators) and the lack of awareness of the importance of balance of payments statistics among the respondents. However, the RD is in the process of improving the collection of these data.

Travel

Data on travel credits and debits are estimated on the basis of special research studies because of the absence of comprehensive data. Estimates of data on travelers arriving in and departing from Namibia are made on the basis

of various sources, such as the Ministry of Home Affairs, national airlines, and various hotels in the country.

Other services

Other services comprise those international services transactions not covered under transportation and travel. These include commissions; operational leasing; professional, administrative, construction, and technical services; etc. These data are derived from surveys, with adjustments made for undercoverage and nonresponse.

Government, n.i.e. This item covers all transactions in services associated with the government sector or international and regional organizations that are not classified under other items (e.g., expenditures of embassies). The data are compiled from information gathered from government ministries and estimates based on data provided by embassies and international organizations in Namibia in 1999.

Income

Compensation of employees

Data on the credit side for short-term employees, other than those of embassies and international organizations, are based on survey estimates of the number of Namibian residents temporarily working abroad, mainly in South Africa. Details of the compensation of local employees of embassies and international organizations are also estimated.

On the debit side, the entries include estimates of payments to employees who are residents of the host country and work for Namibian embassies abroad; the estimates are checked against government information. Data on short-term employees, other than those of Namibian embassies abroad, are estimated using survey data obtained from embassies in 1999.

Investment income

Direct investment. Data on Namibia's receipts of direct investment income are obtained from balance of payments surveys. The entries covering Namibia's payments of direct investment income include both distributed and reinvested earnings. These data are derived from various sources, including surveys of direct investment enterprises. Dividends are also derived from surveys.

Branch profits received by South African life insurance companies with direct holdings of real property in Namibia are compiled from data provided directly by their offices in Namibia. Other branch profits are derived from surveys. The debit entries for reinvested earnings, which are disaggregated by sectors (that is, for banks, mining, and other sectors), are derived from surveys, with adjustments for nonresponse and undercoverage.

Portfolio investment. Data on portfolio investment income and other investment income are obtained mostly from surveys developed in collaboration with the Namibia Financial Institution Supervisory Authority (NAMFISA) and the BON debt records (for treasury bills, internal registered stock, etc.). The Ministry of Finance also provides relevant information.

Current transfers

General government

Data on grants from international organizations and foreign governments are obtained mainly from the National Planning Commission Secretariat, the United Nations Development Program, and the BON survey of nongovernmental organizations (NGOs). Data on receipts from the South African Customs Union (SACU) are based on data on import tariffs provided by the Ministry of Finance, while data on actual receipts from the Customs pool are obtained from the BON's Finance Division.

Other sectors

Worker's remittances are estimated from exchange control statistics (assuming that such workers are predominantly from outside the Common Monetary Area). Further information on transfers within the Common Monetary Area is obtained from surveys.

Capital Account

Capital transfers

General government

Data are estimated from information obtained from local newspapers and from direct contact with the National Planning Commission Secretariat, which is the main recipient of such transfers.

Other sectors

This component consists mainly of foreign aid receipts linked to capital projects or fixed assets. Data are collected through surveys covering NGOs, embassies, and international organizations.

Financial Account

Direct investment

Data on direct investment are collected and published on both a market-value and a book-value basis. The major source of data for this component are surveys of both inward and outward investment.

Portfolio investment

This item covers investment in equity and debt securities that are traded or tradable in organized or other financial markets. In Namibia these securities are invest-

ments in unit trusts, stock exchange organizations, and transactions in government bonds. Data sources for these transactions include the government, surveys, BON, and direct contact with companies.

Other investment

Government transactions cover mainly SACU transactions and foreign debt. The data are sourced from the Ministry of Finance and BON. Transactions of the monetary authorities cover currency and deposit liabilities and short- and long-term loans received. The source of data is the BON. Transactions of banks include currency and deposits and are obtained from bank reports to the BON. Data for other sectors are obtained from the combined survey with NAMFISA and direct contact with companies.

Reserve assets

The Namibia dollar was introduced in September 1993. Before that date, the South African rand was used in Namibia. The rand has gradually been withdrawn from circulation (although it remains legal tender in Namibia) and replaced by the Namibian dollar. Therefore, the largest component of reserve assets represents holdings of rand, although holdings of other foreign exchange, especially the pound sterling, euros, and U.S. dollars, have become more prominent recently. Other items under this component include SDRs, reserve position in the Fund, and certain other claims. The data source is the BON.

III. Specific Items: International Investment Position

The classification of external assets and liabilities included in the IIP is consistent with that used in the financial account of the balance of payments. The data sources are surveys, the Namibian government, and the BON. The revision in direct investment assets data in 1994 and subsequent years was made because Walvis Bay became part of Namibia in 1994; direct investment assets in Walvis Bay became domestic investments.

Nepal

The following text was confirmed as current in 2004.

I. General

The Research Department of Nepal Rastra Bank (NRB) is responsible for compiling Nepal's balance of payments statistics. The Research Department collects the balance of payments data on exports and imports from customs

declaration forms submitted to the customs authorities. For data on services, income, and foreign grants, the department collects information from commercial banks and the NRB, using an international transactions reporting system (ITRS). Information on disbursements and amortization of foreign loans is based mostly on reports prepared by the Financial Comptroller General's Office (FCGO) of the Ministry of Finance. Data on foreign direct investment are obtained from commercial banks and other enterprises having foreign investment.

The NRB compiles the balance of payments data in millions of rupees, prepares the data on a monthly basis, and publishes them in the *Monthly Economic Indicators*. In addition, it publishes quarterly figures in the *Quarterly Economic Bulletin* and annual figures in the *Economic Report*. The data conform with BPM5.

II. Specific Items: Balance of Payments

Current Account

Goods

The primary data sources of goods transactions are the customs points, which compile merchandise trade statistics on the basis of declaration forms and invoiced documents received from the exporters and importers. In the customs records, the exported goods are valued partially on an f.o.b. basis and the imported goods on a c.i.f. basis for countries other than India. The NRB converts merchandise export and import data to an f.o.b. basis and makes coverage adjustments for border trade, exports and imports of electricity with India, and sales and purchase of aviation fuel and spare parts. The balance of payments account excludes freight payments to India on exports transported by land through India to third countries, because they reflect nonresident-to-nonresident transactions.

Services

Transportation

This category includes freight and passenger services by all modes of transport. The Research Department collects the data from commercial banks, the NRB, Indian airlines, and domestic airlines for three main categories, namely, freight, passenger services, and other transportation. The main credit items are the foreign exchange earnings of local airlines on passenger services and enterprises engaged in land transport. Debits reflect mainly freight charges, passenger services, and payments made to the foreign transport companies.

Travel

The NRB collects the balance of payments data on travel from the ITRS. This item includes, as credits, the re-

ceipts from foreign visitors in the form of cash, traveler's checks, drafts, etc. and the foreign exchange earnings from nonresidents of local hotels, travel agencies, and certain service agencies. The item includes, as debits, the residents' expenditures abroad for business and personal travel, education expenses, medical treatment, and passport facilities (foreign exchange facilities provided to Nepalese passport holders going abroad).

Other services

This category covers receipts and payments relating to premiums and claims of life and non-life insurance companies, communications services, construction services, professional and technical services, advertising services, purchases of newspapers and newspaper printing services, royalties, commissions, discount fees, and other fees. The category also includes foreign exchange earnings and expenditures of Nepalese diplomatic missions abroad, such as fees for visa, mountaineering, and other purposes. The data on government n.i.e. are obtained from the ITRS and different departments of the NRB. The primary credit entries are the expenditures of foreign diplomatic missions and international organizations in Nepal. Likewise, the debit entries comprise expenditures of Nepal's diplomatic missions abroad.

Income

Investment income

The Research Department obtains information on investment income transactions from the ITRS and the NRB's Foreign Exchange Management Department. Debits cover income on direct investment paid to foreigners, interest payments, and other charges on foreign loans of the government and the private sector. Currently, the debit account also includes payments for electricity purchase from foreign investment. Credits include the interest receipts on foreign investment of the NRB and the commercial banks.

Current transfers

The data for this category include the total grant aid received from abroad, comprising grants in cash and kind. The data for these components are obtained normally from the NRB, customs records, and the FCGO. The data for workers' remittances cover all amounts of private remittances; NRB obtains the data partly from the exchange record and partly from estimates based on data provided by the Department of Labor. Data on pensions are obtained from the ITRS. Another item under this heading is the Indian Excise Refund, data for which are obtained from the NRB.

Capital Account

The capital account covers capital grants to the government and the private sector.

Financial Account

Direct investment

NRB collects data on foreign direct investment from commercial banks and other enterprises.

Other investment

Trade credits

To derive estimates of trade credit assets, NRB's Research Department uses information from customs records and foreign exchange settlements. If the value of exports based on customs records is greater than the value of export receipts registered in the exchange record, the department records an asset. The department calculates prepayments on imports in a similar manner, using data on imports. It obtains data on the foreign assets and liabilities of commercial banks and the NRB from regular reports filed by these institutions.

Loans

The Research Department uses the records of the FCGO to derive data on loans to the central government. Data for other investment assets are the counterpart of estimated workers' remittances, excluding the value of gold and silver imports.

Reserve assets

The department obtains data on reserve assets from the records of the NRB. Reserve assets comprise monetary gold, SDRs, reserve position in the Fund, and foreign exchange of the NRB.

The Netherlands

The following text was confirmed as current in 2004.

I. General

As from April 2003 the Nederlandsche Bank (DNB) adopted a completely new system for compiling the balance of payments statistics. The DNB and Statistics Netherlands agreed upon a new division of tasks, whereby Statistics Netherlands is responsible for both trade statistics as well as the international trade in services. DNB, which has final responsibility for compiling the balance of payments, is responsible for the financial account and investment incomes. DNB collects financial transactions using a direct reporting system. For deriving the main financial positions and transactions of the banking sector, from 1999 onwards the compilers use money and banking statistics.

In the Dutch direct reporting system, DNB uses an integrated model with both flows and stocks, including a

full reconciliation between them. Increases and decreases are reported separately, that is, the model collects gross flows. The remaining changes needed for the reconciliation concern fluctuations in the exchange rate, the market price, and other changes, e.g., write-offs.

Besides the financial assets and liabilities, the Dutch direct reporting system similarly reconciles investment income for each instrument separately. DNB distinguishes 14 separate reporting profiles, each of which comprises the requirements for a specific economic (sub) sector. All profiles are simple variations of the reconciliation model.

In general, the reporting agents have to report on a monthly basis (within 15 working days). If the agents cannot process certain data monthly, because data are simply not available, the agents report these data annually. This mainly concerns items of direct investment, that is, reinvested earnings and the value of equity capital and foreign real estate.

For pragmatic reasons, DNB collects part of the data for portfolio investment and for financial derivatives through intermediary reports from specialized institutions. Institutions may report portfolio investment security-by-security, based on ISIN codes. In the compilation process, DNB enriches the ISIN reports on the basis of a security database, DEBBI, which contains specific information about securities issued worldwide. A commercial data provider updates DEBBI daily. Alternatively, institutions may report portfolio investment on an aggregated level, that is, sum totals broken down by type of security, the country of residence, and the sector of the issuer.

The direct reports for the financial account are all denominated in (thousands of) euros. The full reconciliation included in the reporting model allows for two simple checks of the consistency of the data. First, for each item, the sum total of all reported changes must equal the difference between the opening and closing positions. Second, each opening position must equal its closing position in the previous reporting period.

For data transmission, DNB developed an Internet application (e-Line BoP) that carries out both checks online. If the results of the test are negative, transmission is not possible. Reporting agents can enter the data manually or electronically through import files. The transmission takes place encrypted with a high level of security. With e-Line BoP, DNB conducts plausibility checks, mainly on the macro data.

In general, DNB compiles the Dutch balance of payments in conformity with the *BPM5*-based methodology and has adjusted the time series back to 1967. The compilers fully apply the residency principle and the rules with respect to the valuation of transactions and their time of recording. The sampling process for the financial

account is straightforward, employing the cutting-of-the-tail principle: for each of the major items of the financial account, DNB selects those reporting agents that account for about 95 percent of the total transactions and positions of the population. Although this coverage comes close to full coverage, DNB considers some procedure necessary for grossing up the reported data. The sampling process requires a comprehensive register of the overall population. Attuning the BoP registers is of vital importance, in cooperation with Statistics Netherlands, also within the framework of national accounts.

DNB has an effective legal instrument to keep nonresponse limited through its authority to impose administrative fines and fees and/or cease and desist orders under penalty. Furthermore each month for each missing report estimate, it makes imputations on a micro level, basing the imputations on historical data of the reporting agent involved.

With a few exceptions, a variety of sources provide information on individual balance of payments items. For example, although trade statistics are the main source for exports and imports of general merchandise, Statistics Netherlands derives information from other sources needed to adjust these data, thus complying with methodological rules established in succeeding editions of the *BPM*.

DNB provides the Dutch balance of payments, compiled on a monthly basis, to official institutions (ministries, Central Planning Bureau, Statistics Netherlands) and (key items only) to the European Central Bank. It publishes a quarterly balance of payments statement in its *Statistical Bulletin* (*Statistisch Bulletin*) and also reports it to a number of international institutions, including the IMF, Eurostat, OECD, and BIS. The *Statistical Bulletin* contains a summary statement of the balance of payments and detailed tables in conformity with the list of standard components in *BPM5*. The tables on direct investment and portfolio investment also include a detailed geographical breakdown.

II. Specific Items: Balance of Payments

Current Account

Goods

The main source of general merchandise data is the trade statistics. The data that Statistics Netherlands provides for the goods component comprise intra- and extra-EU trade. Statistics Netherlands adjusts for coverage, valuation (of which c.i.f./f.o.b. margin), and time of recording, using its additional information. After the adoption of the Intra-Community Trade Statistical System (Intrastat), the quality of intra-EU trade statistics diminished. Consequently, Statistics Netherlands' Na-

tional Accounts Department makes substantial corrections to the trade data. These corrections are also adopted by the Nederlandsche Bank.

The revision of the national accounts data from 1995 onwards includes goods transactions of distribution centers located in the Netherlands. Statistics Netherlands separately identifies transactions in nonmonetary gold, derived from the detailed product breakdown in trade statistics. The source of data on goods for processing is the trade statistics. The source of data on goods procured in Dutch ports is trade statistics. The value of goods procured in foreign ports is estimated.

Services

As of the second quarter of 2003, Statistics Netherlands has been producing quarterly data on international trade in services. To that end, it adopted a new quarterly survey. In 2004 the reporting population for this survey comprised a sample of about 3,100 reporting agents (approximately 10 percent of the total population). A small number of large entities directly reports. In addition, Statistics Netherlands surveys a larger number of small and medium enterprises with less detail. The results are grossed up to a national level.

Income

According to the reconciliation model, interest generally is collected on an accrual basis. Because data on reinvested earnings are only available on an annual basis, for recent periods DNB has made estimates about the average of reinvested profits over the previous three years. It does this on the level of individual reporting agents. It revises the estimates once the actual data have been collected through the annual reports. It uses estimates from Statistics Netherlands for compensation of employees.

Current transfers

The main players are direct reporters (government). DNB supplements the data with estimates of National Accounts (Statistics Netherlands) for social security and other (nongovernment) current transfers.

Capital Account

Capital transfers

The main players are direct reporters (government). This item also covers changes in the residency status of portfolio accounts held with resident banks. DNB supplements the data with estimates of National Accounts (Statistics Netherlands).

Acquisition/disposal of non produced, non financial assets

Statistics Netherlands records these transactions as part of the international trade in services.

Financial Account

Direct investment

DNB classifies transactions in conformity with the directional principle as recommended in *BPM5*. Data include reinvested earnings, for recent periods based on estimates.

Financial derivatives

DNB records transactions in options, futures, swaps, forward rate agreements, etc. generally on a gross basis.

Other investment

Trade credits (short-term). The survey system does not collect data on short-term trade credits. All data for this item are estimated by means of a model based on international trade statistics. This econometric model relates the supply of short-term trade credit (on the asset side) to exports and the demand for short-term trade credit (on the liabilities side) to imports.

Loans, currency and deposits. DNB bases data for the monetary and financial institutions (MFI) sector on flows derived from the money and banking statistics.

III. Specific Items: International Investment Position

Direct investment, portfolio investment, financial derivatives, and other investment

The reconciliation model not only enables DNB to compile the international investment position (IIP) on an annual basis but, in principle, at any time. Generally, agents report each position on a monthly basis as a part of the reconciliation model. However, some data are not available on a monthly basis. This concerns positions of direct investment, that is, equity capital and foreign real estate. The stock data are consistent with the corresponding balance of payments flows.

Reserve assets

The source of these data is the balance sheet of the Nederlandsche Bank.

Netherlands Antilles

I. General

The Central Bank of the Netherlands Antilles (BNA) is responsible for compiling the balance of payments statistics. Data are obtained from several sources, including

an international transactions reporting system (ITRS) that includes transactions between residents and non-residents through banks either in the Netherlands Antilles or abroad. Surveys are conducted to compile data on intercompany transactions, trade credit extended and received, and tourist expenditures, among others. The Central Bureau of Statistics (CBS), in cooperation with the Customs Office, provides the trade statistics.

Balance of payments data are compiled in Antillean guilders on a quarterly basis and published in the *Quarterly Bulletin* of the BNA. Since 2000, the classification and compilation of the balance of payments is in accordance with *BPM5*. A major deviation is the treatment of the international financial services sector. This sector is treated as a nonresident, and therefore, only operational expenses and revenues of this sector obtained from residents are recorded in the balance of payments. The existing time series, solely based on the ITRS, have been adjusted back to 1995 in accordance with *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

The main data source of general merchandise and goods for processing is the trade statistics compiled by the Customs Office, published by the CBS. This information is complemented with data from the ITRS. Imports in the trade statistics are recorded on a c.i.f. basis. The adjustment to an f.o.b. basis is made on an estimate of the insurance and freight costs, calculated as 3 percent of the import value. Data regarding oil imports, repairs of goods (exports), and goods procured in ports (exports) are derived from surveys and supplemented with information from the ITRS.

Services

Transportation

Transportation entries are derived from the ITRS, information from foreign airline companies, and estimated freight costs. The latter is calculated as 2.5 percent of the amount of cost, insurance, and freight.

Travel

Data on average expenditures of foreign tourists are derived from exit surveys of foreign visitors (cruise and stayover) conducted by the tourism organizations of the islands forming the Netherlands Antilles. The credit entries are thereafter calculated by multiplying the average expenditures with the average length of stay and the number of foreign tourists. The debit entries are derived from the ITRS.

Other services

All but insurance and other business services are derived from the ITRS and surveys regarding intercompany transactions and trade credit extended and received.

Insurance. Insurance services are estimated as 0.5 percent of the amount of cost, insurance, and freight.

Other business. Credit entries contain, among other things, the local expenses of companies operating in the international financial services sector.

Income

Direct investment. These data are compiled from the ITRS and the survey regarding intercompany transactions.

Portfolio investment. This information is obtained from the ITRS and the survey regarding intercompany transactions.

Other investment. These data are derived from the ITRS, the survey on intercompany transactions, and information from the government. The government interest payments are recorded on an accrual basis.

Current transfers

These data are compiled from the ITRS and the survey regarding intercompany transactions.

Capital Account

Capital transfers

These figures are obtained from the ITRS and the Ministry of Finance.

Financial Account

Direct investment

Transactions are classified according to the principles outlined in *BPM5*. The difference between the recorded credit and debit amounts of the intercompany account surveys is also classified as a direct investment transaction.

Portfolio investment

These data are compiled from the ITRS and the survey regarding intercompany transactions.

Other investment

Data on government transactions are obtained from the Ministry of Finance, and trade credit data are obtained from trade credit surveys. These data sources are supplemented with the ITRS and the intercompany transactions survey.

Reserve assets

These data comprise the change in foreign exchange at the BNA minus the short-term foreign liabilities of the

BNA plus the change in the net foreign assets of the commercial banks, which are deemed to be under the control of the monetary authorities.

New Zealand

The following text was confirmed as current in 2004.

I. General

Statistics New Zealand (Statistics NZ) compiles New Zealand's balance of payments statistics and international investment position statistics. From the June 2000 quarter, following the recommendations of *BPM5*, Statistics NZ began compiling and publishing a full set of balance of payments (current, capital and financial accounts) and international investment position statistics on a quarterly basis. Prior to this, full financial account and international investment position statistics are only available annually. Quarterly balance of payments and international investment position data are published within 12–13 weeks of the end of each quarter. March year-end balance of payments and international investment position statistics are also published within six months of the end of the reference year. The focus of the annual series is to provide additional information such as country, sector and industry breakdowns of foreign investment in New Zealand and New Zealand investment abroad.

Statistics NZ uses a wide variety of data sources to compile balance of payments and international investment position statistics. These include government's administrative data sources, surveys of New Zealand resident enterprises conducted by Statistics NZ, surveys conducted by other organizations, and data models and financial market information.

New Zealand's balance of payments and international investment position statistics are compiled in New Zealand dollars. Respondents to surveys are requested to convert amounts originally denominated in foreign currencies into New Zealand dollars at the rate of exchange applying at the time of the transaction or at the reference date for positions (stocks) data. In practice, data providers use a range of conversion practices in reporting their data to Statistics NZ.

Further information on New Zealand's balance of payments and international investment position statistics, including more detailed data than that shown in *BOPSY*, are available on the Statistics NZ website (www.snz.govt.nz). Statistics NZ has recently produced a comprehensive document describing the concepts, methods and data sources used in compiling New

Zealand's balance of payments and international investment position statistics. An electronic copy of this document is available free on the Statistics NZ website by looking under *Economy/Balance of Payments/Publications*.

II. Specific Items: Balance of Payments

Current Account

Goods

Exports and imports of goods in the balance of payments are based on the overseas merchandise trade statistics compiled monthly by Statistics New Zealand. These data, derived from the records of New Zealand's Customs Service, record exports on an f.o.b. basis and imports on a c.i.f. basis. For balance of payments purposes, imports are valued on a v.f.d (value for duty) basis. This is considered to be a reasonable approximation for imports on an f.o.b. basis.

The following adjustments are made to exports: timing and valuation adjustments for goods sold on consignment, timing adjustments for goods that leave New Zealand in one period but are known to have changed ownership in a previous or subsequent period, and coverage adjustments for goods that are operationally leased.

Adjustments made to imports of goods include coverage adjustment for goods that are operationally leased, adjustments for reclassification of nonresident freight and insurance to transportation and insurance (these are removed from imports by deducting imports v.f.d. [value for duty] from imports c.i.f.), and timing adjustments for significant goods that enter New Zealand in one period but are known to have changed ownership in a previous or subsequent period.

Services

Transportation

The main types of transportation services data collected are for the carriage of goods (freight) and passengers. Also included under transportation services are charters of carriers, tugboat services, airport and harbor fees, and goods consumed by carriers in the course of their operations, including bunkering and provisioning. These data are provided from quarterly and annual surveys of resident airlines and shipping companies, nonresident airlines (through their New Zealand offices), and New Zealand agents acting for nonresident ship operators.

Travel

Data on the expenditure of overseas tourists in New Zealand are derived from an international visitors survey, conducted by a marketing company for the New Zealand Tourism Board. Departing travelers are inter-

viewed about their travel expenditure for the survey in the three main airports of New Zealand. This sample survey has been conducted periodically since the September quarter of 1986. In periods when survey data are not available, quarterly estimates are extrapolated from previous survey results and data on the numbers of short-term (less than twelve months duration) visitors to New Zealand. Estimates are also made for expenditure on education and health-related travel by nonresidents. The estimates for education-related travel are derived from a Survey of English Language Providers and Ministry of Education data. Health expenditure is derived from Crown Health Entity data.

Information on the expenditure of New Zealand residents traveling overseas is derived from a model that uses information obtained from a sample survey of returned New Zealand travelers. The survey began in March 1991 but was discontinued in March 1994. Quarterly estimates are now extrapolated from previous survey results and information on the number of New Zealand residents returning from overseas travel of less than twelve months duration.

Other services

Insurance. Data are obtained from quarterly surveys of resident insurers, agents, and brokers and from surveys of resident enterprises that place insurance directly with nonresident insurers. Life insurance is calculated by multiplying the total amount of insurance premiums exported or imported by the five-year average domestic service charge ratio. The average domestic service charge ratio is the ratio of the domestic insurance service charge to total domestic premiums (premiums paid to resident insurers), where the service charge is calculated as premiums minus claims. The domestic service charge is the service charge applied to all domestic resident insurers regardless of who/where their clients are.

Freight insurance is derived directly from the overseas merchandise trade statistics for imports from the total value of imports, and the imports service ratio is applied to the overseas merchandise trade exports statistics to calculate the freight insurance on exports of goods.

Other business. This item covers all services transactions not included elsewhere. Types of services covered include engineering, banking and financial, management accountancy, legal, consultancy, communication, advertising, and periodicals on individual subscription. Estimates are sourced from Statistics NZ's quarterly sample survey of resident enterprises engaging in international services and royalty transactions. The quarterly survey has a sample size of approximately 740 enterprises.

Government, n.i.e. This item covers defense and diplomatic transactions where at least one party to the transaction is either the New Zealand government or a for-

eign government. The credit entries include estimates of sales of capital assets excluding land, estimated expenditure of foreign embassies in New Zealand, the portion of the New Zealand's international aid spent in New Zealand, and the government's receipts from immigration fees. Debit entries comprise the operational expenses of New Zealand's embassies overseas and the costs of New Zealand's defense forces stationed overseas. Government's current transactions data are sourced from government departments and a 1999 benchmark survey of the expenditure of foreign embassies in New Zealand.

Income

Investment income

Beginning from the June quarter 2000, the data for investment income are sourced from surveys introduced to collect financial account and international investment position data. The data collected in these surveys are based on the *BPM5* guidelines. The data collected also enable the classification of investment income into direct, portfolio, and other investment income.

Direct investment. The direct investment threshold applied is 10 percent or more of the equity ownership in an enterprise at the individual investor level for both direct investment in New Zealand and New Zealand direct investment overseas. The income arising from direct investment includes dividends, retained earnings (and losses), earnings of branches, and net interest arising from lending and borrowing arrangements between the direct investor and the direct investment enterprise. Interest income is recorded on a mixture of debtor- and creditor-based accrual bases.

Portfolio investment. Portfolio investment income includes dividends and interest. Interest payments on New Zealand government bonds (debits) are estimated on a creditor-based accrual basis. Interest income receipts and payments for other sector are recorded on a mixture of debtor- and creditor-based accrual bases.

Other investment. Other investment income includes interest receipts and payments that do not fall within direct and portfolio investment income. It comprises interest on loans, deposits, trade credits, and other assets and liabilities between unrelated parties. Interest income is recorded on a mixture of creditor- and debtor-based accrual bases.

Current transfers

General government

These data are obtained from the records of government departments. The transactions include pension and benefit payments from the New Zealand government to other governments, in respect of New Zealand citizens living overseas, receipt of benefits and pensions from

foreign governments for nonresidents living in New Zealand, government foreign aid, and receipts of withholding tax from nonresidents.

Other sectors

Transactions classified under this item include private sector foreign aid as well as gifts of cash. The private sector aid estimate is obtained from an annual survey of New Zealand aid organizations that, since 1994, has been conducted by the Ministry of Foreign Affairs and Trade. The estimate of cash gifts is derived from overseas exchange transactions data, extrapolated using mathematical techniques. (The Reserve Bank of New Zealand (RBNZ) compiled the overseas exchange transactions record until the abolition of capital controls in June 1986.)

Capital Account

Capital transfers

Capital transfers include migrants' transfers, which are funds that immigrants bring with them to New Zealand and that emigrants take to other countries. The migrants' transfers data are derived from a data model. Migration data and information obtained from the New Zealand Immigration Service are used in the data model to estimate migrants' transfers.

Acquisition/disposal of nonproduced, nonfinancial assets

Data on transactions in the ownership of copyright, patents, etc. are compiled from Statistics NZ's quarterly Survey of International Trade in Services and Royalties.

Financial Account

Beginning from the June quarter 2000, Statistics NZ moved its main financial account and international investment position data collection to a quarterly basis. At the same time, Statistics NZ introduced changes recommended in *BPM5* to these collections.

The new collection known as the Quarterly International Investment Survey (QIIS) collects data on the international financial assets and liabilities of resident end-investors. The survey collects data on the opening and closing position in all international financial assets and liabilities, the transactions and other changes in position (price and exchange rate changes), and the investment income associated with claims and liabilities to nonresidents.

Direct investment

The direct investment threshold applied is 10 percent or more of the equity ownership in an enterprise at the individual investor level for both direct investment in New Zealand and New Zealand direct investment overseas. The types of direct investment transactions included under this classification are changes in equity

capital, unremitted earnings, and changes in long- and short-term capital. From the June 2000 quarter onwards, New Zealand has been compiling financial account data on a *BPM5* basis. The 10 percent or more equity ownership criterion is applied for both inward and outward direct investment activity.

Portfolio investment

Portfolio investment comprises transactions in debt securities (bonds and notes, and money market instruments) and equities that are not classified as either direct investment or reserves. In New Zealand the data on the stock and flow of portfolio investment are collected from a number of quarterly surveys. Data on the stock and flow of portfolio investment (assets and liabilities) are available by instrument and by sector.

Data on portfolio assets held abroad by New Zealanders are collected from the QIIS and the Quarterly Managed Funds Survey. Both surveys collect stock and transactions data (however, some transactions data are estimated).

Liabilities data are sourced from the QIIS (equity and debt securities), the Quarterly Nominees Survey (for equity data), and a Monthly Nominee Company Survey run by the RBNZ (for debt securities data). The Quarterly Nominees Survey provides data on the stock of New Zealand shares held by nonresidents in the custody of a resident nominee. From the Nominee Survey, transactions data are derived from the stock data using external information obtained from the stock exchange and nominee companies. Adjustments are made for price and exchange rate changes and are included in the IIP statement. The RBNZ's Monthly Nominee Company Survey collects information on the nonresident holdings of debt securities issued by New Zealand residents.

Other investment

The main sources used to collect data on other investment are the QIIS and the Quarterly Managed Funds Survey. The QIIS collects data on both assets and liabilities, while the Managed Funds Survey collects only assets data. The stock and flow of other investment assets and liabilities data are available by sector. Information on the term to maturity profile is available for a significant portion of the stock of other investment assets and liabilities.

Other investment includes all financial transactions that are not included in direct investment, portfolio investment, or reserve assets. Included are other assets and liabilities, loans, currency and deposits, and trade credits between unrelated parties.

Reserve assets

Reserve assets comprise the financial claims on nonresidents that are available to the RBNZ and the New Zealand Treasury. The principal holder of New

Zealand's reserves is the RBNZ. The data, which relate to transactions in reserve assets as opposed to changes in holdings, are obtained from RBNZ records.

III. Specific Items: International Investment Position

Descriptions of data sources and methods used to compile the financial account generally apply to the international investment position statement. There are instances, however, where the quality of the data differs between the balance of payments and the international investment position statements. The stock data in almost all cases are reported directly by respondents, whereas in some instances transactions data are imputed. The market value of the stock of direct investment equity is often derived using the net asset value method, while the assets and liabilities may be at historical rather than at current cost.

Nicaragua

The following text was confirmed as current in 2004.

I. General

The External Programming Division of the Economic Studies Department of the Central Bank of Nicaragua (Banco Central de Nicaragua—BCN) is responsible for compiling balance of payments statistics. The primary sources of data are customs documents, annual surveys, and direct reports by government ministries and various departments of the BCN, as detailed below. Balance of payments statements are prepared on a quarterly basis and are denominated in U.S. dollars. Transactions denominated in other currencies are converted into U.S. dollar equivalents at the exchange rate applicable at the time of the transaction. Balance of payments statistics are published annually in summary form in the BCN's *Annual Report* and are also available on the Internet.

Balance of payments reports are available on the Internet, with historical data starting from 1994. In terms of methodology, Nicaragua is in transition between the *BPM4* and the *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

Customs compiles international trade statistics based on customs documents, which it provides to the BCN's

International Trade Section of the External Programming Department on a monthly basis. The BCN's International Trade Section adjusts the data for coverage, valuation, and time of recording to convert these data to a balance of payments basis. Customs data on imports are compiled on a c.i.f. basis. Freight, insurance, and other charges declared by the importer to Customs are deducted to derive the f.o.b. value. In the case of exports, customs data for the principal products (currently shrimp, lobster, fresh fish, and bananas) are replaced by data provided by related enterprises or associations. In the case of imports, customs data for crude oil and byproducts are replaced by data provided by the electricity company, INE-Petronic.

Data on goods for processing collected from the free zones are fully available and are included in the trade data. Data on goods procured in ports are provided by INE-Petronic.

Services

Transportation

Credit entries for freight are estimated on the basis of information provided by Customs. Freight services obtained by importers are based on data recorded in customs declarations. Air passenger services are based on an annual enterprise survey. Data on other transport include services reported by the National Ports Enterprise.

Travel

Credit and debit entries are estimated by combining information provided by the Directorate General of Migration and Aliens on the number of nonresident and resident travelers and the average stay, with information derived from the annual survey undertaken by the Institute of Tourism on the travelers' expenditures plus the BCN's External Programming Department's estimates.

Other services

Communications. These data, reported by the Nicaraguan Telecommunications Enterprise, cover gross revenue and expenditure resulting from the provision and acquisition of international communication services.

Insurance. The coverage of this item is restricted to the insurance of goods involved in international trade. Credit entries are estimated on the basis of the f.o.b. export value. Debit entries are based on data recorded on imports declaration forms.

Government, n.i.e. Through 1995, credit entries were estimated based on information on current account deposits of foreign embassies at the BCN. Since January 1996, these data have not been available; surveys of foreign embassies to collect these data will be introduced. Debit entries are derived from information provided by the Ministry of External Relations on the expenditure of Nicaraguan embassies and consulates abroad.

Income

Investment income

Direct investment. This component is estimated on the basis of the annual survey of foreign investment enterprises. The debit entries include reinvested earnings of nonresident direct investors.

Other investment. Credit entries include information provided by the BCN's Administration of Reserves Department on interest received from BCN's deposits and investments abroad, while the BCN's Monetary Programming Department provides information on the interest received from the commercial banks' deposits and investments abroad. Debit entries cover information provided by the BCN's Foreign Debt Section on interest on external debt.

Current transfers

Other sectors

Data on workers' remittances received from Nicaraguans residing abroad are obtained from an annual survey of enterprises providing this service and from data provided by the Department of External Programming of the BCN. The item also includes additional information regarding grants from abroad given to local NGOs.

Capital Account

Capital transfers

The External Debt Department of the BCN provides information on debt forgiveness. Data on grants in kind received are obtained from the Ministry of External Relations and the Ministry of Finance, since they are then used for public investment. Cash grants are taken from BCN records since they are used to strengthen the foreign reserves.

Financial Account

Direct investment

These data are collected through annual surveys of direct investment enterprises. In addition, data on new investments are available from the Ministry of Economy.

Portfolio investment

Since 1996, some data on portfolio investment are collected from commercial bank reports and information provided by the Department of Monetary Programming of the BCN.

Other investment

Data on external debt transactions of the general government, the central bank, and the public enterprises are collected by the BCN's External Debt Department.

These include current and expired arrears and debt renegotiations. Data on banks are collected by the Department of Monetary Programming of the BCN. Limited information on private sector transactions is also included.

Reserve assets

The BCN's Department of Monetary Programming provides the data.

Nigeria

I. General

The Balance of Payments Office in the Research Department of the Central Bank of Nigeria (CBN) compiles the nation's balance of payments statistics. Data required for balance of payments estimation are sourced mainly from various departments within the CBN. The Debt Management, Foreign Operations, International Economic Relations, and Trade and Exchange Departments of the CBN provide external debt figures, foreign exchange flows and external reserves statements, petroleum and gas statistics, and trade data, respectively. Data are obtained from four primary sources: the banks, the Nigerian Customs Service, the Nigerian Stock Exchange, and surveys. By statute, the banks are required to render returns to the CBN on financial and foreign exchange flow statistics, whereas the Customs Department supplies data on seizure of smuggled goods. The Nigerian Stock Exchange provides data on foreign investment in the nation's emerging market, while other primary data are procured through surveys conducted by the Research Department.

Because the Nigerian economy is heavily dependent on petroleum, the presentation of Nigerian balance of payments is classified broadly into oil and non-oil sectors. The balance of payments statements, which are reported to the Fund, are compiled on a quarterly basis and are published in the *Half-Year Report*, the *Annual Report and Statement of Account*, and the *Statistical Bulletin* of the CBN. At present, Nigeria's balance of payments compilation accords with the international standards recommended in the *BPM5*.

Most of the sources used in the compilation of balance of payments statistics are expressed in U.S. dollars and converted to the national currency. Nigeria operates a single exchange rate system prevailing in the Autonomous Foreign Exchange Market. The rate is applied to all external transactions. The CBN reports balance of payments statistics to the Fund in naira and also provides the exchange rate for conversion into U.S. dollars.

II. Specific Items: Balance of Payments

Current Account

Goods

Merchandise trade data are based on the CBN's foreign exchange flow statements, petroleum and gas statistics, and non-oil shipment statistics, which are collected from the Foreign Operations Department, the International Economic Relations Department, and the Trade and Exchange Department, respectively. Both exports and imports are valued on an f.o.b. basis. For timeliness, non-oil sector imports are proxied by the gross sum of foreign exchange allocation for visible imports at the autonomous foreign exchange market, National Priority Projects, private imports not valid for foreign exchange, drawings on federal government letters of credit (government imports), and payments through the West African Clearing House (WACH) (to capture autonomous imports along the West African coast, as well as the value of smuggled goods seized by Customs). The sum total is then adjusted for the cost of freight. Oil sector imports are estimated on the basis of crude oil production volume. Total oil export value is estimated on the basis of monthly oil export volume and the average realized price per barrel. However, the Statistical Services Division of the Research Department annually conducts a survey of oil prospecting companies, and an oil export figure collated from the returns is adopted to replace the estimate. Following the emergence of gas production, export and production data are obtained from International Economic Relations Department. The value of non-oil exports is based on bank returns rendered to the Trade and Exchange Department of the CBN.

Services

Transportation

This category of services covers all modes of transportation plus port services. In the non-oil sector, the credit entries (which reflect receipts from freight, passenger services, and port services provided by Nigeria to non-residents) are obtained from bank returns made to the Trade and Exchange Department. Debit entries cover freight charges accruable to foreign carriers; these are estimated by adjusting the derived freight value for local components. Currently, freight cost is estimated at 10 percent of the c.i.f. value of imports.

Travel

Non-oil sector travel data (private) are obtained from authorized dealers' returns to the Trade and Exchange Department but are not broken down into the relevant components. Thus, data on personal and business travel are not provided separately. The cash flow statement of the Foreign Operations Department captures foreign ex-

change disbursements on official travel. The oil sector travel item is estimated to move in tandem with the level of crude oil production activities.

Other services

Data in respect of other official services are obtained from the cash flow statement compiled by the Foreign Operations Department, while the private sector counterparts are obtained from returns rendered by banks to the CBN.

Income

Investment income

Direct investment. For the non-oil sector, the credit entry covers returns on direct investments abroad made by Nigerian residents; the Trade and Exchange Department statements supply the data. The debit entry, which reflects the non-oil companies' repatriated profits and dividends, is obtained from bank returns to the Trade and Exchange Department. In the oil sector, the debit entry represents oil companies' repatriated earnings as derived from petroleum statistics and a formula supplied by the Nigerian National Petroleum Corporation.

Other investment. In the non-oil sector, the credit entry represents data on interest earnings on official reserve assets and foreign exchange market accounts as obtained from the Foreign Operations Department. The debit entry, which covers estimated interest payments due on debt, is obtained from the Debt Management Department.

Current transfers

General government

In the non-oil sector, credit entries refer to grants received in cash and in kind by the federal government of Nigeria from international organizations, while the debit entries cover payments by the government to international organizations. The figures are obtained from the cash flow statement supplied by the Foreign Operations Department.

Other sectors

The Trade and Exchange Department provides data on workers' remittances, in cash and in kind, by Nigerians residing abroad (credit) and by foreign residents in Nigeria (debit).

Capital Account

Capital transfers

Debt forgiveness. The Debt Management Department is intended to provide data on debt forgiveness, whenever it occurs.

Migrants' transfers. Data on migrants' transfers are supposed to be supplied by the banks to the CBN where there is evidence of such transactions.

Financial Account

Direct investment

In the non-oil sector, data on direct investment inflows are obtained from surveys conducted by the Statistical Services Division of the Research Department, while data on the repatriation of direct investment capital by foreign residents in Nigeria are sourced from the Trade and Exchange Department. Direct investments in the oil sector comprise mainly new funds and suppliers' credit. Data on suppliers' credits are estimated to move in tandem with the level of crude oil production during the period, while new funds should be reported on the oil companies returns to the CBN or their respective annual reports.

Portfolio investment

Data on portfolio investment transactions are obtained from the Debt Conversion Secretariat within the CBN (which captures gross amounts redeemed through the Debt Conversion Program). The Nigerian Stock Exchange provides data on foreign investment in the nation's emerging market.

Other investment

The monetary authorities' transactions in other investment (other than reserve assets) are derived from the monthly CBN balance sheet. Banking sector assets and liabilities data are obtained from returns submitted by commercial banks to, and consolidated at, the CBN. Other sector assets and liabilities include merchant bank assets and liabilities, trade credits, and net claims on foreigners in respect of oil exports. All of these figures are derived from records within the CBN.

Reserve assets

The CBN balance sheet supplies data on movement in monetary gold and official foreign exchange. The entries reflect changes in the holdings of the CBN as measured by the difference in the amount of foreign currencies outstanding at the beginning and end of the period, net of attached or blocked assets.

Norway

I. General

Statistics Norway (SN) has the final responsibility for the compilation and publication of the Norwegian balance of payments statistics. It should be recognized, however, that the international transactions reporting system (ITRS) of Norges Bank (Norwegian Central Bank) (NCB) constitutes one of the main pillars on which the Norwegian balance of payments is founded. The balance of pay-

ments statistics are compiled by the Division of National Accounts in SN. SN uses transactions-based data, obtained from external trade statistics, oil and gas statistics, ocean transport statistics, and other statistics produced by SN, as the primary source of most transactions relating to exports and imports of goods and services. The ITRS is the data source used for compiling services not covered by the transactions-based data (which are most services in the preliminary balance of payments statistics), most of the income flows, and financial flows. The Norwegian balance of payments statistics are prepared on a monthly basis and published separately in the *Weekly* and *Monthly Statistical Bulletins* on the Internet. Balance of payments statistics are also published as part of the national accounts tables in various publications. Data are compiled in Norwegian kroner (NOK); transactions denominated in other currencies are converted to NOK. The exchange rates used for converting those ITRS-based transactions that are denominated in foreign currencies to NOK are the averages of buying and selling rates at the Oslo Stock Exchange. Banks and (so far) one nonbank enterprise compile an ITRS daily, and thus daily exchange rates are applied. Other nonbank enterprises compile monthly ITRS (of own-account transactions with nonresidents), in which only average monthly exchange rates are used. All data for exchange rate adjustments of financial stocks are based on exchange rates prevailing at the end of the month. The conversion rates used in the banking statistics (the data source for parts of the financial account) are the buying and selling rates at the end of the month. The exchange rates used in the external trade statistics are the rates prevailing at the time the transactions occur.

High priority has been given to the adoption of the recommendations of both the *BPM5* and the 1993 revised *System of National Accounts (SNA 1993)*. These projects have, in addition to implementing new international guidelines, incorporated revisions of historical time series, the development of new methods of estimation, and the establishment of a new database system for integrated economic accounts. A summary annual balance of payments statement according to *BPM5*, covering the period 1988–94, was published in 1995. Revised monthly balance of payments data have been established back to 1994. More detailed annual balance of payments data are available from 1992. Revised rest of the world accounts of the Norwegian national accounts, back to 1978, were published in 1997.

II. Specific Items: Balance of Payments

Current Account

Goods

Statistics on external trade in goods are based on information collected by the customs authorities; they are

compiled by SN according to the general trade principle and include transactions relating to the change of ownership of ships and drilling rigs when the equipment does not necessarily cross Norway's borders. These data are supplemented with information on exports and imports outside the customs area, in particular transactions related to the oil activities on the Norwegian continental shelf. No adjustment is presently made to the external trade statistics to account for goods that cross the border without a change of ownership. For international reporting purposes, imports c.i.f. are adjusted to f.o.b valuation. This estimation is based partly on data from the annual ocean transport survey of SN and partly on ITRS data.

Services

Transportation

The estimation of receipts from the provision of maritime freight and passenger services of nonresidents is based partly on the ocean transport survey compiled by SN and partly on the ITRS. The latter source has less detailed information, but it is available at an earlier point of time; therefore, it is used as the basis for the preliminary balance of payments statistics. The ocean transport survey is compiled on an annual basis. These statistics, which in principle cover all Norwegian operated vessels in foreign-going trade, are based on reports from shipping companies for each of these ships of 250 gross tons or more, including foreign registered and/or owned vessels. A large part of Norwegian oil and natural gas is exported by pipeline. This transportation service comprises the operation of pipelines from petroleum fields on the Norwegian continental shelf to installations onshore in foreign countries. SN compiles comprehensive and detailed statistics on the activities on the Norwegian continental shelf, including statistics on pipeline transport; these are based on reports from the Norwegian pipeline companies.

Travel

Through 1991, entries for travel were based entirely upon data supplied by NCB on the sale of local currency in exchange for foreign currency, supplemented with data from credit card companies. From 1992, these sources have been supplemented with separate estimates based on tourist statistics (i.e., accommodation statistics, passenger transport statistics).

Other services

Data on other services are based partly on the ITRS and partly on other statistical sources and estimates.

Communications. The data sources include aggregated information obtained from the public-owned telecommunications company, as well as the accounts of the Post Office.

Construction. Construction activity is classified as direct investment if the work is undertaken through a local subsidiary or branch; otherwise, it is classified as services.

Insurance. Data on gross premium payments are obtained from the ITRS. Estimates of the service element, for both credits and debits, are made by using the ratio of services to gross premiums, as observed in the statistics on domestic insurance companies produced by SN.

Other business. Owing to data collection problems, no estimates of merchanting activity are included.

Income

Investment income

The major source for the investment income entries is the ITRS. No split between total direct investment income and portfolio investment income is presently published. However, data on reinvested earnings on direct investment are included. Reinvested earnings and total dividends and other distributed branch profits are shown as direct investment income. The data for reinvested earnings are obtained from a special survey conducted by the NCB. Interest income is split between portfolio income and other income. Interest income is recorded on a due-for-payment basis except for interest on the securities investment of the NCB, which is recorded on a partial accrual basis.

Current transfers

Data on private transfers are obtained from the ITRS and are classified according to the detail provided by the ITRS. The aggregate governmental transfers are obtained on a preliminary basis from the ITRS; a detailed breakdown on a final basis is subsequently obtained from the accounts of the central government. The data include transfers in kind, for which the counterpart entry is assumed to be included in exports of merchandise. No counterpart entry is estimated for the service account.

Capital Account

Capital transfers

This item consists of data from the central government accounts on governmental transfers and data from the ITRS on transfers related to immigration/emigration and debt forgiveness (when data are available).

Financial Account

Most of the data on the transactions recorded in the financial account are based on the ITRS. Transactions of the monetary authorities (the central bank) and the banking sector are derived from changes in the foreign claims and liabilities shown in the balance sheets of these sectors, by adjusting for the effects of exchange

rate and price changes (where data are available). Financial account transactions are measured at market value with respect to transactions derived from the ITRS and at the lower of cost or market valuation when derived from the banking statistics.

Direct investment

The definition of direct investment in the Norwegian balance of payments statistics is generally in accordance with the recommendations of the IMF and the OECD. Transactions are limited to the immediate control principle. In 1995, the measurement of reinvested earnings was introduced, based on information from annual surveys of direct investment stocks, and are included in time series back to 1988. Until the results of the latest annual survey are available, estimates of data on reinvested earnings are based on data for previous periods. Construction activity is classified as direct investment only if work is undertaken through a local subsidiary or branch; otherwise, it is classified as services.

Portfolio investment

Transactions of the monetary authorities and the banking sector are derived from banking statistics. The data source for other sectors is the ITRS. Valuation is, for the most part, transaction values, but in some cases (where stock data are used to derive transactions) valuation is at cost. New issues of debt securities abroad were previously recorded as loans but are now included in portfolio investment. Securities investments of the Norwegian Petroleum Fund are included in portfolio investment, and not in reserve assets.

Financial derivatives

Financial derivatives are included in unclassified securities.

Other investment

New issues of debt securities abroad were previously recorded as loans but are now included in portfolio investment. Trade credits are not fully included. The distinction between long- and short-term investment, particularly loans, has been removed, because the distinction is no longer made in some data sources.

Reserve assets

Transactions in reserve assets are derived from the banking statistics as changes in the NCB's foreign claims and liabilities, adjusted using data on exchange rate and price changes in the ITRS. The banking statistics should, in principle, be in accordance with the NCB's balance sheet, but some minor deviations may occur for technical reasons. The valuation is the lower of cost and market value.

Reserve assets do not include the foreign investments of the Norwegian Petroleum Fund, which is owned by the

government and administered by the NCB; these are included instead in portfolio investment or other investment, depending on the financial instrument.

Oman

I. General

The agency responsible for compiling the balance of payments for the Sultanate of Oman is the Central Bank of Oman (CBO). In preparing the balance of payments estimates, the CBO obtains data from a few surveys as well as other sources, such as government ministries, other government agencies, banks, and its own internal records.

The CBO prepares the balance of payments estimates on an annual basis and publishes them regularly in its *Annual Report* as well as in its *Quarterly Statistical Bulletin*. The estimates are expressed in millions of rials Omani.

From 2000 onwards, the CBO compiles the Omani balance of payments in accordance with the principles of the *BPM5*. Data for the period 1996–2000 are now presented on the basis of *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

The data are based on trade statistics compiled by the Directorate General of Customs, with two exceptions—hydrocarbon exports, including LNG, and unrecorded imports, for which the primary sources of data are the Ministry of Petroleum and the Ministry of Defense, respectively. The Oman Refinery supplies data on other oil-related products (residues and light products).

Services

Transportation

Data on transportation credits reflect the value of services provided to nonresidents at Omani ports. The CBO takes these data, representing payments of port dues, stevedoring, and demurrage charges, from the annual statements of the Port Services Corporation Ltd. Debit entries include estimated freight values on imports.

Travel

Travel credit estimates are based on the number of foreign tourist arrivals, provided by the immigration au-

thorities, multiplied by the average expenditure per tourist as estimated through a comprehensive survey.

Travel debits represent the estimated expenditure of students studying abroad, Omani pilgrims abroad, and health treatment received by Omani nationals abroad. Debits include estimates of expenditure by Omani residents abroad.

Other services

Communications. Communication transactions (credit and debit) are recorded gross, representing receipts and payments respectively, of telephone, Internet, telex, telegraph, fax, and postal services. The Ministry of Communications provides the data.

Insurance. Insurance credits denote premiums, claims, and reinsurance received on account of life insurance and other insurance services. Debits under the insurance account reflect payments under the same items. The CBO obtains details of insurance receipts and payments from insurance companies, including agents operating in Oman.

Other business services. This component covers payments to nonresidents for consultant services provided to the government, and to the oil and defense sectors. CBO obtains data on oil and defense sectors from the concerned ministries. Payments by other government departments are estimated on the basis of a benchmark established on government civil current and capital expenditures for the previous year. No data are available on receipts by residents for other services they provide to nonresidents.

Income

Compensation of employees

Earnings of Omanis residing in border areas and working in neighboring countries are estimated and recorded under credit. Estimates are based on a past benchmark survey on the number of residents crossing the border, their average wage earnings, and an assumption about the share of their earnings that is remitted home.

Investment income

Direct investment. Debit entries for direct investment income cover three components: (1) remittances of profits by Petroleum Development Oman and other oil companies to their foreign shareholders, (2) estimates of profits of foreign-owned construction enterprises engaged in construction activity in Oman, and (3) estimates of remittances of profits of other Omani direct investment enterprises.

Sources of information for the components follow. For the first, the Ministry of Finance supplies the information. The second component is estimated by assuming a net return of 12.5 percent to builders on total invest-

ment in the non-oil sector, and the amount of profits so estimated is assumed to be remitted abroad. For the third component, the estimates are limited to banks operating in Oman with at least 10 percent foreign ownership. Data on bank profits, reported to the CBO by the banks, provide details of profits remitted abroad and the reinvested portion of the profits. Under investment income payments, the CBO records the total amount of profits accruing to nonresident direct investors, and it reports the contra-entry under reinvested earnings, direct investment, in the financial account.

Other investment. The item refers to the total investment income of the official sector (CBO and government) and of commercial banks.

The official sector's interest receipts comprise two components: (1) interest earned on the CBO's foreign assets and (2) interest earned on State General Reserve Fund (SGRF) assets held abroad. The CBO takes data on interest earned on its foreign assets from its internal records, whereas the Ministry of Finance provides data on interest earned on SGRF assets held abroad. Investment income debits include data the CBO obtains from the Ministry of Finance on government interest payments on short- and long-term foreign loans. Investment income debits also include interest payments on government development bonds issued to nonresidents; these are based on records available in the CBO. This item also includes interest payments made by the LNG Company.

The main source of data on commercial banks' interest receipts and payments is their consolidated balance sheet, providing details of their foreign borrowing and their claims abroad.

Current transfers

The debit entries reflect estimates based on the number of expatriates working in Oman, their average salary, and assumptions about the proportion of their salary remitted abroad. The Ministry of Labor and Development provides the information on the number of expatriates engaged in Oman and their average salaries. Compilers also cross-check these remittances with the data collected on actual remittances made through the banks and a few exchange houses, which are situated in the capital area, Muscat.

Capital Account

Capital transfers

The credit entry represents grants received by the government, while debit entries include the grants extended by various ministries. The source of these data is the budgetary statistics provided by the Ministry of Finance.

Financial Account

Direct investment

The data refer to receipts of funds by direct investment enterprises (such as oil companies, other companies, and commercial banks) from their foreign shareholders. The CBO obtains the data on the oil sector and banks from primary sources. The inflows also include the contra-entry for the reinvested earnings of foreign banks operating in Oman.

Portfolio investment

The debit entries reflect three types of transactions: (1) the net inflow of funds into the securities market, estimated on the basis of change in the nonresident holdings of equities of individual companies during the year and their average market price, as obtained from the Muscat Securities Market authorities; (2) the capital brought in by the branches of local banks including nonresident share of stock dividends, as reported by the commercial banks; and (3) transactions under Development Bonds issued by the government, culled out from the central bank records.

Other investment

On the asset side, the trade credit item includes change in oil export credits extended by Oman, estimated on the basis of receivables under oil exports as at the end of the year. The currency and deposits item reflects the change in the commercial bank's foreign assets (nonresidents), as reported by the banking system. Other assets include the subscription to IMF quota increase, contribution to regional funds, if any, and contributions to the Oil Fund. The Oil Fund, set up in 1993, represents the amount maintained abroad by the government out of oil revenues. The CBO obtains the data from government sources.

On the liabilities side, the data include loans and currency and deposits. The loans item includes drawings on, and repayments of, both long- and short-term loans received by the resident official sector, included under *general government*. The other sectors item reflects other identified net foreign borrowings (excluding banking sector). The currency and deposits item represents the change in the foreign liabilities of the commercial banks, which is extracted from the banking returns.

Reserve assets

The entries reflect changes in monetary gold, SDR holdings, reserve position in the Fund, and foreign exchange holdings of the CBO, including placements of the SGRF through the CBO. The CBO derives the data from its records. The entries under government reserves include holdings of the SGRF assets with foreign banks and in-

stitutions; the CBO receives this information from the Ministry of Finance.

Pakistan

The following text was confirmed as current in 2004.

I. General

The Statistics Department of the State Bank of Pakistan (SBP) compiles Pakistan's balance of payments statistics on quarterly and annual bases. The data are compiled in millions of U.S. dollars and rupees.

The data for balance of payments statistics are derived from various sources including (1) the international transactions reporting system (ITRS), (2) SBP's transactions, (3) foreign and domestic shipping lines and airlines, (4) Pakistan's diplomatic missions abroad, (5) duty-free shops, (6) customs authority, and (7) foreign exchange bureaus for most of the current account items and reserves. For the capital and financial accounts, the data are collected through the (8) Economic Affairs Division (EAD) and Finance Division (FD) of the Ministry of Finance, (9) survey of foreign investment's equity capital and reinvested earnings, and (10) enterprise survey for private loans. In June 2003, all questionnaires including the ITRS for banks were revised to ensure consistency with the guidelines outlined in the *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

Goods exported are originally valued on an f.o.b. basis. The freight collected by foreign and Pakistani shipping lines and airlines is deducted from the c.i.f. value of exports. As such, certain estimates for this item are based mainly on proceeds of exports recorded through the ITRS. Adjustments for freight, coverage, valuation, and timing are made for balance of payments purposes. For imports, the ITRS covers only cash imports through banking channels. Freight is estimated at a flat rate of 8 percent of total import payments and is deducted from the ITRS value of imports to arrive at an f.o.b. value of imports. Other adjustments made to the exchange record data are for imports financed by loans/grants and imports of capital goods by branches or subsidiaries operating in Pakistan by their parent companies abroad. The data for such imports are collected

from the annual survey of liabilities and assets and foreign investment in Pakistan.

Services

Transportation

This component covers all modes of transport and port services. The data are based on a survey of foreign shipping lines and airlines and reporting of Pakistani shipping lines and airlines for freight, passenger, and other components. In addition, the inward and outward remittances of transportation companies are reconciled with the reporting of the ITRS.

The ten-year moving average of data on imports by route, compiled by the Federal Bureau of Statistics, is used for the adjustment of the contra-entry of 8 percent freight on imports.

Travel

Data for both business and personal travel are collected through receipts and payments of the banking sector plus the inward and outward remittances on travel through the foreign exchange bureaus operating in Pakistan.

Further, the travel expenses of the crew of foreign shipping lines and airlines in Pakistan and the travel expenses of the crew of local shipping lines and airlines abroad are collected through a transportation survey of the respective companies.

Other services

The data on communication, construction, insurance, financial, computer & information, royalties and license fees, other business, cultural, and recreational services are collected from the ITRS.

Government, n.i.e. The credit entries cover remittances received by foreign diplomatic missions and earnings of Pakistani embassies working abroad. The debit entries include expenditure incurred by Pakistani diplomatic missions abroad and an estimate of technical assistance financed by grants and loans. The data are collected through a survey of Pakistani diplomatic missions abroad, ITRS, transactions through SBP, and data from the Ministry of Finance on logistical support, and so forth.

Income

Investment income

Data on the direct and portfolio investment income on equity pertaining to dividends and distributive branch profits to nonresidents are collected through the ITRS. The data on reinvested earnings and equity capital are collected through a survey of foreign assets and liabilities.

Information regarding income on debt (interest) is collected through the ITRS and payments or receipts through the SBP. The rescheduled and capitalized interest is captured through the reporting of the Ministry of Finance and an enterprise survey of the private sector. For cash payments and receipts, the separate codes are allocated to report transactions on income on debt for bonds and notes and money market instruments. Other investment income transactions that comprise interest to the IMF, interest on deposits of monetary authority, interest on loans for central bank, and other interest on foreign currency accounts are collected through the banks and the SBP.

Current transfers

General government

The entries for this component comprise the receipts of taxes and duties, and receipts and payments for contribution from or to international organizations, embassies, etc. The data are collected through the ITRS and the SBP records.

Other sectors

The entries cover workers' remittances, residents' foreign currency accounts, philanthropic donations, pensions, etc. and contra-entries for imports under personal baggage, gift scheme, and sale proceeds of duty-free shops. The data are collected through the ITRS, customs authorities, and duty-free shops.

Capital Account

Capital transfers

The item comprises data on debt forgiveness, project grants, refugee assistance, etc. that are collected from the Ministry of Finance. Data on cash grants to private sector, military assistance, etc. are collected through the banking system. Migrants' transfers in kind are collected from customs records. Data on acquisition of nonproduced nonfinancial assets are collected through the survey of Pakistani diplomatic missions abroad.

Financial Account

Direct investment

Direct investment abroad covers investment abroad by Pakistani firms/companies and the repatriation of such investment. Direct investment in Pakistan covers the investment by foreign enterprises of both cash and equipment brought in, and reinvested earnings.

Basic data are obtained from the ITRS. In addition, non-cash flow data (i.e., data on equipment and reinvested earnings) are derived from the annual survey of assets and liabilities and foreign investment in Pakistan; the survey is administered to foreign companies/branches

operating in Pakistan, Pakistani joint stock companies, and partnership companies.

Portfolio investment

The entries cover remittances received, related to bonds, national savings investments, foreign exchange bearer certificates (FEBC), foreign currency bearer certificates (FCBC), special U.S. dollar bonds, corporate equities, shares, debentures, etc. sold to foreigners by resident enterprises. Entries also cover outward remittances related to the purchase of foreign bonds and corporate equities.

Other investment

Most of the data on other investment (i.e., assets and liabilities) are obtained from the exchange records, supplemented by information received from various government agencies. The data on drawings of foreign loans are obtained from the Ministry of Finance, EAD, government of Pakistan, and data on the repayments of foreign loans from the exchange records.

Covered under assets are the outstanding export bills of Pakistani exporters from the monthly reporting of banks, assets of Pakistani embassies abroad, and public and private enterprises having offices abroad through their respective surveys. In addition, currency and deposits of individuals and nostro balances of authorized dealers are recorded through the ITRS.

Liabilities are the nonresidents' rupee accounts and balances of foreign currency deposits of nonresidents in Pakistan. Information on all official guaranteed and nonguaranteed long- and short-term loans are collected through the Ministry of Finance. Data on loans of the private sector are collected through the Exchange Policy Department of the SBP.

Reserve assets

Data are obtained from the records of the SBP and holdings of nostro balances by authorized dealers on behalf of the SBP.

The data on monetary gold, SDRs, and other nostro balances including placements are compiled from the monthly balance sheets of the SBP. These data are further reconciled with the daily reporting of the Exchange and Debt Management and Reserve Position by the SBP to take the actual flows in the balance of payments statement.

Panama

The following text was confirmed as current in 2004.

I. General

The agency responsible for compiling the balance of payments statistics of Panama is the Dirección de Estadística y Censo (Directorate of Statistics and Census) (DSC) of the Office of the Comptroller General of the Republic (CGR). The main sources of data are the National Bank of Panama, the Superintendency of Banks (SB)—formerly, National Banking Commission, Directorate of Public Credit of the Ministry of Economy and Finance (MEF)—formerly, the Ministry of Planning and Economic Policy (MPEP), Superintendency of Insurance, Panama Canal Authority—formerly, the Panama Canal Commission, and the U.S. Embassy.

The directorate also obtains information from other departments of the DSC (which compiles statistics on foreign trade and migration) and other directorates of the CGR (which compiles data on external debt). In addition, the DSC conducts surveys and special research on services, income, current transfers, and private nonbank financial flows.

The DSC compiles the data on an annual basis, although quarterly information is available for some items, and publishes them in the bulletin *Estadística Panameña - Situación Económica, Sección 341: Balanza de Pagos and Estadística Panameña - Avance de Cifras: Balanza de Pagos*. The data presented in this *Yearbook* include revisions to some transactions in all sectors of the balance of payments for 2000–2002.

The directorate compiles the data in balboas, which are equivalent to U.S. dollars. It converts transactions denominated in other currencies to balboas at the rates prevailing at the time of the transaction. Except for coins, all currency circulating in Panama is U.S. currency, but information on the amounts in circulation is not available. Consequently, any changes in the value of U.S. currency in circulation are implicitly reflected in net errors and omissions.

The classification of accounts used in the national presentation of Panama's balance of payments closely follows the presentation of the fifth edition of the *Balance of Payments Manual (BPM5)*. Revised balance of payments data for 1998–2002 is published in DSC's *Panamá en Cifras*.

II. Specific Items: Balance of Payments

Current Account

Goods

The DSC bases the data on the trade statistics it compiles from customs documents. Adjustments are made to exclude trade between the Colón Free Zone and the rest of

Panama to/from the rest of the world, which the trade statistics include. Beginning with 2001, the trade statistics include imports by the Panama Canal Authority.

For goods procured in Panamanian ports by foreign carriers, DSC obtains data from the trade statistics and direct sales by private enterprises (bunker oil), from the oil companies (aviation fuel), and from surveys of agents of foreign airlines and shipping companies (other supplies).

Data on imports from the rest of Panama and the Colón Free Zone (from 1998 onwards) are available both on an f.o.b. and a c.i.f. basis. From 1997 onwards, adjustments in coverage register electricity trade between Panama and Central America, as well as goods for processing derived from export returns. These estimates are generated from trade declarations.

Services

Transportation

DSC derives information on freight on imports from customs declarations. It obtains data on passenger services from surveys of national airlines and agents of foreign airlines. For port services, it obtains data from agents of foreign air and shipping lines, national airlines, and the Panama Canal Authority (for tolls and other services to Canal users).

Travel

DSC bases data on sample surveys it conducts in conjunction with the Panamanian Tourism Institute, on the expenditures of foreign visitors in Panama and of Panamanian residents on their trips abroad, and on information derived from migration statistics on the number of travelers.

Other services

Insurance. The credit entries cover net premiums on direct insurance and reinsurance assumed by Panamanian insurance companies. The Superintendency of Insurance of the Ministry of Commerce and Industry provides the information. The debit entries cover premiums on merchandise insurance on imports, derived from the trade statistics, adjusted to exclude insurance collected by resident insurers, and net reinsurance premiums ceded to foreign companies.

Financial. The data mostly cover commissions and other financial services provided or received by general license and international license banks, as reported to the Superintendency of Banks.

Other business services. DSC obtains the data through its surveys of nonfinancial enterprises, including those operating in the Colón Free Zone.

Government, n.i.e. Until 1999, the credit entries mainly covered acquisition of goods and services in Panama by

U.S. military establishments that were located in the Panama Canal Area. The source of the data is the U.S. Embassy. DSC takes the data on Panamanian government expenditures abroad from the Directorate of Accounting of the CGR.

Income

Compensation of employees

Until 1999, DSC obtained data from the U.S. Embassy in Panama, and the data included wages paid to Panamanian residents by the U.S. Defense Department and some other U.S. agencies that operated in the Panama Canal Area.

Investment income

Direct investment. The entries cover transactions of nonfinancial corporations (including those operating in the Colón Free Zone), the Panama Canal Authority (until 1999), general license banks (which do business with both residents and nonresidents), and international license banks (which do business with nonresidents only). Until 1999, the sources of the data were annual surveys conducted by the DSC, the annual report of the Panama Canal Authority, and the general license and international license banks' consolidated balance sheet and income statement data, which the Superintendency of Banks provided.

Portfolio investment. DSC obtains the data on general government from the Directorate of Public Credit of the MEF. It derives the data for the banking sector bank-by-bank from the consolidated income and loss statements of the general license and international license banks, provided by the Superintendency of Banks.

Other investment. The main source of data on general government is the External Debt Report prepared by the Directorate of Accounting of the CGR and, from 1996 onwards, by the Directorate of Public Credit of the MEF. The DSC derives the data for the banking sector, bank-by-bank, from the consolidated profit and loss statements of the general license and international license banks provided by the Superintendency of Banks. It obtains data related to the other sectors, concerning the decentralized institutions, from the External Debt Report of the Directorate of Accounting of the CGR and, from 1996 onwards, from the Directorate of Public Credit at the MEF and from the survey of foreign investment enterprises.

Current transfers

In keeping with *BPM* recommendations, since 1997 the available information allows a distinction to be drawn between current and capital transfers. The credit entries for current transfers of general government include grants received from the United States Agency for International Development (AID), based on data provided by AID.

The debit entries refer to workers' remittances and are derived from surveys of the exchange and transfer bureaus.

Other current transfers (credit) mainly cover pensions paid by the U.S. government to residents of Panama who worked for U.S. government agencies in the former Panama Canal Zone.

Capital Account

Capital transfers

From 1995 onwards, they include grants by foreign governments and, since 1997, furniture and equipment grants from international organizations.

Financial Account

Direct investment

No data are available on direct investment abroad by Panamanian residents.

The data sources are as described for direct investment income, debit. Direct investment enterprises are defined as those in which a foreign investor has an equity participation of 10 percent or more.

Portfolio investment

DSC derives the entries under assets for bonds and notes of the banking sector from the consolidated balance sheets of the general license and international license banks (provided by the Superintendency of Banks). The directorate obtains the entries under assets for bonds and notes of other sectors from the annual enterprise survey it conducts. Beginning in 2002, the Coordinated Portfolio Investment Survey has been implemented. DSC expects to include the results of this survey in the balance of payments statistics.

For portfolio investment liabilities, DSC obtains data on general government bonds and notes from the Directorate of Accounting of the CGR and, from 1996 onwards, from the Directorate of Public Credit of the MEF. These data comprise new bond issues designed to reschedule debt in arrears as well as those used for repurchases and exchanges of the new bonds. They also include repayments on previous issues as well as repurchases and swaps of new bonds.

Other investment

DSC derives data for the monetary authorities from the balance sheet of the National Bank of Panama. It obtains data on the external debt transactions of general government and the decentralized institutions from the Directorate of Accounting of the CGR and, from 1996 onwards, from the Directorate of Public Credit of the MEF.

The entries for banks' short-term loans, other assets, and other liabilities may include long-term transactions, but separate information is not available. DSC draws data on the liabilities of other sectors from the surveys it conducts.

Reserve assets

The entries refer to the foreign exchange assets of the National Bank of Panama, a government-owned deposit money bank that performs some of the functions of a central bank. There is no central bank in Panama. The reserve asset entries are defined as the changes in stock at the end of each year as a result of the transactions carried out.

III. Specific Items: International Investment Position

The data sources on the international investment position (IIP) are the same as those used in compiling the balance of payments.

Papua New Guinea

I. General

The National Statistics Office (NSO) is officially responsible for the compilation of balance of payment statistics for Papua New Guinea. However, the Bank of Papua New Guinea (BPNG) has been collecting and publishing Papua New Guinea's balance of payments statistics, using an international transactions reporting system (ITRS), as the NSO is unable to produce these statistics with an acceptable timeliness.

The ITRS system of Papua New Guinea relies on data collected from three sources: (1) reports on transactions settled by the domestic banks, used for recording merchandise exports and imports, services, transfers, and capital and financial account transactions (the daily exchange rates are used to convert foreign currency values to Papua New Guinea kina); (2) reports on transactions of resident companies settled through offshore accounts held with nonresident banks, as permitted under the Foreign Exchange and Gold Regulations of Papua New Guinea (the reports on nonresident bank accounts are denominated in the original currency and converted to Papua New Guinea kina, using the average exchange rate of the month as a proxy for the exchange rate at the time of the transaction); and (3) data on changes in official financial assets and liabilities obtained from the International Department of BPNG.

Together, these three sources are expected to provide a full coverage of transactions undertaken between Papua New Guinea and the rest of the world. The BPNG also estimates the reinvested earnings and migrant transfers. The BPNG is currently designing a survey of enterprises to better measure reinvested earnings of Papua New Guinea's direct investment enterprises.

In general, the balance of payments estimates are compiled in accordance with the international standards recommended in *BPM5*. The data are compiled monthly but are published with a quarterly periodicity and provided to official and foreign institutions, private organizations, and individuals.

II. Specific Items: Balance of Payments

Current Account

Goods

Merchandise export and import statistics are compiled using daily submissions from commercial banks and monthly submissions from holders of nonresident bank accounts. Exports are valued on an f.o.b. basis, while imports are valued c.i.f.. A classification adjustment is made to c.i.f. imports to exclude the cost of freight and insurance.

Services

Transportation

Transportation services include receipts and payments from freight, port handling, or other transportation-related services on traded goods.

Travel

Travel data cover passenger services by all modes of transport and port services related to the transportation of passengers. They include tickets, hotel rooms, airport taxes, and other travel expenses and receipts. Education-related expenditures are shown as a separate component of travel and include all tutorial fees and remittances or receipts associated with education at all levels.

Other services

This category covers receipts and payments for insurance and other business services, which include leasing, consultancy, and management services. Leasing services cover receipts or payments relating to financial or operating leases.

Income

Investment income

Direct investment. This item includes dividends on shares and other forms of ownership, paid offshore to nonresident shareholders or received by Papua New Guinea

companies or individuals as a result of shareholding in nonresident companies.

Other investment. These data include all receipts or payments in the form of interest earned or related fees associated with lending or advances between a resident entity and a nonresident entity.

Current transfers

General government

These data include tax payments or receipts on income or wealth and other transfers such as Australian budget support to the government of Papua New Guinea.

Other sectors

These data include superannuation fund receipts or payments made for bona fide superannuation funds, transfers made in respect of family support, and receipts and payments in the form of gifts.

Financial Account

Other investment

Other investment includes the government of Papua New Guinea's loan drawdowns and repayments. The source of the data is the Financial Markets Department of BPNG. Private loan drawdowns and repayments are measured using information from the domestic commercial banks and monthly reports of resident companies holding offshore bank accounts. Other investment transactions also include changes in assets held with nonresident bank accounts by resident companies. In addition, nonofficial monetary sector transactions related to changes in the net foreign assets of the commercial banks are included in other investment.

Reserve assets

Data on changes in the official international reserves of Papua New Guinea that are held by BPNG are obtained from BPNG's Financial Markets Department.

Paraguay

The following text was confirmed as current in 2004.

I. General

The Central Bank of Paraguay (CBP) is responsible for compiling the balance of payments statistics. Within the CBP, the International Economics Department (Balance of Payments Division) of the Office of the Manager of Economic Research collects data from various public and private agencies, such as other CBP offices, the Direc-

torate General of Customs, ministries, and binational companies (Itaipú and Yacyretá). It also prepares its own surveys for data collection on services and direct investment income and capital. It publishes the data annually in the *Balance of Payments Bulletin*, following the *BPM5* guidelines. It also prepares quarterly estimates. In addition, for certain items, monthly information is available.

II. Specific Items: Balance of Payments

Current Account

Goods

The data are based on foreign trade statistics processed from customs documents (export and import clearance documents). Beginning in 1990, data recorded as total exports include (1) exports recorded on an f.o.b. basis from customs documents, (2) unrecorded f.o.b. exports obtained by subtracting recorded exports from partner country data shown in the Fund's *Direction of Trade Statistics (DOTS)*, (3) re-exports, which are estimated on the basis of *DOTS* data, and (4) adjustments for coverage to include goods sold to binational companies and electricity sold to Argentina by ANDE (the national electricity company).

Data on imports include (1) imports recorded on an f.o.b. basis from customs documents, (2) unrecorded imports obtained by subtracting *DOTS* data on partner country exports to Paraguay from customs data on imports f.o.b., and (3) an adjustment for electricity purchases by ANDE from the Itaipú Binational Company.

Services

Transportation

The main sources for freight data are shipment documents and surveys of land, air, and inland waterway transportation companies. Other sources to compile this item include the report on soya exports of the Paraguayan Chamber of Cereals and Oleaginous Products Exporters, regional reports prepared by the Ministry of Public Works, and the report on goods exported via inland waterways from the State Merchant Marine. The CBP obtains data to compile passenger services from the Capital Police, which reports the number of passengers entering and leaving the country using different carriers (air or land), multiplied by the ticket prices collected in surveys of local tourism operators.

Travel

Concerning inward tourism, the CBP obtains data monthly from the Directorate General of Tourism on the number of excursionists (mainly related to cross-border shopping) and tourists (who stay in the country for more than 24 hours). The central bank multiplies these data by an estimated daily expenditure based on UN estimates.

For outward tourism, the Capital Police provide data on the number of Paraguayan nationals leaving the country and, for air travel, their points of departure and destination. To calculate expenditure, the CBP uses a UN schedule of expenditure together with estimates based on interviews with tourism agents on cross-border shopping.

Other services

Insurance. The data cover receipts and payments by Paraguayan insurance companies on account of reinsurance abroad. The CBP's Superintendency of Insurance supplies the data.

Other business services. CBP derives the data from enterprise surveys.

Government, n.i.e. Credit entries are estimated using an average expenditure figure per person for members of the foreign diplomatic corps in Paraguay. The Ministry of Foreign Relations is the source of data.

Income

Compensation of employees

The credit entries cover income paid to employees of the binational companies (Itaipú and Yacyretá). These companies provide the information on an annual basis.

Investment income

CBP uses surveys for information on reinvested and distributed earnings of direct investment enterprises in Paraguay.

Current transfers

General government

Through an annual survey, government agencies provide the data. Adjustments are made on the basis of information from the UN and from the survey of various nonresident organizations cooperating with the government.

Financial Account

Direct investment

For direct investment, CBP's Balance of Payments Division obtains data from its annual survey of enterprises established in Paraguay. It updates the directory of enterprises with the list of beneficiaries of Law 60/90 on the Investment Incentive Regime.

Other investment

Various units of the CBP provide data concerning the monetary authorities. The External Debt Division provides data on a monthly basis related to public sector liabilities. The Superintendency of Banks provides information about bank transactions from the consolidated balance sheets of Paraguayan financial institutions.

CBP obtains nonfinancial private sector data from surveys to key enterprises and from data published by the Bank for International Settlements.

Reserve assets

CBP derives data on monetary gold and foreign exchange reserves from its general foreign exchange position report. It uses the International Monetary Fund's data to compile the entries for SDR holdings and the reserve position in the Fund.

III. Specific Items: International Investment Position

Data sources used for compiling the international investment position (IIP) are the same as those used for the balance of payments.

Peru

The following text was confirmed as current in 2004.

I. General

The Balance of Payments Department of the Banco Central de Reserva del Perú (Central Reserve Bank of Peru—CRBP) is responsible for compiling balance of payments and international investment position statistics. It obtains data from the Office of the National Superintendent of Tributary Administration (SUNAT), financial institutions, various government ministries, nonfinancial institutions, and enterprises, as detailed below. The CRBP conducts quarterly and annual surveys of international travelers and of a sizable sample of representative enterprises.

The CRBP prepares the balance of payments statements in U.S. dollars on a quarterly basis in accordance with the recommendations of the *BPM5*. It publishes these data in the *Weekly Report (Nota Semanal)*, the *Annual Report (Memoria)*, and on the Internet (<http://www.bcrp.gob.pe>).

The CRBP compiles the international investment position based on survey data, official records, and international sources.

II. Specific Items: Balance of Payments

Current Account

Goods

Merchandise exports and imports are valued on an f.o.b. basis. SUNAT compiles the data on the basis of customs declaration forms.

Export data are recorded on the date of shipment. These data are supplemented by the value of goods (mainly fuel and food) sold to nonresident transport enterprises and nonresident ship and aircraft repairs in Peru (CRBP surveys).

Import data are recorded on the date on which the customs documents are numbered, which is close to the date of clearance. These data are supplemented by data on imports into the Free Trade Zone of Tacna (ZOFRAT-ACNA), purchases of goods (primarily fuel and food) abroad by resident transport companies (CRBP surveys), and ship repairs by nonresidents.

Services

Transportation

CRBP bases the credit and debit entries on its quarterly survey of international transport companies and agents. It surveys all national companies and foreign airlines. Transactions of foreign shipping companies are reported by their agents or representatives in Peru.

The survey provides data on freight charges, sale of passenger fares, and supporting and auxiliary services by mode of transport (air, sea, and other transport). Compilers also use the import freight charges recorded in customs declaration forms after they adjust the data to subtract freight services provided by resident enterprises.

Travel

Data are estimated on the basis of tourism surveys (inward and outward) that the CRBP conducts at the Jorge Chavez International Airport, the Santa Rosa post on the Chilean border, and the Yunguyo post on the Bolivian border. These surveys provide estimates on the average expenditure of nonresident travelers in Peru and resident travelers abroad.

The number of international travelers is provided by the Directorate General of Migration and Naturalization, an agency of the Ministry of the Interior. Data include travelers that cross the border and spend more than a night abroad and same-day visitors abroad (outward tourism) or in Peru (inward tourism). Debit entries also include the contra-entry of scholarships recorded as current transfers.

Other services

Communications. This account covers Peru's gross revenue from and payments for international communication services (primarily telephone, telegraph, telex, and satellite usage). CRBP obtains data directly from the providers of these services.

Insurance. Insurance companies operating in Peru provide the data quarterly to the CRBP. Credits and debits are entered when the transaction occurs (not on a cash basis) and include reinsurance premiums paid, commis-

sions, and claims collected. CRBP's annual Services, Foreign Investment, and External Debt Survey (SFIED) captures insurance services obtained by large Peruvian enterprises directly from foreign insurance companies.

Other business. This account mainly records royalties and license fees, computer services, financial services, administrative services, commissions and representation fees, and engineering services. Data are based on the results of the annual SFIED survey and include debits for import supervision provided by SUNAT.

Government, n.i.e. CRBP bases the credit entries, to the extent possible, on data that foreign embassies provide of their expenses. Debit entries are based on data provided by the Ministry of External Relations of Peru and on data on nonreimbursable services sourced from the Ministry of the Presidency.

Income

Investment income

Direct investment. Preliminary quarterly data are based on the accounting records of enterprises as reported in the quarterly Foreign Investment and External Debt Survey (QFIED), conducted among a representative sample of enterprises. Final data are based on the accounting records of enterprises as reported in the annual SFIED survey. Distributed income is recorded on the date it is paid, and reinvested earnings (with a contra-entry in direct investment capital) are recorded in the period in which they are earned.

Portfolio investment. CRBP obtains data on bonds and equity securities held by nonresidents, from the QFIED and SFIED surveys.

Other investment. The Ministry of Economy and Finance (MEF) provides information on interest payments on external public debt. Compilers derive data on interest payments on external private debt by applying an average rate to the stock of debt. Data on interest receipts are estimated by applying an average rate to deposits of nonbank residents held abroad. The SFIED survey supplies the average interest rates.

Current transfers

Other sectors

Workers' remittances. In 1998, the Analysis for Development Group (GRADE)—at the request of the CRBP—made an estimate of workers' remittances from abroad. The number of Peruvians living abroad was estimated through the review and an update of the census of the population of various countries. An estimate of the amount remitted according to the social characteristics of the population that remit was also made. The data series were revised in 2000. Data are updated based on the information of money transfer enterprises provided

by the Superintendence of Banks and Insurance Companies (SBS).

Capital Account

Capital transfers

General government

Debt forgiveness. This item covers external public debt forgiven. The MEF provides the data.

Other. SUNAT provides data on donated goods (c.i.f. value). Based on this information, it is possible to identify the beneficiary sector (public or private). The Ministry of the Presidency provides data on nonreimbursable international technical cooperation received in cash and services.

Other sectors

Migrants' transfers. CRBP obtains the average transfer per migrant from the survey it conducts in 21 foreign cities with a high concentration of Peruvian residents. For the flow of migrants in a given period, CRBP uses statistics prepared by the Directorate General of Migrations and Naturalization of the Ministry of the Interior.

Other. Information on donations of capital goods is provided by SUNAT and recorded on an f.o.b. basis.

Financial Account

Direct investment

Enterprises are considered direct investment enterprises if nonresidents hold 10 percent or more of the ordinary shares. The data sources are the CRBP, the QFIED survey, the annual SFIED survey, the records of the National Agency for Investment Promotion (PROINVERSION), and the reports on external income and expenditure submitted to the CRBP by foreign oil companies.

CRBP compiles preliminary quarterly data from QFIED surveys, PROINVERSION, and specialized media (journals, reviews, etc.). It supplements annual data with information provided by the SFIED survey, which includes information on equity, foreign participation, distribution and reinvestment of earnings, and long-term debt with the head office and/or affiliates. Data are recorded at book value.

Portfolio investment

CRBP bases data on portfolio investment assets on its annual SFIED survey. Data on portfolio investment liabilities primarily include purchases and sales of securities by nonresident investors through the Lima Stock Exchange Market. The compilers also record the

placement of bonds with nonresidents, based on data in QFIED surveys and the annual SFIED surveys.

Other investment

Monetary authorities. CRBP obtains these data from its records, which exclude the effect of price fluctuations on liabilities.

General government. The records of the Directorate General of Public Credit of the MEF provide final data on disbursements and repayments of medium- and long-term loans. The preliminary data also include information obtained from multilateral agencies (IDB and World Bank), other ministries, and public enterprises.

Banks. These data are calculated as the difference between balances; consequently, they include valuation changes.

Other sectors. Quarterly surveys to enterprises supply preliminary quarterly data on disbursements and repayments of medium- and long-term loans. The annual SFIED survey supplies data on disbursements and repayments of medium- and long-term loans to the private sector. Financial institutions complying with a CRBP resolution provide data on short-term loans (working capital, exports, and imports).

Reserve assets

CRBP obtains these data from its records, which exclude the effect of price fluctuations on assets.

III. Specific Items: International Investment Position

Direct investment

PROINVERSION is responsible for recording direct investment in Peru and reports the balances shown. Data correspond to nominal and historic values.

Portfolio investment

The balances represent (1) the market value of the holdings of nonresident investors in the Lima Stock Exchange Market published by the clearing house Cavali ICLV S.A., and (2) the balance of equity securities, bonds, and similar instruments placed abroad.

Other investment

Assets include the deposits of nonbank residents abroad; the data are obtained from the international banking statistics of the Bank for International Settlements.

The public sector debt comprises debt of the general government and financial and nonfinancial public enterprises and the financial costs of unpaid due debt. These data are based on information provided by the Direc-

torate General of Public Credit of the MEF. CRBP debt data are derived from the CRBP records.

The CRBP takes data on medium- and long-term external debt of the private sector from the QFIED and the SFIED surveys it conducts.

Balances on short-term debt are based on reports sent by financial institutions. These data include debt contracted directly by the resident financial institutions, debt guaranteed by them, and debt intermediated by them without incurring any liability.

Philippines

The following text was confirmed as current in 2004.

I. General

The Department of Economic Research (DER) of the Bangko Sentral ng Pilipinas (BSP) is responsible for compiling the balance of payments of the Philippines. The principal sources of data are the National Statistics Office (NSO) for trade in goods and the following internally generated statistics of the BSP: (1) the International Transactions Reporting System (ITRS), also locally referred to as the FX Form, for most of the services account, income, current transfers, direct investment, portfolio investment, and other investment components; (2) the International Operations Department (IOD) of the BSP, responsible for compiling the external debt statistics and for registration of loans and investments; (3) the Monetary Survey (MS) for commercial banks' transactions; (4) the Cross Border Transactions Survey (CBTS) for transactions settled through accounts abroad; (5) the accounting records on reserves maintained by the Treasury Department (TD) of the BSP; and (6) the Supervisory Reports and Studies Office for data on trading of bonds. Supplementary data are also provided by other government entities (i.e., National Economic and Development Authority and the Securities and Exchange Commission—SEC), international and multilateral organizations, and foreign government agencies (i.e., the U.S. Veterans Administration and the U.S. Agency for International Development (USAID)).

Beginning with the report of the third quarter of 2003, released in December 2003, the balance of payments (expressed in U.S. dollars) is compiled on a quarterly basis. However, monthly aggregates are contained in the quarterly report, with data for the comparable quarter of the previous year. The data are disseminated to the public with an 11–12 week lag through a press release and the BSP website and subsequently published in the *Selected Philippine Economic Indicators*.

Starting with the January 2000 balance of payments, data are compiled in accordance with the methodology set out in the *BPM5*. However, owing to data limitations, full compliance with the *BPM5* definition of residency is yet to be achieved, pending the establishment of new databases.

II. Specific Items: Balance of Payments

Current Account

Goods

Data on goods are based on customs data, which are processed and consolidated by the NSO. The NSO compiles the foreign trade statistics using the general trade system, in which the national boundary serves as the statistical frontier. For balance of payments purposes, the DER adjusts the foreign trade statistics to exclude goods that do not involve a change of ownership (i.e., returned goods, temporary exports and imports, and equipment procured under operations lease arrangements). In the balance of payments, both imports and exports are valued on an f.o.b. basis.

Services

Transportation

Transportation refers largely to data on merchandise freight, sourced from the foreign trade statistics. The ITRS provides data on other components of transportation services.

Travel

Estimates of travel receipts are based on the Visitors Sample Survey (VSS) conducted by the Department of Tourism (DOT). The VSS provides information on the average expenditure of foreign tourists and the average length of stay in the Philippines. Data on travel expenditure abroad by residents are based on the ITRS.

Other services

Except for data on merchandise insurance, which are largely obtained from the NSO, the data on other services components are based on information from the ITRS. With the refinements made to the ITRS in April 1999, a finer breakdown of services transactions is now reflected in the balance of payments, in conformity with the *BPM5* classification.

Income

Compensation of employees

Credit entries refer to overseas Filipino worker earnings that are inwardly remitted through the banking system. Debit entries refer to the earnings of nonresidents em-

ployed in local firms. Since the ITRS is the main data source, the one-year residency criterion cannot be adhered to, given the limitations of the banking monitoring system for gathering such details.

Investment income

Data on income receipts of residents for direct investment, portfolio investment, and other investment are sourced from the ITRS. Income payment data are provided by the ITRS, complemented by data from the external debt statistics, specifically for income payments on loans and bonds. Data on income receipts and payments of the monetary authorities are obtained from the accounting records of the TD of the BSP.

Current transfers

General government

Credits cover the receipt of grants from foreign governments and multilateral agencies; data are provided by the National Economic Development Authority (NEDA), which monitors these flows. Supplementary information on grants is provided by the USAID and by the U.S. Veterans Administration for data on pensions paid to residents. Debits represent the government's contributions to international organizations.

Other sectors

All data are obtained from the ITRS, supplemented by information from the foreign trade statistics and the CBTS.

Capital Account

Capital transfers

The general government account uses the same data source as that used for current transfers and includes mostly the equipment component of grants. The other sectors' account represents migrants' transfers and is based on information from the ITRS.

Acquisition/disposal of nonproduced nonfinancial assets

Data for this account are obtained from the ITRS.

Financial Account

Direct investment

Data for direct investment abroad are obtained from the ITRS, supplemented by data from MS and SEC. The data on foreign direct equity investment in the Philippines are also obtained from the ITRS. This information is also supplemented by the BSP's registration records for investment that does not involve foreign exchange flows, such as equipment imports and unremitted dividends and profits used to fund additional investment in the Philippines. Data on other direct investment pertain

to intercompany loans and are based on information from the external debt statistics and the MS.

Portfolio investment

Data for portfolio assets are obtained from the ITRS, CBTS, and MS in the case of the commercial banks and from TD in the case of BSP portfolio assets. Data on portfolio investment liabilities are obtained from the ITRS, MS, and TD. The external debt statistics and the Supervisory Reports and Special Studies Office provide information on the trading of bonds.

Other investment

Other investment assets and liabilities are largely comprised of trade credits, loans, and changes in banks' currency and deposits. Data on other investments are obtained from the ITRS, MS, CBTS, external debt statistics, and TD. The data on trade credits are net estimates, representing the difference between trade receivables and trade payables. Loans on the liability side are based on data from the external debt statistics and from the MS for the data on banks' currency and deposit liabilities.

Reserve assets

The overall balance of payments position is equal to the change in net international reserves (NIR) of the BSP that is purely due to economic transactions, i.e., excluding the effects of revaluation of reserve assets, gold monetization, and reserve-related liabilities. Net international reserves is derived by deducting reserve-related liabilities (Use of Fund Credit and BSP short-term liabilities) from reserve assets. The data are provided by the TD of the BSP.

Poland

I. General

Under the Act on the National Bank of Poland (NBP) of August 29, 1997, as published in the *Dziennik Ustaw* (Journal of Laws) of 1997, No. 140, Item 938, the NBP is obligated to compile the balance of payments and the international investment position statement and to report thereon to Parliament.

The Act on the National Bank of Poland and the *Prawo dewizowe* (Foreign Exchange Act), as published in the *Journal of Law* of 2002, No. 141, Item 938, specify the reporting requirements. Under these acts and other legal regulations, the NBP is authorized to request data for compiling balance of payments statistics. Other legal regulations are (1) the Government's Decree dated December 10, 2002, as published in the *Journal of Law* of

2002, No. 218, Item 1835, and (2) the Resolution of NBP's Management Board dated March 29, 1999, as published in the *Dziennik Urzędowy NBP* (Official Journal of the NBP) of 1999, No. 8.

The Polish balance of payments system comprises monthly balance of payments on a cash/settlements basis and annual balance of payments on a transactions basis. The data presented in the Fund's *Balance of Payments Statistics Yearbook* refer to the balance of payments on a transactions basis.

The monthly balance of payments on a cash/settlements basis rely on payments recorded by the Polish banking system. The settlements comprise transactions undertaken by the banks on their own behalf and on behalf of their clients. It is a closed system, that is, all changes in the external accounts are explained. The balance on external accounts at the beginning of the period plus transactions during the period equal the balance at the end of the period. The data also cover transactions in cash through bureaus of exchange of banks, mostly recorded as unclassified current account transactions. The unclassified transactions are a nonstandard item specific for the Polish balance of payments on a cash basis. The system provides for compiling the balance of payments with detailed instrument/category and sector breakdowns. The reports include all credit and debit transactions, as well as currency and country breakdowns.

The system for the annual balance of payments on a transactions basis incorporates data from the balance of payments on a cash basis. It is supplemented with data derived from surveys of enterprises and other entities in goods, services, income, direct investment, trade credits and loans. It also includes transactions on accounts held by Polish residents with banks abroad. The transactions in cash through bureaus of exchange of banks (recorded as unclassified transactions in the monthly balance of payments) are reclassified to the appropriate balance of payments items (i.e., goods, travel, and workers' remittances). In general, the system provides full coverage, with a limited application of exemption and simplification thresholds. It provides for compiling the balance of payments with detailed breakdowns by item. For selected items, currency and country breakdowns are available.

The balance of payments on a cash basis is compiled monthly and published one month after the end of the reference period. The balance of payments on a transactions basis is compiled annually and published nine months after the end of the reference year.

The data are released simultaneously to all interested parties by posting on the NBP's website (<http://www.nbp.pl>). Publishing timetables are available on the website in advance. An advance release calendar, providing the precise release dates one quarter ahead, is available on the website. Information posted on the website covers limited breakdowns.

II. Specific Items: Balance of Payments

Current Account

Goods

For the monthly balance of payments on a cash basis, the data sources for the goods item are bank records and settlements made through the Polish banking system. For the annual balance of payments on a transactions basis, the data sources for the goods item are bank records and surveys for the data through 1999; since 2000, the data sources are customs statistics with adjustment estimates for missing data.

Up to 1999, in the balance of payments on a transactions basis the banking statistics data were supplemented with surveys submitted by enterprises and estimates of nonrecorded foreign trade turnover and adjustments for an f.o.b. basis. Starting with the annual data for 2000, the method of compilation for the balance of payments on a transactions basis changed. The main source of data is now customs statistics, which the Central Statistics Office (CSO) also uses for compiling the international trade statistics. Data provided by the customs statistics are adjusted and converted in line with the definitions and methodology of *BPM5*. Additional estimates are made for foreign trade flows not recorded by the customs statistics.

Services

Data on services for the monthly balance of payments are based on settlements made through the banking system. The detailed breakdown of services is consistent with *BPM5* recommendations. However, some transactions are recorded net.

For the balance of payments on a transactions basis, the data are supplemented with information derived from surveys of enterprises' transactions in services with nonresidents. Data include reports on trade credits, loans, and accounts held with banks abroad, as well as information on foreign services connected with technical assistance programs.

Transportation

Data provided by the banking system on payments for transportation services include services broken down by type (sea, air, railway, and other). These data are not broken down by passenger transportation, freight, and other forms. In the balance of payments on a transactions basis, detailed data on transportation services are obtained from surveys of domestic carriers. Estimates are made for reclassifying costs of foreign transport from goods to services.

Travel

Foreign travel comprises data from the banking system on settlements between Polish travel offices and foreign

counterparts on group and individual travel. It also comprises settlements with nonresident banks on travelers' checks, settlement of payments made through credit cards, and settlement on business, training, and health trip costs. In the balance of payments on a transactions basis, these data are supplemented with data and estimates of travel transactions not covered by the banking statistics system, using research information provided by the Tourism Institute and the CSO. The transactions in cash through banks' bureau-of-exchange desks (recorded as unclassified transactions in a current account of the balance of payments on a cash basis) are reclassified to the appropriate balance of payments items (i.e., goods, travel, and workers' remittances) in the balance of payments on a transactions basis.

Other services

The data source is information provided monthly by the banking system records. In the balance of payments on a transactions basis this information is supplemented with data from surveys of enterprises.

Income

Compensation of employees

Compensation of resident employees comprises wages, salaries, and other benefits in cash, earned by individuals, paid by nonresident employers and transferred to Poland. Compensation of nonresident employees comprises wages, salaries, and other benefits in cash, earned by individuals, paid by resident employers, and transferred abroad. The data are derived from banking statistics.

Investment income

Direct investment. The monthly balance of payments includes information on settlements made through the domestic banks. The records cover data on interest and dividends paid.

In the balance of payments on a transactions basis, investment income on direct investment (for both inward and outward investment) includes interest on intercompany loans and on equity, that is, dividends, remittances of branch profits, reinvested earnings, and undistributed branch profits.

The data on interest are collected from direct investors (outward investment) and direct investment enterprises (inward investment) in quarterly surveys. Information on income on equity is collected through annual surveys.

Dividends and distributed branch earnings are recorded when payable, and reinvested earnings as well as undistributed profits are recorded in the period in which they are earned.

Reinvested earnings are calculated as profits earned (collected on an all-inclusive basis) during the period,

less dividends payable. The Fully Consolidated System is not applied: reinvested earnings are counted for directly-owned enterprises only. Since 1996, direct investors' shares of losses have been introduced as negative reinvested earnings. The reinvested earnings are recorded as additional equity capital in the financial account.

Interest on intercompany loans is recorded for both directly and indirectly owned enterprises as of the date on which they are due for payment. Income on debt securities between affiliates is considered to be insignificant for the moment and is recorded—if any—as a portfolio investment income.

Portfolio investment. Data on portfolio investment income are derived from banking statistics. The information is available with a breakdown by instrument (equity, bonds and notes, money market instruments). The breakdown by domestic sector is also available (monetary authorities, general government, banks, other). For income on equity securities, only dividends are registered as income on portfolio investment; other gains on equity securities are classified as portfolio investment in the financial account.

No accrued interest (e.g., on zero-coupon bonds) is registered in the current account.

Other investment. Both in the balance of payments on a cash basis and in the balance of payments on a transactions basis, interest is recorded on a settlement or due-for-payment basis.

In the balance of payments on a cash basis, income from other investment includes interest on credits extended and received and interest on bank account deposits and repos. Banks engaged in operations abroad provide interest flows on loans, deposits, etc.

For the balance of payments on a transactions basis, the banking statistics data are supplemented by data on interest on loans unrecorded by the banking system, and on interest received on deposits of nonbanking institutions held with banks abroad.

Current transfers

In the balance of payments on a cash basis, data on current transfers comprise mainly workers' remittances, transfers associated with pension allowances, membership contributions, and financial assistance from abroad. The banking system records the data.

In the balance of payments on a transactions basis, the information on workers' remittance credits also includes estimates for net workers' cash remittances. The various data sources and estimates used provide only for adjustments on a net basis. The bank data are also supplemented with information on grants received in kind.

Capital Account

Capital transfers

Capital transfers include donations and grants to finance fixed assets, and debt forgiveness. In the balance of payments on a cash basis, the data are derived from the banking statistics. For the balance of payments on a transactions basis, the banking data are supplemented with information on debt forgiveness and grants in kind.

Acquisition/disposal of nonproduced nonfinancial assets

The acquisition/disposal of nonproduced and nonfinancial assets refers to patents, copyrights, trademarks, etc. purchased by residents or sold to nonresidents, and land sold to foreign embassies in Poland or purchased by Polish embassies abroad. Data are derived from the banking statistics.

Financial Account

Direct investment

The monthly data on foreign direct investment are derived from the flows of international payments reported by the domestic banking sector. The data are broken down into equity and intercompany loans.

Annual data on equity capital and reinvested earnings come from surveys of direct investment enterprises in Poland and from Polish direct investors. Non-cash equity contributions are covered. Enterprise reports are the only source from which the data are compiled. Information from other sources (e.g., press reports, published company accounts, bilateral sources, and exchange control authorities) are used only to update the business register.

The criterion of 10 percent ownership of directly-owned enterprises is used to identify a direct investment relationship. The flows of direct investment are recorded on a directional basis. Reverse capital investments are observed but are negligible for the moment.

Until now, special-purpose entities (SPEs) have not been established in the Polish economy, although resident enterprises establish enterprises abroad that have the sole purpose of serving as financial intermediaries. The direct investment item includes only equity investments of these SPEs.

On a quarterly basis, the survey on external loans to enterprises provides further details on intercompany loans in accordance with the directional principle. Intercompany loans are broken down by maturity. The survey also includes financial leasing.

The other investment item includes trade credits between affiliated enterprises. The portfolio investment item records transactions in securities between affiliates.

Portfolio investment

The source of data for the balance of payments on a cash basis is the banking records. The data for the balance of payments on a transactions basis are compiled using the banking statistics data with adjustments based on the stock data collected.

Data on flows and stocks of inward and outward portfolio investment are generally collected on an aggregated basis. There are, however, exceptions for stocks of Polish securities issued abroad and Polish equity securities registered with custodian accounts with Polish banks. These data are collected on a security-by-security basis, using the ISIN codes for Polish equity securities registered with custodian accounts with Polish banks.

Equity securities include all types of tradable shares. As regards data on stocks for the IIP statement, they also include other types of nontradable equity securities that bear ISIN codes (e.g. nominative shares). Shares in investment funds are also treated as equity. Debt securities include all kinds of long- and short-term securities. The one-year original maturity criterion is applied to classify securities as long- or short-term. Included are treasury bonds and notes, corporate bonds, treasury bills, commercial paper, and negotiable certificates of deposit. Also included are debt securities with embedded financial derivatives (e.g., convertible bonds or bonds with a put option).

Financial derivatives

Financial derivatives constitute a separate category of financial account in the Polish balance of payments statement. Banking records are the source of data on financial derivatives for both the balance of payments on a cash basis and the balance of payments on a transactions basis.

The financial derivatives category includes all symmetric risk instruments, such as futures and forwards and swaps, and asymmetric risk instruments such as options. Income on transactions in derivatives is classified as financial derivatives. The data do not fully capture flows that result from settling financial derivatives with underlying instruments other than foreign currencies.

Other investment

Trade credits

The balance of payments on a cash basis do not cover trade credits. Data for trade credits are collected through quarterly surveys of major exporters and importers. Data on trade credit flows are derived from pure stock data. The surveys provide quarter-end stock information on assets (prepayments on imports and trade credit extended to exports separately) and liabilities (prepayments on exports and trade credits received on imports). Data

on trade credits cover mostly other sectors, although the data cover the small amount of credit received by local governments. The direct investment category currently does not record trade credits between affiliated enterprises; the other investment category does.

Loans

The NBP and *Bank Gospodarstwa Krajowego* (both acting as agents of the government) provide data on external loans and borrowings of the general government.

Banks that are engaged in operations abroad provide the flow data (settled transactions) for the banking sector, including the monetary authority. These flows are checked and reconciled with stock data.

The data on enterprises' loans for the balance of payments on a cash basis are obtained from bank reports. The data published in the balance of payments on a transactions basis are derived from a survey conducted on a quarterly basis. The information covers loans extended and repaid in cash, goods, or services, as well as a cancellation of the loan amount or a reorganization of debt through rescheduling, debt forgiveness, refinancing, or prepayments.

The item records data on financial leasing and also includes information reported by private individuals. A breakdown by maturity is available.

Currency and deposits

Currency and deposits comprise transactions of Polish banks' assets and liabilities arising from current accounts and deposits, as well as foreign currency banknotes and coins held in banks' vaults. The data are published in the balance of payments on a cash basis. Quarterly, these data are supplemented with information on changes of stocks in the accounts of Polish nonbanking institutions held with banks abroad and are presented in the balance of payments on a transactions basis. Currency and deposits also includes repurchase agreements.

Other assets and liabilities

Other assets and liabilities cover data on assets and liabilities other than loans, debt securities, trade credits, currency, and deposits.

Reserve assets

The NBP is the holder of the official Polish international reserves. The reserve assets comprise monetary gold, special drawing rights (SDRs), the reserve position in the IMF, foreign exchange (currency and deposits, securities, and financial derivatives), and other claims (repurchase agreements). Data on transactions in reserve assets are obtained from the NBP's records on a monthly basis. The accruals principle is not applied.

III. Specific Items: International Investment Position

The IIP is compiled for all financial account items except derivatives (i.e., direct investment, portfolio investment, other investment, and reserve assets).

The IIP is compiled annually and published nine months after the end of the reference year. Components constituting external debt items are compiled quarterly. The information on external debt is published three months after the end of a reference quarter.

Direct investment

The data on direct investment stocks are derived from an annual survey of direct investors and direct investment enterprises resident in Poland. Data from the surveys cover information on investment in equity, contributions in kind, reinvested earnings, and intercompany loans. The data on equity refer to the balance sheet value based on an interim but not current revaluation. Data on stocks of loans are based on the face value.

The direct investment data do not cover any other form of non-equity assets and liabilities. That is, the data include neither debt securities nor trade credits between affiliated enterprises. These transactions are recorded under portfolio investment (debt securities) or under other investment (trade credits).

Portfolio investment

Data on portfolio investment are generally supplied by intermediaries, that is, custodian banks, brokerage houses, and clearing houses (for treasury bills). Data on government assets in the form of securities and liabilities arising from securities issued abroad are obtained from banks operating as settlement agents to service the government's external debt. Polish securities issuers individually report to the NBP the data on securities issued in foreign markets by nongovernment and nonbank entities. For liabilities, the information on equity securities is based, in general, on the market value, and information on debt securities is based, in general, on the face value. For assets, information on both equity securities and debt securities is based on the book value in most data sources and, exceptionally, on the market value.

Financial derivatives

No data on stocks of financial derivatives for the IIP are available. The data collected from Polish banks are insufficient for the proper valuation of positions in financial derivatives.

Other investment

Trade credits

Trade credits data are based on the responses to a quarterly survey of major exporters and importers. The in-

formation is based on the nominal value. The data refer mainly to other sectors.

Loans

Information on loans is broken down by sector. Settlement agents provide data on general government loans. Data on banks' external loans are derived mainly from banking statistics. Data on enterprises' loans are obtained from quarterly surveys and are compiled on a loan-by-loan basis and in the original currency. Information is compiled on any changes to individual loans, such as a cancellation of the loan amount or a reorganization of debt through rescheduling, debt forgiveness, refinancing, or repayments. The information is based on the face value.

Currency and deposits

For the NBP, the data on currency and deposits are derived from the NBP's balance sheet (excluding reserve assets). For other banks, data are derived from banks' balance sheets. The item also includes data on assets of nongovernment and nonbank entities in the form of accounts with banks abroad. The position data cover repurchase agreement transactions. The data are based on the face value.

Other assets and liabilities

Other assets and liabilities cover data on assets and liabilities other than loans, debt securities, trade credits, currency, and deposits.

Reserve assets

The information on stocks of official reserve assets is derived from the NBP's balance sheet and is available on a monthly basis. Reserve assets are calculated at market or approximate-to-market value and cover only actually existing assets denominated in foreign currencies. The component excludes claims on residents.

Portugal

The following text was confirmed as current in 2004.

I. General

The Banco de Portugal (BdP) has been responsible for compiling and producing the Portuguese balance of payments statistics since 1963. Between 1948 and 1962, the Inspeção do Comércio Bancário para as Instituições Bancárias (Banking Supervisory Authority) was responsible for their collection. Further to the full liberalization of foreign exchange regulations and the commitment by Portugal regarding statistical harmonization at the Euro-

pean level, a new collection and statistical production system was introduced in 1993, in close cooperation with the banking community.

The legal basis for the compilation of balance of payments transactions is the Organic Law of the BdP (Law No. 5/98, of January 31, 1998), as amended by Decree Law No. 118/2001 of April 17, 2001. This law allows the BdP to request information from any public or private body for statistical purposes. The report of balance of payments transactions is compulsory for both banks and nonbanks (direct reporters and official sector).

The Portuguese data collection system is mainly based on settlements, with transaction-by-transaction reporting by banks and direct reporters, covering both the credit and debit flows that affect the country's external position. In addition to settlements, the general collection system also includes specific reporting for the following sets of information: (1) trade statistics, which are obtained from the Instituto Nacional de Estatística (INE—National Institute of Statistics), and the debit side of the transport item, which is also derived from information provided by the INE; (2) estimates for the credit side of the travel item are derived from tourism statistics provided by both the INE and the Direção-Geral do Turismo (Directorate-General for Tourism); (3) security-by-security databases both on domestic and on foreign securities ensure compliance with the accruals principle regarding portfolio investment income; (4) reinvested earnings and trade credits between foreign direct investment (FDI) enterprises are obtained from surveys on direct investment stocks; (5) a security-by-security reporting system on portfolio transactions is the source used in compiling the portfolio investment item.; (6) a monthly survey of banks is the source used for compiling the financial derivatives item; (7) monthly trade credits are estimated from quarterly surveys among key Portuguese exporters/importers; (8) banking statistics on the banks' external positions are used for compiling data for the other monetary financial institutions (OMFI) sector within the other investment components; and (9) the accounting registers of the BdP are used to derive data on reserve assets and on the monetary authority sector within the portfolio investment and the other investment items of the financial account.

The principal types of reporting agents comprise the following:

(1) banks, which are required to report the following types of external transactions: those carried out on behalf of their resident and nonresident customers or on their own account, whether acting as an intermediary between a nonresident (bank or nonbank) and another resident bank, or carrying out interbank operations affecting an external position; major banks engaged in

trading in financial derivatives are also requested to report these data through a monthly survey;

(2) direct reporters: general direct reporters report all transactions with nonresidents, whether settled by a resident bank or not; residents holding accounts abroad must report settlements via nonresident banks; residents holding current accounts with nonresidents must report all settlements cleared through those accounts; additional data are also collected for enterprises/households on external credits and loans, and inward and outward direct investment;

(3) enterprises involved in FDI relationships: data on stock surveys for direct investment, both abroad and in Portugal, are collected from resident FDI enterprises;

(4) resident securities custodians, which provide information about portfolio investment transactions/positions on domestic securities on behalf of their nonresident clients and on foreign securities on behalf of their resident clients; resident banks are also compelled to report portfolio investment transactions/positions on their own account; investors operating through nonresident custodians have to report directly their transactions and stock data; and

(5) other sources: the INE reports overall statistical data on international trade (goods) and also the information collected through a specific survey among the most important exporters/importers that allows the Banco de Portugal to produce monthly estimates on trade credits; the Direção-Geral do Tesouro (Treasury) and the Instituto de Gestão do Crédito Público (IGCP – Public Debt Management Office) report data on the external transactions of the general government; and the BdP supplies data on its external operations (by both the Control and Accounting and the Markets and Reserve Management Departments) and on MFIs' external positions (Statistics Department—Monetary and Financial Statistics and Central Credit Register Division).

Under the general reporting system, banks may be exempted from reporting transactions below EUR 12,500. Missing data for transactions below EUR 12,500 are then estimated according to information reported in the same period of the previous year for transactions below EUR 12,500. The portfolio investment collection system has a simplification threshold of EUR 500 million. All reporting institutions whose monthly transactions do not reach EUR 500 million and, at the same time, have less than EUR 500 million in outstanding amounts report only once a year, using a simplified form.

The BdP compiles and produces a monthly Portuguese balance of payments on a transactions basis, with a large detailed sectoral and geographical breakdown for some items, which is first released on the website of the BdP (www.bportugal.pt) and subsequently published in the

Boletim Estatístico. A less detailed balance of payments on a monthly basis is also available and published in the *Monthly Economic Indicators*, with a two-month delay. The BdP also publishes international investment position statistics on its website and in the *Boletim Estatístico*, on a quarterly basis. On a yearly basis, it also publishes data on the balance of payments and international investment position in its *Annual Report*.

The BdP (Balance of Payments and International Investment Position Statistics Division) also has a commitment to the IMF's Special Data Dissemination Standard (SDDS) regarding the dissemination of balance of payments and the international investment position statistics, external debt statistics, and the data template on international reserves and foreign currency liquidity.

BdP revises monthly data on a quarterly basis, at the end of each quarter, and at the end of the year. It revises the data for the first six months once more at the end of the first half of the year. For example, in March, it revises data for both January and February, in June, it revises data for January to May, and in December, it revises data for all months of the year (as well as data for the previous year, if necessary). The annual balance of payments becomes final after two years.

II. Specific Items: Balance of Payments

Current Account

Goods

General merchandise. The main source of data for general merchandise in the balance of payments is the trade statistics provided by the INE. For imports and exports related to intra-EU trade, BdP derives the figures from within the Intrastat system; for extra-EU trade, it derives data from customs declarations. The reference time underlying these statistics is the time of the physical transaction in the goods.

Data provided by the INE are subject to further adjustments made by the BdP, with the aim of approaching definitive data (adjustments are introduced for the following items: information below the Intrastat exemption threshold and nonresponse, government trade, c.i.f./f.o.b. margin, goods not crossing the border, f.o.b. goods not included in trade statistics, goods procured in ports by carriers-imports).

Services

Transportation

BdP bases transportation data on the settlements statistics, supplemented with the estimates (see above) used to convert c.i.f. to f.o.b. valued goods. Data distinguish the means of transportation (sea, air, rail, or other trans-

port) and provide a breakdown by transportation category (passenger, freight, or other transportation).

Travel

Travel data are based on settlements (e.g., bank transfers, cash, travelers' checks, debit and credit cards, and other means of settlement), on information provided by travel agencies, and on estimates produced by the BdP based on real indicators and prices of tourist activity (tourism statistics provided by the INE and the Tourism office).

Other services

Insurance. Applying the recommendation of the *BPM5*, a split is made between the service and the transfer components of non-life premiums. Data on life premiums and pensions funds are also subject to a split into services and other investment. As a result of the procedure undertaken to value imports on an f.o.b. basis, estimates are included in the service component of insurance.

All information on other services is based on the settlements system.

Income

Compensation of employees

BdP takes data on this item from the settlements system.

Investment income

BdP applies the accruals principle to almost all investment income components. The major exception concerns other investment, for which data on a settlements basis are obtained for banks and the monetary authority. Under direct investment income, only reinvested earnings are accrued. The main sources for data on reinvested earnings are stocks surveys on direct investment activities performed abroad by residents and in Portugal by nonresidents.

With the aim of obtaining more timely statistics, annual data are derived from stock data, with account being taken of the year-on-year rate of change in the gross domestic product (GDP) of the countries of destination, regarding the credits side, and of Portugal, for the debits, applied to the previous companies' results compiled from the survey. The procedure used to derive data on reinvested earnings also takes into account the dividends collected through the settlement system. Before the release of definitive data, which occurs at the same time as the disclosure of the results of the surveys, no revisions take place.

For the compilation of income on debt transactions between direct investment companies, settlements data are being used. For the income on portfolio investment, the accruals principle is applied, with monthly estimates being derived from stocks data and data on inter-

est rates. BdP applies this procedure to all types of securities. For the other investment of nonbanks, it combines stock data on both assets and liabilities with market interest rates to derive monthly accruals. BdP provides figures for income on reserve assets on a settlements basis.

Current transfers

General government

Within the transfers data received from the EU institutions, a split is made between capital and current transfers. Additional details reported by the Treasury are useful in this field. The criterion applied respects, above all, the Eurostat recommendation, which was adjusted in accordance with the final destination of the EU funds transferred to Portugal. The breakdown applied is based on the purposes of the EU funds transferred to Portugal in the period 1993–97.

Other sectors

Workers' remittances. This information is collected mainly by the banking system.

Other transfers of other sectors. With respect to the recording of nonlife insurance premiums and claims, see insurance services.

Capital Account

The BdP has implemented the recommendations of the IMF's *BPM5*, in accordance with the harmonization proposals made by the ECB and the Eurostat. In this context, only transfers that reflect a change in the stocks of assets of one or both parties involved in the transaction are included as capital transfers. The classification of transfers as public or private primarily takes into account the criterion of the institutional sector of the resident. Thus, transfers involving the Portuguese State are registered as public transfers, and those that involve other resident sectors are classified as private transfers.

Those EU transfers used to finance infrastructure projects are recorded as capital transfers, namely: the Cohesion Fund (100 percent), the Specific Program for the Development of Portuguese Industry (100 percent), the European Regional Development Fund (85 percent), the European Agricultural Guidance and Guarantee Fund-Guidance (80 percent) and the Financial Instruments and Guidance for Fishing (55 percent). All the other funds are recorded under current transfers.

Data relating to certain capital transfers, such as migrants' transfers (excluding workers' remittances), investment grants in kind, and debt forgiveness by companies, are difficult to obtain, as the balance of payments statistical collection system relies mainly on

settlements data reported by resident banks, which might not cover these subjects properly.

Financial Account

Direct investment

The BdP collects data on a transaction-by-transaction basis for inward and outward direct investment flows via the settlements registers submitted by the resident banking community. The BdP also receives detailed data on direct investment transactions above EUR 250,000 via the Direct Investment Statistical Declaration, that is, data regarding the resident and nonresident parties to the transaction, a description of the transaction, and supplementary information on the equity participation.

Whenever transactions are performed via a nonresident bank, the resident must report directly to the BdP the transaction settlement that takes place abroad. Definitive direct investment statistics are also based on the results of annual stocks surveys on both Portuguese direct investment abroad and foreign direct investment in Portugal. These surveys are the source used for recording reinvested earnings.

For foreign direct investment in Portugal, the survey was first launched to gather data for end-1995. For Portuguese direct investment abroad, data based on a stocks survey began to be available from 1996 onwards.

The Nomenclature of External Operations has complied with the 10 percent rule since the introduction of Decree Law No. 321/95 of November 28, 1995, which took into account the international recommendations regarding foreign direct investment. The direct investment item in the Portuguese balance of payments includes cross participations, reverse loans, and short-term transactions between direct investors and direct investment companies. Furthermore, the item covers all cross-border transactions in real estate.

Portfolio investment

The portfolio investment collection system introduced in 2000 is based on a single report used to collect information for purposes of the balance of payments, monetary and financial, and the financial accounts statistics. In this fully automated system, domestic securities custodians provide information about portfolio investment transactions in domestic securities on behalf of their nonresident clients and in foreign securities on behalf of their resident clients. Banks must also report transactions on their own account. Investors operating through nonresident custodians must report their transactions and stock data directly.

This is a security-by-security and an investor-by-investor system. Resident investors are identified by

their fiscal number or by their institution number in the case of pension or investment funds. Nonresident investors must have been previously identified in the system (using a specific type of record within the reporting file), with the exception of households that must be identified by the ISO code for their country of origin (PRT if they are residents, other country codes if they are nonresidents). Identification includes the country of residence and the institutional sector of the nonresident investor.

The investor or custodian must report monthly statistical information on transactions and quarterly data on end-of-period positions. However, they may choose to report both transactions and stocks on a monthly basis. A simplified regime of annual data reporting also exists for those entities whose transactions and balance sheet assets fall below the simplification threshold, as previously described.

The ISIN codes are used for the identification of the securities reported to the BdP. Moreover, the future existence of a European centralized securities database may contribute to a further harmonization of international statistics in this domain.

The geographical allocation criteria are based on the assets side, on the country of residence of the issuer of the security (debtor), and, on the liabilities side, on that of the first known counterpart, for both flows and stocks. The geographical breakdown is possible for monthly flows and stocks. Settlements registers and monetary financial institutions' balance sheets are used for checking and quality control purposes.

Financial derivatives

BdP bases its system for collecting data for financial derivatives, implemented in 1999, on a monthly survey among the more important banks in this domain, on both flows and positions for assets and liabilities. This survey takes into account the recommendations of the ECB and the IMF on this domain.

Financial derivatives transactions are also captured through the settlements system, which has a specific code for this type of transaction. Banks have to report both their own positions and positions opened by their clients (mainly enterprises and individuals).

The BdP (Markets and Reserve Management Department) reports data for the monetary authority sector. Data for the general government sector are compiled from other sources, namely from the Treasury. The instrument breakdown available is based on the type of instrument and the market risk, in accordance with the structure defined in the *BPM5* for "Selected Supplementary Information."

The instrument category comprises futures, options, swaps, forward transactions, and others (a residual figure that might include, for example, credit derivatives). The market risk category includes foreign exchange, single currency interest rate, equities, commodities, and others (a residual figure). A breakdown of data by inflows and outflows is available. This breakdown is consistent with the recommendations of the IMF: all cash settlement receipts are recorded as a reduction in financial assets, and all cash settlement payments are recorded as a decrease in liabilities.

Other investment

Flow data for the other monetary financial institutions and monetary authority sectors are derived from balance sheet data at the beginning and end of the period. BdP calculates differences in the original foreign currencies and converts them into euros, using the respective period average exchange rates. The collection system for other investment of other sectors (excluding the monetary authority, other monetary financial institutions, and general government) relies mainly on the information reported via settlements registers. The Treasury provides data on the external loans and borrowings of the general government. Actual flows of other investment, and not the change in stocks, are registered in the balance of payments, except for transactions concerning the other monetary financial institutions and monetary authority sectors, as previously described.

Trade credits

Trade credits are estimated combining information on imports and exports of goods and services with information on the average number of days for payment or receipt obtained through a quarterly survey of major exporters and importers. The time of recording of trade credits is the time of the change of ownership of the items, based on the time of registration in the accounting books of the companies involved in these operations.

Reserve assets

BdP obtains the data on reserve assets from its records. It follows the recommendations of the *BPM5* and those of the ECB regarding the definition of reserves for the Eurosystem, i.e., reserve assets cover gold, SDRs, reserve position in the Fund, external assets denominated in non-euro area currencies and issued by nonresidents in the euro area, and other claims.

BdP identifies all instruments separately within the monthly reserve assets figure. It calculates daily transactions through the change in stocks, valued at market prices, and converts them to euros using daily market exchange rates, except regarding monetary gold for which monthly external transactions are reported.

III. Specific Items: International Investment Position

Once the figures on direct investment, trade credits, and financial derivatives stocks were made available, a complete IIP was produced, for the first time in Portugal, in September 1999, regarding end-1997 and 1998 stock data. When they become definitive, statistics for the IIP components are mostly compiled using pure stocks data.

The BdP publishes in the *Boletim Estatístico*, on a monthly basis, the last complete annual IIP available and detailed end-of-quarter figures, based on pure stocks and accumulated flows, for the main components of the Portuguese IIP (assets and liabilities), namely for direct investment, portfolio investment, financial derivatives (on a net basis), other investment, and reserve assets.

Direct investment

Final data on stocks are available through the Questionnaire on Foreign Direct Investment in Portugal (first data concerning 1995) and through the Questionnaire on Portuguese Direct Investment Abroad (1996 data were first made available), which are conducted in alternate years. Data supplied to the BdP are based on book values.

In the case of Portuguese direct investment abroad, these are revalued, according to accounting principles, at current prices. Quarterly estimates are produced through a mixed stock data/accumulation of flows procedure over the following year in which pure stock data are not immediately available. A full geographical allocation can be provided on an annual basis.

Portfolio investment

Until the end of 1999, pure stock statistics on resident holdings of foreign securities were produced on the basis of information reported through a specific form. Detailed annual information was provided on the identity of the investor, the custodian, the denomination of the security (on a security-by-security basis), the codification of the security (e.g., ISIN), the type of security, the identity of the issuer, and the valuation of stocks (physical quantity, currency, and quotation of securities).

Additional items, such as the currency of denomination of the securities and the sector of both the investor and the issuer, which were not included in the IMF 1997 Coordinated Portfolio Investment Survey, were requested. A complete geographical allocation was available according to the country of residence of the security issuer.

Data on stocks of domestic securities held by nonresidents were produced on a monthly basis, until the end of 1999, through the reports collected from custodians (concerning physical quantities and nominal values of

securities deposited in nonresident dossiers) and from the Portuguese stock exchange (concerning prices). A complete geographical allocation was available, based on the country of residence of the first known counterpart.

From 2000 onwards, BdP collects stock data for both assets and liabilities quarterly, on a security-by-security basis, using the ISIN code as the security identifier. A complete geographical breakdown is available, based on the country of residence of the security issuer (assets) or of the first known counterpart (liabilities). BdP uses information reported under this security-by-security system to produce quarterly estimates on stock statistics, which are being published.

Financial derivatives

Options, futures, swaps and forwards are valued at market prices. In the case of futures, the market practice usually involves a daily settlement of gains and losses (variation margin), implying that their market value is zero.

Other investment

BdP derives data on the monetary authority's assets and liabilities from its balance sheet, collects data on general government's assets and liabilities directly from the Treasury, and collects data on banks' assets and liabilities through external positions of the banks' balance sheets.

Until 1997, it used a mix of BIS figures and an accumulation of flows to compile deposits of resident nonbanks with nonresident banks; since then, it uses accumulation of flows. It derives stock figures on loans from the accumulation of flows based on pure stocks of end-1994, and it uses a quarterly survey of major exporters/importers to produce stocks data on trade credits.

Reserve assets

The balance sheet of the BdP is the source of these data. It is available, for this purpose, on a monthly basis.

Romania

I. General

The agency responsible for compiling the Romanian balance of payments and international investment position (IIP) statistics is the National Bank of Romania (NBR) through the Statistics Department (SD). The SD obtains data for the balance of payments estimates from a variety of sources, including the National Institute for Statistics (NIS), the commercial banks, the Ministry of Public Finance (MOPF), and the Ministry of Trade. Data are prepared on a monthly basis and published in the *Monthly Bulletin* by the NBR.

From 1992 onward, the available data are also published in the *Balance of Payments Assets and Liabilities Annual Report* by the SD. The 1992 annual report included revised data for the five previous years, published according to the recommendations contained in *BPM5*. From 1994 onward, the SD has compiled IIP data on an annual basis, showing changes due to transactions, exchange rate influences, and other reasons, and the annual report has been renamed the *Balance of Payments and International Investment Position Annual Report*. Starting in 1995, quarterly IIP data have also been compiled and published.

Data are compiled in U.S. dollars and, starting from June 2003, in euros; transactions denominated in other currencies are converted into euros. To the extent possible, transactions denominated in other currencies are converted to U.S. dollars at the rates prevailing at the time at which the transactions take place. For those data derived from balance sheets, the exchange rate at the end of the reporting period is used. The Romanian balance of payments includes a small number of transactions that are denominated in transferable rubles because of the clearing agreements in liquidation. These transactions are converted to U.S. dollar equivalents using the exchange rate of US\$1=0.877 transferable rubles and then to euros using the euro/US\$ exchange rate. The classification of accounts used in Romania's balance of payments statement generally accords with the international standards recommended in *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

General merchandise data are based on trade statistics compiled by the Customs Department of the MOPF from customs documents. Official data on trade statistics are published by NIS in the monthly *Statistical Bulletin*. The customs data record the physical movement of goods across Romania's customs boundaries; they include aid in kind, goods shipped between Romania and foreign territories, and goods under financial lease. Adjustments regarding timing, coverage, and valuation are made by the NIS to ensure that the data conform with balance of payments concepts. Both exports and imports are then recorded on an f.o.b. basis. Imports f.o.b. are estimated by applying an adjustment coefficient estimated by NIS.

Services

Transportation

Banking records are the main source for transportation transactions. Commercial banks provide the NBR with data on transportation operations, classifying them ac-

cording to the balance of payments components. An adjustment is made to record the value of freight in accordance with balance of payments recommendations (i.e., by including only those freight services performed by nonresidents).

Travel

Data are based on information obtained from the banks, supplemented by additional data based on the transactions of the exchange offices, compiled by the SD. Estimates are made of the amount of foreign exchange sold/purchased by residents through bureaus of exchange that is not related to travel. This amount is not recorded in the travel balance. The remaining foreign exchange transactions of nonresidents made through bureaus of exchange (credits) are derived as the difference between the amount of foreign exchange sold and purchased by nonresidents in the reporting period.

Other services

Communications. Data are obtained on a monthly basis from commercial banks on receipts and payments associated with communication services.

Construction. Data on construction services are obtained from banking accounts. The item refers to (1) amounts received by Romania's construction companies operating abroad for less than one year that provide construction services to nonresidents (on the credit side) and (2) payments to nonresident construction companies for providing similar services to Romanian residents (on the debit side).

Insurance. Data are based on bank reports of transactions related to various kinds of insurance (e.g., freight insurance, insurance against fire and accidents, and life insurance). However, for statistical purposes, Romania's balance of payments classifies insurance services in two categories—life and nonlife insurance.

Other business. Entries for other business services cover financial services, computer and information services, royalties and license fees, operational leasing, and other services not included elsewhere.

Government, n.i.e. Data on government services n.i.e. are obtained from banking records and cover the expenditure of foreign diplomatic missions located in Romania and amounts paid for goods and services bought abroad by the Romanian government's diplomatic personnel. Once a year, the SD receives, from the Ministry of Foreign Affairs, additional information related to the expenses of Romania's diplomatic missions abroad.

Income

Investment income

Direct investment. Data on direct investment income are derived from banking records and include only divi-

dends paid in cash. Data for direct investment income paid in kind are not available. Following the introduction in 2003 of a survey of the major foreign direct investment companies in Romania, data on investment income paid in kind and reinvested earnings in Romania will be available starting in 2004.

Portfolio investment. Estimates of income associated with the holding of portfolio investment securities are based on bank records for assets and, for liabilities, on data from the Debt Management and Financial Analysis System (DMFAS)—a database that is used to monitor external debt on a loan-by-loan basis.

Other investment. For banking institutions, information on income receipts and payments is derived from bank records. Short-term investment income credits consist mainly of interest received by residents from their deposits abroad, whereas the debits consist of the earnings of nonresidents (including individuals) from their deposits held in Romanian commercial banks.

As regards medium- and long-term investment income, every month the SD receives information from the Market Operation Department of the NBR on interest received on holdings of official reserves. Within the SD, the Analysis and Statistical Information Division of the NBR provides estimates of interest paid on contracted medium- and long-term debt.

Current transfers

General government

Data are obtained from bank reports and cover mainly (1) subsidies granted/received from nonresidents for current budget support, and (2) the Romanian government's contributions to the administrative budgets of international organizations.

Other sectors

Additional information concerning aid, donations, contributions, and technical assistance (PHARE, etc.) is recorded under private transfers. The SD acquires these data from the Customs Department of the MOPF.

Capital Account

Capital transfers

Estimates for the debt forgiveness item of general government are obtained from Romania's government budgetary documents.

Financial Account

Direct investment

The principal source of data concerning direct investment transactions is the banking system; bank reports provide information on direct investments of nonresidents in Romania and direct investments of Romanian

residents abroad that are effected through the banking system. Starting in 1997, estimates derived from customs data are included for the value of direct investment in kind. These data are to some extent approximate, because they cannot always be extracted from the general trade data. However, in 2003 a survey will be conducted to improve the measurement of transactions and associated stock of inward direct investment, among resident companies receiving foreign direct investment. The data will include investments in kind and reinvested earnings.

Portfolio investment

Net Romanian purchases of foreign securities and net foreign purchases of Romanian securities are estimated on the assets side on the basis of bank credits. The DMFAS, a database for monitoring medium- and long-term debt, provides information on debt securities issued by Romanian entities transacted with nonresidents. Since the second half of 1997, the net foreign purchases of Romanian securities through the Romanian Stock Exchange have also been taken into consideration. For balance of payments purposes, the portfolio investment is classified by instrument—the main distinction being between equity securities and debt securities.

Other investment

General government assets cover the medium- and long-term credits extended (mainly to former centralized economies). Within the SD, Romania's external debt is monitored using DMFAS, which provides data on the government's medium- and long-term liabilities. The MOPF is the primary source of these data. For balance of payments purposes, the specialized division that manages DMFAS processes all information concerning loans and credits by converting it into U.S. dollar equivalents.

Transactions in other assets and liabilities by the banks cover medium- and long-term credits (extended or received by the banking system); information on these flows is acquired from bank reports on their short-term loans and credits (trade-related credits have an important weight in total borrowing), currency and deposits, and other short-term assets not included elsewhere.

The category covering "other assets and liabilities" comprises mainly medium- and long-term commercial credits contracted by the private sector. The item also includes outstanding export and import bills (taking into account the maturity-medium- and long-term). Short-term transactions are recorded on a net basis, and the data are calculated as the difference between opening and closing stocks.

Reserve assets

Estimates of transactions in reserve assets are based on the NBR balance sheet and on data provided by the

Market Operations Department relating to treasury bills and foreign securities.

III. Specific Items: International Investment Position

In 1995, the NBR started compiling and publishing quarterly IIP statistics according to the recommendations of the *BPM5*. On the asset side, the most important components are medium- and long-term claims, together with international reserves. On the liabilities side, they comprise medium- and long-term external debt and foreign direct investment.

The data are supplied mostly by the NBR, the commercial banks, the MOPF, and the Ministry of Foreign Affairs. The external debt data are compiled using DMFAS, which was implemented in the NBR and the MOPF in 1994. The IIP data represent a mixture of methods encompassing direct measurement of stocks and an accumulation of flow data in the case of direct investment, and certain items under other investment. The NBR fully reconciles IIP stocks and payments flows, based on information on stocks, flows, changes in price (for monetary gold only), exchange rates, and other changes. The valuation principle underlying the measurement of the stocks of direct investment portfolio investment and the securities component of reserve assets is the acquisition cost or book value. The stock of monetary gold is valued in terms of the market price prevailing at the end of each quarter.

The NBR publishes selected IIP indicators in the *Monthly Bulletin*. Annually, it publishes comprehensive analysis of the balance of payments and IIP.

Russian Federation

The following text was confirmed as current in 2004.

I. General

The Bank of Russia (BR) is in charge of compiling and disseminating balance of payments and international investment position (IIP) statistics of the Russian Federation. The principal sources of information are the internal sources of the BR, the Ministry of Finance (MOF), the Federal Service for State Statistics (FSSS), the Federal Customs Service (Customs) of the Russian Federation, and other agencies. BR compiles the balance of payments in the following geographical classifications: by the Commonwealth of Independent States (CIS) and by non-CIS (far abroad) countries.

The data are quarterly and annual in U.S. dollars. BR prepares them in three months following the reference period. It publishes the balance of payments data on the Internet and in BR print editions—namely the *Bulletin of Banking Statistics* and the *Vestnik Banka Rossii*, where they are available with commentary, supplementary tables, methodological notes, description of the data sources, and list of the latest revisions. BR compiles the balance of payments for the Russian Federation on a *BPM5* basis.

The BR compiles the IIP of the Russian Federation for all sectors of the economy annually, and data are available since 2001. The IIP for the banking sector has the same periodicity and timeliness as those of the balance of payments.

II. Specific Items: Balance of Payments

Current Account

Goods

The primary source of data on transactions in goods is the Customs' statistical system. Customs data on imports are measured on a c.i.f basis, and BR applies a 5.7 percent adjustment factor to obtain an estimated f.o.b. basis for imports from those countries that have no borders with Russia.

Exports and imports of goods registered by Customs are adjusted to include transactions in goods that are not covered in customs statistics. The adjustments are made for goods sold without crossing Russia's frontier (mainly fish and sea products); goods procured by foreign carriers in Russian ports and by Russian carriers in foreign ports; goods brought in and taken out by migrants; goods nonregistered by Customs (goods undeclared and/or inadequately declared when imported by legal entities; goods exported/imported by individuals for subsequent selling, including imports of vehicles); and repairs on goods.

For estimates of nonregistered imports of goods, BR uses data on the balance of merchandise resources of retail trade compiled by the FSSS, with a conversion from retail to f.o.b prices. The central bank also deducts data on goods for processing from exports and imports and classifies them separately under goods.

Services

The BR obtains data on all services, except for travel, mainly from credit institutions. Data on transportation, communication services, royalties and license fees, and operational leases are adjusted using enterprise surveys conducted by the FSSS.

Estimates of travel services are based on the estimated average per diem expenditures, number of residents trav-

eling abroad and nonresidents traveling in Russia, and the estimated duration of their stay. The Frontier Service provides data on the number of travelers, country of origin (for inward travelers), country of destination (for outward travelers), and type of travel (private, business, tourism, transit, etc.), while BR surveys provide a basis for estimates of inbound tourist expenditures.

Travel debits include the estimated value of vehicles that Russian individuals import for noncommercial use. The numbers and values of vehicles are registered by customs.

The MOF provides additional data on government services.

Income

Compensation of employees

BR estimates wages and salaries of Russian residents working abroad and of nonresidents employed in Russia via a data model, based on the number of involved people (data of the Federal Migration Service) and average compensation in different industries.

Investment income

In principle, Russia's balance of payments statistics are compiled with the full recognition of the change in ownership criteria as the basis for determining balance of payments transactions and their time of recording. Reinvested earnings and undistributed branch profits are recorded in the period in which they are earned. However, dividends are recorded on the date they are paid, rather than the date they are payable—the lag between date of dividend declaration and actual payment is deemed minimal. Income on bonds and notes, and money market instruments is compiled on an accrual basis.

The BR obtains data on the banking sector from credit institutions. Estimates of nonfinancial enterprises' investment income are based on the international transactions reporting system (ITRS), securities databanks, calculations of the BR and other administrative records. Primary sources of information on general government are MOF, subjects of the Russian Federation, stock exchanges, credit institutions, and international financial organizations. Data on the monetary authorities are sourced from the BR, the Ministry of Finance, and the International Monetary Fund (IMF).

Capital Account

Capital transfers

The data on migrants' transfers are estimated via a data model. The model is based on estimated transfers for different categories of migrants and the number of mi-

grants in each category, provided by the Federal Migration Service. BR obtains debt forgiveness data from government foreign debt agent reports.

Financial Account

Direct investment

BR obtains data on direct investments from surveys of banks, including custodians, surveys of nonfinancial enterprises, the ITRS, special security databanks, and data of the BR concerning its own operations.

Adjustments to direct investments data are made on the basis of separate U.S. GAAP statements, presented by the companies, the Coordinated Portfolio Investment Survey (CPIS), data of federal agencies (including Russian Fund of Federal Property, for investments during privatization), operators of product sharing agreements, and partner countries. The BR model provides the basis for the assessment of investments in real estate.

BR compilers verify data by comparing different report forms (relevant surveys, ITRS), data of separate nonfinancial enterprises, information of partner countries and the mass media, and commercial information systems.

Portfolio investment

Estimates of portfolio investments use the same sources of information and verification practices as those identified for estimating direct investments, excluding data provided by Russian Fund of Federal Property, operators of product sharing agreements, and the BR's assessment of investments in real estate.

Estimates of general government security transactions are based on data derived from MOF, subjects of the Russian Federation, stock exchanges, underwriters, and lead managers.

Financial derivatives

Data on financial derivatives are available since 2002. The sources of information are the reports of banks and the BR.

Other investment

Trade credits

Trade credits include accounts receivable from and payable to nonresidents on exports and imports of goods and services. Transactions in trade credits are estimated on the basis of data produced by the foreign exchange control system.

Loans

Generally, the MOF and Vnesheconombank, which is the government's agent for these transactions, provide the data on government external borrowing and govern-

ment credits extended by Russia. BR compilers use reports provided by the foreign exchange control system to calculate transactions related to loans received and granted by nonfinancial enterprises.

Data on financial leases are estimated using the Customs information.

The data on transactions in loans carried out by credit institutions are derived from their reports.

Currency and deposits

Apart from showing the transactions in deposits placed with nonresident banks, the item *currency and deposits, assets, other sectors* shows net purchases of foreign exchange by individuals and nonfinancial enterprises. The magnitude of these flows is, as a rule, considerable. BR estimates purchases and sales of foreign exchange by resident individuals and nonfinancial enterprises by comparing different types of available data. For instance, it compares credit institutions' reports on their net purchases of foreign banknotes from abroad with other residents' and nonresidents' transactions in these banknotes and with estimates of transactions in foreign exchange pertaining to migration, travel, and the sphere of nonregistered exports/imports of goods.

The item *currency and deposits, liabilities, monetary authorities* shows net purchases of Russian ruble banknotes by nonresidents.

Assets and liabilities of the general government under this item comprise changes in balances on clearing accounts of nonresident monetary authorities with Vnesheconombank and clearing accounts of Vnesheconombank with nonresident monetary authorities, opened according to intergovernmental agreements.

Other assets and liabilities

These items cover transactions in other assets and liabilities of residents and arrears. Most transactions in arrears refer to the indebtedness of the former USSR. Data on these transactions are provided by Vnesheconombank as an agent of the government.

Other assets also include transactions in assets by resident enterprises arising from nonrepatriation of export proceeds, nonsupply of import of goods and services against import contracts, and remittances against fictitious transactions in securities.

Reserve assets

BR calculates transactions in reserve assets on the basis of its own records and those of the MOF; both institutions hold gold and foreign exchange reserve assets. The IMF data are also used as a secondary source. The information provided is sufficiently detailed to enable derivation of flow measures that exclude valuation changes.

III. Specific Items: International Investment Position

Previously, the BR compiled IIP statistics for Russia's banking sector for the period 1994–99. That sector comprised the BR and credit institutions, including Vnesheconombank (net of the assets and liabilities managed by Vnesheconombank as the agent of the government of Russia). IIP data for all sectors are available since 2001.

Data sources used for IIP compilation are similar to those used for the balance of payments statistics. Stocks of external assets and liabilities are measured at market values, with two exceptions—monetary gold, which is valued at a price of US\$300 per troy ounce, and outstanding amounts under the items *Loans* and *Arrears* of the general government on the asset side. The latter are included in the statistics at book value, but following the negotiations with the Paris Club, the claims amount will be reduced.

Rwanda

The following text was confirmed as current in 2004.

I. General

The National Bank of Rwanda (NBR) is responsible for compiling Rwanda's balance of payments. Since January 2003, the task has been assigned specifically to the Balance of Payments Service within the Foreign Exchange Control Inspection and Balance of Payments Department.

To compile the balance of payments estimates, the NBR uses several sources: the *balance des règlements en devises* (the exchange records), data provided by public agencies, and the annual survey of enterprises, embassies, and international organizations. Since 2003, annual surveys are conducted on foreign direct investment enterprises, services, and transfers by the Section of BOP Statistics Survey, established by NBR to compile data from other sources. The data are published on an annual basis on the NBR's website, expressed first in millions of U.S. dollars and then in millions of Rwanda francs (RF) after conversion at an annual average exchange rate. From September 1998 onward, the data are published consistent with *BPM5* (except the capital and financial account), and every effort is being made to further improve the reliability of the data. However, all the details required to compile the whole balance of payments based on *BPM5* are not yet available.

II. Specific Items: Balance of Payments

Current Account

Goods

NBR compilers prepare estimates of Rwanda's two main export products (coffee and tea) on the basis of sale contracts. They value exports of other products on the basis of customs documents, including customs declarations of exports and certificates of cash receipts from exports (certificates of receipt) and on the basis of data from surveys. They value exports on an f.o.b. Kigali basis. However, a portion of Rwanda's coffee and tea is exported after consignment at the port of Mombasa. The NBR adjusts the value of such exports to express them f.o.b. Kigali, by subtracting the cost of the transportation from Kigali to Mombasa from the value of the coffee and tea sold f.o.b. Mombasa. In addition, sales of electric power and exports through postal packages are added to the export data.

Estimates of merchandise imports are prepared on the basis of data prepared by customs officers. Nonetheless, customs statistics do not cover certain official imports, electricity imports, and imports of postal packages. They do not cover imports below RF 100,000 (carnets 126 BIS) passing through frontier customs offices, which are not recorded in the Automated System of Customs Data (ASYCUDA) by the customs statistics service. The NBR gathers information on such imports separately from the Customs' Office, the Water, Energy, and Electricity Company, the National Post Office, and courier companies working in Rwanda.

Services

Transportation

Passenger. Transportation services include the (1) transportation of nonresident passengers by the national airlines and road-transport companies and (2) transportation of resident passengers by foreign airlines.

Freight. The main data source currently used is the survey on transportation companies. Rwanda's export products, such as tea and coffee, are transported to the port of embarkation (Mombasa, Kenya) by both nonresident carriers (approximately 71 percent) and resident carriers (29 percent), and freight costs are borne by foreign importers. This allocative ratio is used only on imports. The annual surveys of 2003 confirmed that the NBR would continue to use this allocative ratio to estimate the amount of freight earnings by residents. Concerning exports, data come from main exporters of products such as coffee, tea, coltan, and cassiterite.

Other transportation. This account includes services provided to foreign airlines by the Rwanda Airports Au-

thority (for landings, takeoffs, and navigation) and those provided by foreign airlines to national airline companies. The data are drawn from the exchange records and supplemented with annual survey questionnaires to the national airlines, the Rwanda Airports Authority, and foreign airlines.

Travel

The NBR derives credit entries from surveys conducted at hotels, guesthouses, and the Rwanda Office of Tourism and National Parks and from the exchange records. The amounts entered as debits are also drawn from the exchange records, supplemented with information from the ministries of National Education, Foreign Affairs and Cooperation, and the Interior's Immigration and Emigration Service. These data were not gathered for the period 1994–2000, and the balance of payments for each subsequent year has been compiled on the basis of estimates. Beginning in 2001, data from surveys have been used to compile this item.

Other services

Insurance. The data are collected by surveys. The amounts entered as credits relate to the insurance of exports. Data on the insurance of goods to be posted on the debit side are not classified separately; they are included in freight. Data on other insurance transactions are collected by surveys.

Other business services. The amounts recorded under this heading include charges, management costs and agents' commissions, professional fees, the rental of equipment, communications services, and the rental of films. All these data are derived from the exchange records.

Government, n.i.e. The relevant data were formerly compiled on the basis of the exchange records. Currently, this information is collected primarily by surveys. Amounts entered as debits relate to the expenditure abroad of Rwandese diplomatic personnel and missions. Amounts entered as credits cover the services relating to spending by technical assistance personnel and the expenditure of foreign diplomatic missions and international organizations in Rwanda.

Income

Compensation of employees

The compensation of nonresident workers (e.g., local personnel working in Rwandese embassies abroad) is estimated on the basis of the exchange records and the results of surveys of the Rwanda Social Fund (*Caisse Sociale du Rwanda [CSR]*). NBR also draws data on compensation paid to Rwandese residents employed by foreign embassies, international organizations, and other international assistance agencies from the exchange records and the survey results of CSR and other agencies.

Investment income

Direct investment. The data on income from direct investment are derived from the survey and exchange records. Amounts entered as debits relate only to data on the distributed dividends and profits of branch offices. NBR is conducting investigations to identify investments abroad in order to take related income into consideration in the near future.

Portfolio investment. The NBR compiles data on income from portfolio investment on the basis of the exchange records.

Other investment. NBR also compiles the data on income from other investment on the basis of the exchange records (for the investment of the banking sector and other sectors) and information from the Finance and Public Debt Service of the NBR (in particular, for the monetary authorities and the general government).

Current transfers

General government

The data are compiled on the basis of information from the Ministry of Finance and Economic Planning (MINECOFIN), various public agencies, and the UNDP. A Central Projects and External Finance Bureau (CEPEX), established currently in the MINECOFIN, is in charge of compiling these data. Credit entries cover grants received in cash and in kind relating to development programs, humanitarian assistance, and the training of central government personnel. Debit entries cover contributions by Rwanda to the administrative budgets of international organizations.

Other sectors

The data are derived from the exchange records.

Capital Account

Capital transfers

General government

The data on capital transfers cover debt forgiveness and project-related grants-in-cash and in-kind (e.g., grants for Public Investment Program [PIP] financing). They are compiled on the basis of information supplied by the CEPEX Bureau and the NBR service dealing with external debt, as well as from the exchange records.

Other sectors

The data on the capital transfers of the other sectors cover transfers-in-cash and in-kind for home construction, water supply, and other projects implemented by nongovernmental organizations (NGOs) on the economic territory of Rwanda. NBR compiles these data on the basis of information supplied by international orga-

nizations, the CEPEX Bureau, and other public agencies, as well as from the exchange records.

Financial Account

Direct investment

NBR derives the data from the survey on direct investment enterprises. The Bank compares these data with the data collected from the Secretariat of National Privatization and from the Rwanda Investment Promotion Agency (RIPA), both operating within the Ministry of Finance and Economic Planning.

Portfolio investment

The only existing source, for the time being, is the exchange records.

Other investment

Monetary authorities. NBR derives the data from its books. The data concern especially deposits with foreign institutions.

General government. NBR obtains the data from its Finance and Public Debt Service and from the Public Debt Division of the CEPEX Bureau. This item currently covers loans in support of projects, loans to support the balance of payments, and subscriptions to the capital of nonmonetary international organizations.

Banks. The data relate to changes in the foreign assets and liabilities of the commercial banks. Compilers draw the data from the monetary survey tables prepared by the Monetary Statistics and Credit Section within the NBR's Research Department.

Other sectors. Entries under this heading cover data on trade credits and foreign exchange deposits with the banks, derived from the exchange records.

Reserve assets

NBR uses the data from its International and Accounting Departments to compile the data on Rwanda's reserve assets.

Samoa

I. General

The Central Bank of Samoa (CBS) has been compiling balance of payments statistics for Samoa on a regular basis since its inception in 1984. Before that, balance of payments statistics for the country were compiled on an ad hoc basis by various government departments. The balance of payments is compiled largely in accordance with the *BPM4*, using data from various sources. A system for recording and classifying foreign exchange transactions through the commercial banks, known as the "ticket system" which provides codes, is used in conjunction with other data collection surveys to compile balance of payments statistics. The codes are described in a way that is familiar to commercial bank tellers who handle international transactions. The coding system was designed to enable the CBS to convert the data thus classified into balance of payments transactions.

Balance of payments statistics are compiled on a quarterly basis and published in the CBS quarterly bulletins and annual reports. Samoa is moving towards a *BPM5* framework for the statistics; in particular services are now classified according to *BPM5*. The statistics are compiled in the national currency, the tala. Where transactions are reported to the CBS in other currencies, these are converted to tala at the market rates prevailing on the transaction dates.

Because detailed information on trade cannot be derived from the ticket system, trade data captured by this system are replaced with those compiled separately by the CBS. Similarly, detailed information on some components of transportation and other services transactions cannot be derived from the ticket system and are therefore collected through monthly surveys of foreign airlines, foreign diplomatic missions, and international and regional organizations located in Samoa. To avoid double counting, data collected from the surveys or provided through other sources and means replace those reported by the ticket system.

Private sector capital is captured by the ticket system, but the level of detail is insufficient to enable it to be shown as a separate item in the financial account. As a result, private sector capital is reflected in errors and omissions. The item called "private capital" shown in the balance of

payments table in recent CBS bulletins represents aircraft lease payments arrears by Polynesian Airlines—the national flag carrier—which were guaranteed by the government. This item is a part of government-guaranteed debt. However, it has been shown separately because it was very large. It has also been classified as private capital because of its political sensitivity.

II. Specific Items: Balance of Payments

Current Account

Goods

Since June 1991, statistics on the export of goods have been compiled by the CBS. Prior to that, they were compiled by the Department of Statistics and the Customs Department. Exports of goods are valued f.o.b. Exports by one, large, fully owned, foreign subsidiary company are excluded because of inconsistencies in their valuation. Instead, the company's expenditures in Samoa (mainly on salaries and wages, electricity, and other ancillary services) are included in the services account of the balance of payments, classified as export processing. These figures are derived from the ticket system.

Statistics on imports of goods have been compiled by the CBS, beginning in 1991, using primary documents (import entries) made available by the Customs Department. Before 1991, import statistics were compiled by the Department of Statistics and the Customs Department. Imports of goods are valued c.i.f. Foreign currency values are converted to tala by the Customs Department at the exchange rates provided by the CBS at the end of each month. Imports are recorded at the time they physically cross the Samoa customs boundary. For balance of payments purposes, imports are adjusted for coverage so that imports by nonresidents (mainly diplomatic missions and international and regional organizations) are excluded. Also excluded are the imports of the company whose exports were excluded as described above.

Services

Entries for international transactions in services are derived from the ticket system, supplemented by information collected from monthly surveys of all foreign airlines, foreign diplomatic missions, and international and regional organizations located in Samoa.

Transportation

Entries for transportation services are derived from the ticket system (mainly for data on services transactions of foreign shipping companies, the local shipping company, and the local airline) and from a monthly survey of all foreign airlines. Because imports are valued c.i.f., freight and insurance debits are not included in the ser-

vices account to avoid double counting. This figure is shown as a memorandum item in the services and income account table of the CBS's *Quarterly Bulletin*.

Travel

Monthly entries for travel credits are estimated on the basis of tourist arrivals and the average tourist expenditure derived from the Western Samoa Visitor Survey conducted in 1990 and subsequently adjusted for price changes using the consumer price index. (Travel credits captured in the ticket system are replaced by the above entries.)

Other services

Entries for other services are derived from the ticket system and from monthly surveys of foreign diplomatic missions and international and regional organizations located in Samoa. Included in this category is the value added from the operations of a foreign-owned enterprise in Samoa, which are classified as export processing in the services and income account table of the CBS *Quarterly Bulletin*.

Income

Investment income

Credit entries consist of the actual interest earnings by the CBS from its foreign exchange holdings, plus the estimated interest earnings on foreign exchange holdings of the commercial banks and the Treasury Department. Credits also include inward remittances of dividends from profits earned abroad; these are derived from the ticket system. Debit entries for the government sector consist of interest payments and charges on government and government-guaranteed debt. The Treasury Department provides these figures on an annual basis. Debit entries for the private sector mainly cover interest payments on private sector debt and amounts repatriated as dividends from profits. These are derived from the ticket system.

Current transfers

Entries for current transfers comprise only cash transfers by the private sector, which are derived from the ticket system, and transfers in kind, which are taken from the imports database. All government transfers are recorded as capital transfers in the capital account.

Capital Account

Capital transfers

Entries on capital transfers comprise only government transfers. The Treasury provides these data on an annual basis. Monthly or quarterly estimates are derived by apportioning the annual figures on a pro rata basis.

Financial Account

No information is readily available on direct investment, portfolio investment, and other investment. A system for collecting this information has recently been established; it was expected to begin generating regular information in 1997. Initial response to the questionnaire has been poor and fragmented.

Reserve assets

Reserve assets comprise those held by the CBS, the Treasury Department, and the three commercial banks. Entries for reserve assets are derived from monthly statements of assets and liabilities of the CBS and the commercial banks, statements provided at the end of each month by the Treasury Department on its foreign asset position, and information provided by the Fund on Samoa's end-of-month SDR holdings, reserve position in the Fund, and use of Fund credit and loans. The entries reflect changes, rather than transactions, in these reserve assets (i.e., they include the effects of valuation changes).

Saudi Arabia

I. General

The Saudi Arabian Monetary Agency (SAMA), the country's central bank, compiles the balance of payments of Saudi Arabia. The sources of data include SAMA, the Central Department of Statistics (CDS), the Ministry of Finance and National Economy, the General Ports Authority, Airports and Saudi Aramco, as well as private sector sources, such as commercial banks and oil companies.

II. Specific Items: Balance of Payments

Current Account

Goods

Data on exports and imports are obtained from the *Foreign Trade Statistics Bulletin* produced by the CDS, which is responsible for collecting, processing, and publishing foreign trade data. The CDS obtains the basic data from the General Customs Authority. Goods exported and imported are valued on an f.o.b. and c.i.f. basis, respectively. Merchandise data do not include arms and military equipment, goods in transit, fuel and other items used on board the domestic aircraft and ships, passengers' personal effects, fish caught by Saudi fishermen, and goods returned after repair under a guarantee. The

estimated cost of freight and insurance is excluded from the c.i.f. value of imports to derive the f.o.b. value. It is estimated by using information from the Customs Department and from the table on the c.i.f./f.o.b. factor published in the IMF's *International Financial Statistics Yearbook*. Data related to the sales of fuel to foreign ships and aircraft are obtained from various sources, including the oil companies and the Presidency of Civil Aviation. No data are available on fuel sales to foreign cars and trucks.

Services

Transportation

This item covers all air, marine, and land transport services and includes passenger, freight, and other services. Data on air and marine transport are obtained from the Saudi Arabian Airlines, the Presidency of Civil Aviation, and the General Ports Authority. Data on inland transportation and on freight are estimated.

Travel

Foreign visitors are mainly pilgrims who visit Saudi Arabia during and around the months of Zul-Hijjah and Ramadan each year. Expenditures are estimated on the basis of data received from the Ministry of Interior on actual numbers of pilgrims and other visitors. Data on travel by residents of Saudi Arabia abroad are obtained from the commercial banks, which record the purpose for sales of foreign exchange.

Other services

Data on freight insurance services are estimated as part of freight and insurance on imports. Also included are all services extended to the oil companies by the rest of the world, such as consulting, legal, and other services.

Income

Compensation of employees

Data on this item are not available separately and may be included in workers' remittances. This item, however, is not significant for Saudi Arabia.

Investment income

There are three sources of data on investment income, namely, SAMA for government income, the commercial banks for private sector income, and oil companies for the oil sector income. Data on government investment income are obtained from the SAMA's Investment Department. If necessary, these data can also be estimated on the basis of the amount of SAMA's foreign assets and the prevailing international interest rates. Data on investment income of the commercial banks are obtained from SAMA's Banking Supervision Department, but, if necessary, they can also be estimated on the basis of the amount of foreign assets and liabilities of the commer-

cial banks and the prevailing international interest rates published in the Fund's *International Financial Statistics*. The Statistics Department uses the annual profit and loss statements from Aramco to derive the enterprise's investment income.

Current transfers

Workers' remittances represent the main item under current transfers. Data are obtained on a monthly basis from statements on purchases and sales of foreign exchange provided by the commercial banks and licensed money exchange houses. Data on current transfers and capital transfers of the general government (debit) are indistinguishably included in government expenditures (item government services, n.i.e.)

Capital Account

Capital transfers

See note to current transfers.

Financial Account

The oil companies provide data on their direct investment, portfolio investment, and other investment transactions. Financial transactions of the rest of the private sector are channeled through commercial banks and money exchange houses. Sources of data for these transactions are the monthly statements of purchases and sales of foreign exchange, provided by commercial banks and licensed money exchange houses. Data are not available by category. All the entries are recorded under assets, currency, and deposits of other sectors. This item also covers valuation adjustments for changes in exchange rates and net errors and omissions. Data on changes in foreign assets and liabilities of the commercial banks are obtained from the consolidated balance sheet of the commercial banks prepared monthly by SAMA's Banking Control Department.

Reserve assets

This item reflects changes in the overall official reserves, namely, gold, currency cover (foreign exchange convertible into gold), deposits, and investment. These data are obtained from SAMA's balance sheets.

Senegal

I. General

The Central Bank of West African States (BCEAO), headquartered in Dakar, is responsible for preparing the balance of payments. The National Agency (the BCEAO

branch for Senegal) collects the bulk of the statistical data and compiles the balance of payments, whereas the headquarters determines the methodology and compilation procedures and collects certain primary data at a regional level. The compilation of balance of payments conforms to the standards set forth in the *BPM4*. The BCEAO collects data from government agencies, public and private enterprises, commercial banks, and international organizations located in Senegal. The data are recorded on an annual basis. After they have been approved by Senegal's National Balance of Payments Committee, they are published in the BCEAO's *Information and Statistics Notes* and transmitted to the Fund for inclusion in the *Balance of Payments Statistics Yearbook*.

II. Specific Items: Balance of Payments

Current Account

Goods

Data are collected from trade declarations filed with the customs administration. Exports are valued on an f.o.b. basis, and imports on a c.i.f. basis. For balance of payments purposes, imports are adjusted to f.o.b. values by assuming freight and insurance amounts to 12 percent of the c.i.f. value. Customs statistics record the physical movement of goods crossing Senegalese customs boundaries but, for purposes of preparing the balance of payments, are subject to adjustments concerning coverage, valuation, and time of recording. Statistics on goods purchased by foreign carriers are obtained from surveys of the consignees of shipping companies (bunker fuel, provisions, and other supplies) and from oil companies (airplane fuel).

Services

Transportation

This item covers freight, passenger services, and port services. Freight costs are estimated at 10 percent of c.i.f. imports, after adjustments. Information on passenger transportation is obtained from airline companies. Data on port services are obtained from surveys of port and airport authorities and from the consignees of shipping companies. Transportation receipts consist essentially of National Railroad Company receipts (Société Nationale des Chemins de Fer du Sénégal—SNCFS) from merchandise in transit to neighboring countries.

Travel

Credit entries are taken from surveys of hotels, tourist sites, etc. by the Ministry of Tourism. Estimates are based on the number of foreign visitors, their estimated average expenditure, and their average length of stay.

Debit entries are obtained from statements of tourist allocations (including pilgrimage operations) granted by banks, plus data collected from airport authorities.

Other services

Insurance. The costs of insuring merchandise are calculated at 2 percent of c.i.f. imports, after adjustment. Data on the reinsurance of local companies (premiums paid and indemnities received from foreign companies) are obtained from the Insurance Department of the Ministry of Finance. Data on other insurance transactions are not classified separately but are included with other services to enterprises.

Other business. These data are taken from enterprise surveys and cover commissions and other charges in connection with trade, management costs, communication services, insurance services, and leasing costs.

Government, n.i.e. The amounts recorded include the service transactions of general government units, international organizations, embassies and consulates, and military troops. Data are obtained from surveys of the ministries concerned (particularly the Ministry of Finance and the Ministry of Foreign Affairs), international organizations in Senegal, and local water and electricity companies. With respect to embassies and military troops stationed in the country, most of their other expenditure on goods and services is estimated when there is no answer to surveys sent to them.

Income

Compensation of employees

The category includes wages and social contributions paid to and for residents by embassies, military bases, and international organizations established in the country. Data on international organizations are obtained by direct survey, whereas the data on embassies and military bases are estimated.

Investment income

Direct investment. Data on direct investment income are taken from surveys of direct investment enterprises (subsidiaries and branches). Distributed and undistributed earnings are classified separately. The counterpart entries for the reinvestment of undistributed earnings and for disinvestment resulting from losses are credited and debited, respectively, to direct investment in Senegal.

Portfolio investment. Data on portfolio investment income are also obtained through surveys of public and private enterprises, banks, and government. As portfolio investment income is expected to increase with the establishment of a West African Economic and Monetary Union (WAEMU) financial market (in progress), other data sources will be tapped very shortly.

Current transfers

General government

The available information does not always allow a distinction to be made between current transfers and capital transfers. Data are collected from various government agencies and from the United Nations Development Program. Amounts credited to general government current transfers include grants in-kind received, technical assistance, financial aid to the government, taxes, fees and penalties, and contributions to social security schemes. Amounts debited relate to Senegal's contributions to the operating expenses of international organizations, the administrative costs of technical assistance, and social pensions paid.

Other sectors

Data on other current transfers are obtained through surveys of banks, post offices, nongovernmental organizations (NGOs), and religious missions. They cover workers' remittances and grants to NGOs and religious missions.

Capital Account

Capital transfers

See note concerning current transfers.

Debt forgiveness. Data are collected from the Directorate of Debt and Investment of the Ministry of Finance.

Financial Account

Direct investment

Data are collected through surveys of direct investment enterprises. These are enterprises in which the capital is held wholly (branches) or partially (more than 50 percent) (subsidiaries) by nonresidents as defined by *BPM3*. The reinvestment of undistributed earnings and disinvestment resulting from losses is recorded under direct investment—the former as a credit and the latter as a debit.

Portfolio investment

Data on portfolio investment are also obtained from surveys of public and private enterprises, banks, and government agencies. They refer to holdings of less than 50 percent of securities and government securities subscribed by nonresidents.

Other investment

Data on trade credits, loans, and repayments are taken from foreign debt statements prepared by the Directorate of Debt and Investment of the Ministry of Finance. General government units are not authorized to hold international liquidity in the form of fiat money or deposits with nonresidents.

Information on changes in assets and liabilities of monetary authorities is obtained from the books of the BCEAO. Data on the liabilities of the monetary authorities refer to changes in the debit balance of the operations account with the French Treasury, use of Fund credit, and changes in accounts held by nonresident organizations. Data for banks include changes in the external assets and liabilities of commercial banks. Data on transactions of the other sectors are taken from annual surveys of enterprises and cover changes in their external assets and liabilities.

Reserve assets

Data are obtained from the BCEAO books. They comprise changes in SDR holdings, reserve position in the Fund, foreign currencies, and other claims. Assets in foreign currencies include cash holdings in foreign currency and credit balances in the operations account with the French Treasury. Other claims comprise transfers received from abroad and not yet recorded in the operations account.

Seychelles

The following text was confirmed as current in 2004.

I. General

The Central Bank of Seychelles compiles the Seychelles balance of payments. The principal sources of balance of payments statistics are the central bank, commercial banks, the Department of Finance, the Management Information Systems Division (MISD), other ministries and government agencies, and private companies. The balance of payments is compiled on an annual basis and published in the central bank's *Annual Report* and *Quarterly Review*. In addition, it is published in the MISD's *Statistical Abstract*, which is produced annually. The data are compiled in millions of Seychelles rupees. To the maximum extent possible, classification of individual items for the balance of payments is in accordance with recommendations of the *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

The source of data on imports and exports of goods is the Seychelles customs. These data are normally first published by the MISD and are the basis for the trade section of the balance of payments. Trade data for 1995

are central bank estimates only; imports are based on provisional data from the Department of Finance, whereas exports are estimates based on information from individual exporters and government agencies involved in exports. As from 2002, estimates are made for items such as shuttle trade.

Services

Transportation

This item consists mainly of revenue from passenger services, port services, and freight. Passenger services represent air transportation only, and data are obtained from Air Seychelles and agents of foreign airlines based in Seychelles. Port revenue includes data on general marine and port charges and agency service income, which are obtained from shipping agents. Air Seychelles provides data on airport handling fees. Aircraft landing fees are obtained from the Department of Finance. Payments in respect of freight are estimated at 12.5 percent of c.i.f. imports. Receipts for carriage of foreign cargo by Air Seychelles are obtained directly from the airline.

Travel

Until 1991, revenue from travel was based on commercial bank records and a tourism expenditure survey carried out by MISD. Since 1992, however, the emergence of a parallel market for foreign exchange has reduced the coverage of commercial bank records, and total revenues from 1992 to 1995 are based on the MISD survey, although commercial bank receipts are also shown as part of overall revenue. Bank records remain the source of data on foreign travel; in June 2001, with the introduction of exchange control regulations, these records have increased in importance.

Other services

Insurance. Data are obtained from two insurance companies operating in Seychelles—the State Assurance Corporation of Seychelles (SACOS), which until 1995 was the only insurance company, and Harry Savy Insurance (HIS). In addition, the data include 2.5 percent of overall c.i.f. imports for insurance on cargo and payments for insurance services from resident companies to overseas insurance companies.

Royalties and license fees. Information on these items is obtained through surveys of individual companies.

Other business. This item represents payments for lease by Air Seychelles and is provided by the airline. Telecommunications data are obtained directly from the two main telecommunications companies in the Seychelles.

Government, n.i.e. Data pertaining to this item are derived from different sources. The U.S. Air Force tracking station was the source of data on rent and expenditure on domestic goods and services by U.S. staff, who are treated as nonresidents. The station was closed in 1997.

Expenditure of foreign embassies in Seychelles is estimated based on commercial bank data. The Ministry of Foreign Affairs provides information on the level of expenditure by Seychelles on its embassies abroad (excluding salaries and wages paid to non-Seychellois staff). Spending on tourism promotion abroad by the government-established Tourism Marketing Authority is also included as government services payments; the Department of Finance provides these data.

Income

Compensation of employees

This item consists mainly of wages/salaries paid to Seychellois staff by foreign embassies (credits) and to non-Seychellois personnel working at Seychelles embassies abroad (debits). The Ministry of Foreign Affairs is the source of these data. Other data are obtained directly from the returns of local companies with foreign affiliations.

Investment income

Direct investment. Data are obtained from surveys of companies and consist of distributed profits of direct investors and reinvested earnings.

Other investment. This item consists primarily of interest received and paid by government, the central bank, commercial banks, and private sector investors. Data are obtained from the appropriate government agencies, commercial banks, and the private companies.

Current transfers

Data on transfers originate from a number of sources. Under general government, fishing license receipts are provided by the Seychelles Fishing Authority (SFA); data on grants are derived from records of the Department of Finance (for cash grants) and the Ministry of Foreign Affairs (for noncash grants such as education). Current transfers of other sectors consist principally of private remittances by Seychellois working abroad for more than one year and are obtained from commercial bank statistics.

Financial Account

Direct investment

Data on direct investment abroad reflect estimates of reinvested earnings outside Seychelles by residents. Direct investment in Seychelles comprises (1) purchases of government assets (including land) by nonresidents, for which data are obtained from the Department of Finance, (2) data on inflows of both equity and fixed assets of new investors, which are provided by the Department of Finance and private companies, and (3) investment in new plants and equipment by existing direct investors.

Portfolio investment

This item consists of investment in foreign securities, mainly of the banking sector, for which data are obtained from commercial banks.

Other investment

An important component of this item is government loans (receipts and payments), for which data are obtained from the Department of Finance's budget statement of cash transactions. The Central Bank provides information on its own borrowing. Data on commercial bank lending/borrowing from head offices are derived from bank returns. Other investment also includes data provided by the Development Bank of Seychelles (DBS) on loans to the DBS from foreign lenders. In addition, this item includes borrowings and repayments by private companies and individuals—the latter being derived from commercial bank records—and Air Seychelles provides data on their financial leases and annual repayments.

Reserve assets

Data on reserve assets are derived from the central bank accounts.

Sierra Leone

The following text was confirmed as current in 2004.

I. General

The Research Department of the Bank of Sierra Leone (BSL) is responsible for compiling Sierra Leone's balance of payments statistics. BSL obtains the data for the balance of payments estimates from various sources including its own records, the government ministries, the Customs and Excise Department (Customs), and the "Financial Survey of Major Limited Companies." BSL conducts this survey annually to obtain estimates for services and for income and capital flows relating to direct investment, portfolio, and other investments. In addition to compiling the balance of payments, the BSL has been compiling the international investment position (IIP) statement since 2002. The data sources for the IIP are the same as those for the balance of payments.

BSL prepares the data on an annual basis and publishes them in the *Sierra Leone Balance of Payments* pamphlet, in the half yearly *BSL Bulletin*, and on the BSL website. It compiles balance of payments estimates in millions of leones. The balance of payments data accord, as far as possible, with the international methodology recommended in the fifth edition of the *Balance of Payments Manual (BPM5)*.

II. Specific Items: Balance of Payments

Current Account

Goods

BSL bases the estimates on the import and export data compiled by Customs. BSL also receives data on imports of petroleum from the oil companies. The data compiled by Customs for exported goods are valued on an f.o.b. basis, whereas imported goods are valued on a c.i.f. basis. BSL converts foreign currency values of imports into leones at the official exchange rates. Trade data record the physical movement of goods across the Sierra Leonean customs boundary, but they are adjusted in respect of coverage, valuation, and timing for balance of payments purposes. These adjustments include deducting estimates of freight and insurance from the value of imports to derive the f.o.b. value. BSL adds these deductions to the services sector. For coverage adjustments, BSL adds nondutiable imports to the dutiable import figures provided by customs. It also adds other import items such as payments for the printing of currency that are not captured by customs. It adds unrecorded diamond exports from Sierra Leone to the customs-based data. These are estimated by deducting official export figures for diamond from trading partners' official import figures of diamond from Sierra Leone. BSL also adds other exports that are not captured by customs such as goods procured in ports by carriers, official diamond exports, etc.

Services

Following the adoption of *BPM5*, BSL expanded and reclassified the services sector in 2002 to include services relating to computer and information, business and management consultancy, financial other than insurance, other business, etc. In this regard it developed a new survey to capture the additional information as required by *BPM5*.

Transportation

This category covers freight and passenger services for all modes of transport and port services. BSL derives data for transport services from an annual survey of airline and shipping companies that operate in Sierra Leone. It draws data on seaport charges and airport fees from information provided by the seaports and airport authorities. It bases estimates of freight and insurance on information furnished in customs declaration forms. Where such information is not available, the central bank estimates these expenses at 10 percent and 2 percent, respectively, of the c.i.f. value of imports.

Travel

BSL compiles estimates of travel credits by combining data on tourist arrivals with estimates of their average

expenditures, both of which are provided by the Sierra Leone Tourist Board. The BSL obtains information on government travel from banking records.

Other services

Insurance. BSL obtains data from its annual survey of all insurance companies resident in Sierra Leone. Credit entries include the net premiums received on direct insurance of exports and reinsurance by companies operating locally. Premiums are net of claims, cancellations, and commissions. Debit entries cover premiums on merchandise insurance on imports derived from customs statistics.

Other business. Other services comprise those international service transactions not covered under the transportation and travel items. They include communications services, construction services, financial services, computer and information services, royalties and license fees, and other business services. BSL records credit entries for all services provided by residents to nonresidents, while it records debit entries for all services provided by nonresidents to resident enterprises. For information on other services, it designs and administers separate questionnaires to both providers and consumers of such services in the country.

Government services, n.i.e. BSL uses cash flow statements from its International Finance Department for government services not included elsewhere. Credit entries represent expenditures of foreign governments, diplomatic missions, and international organizations in Sierra Leone. Debit entries comprise the expenditures abroad of Sierra Leone's diplomatic and trade missions as well as military expenditures on the Sierra Leone military contingent in foreign countries.

Income

Income covers two types of transactions between residents and nonresidents: those involving compensation of employees, which are paid to nonresident workers (e.g., border, seasonal and other short-term workers); and those involving investment income receipts and payments on external financial assets and liabilities. Included in the latter are receipts and payments on direct investment, portfolio investments, other investments, external debt, and receipts on reserve assets.

Compensation of employees

This item comprises wages, salaries, and other benefits in cash or in kind, earned by individuals in economies other than those in which they are residents—for work performed for (and paid for by) residents of those economies. BSL records income earned by residents of Sierra Leone as a credit and records payments made to nonresidents as a debit. It obtains data from completed questionnaires sent to enterprises as well as official sources like its own records.

BSL has introduced for the first time in 2002 a new item under *compensation of employees* to capture official foreign exchange inflows by United Nations organizations and other diplomatic missions in Sierra Leone. The estimate (credit) represents 30 percent of all official foreign exchange inflows by United Nations organizations and other diplomatic missions in Sierra Leone. This credit—in compilers' fair judgment—accounts for the wages and salaries paid to local employees of these organizations as well as contributions paid by these employers on behalf of the resident employees to schemes such as private insurance and or pension funds.

Investment income

For *direct investment, portfolio investment, and other investment* BSL derives data from its annual financial surveys of registered companies, banks, and other financial institutions as well as from its own records. It obtains details of government transactions from the Department of Finance. The credit entries relate mainly to interest on investments held by official institutions. The debit entries relate to remittances of profits, interest, and dividends accruing to nonresidents, as well as interest on official loans.

Current transfers

General government

BSL derives data from information that various government agencies provide. The entries cover grants in cash and in kind from other governments for development and training, and contributions to the administrative budget of international organizations.

Other sectors

BSL gathers data from its International Finance Department records and information provided by the banks as well as duty-free entries pertaining to NGOs. The credit entries include grants and gifts received, transfers of savings by nonresidents, and transfers of funds by missionary organizations.

Capital Account

Capital transfers

Debt forgiveness. BSL collects data on debt forgiveness from records of its International Finance Department.

Financial Account

Direct investment

To derive data on direct investment, BSL administers an annual financial survey of all registered companies. Estimates mainly cover direct investment in branches and subsidiaries by foreign companies, which for the purposes of this survey covers companies in which nonresidents hold more than 10 percent of share capital. The item includes reinvested earnings.

Portfolio and Other investment

BSL obtains data on general government transactions related to the other investment category from its Banking International Finance and Accounts and Budgeting Departments. Assets include holdings of foreign long-term securities (which comprise mainly sinking-fund contributions, savings banks' investments, and other funds) and other foreign assets. It derives similar data for the monetary authorities from its records. The entries cover changes in foreign assets (other than reserve assets) and liabilities of the monetary authorities. BSL obtains data on the other investment transactions of banks directly from commercial bank records. Entries are estimated as differences in amounts of outstanding foreign assets and liabilities of commercial banks; thus, they include valuation changes.

Reserve assets

BSL's records supply these data. The data on BSL's foreign exchange holdings are estimated as differences in amounts outstanding and, therefore, include valuation changes. BSL has reclassified some line items in the financial account to include reserve assets and exceptional financing items, which were formally not included in the financial account under the fourth edition of the balance of payments manual.

III. Specific Items: International Investment Position

The IIP is the balance sheet of the stock of external assets and liabilities. The position at the end of a specific period reflects financial transactions, valuation changes, and other adjustments, all of which affect the level of assets and/or liabilities, which occurred during the year. Returns from all other institutions through the administered direct investment, portfolio investment, and other investment survey questionnaires serve as the main source of information. In addition, official BSL sources include the Reserve Management Section, the International Finance Department, and the BSL trial balance.

Singapore

The following text was confirmed as current in 2004.

I. General

The Singapore Department of Statistics (DOS) is responsible for compiling Singapore's balance of payments (BOP) and international investment position (IIP). Data for the compilation of BOP and IIP estimates are mainly collected from establishment surveys. Major

surveys conducted by DOS include the Survey of International Trade in Services (TIS), Survey of Debt Transactions (SDT), Survey of Singapore's Investments Abroad, and Survey of Foreign Equity Investments in Singapore. DOS also relies on other external data sources from International Enterprise Singapore (IE Singapore), Monetary Authority of Singapore (MAS), official government records, and other government ministries and agencies.

Data on BOP are prepared on a quarterly basis; they are published in the *Economic Survey of Singapore* and other statistical publications such as the *Monthly Digest of Statistics* and the *Yearbook of Statistics*. They are also available from DOS's SingStat Time Series (STS) Online System.

Data on IIP are prepared on an annual basis; they are released on DOS's National Summary Data Page (NSDP).

Data are compiled in Singapore dollars; transactions denominated in other currencies are converted to Singapore dollars based on the market exchange rate prevailing at the time of the transaction or on the average rate for the shortest period applicable. Singapore's BOP and IIP are compiled in accordance with the *BPM5* framework based on the best currently available information.

II. Specific Items: Balance of Payments

Current Account

Goods

General merchandise data are based on external trade statistics compiled by the IE Singapore from customs documents. The data are adjusted in respect of coverage and classification for balance of payments purposes. The main adjustments are to exclude the cost of freight and insurance from imports, exclude returned goods and samples, exclude aircraft parts imported by foreign airlines, and include exports and imports of water.

Services

Transportation

Transportation covers freight, passenger, and port services. The credit entries for freight cover freight earnings of local shipping lines and airlines. Data are obtained from the TIS. The debit entries cover payments to non-residents for freight services provided. The total cost of freight on imports is estimated by applying freight factors to the value of imports (c.i.f.). These factors are obtained from a survey of importers. Data on passenger and port services are obtained from the TIS and accounts of harbor and airport authorities.

Travel

The main source of information on expenditure by visitors who come in by air and sea is the Survey of Overseas Visitors to Singapore conducted by the Singapore

Tourism Board. Estimates are also made for the expenditure of visitors coming to Singapore by road and rail. Entries for travel debits are derived from the number of returning Singapore residents and the estimated average expenditure per person.

Other services

Construction. Estimates cover earnings and payments by residents from construction-related services. Data are obtained from the TIS.

Insurance. Insurance credits cover insurance earned by resident insurers on exports and goods in transit and other general insurance. Data are obtained from the TIS and surveys conducted by the MAS. Insurance debits cover mainly freight insurance payment on imports. The estimation methodology is similar to that used in estimating freight on imports.

Financial. Financial services include charges for bank services, fees for investment and other financial consultancy services, commissions, stock brokerage, and implicit services charges on foreign exchange trading. Data are obtained from the TIS and surveys conducted by the MAS.

Computer and information. Computer and information services include data processing, software development and programming, computer consultancy, and other technical support. Data are obtained from the TIS.

Royalties. Royalties include patents, industrial design, manufacturing rights, trademark and franchising fees, publication copyrights, and royalties on computer software. Data are obtained from the TIS.

Other business services. Other business services cover all miscellaneous services such as engineering, business management, research and development, legal, accounting, architectural, advertising, and trade-related services. Data are mostly obtained from the TIS.

Personal, cultural, and recreational. Social services include cultural, sports, educational, and recreational services. Data are obtained from the TIS.

Government, n.i.e. The credit entries refer to the expenditure of foreign diplomatic and consular missions and foreign armed forces in Singapore. The debit entries refer to the expenditure of Singapore's overseas diplomatic, trade, and tourist missions and the purchase of goods and services by the government from abroad. Data are obtained from various government agencies and official records of the Accountant-General.

Income

The credit entries cover the net investment income of banks and financial institutions as well as profits, interest, and dividends earned from foreign assets of private companies, statutory boards, the government, and MAS. The debit entries cover earnings attributed to foreign investors and payments of interest on foreign loans by local companies, statutory boards, and the government.

The data are obtained mainly from administrative records, the Survey of Financial Institutions, Survey of Singapore's Investments Abroad, and Survey of Foreign Equity Investments in Singapore.

Current transfers

General government

This item covers government grants, technical assistance rendered overseas, government's contributions and subscriptions to international organizations, and its payment of pensions abroad. Data are obtained mainly from official records of the Accountant-General.

Other sectors

This item covers workers' remittances, remittances through postal orders, and other private remittances. Workers' remittances are estimated on the basis of data from official records.

Capital Account

This item includes deposits of foreigners intending to reside in Singapore and withdrawals of Central Provident Fund savings by Singapore residents migrating overseas. Data are obtained from official records.

Financial Account

Direct investment

Direct investment abroad. This covers direct equity holdings in and intercompany loans extended to overseas subsidiaries and branches, investment in properties abroad, and overseas retained earnings of Singapore companies, statutory boards, and the government. Data are obtained from the Survey of Singapore's Investments Abroad, the Survey of Debt Transactions, the Survey of Statutory Boards, and other administrative records.

Direct investment in reporting country. This refers to equity holdings of foreign investors in their subsidiaries and branches in Singapore. Also included are the intercompany loans received from foreign holding companies, net purchase of properties by foreigners, and a contra-entry to reinvested earnings by foreign investors. Data are obtained from the Survey of Foreign Equity Investments in Singapore, the Survey of Debt Transactions, and the Inland Revenue Authority of Singapore.

Portfolio investment

Portfolio investment covers investments in equity and bonds other than those included in direct investment. Data on the credit side are obtained mainly from the Survey of Foreign Investment in Singapore and transaction records of the Singapore Exchange. The sources of data for the debit side are similar to those for direct investment abroad.

Other investment

General government. This covers drawings and payments of foreign loans and capital subscriptions to international institutions by the government. Data are obtained from the official records of the Accountant-General.

Banks. This covers changes in foreign assets and liabilities of the domestic banking units of commercial banks and finance companies. Data are obtained from the monthly financial statements submitted by commercial banks and finance companies to the MAS.

Other sectors. This covers all other capital transactions of the private sector. Included are foreign loans and overseas deposits of local companies and statutory boards, changes in foreign assets and liabilities of merchant banks, and nonbank residents' transactions with Asian Currency Units. The major sources of data are the monthly financial statements of merchant banks and Asian Currency Units, submitted to MAS; the Survey of Foreign Equity Investments in Singapore; and the Survey of Singapore's Investments Abroad.

Reserve assets

This consists of monetary gold, SDRs, reserve position in the Fund, and holdings of foreign assets of the MAS and Board of Commissioners of Currency, Singapore. By convention, valuation gains and losses are excluded from the balance of payments data on changes in the official reserves. Data are obtained from the MAS.

III. Specific Items: International Investment Position

The data sources and compilation methodology of the IIP are similar to and consistent with those of the BOP financial account, as described above.

Slovak Republic

The following text was confirmed as current in 2004.

I. General

The agency responsible for compiling the balance of payments is the National Bank of Slovakia (NBS), which began collecting balance of payments data for the Slovak Republic in 1993. The NBS obtains balance of payments data from a variety of sources, including data derived from customs returns on goods, data on transactions in goods, services, income, current transfers, and foreign assets and liabilities settled through the

commercial banks (the foreign exchange record), and data on changes in foreign assets and liabilities, derived from a survey of Slovak enterprises.

Data are prepared on a monthly basis and are published in regular reports that are submitted twice a year to the Slovak Parliament. Data are compiled in accordance with the recommendations set forth in *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

Data on goods are based on trade statistics compiled by the Statistical Office of Slovakia (SOSR). The trade data record the physical movement of goods, which are valued at market prices and recorded at the time of crossing the frontier of the Slovak Republic. Trade data are compiled on a monthly basis in Slovak koruny, which for balance of payments purposes are converted into U.S. dollars at the average rate of exchange. Since accession to the European Union (EU) in May 2004, Slovak Republic monitors exports and imports of goods among EU member states on the basis of monthly reports of enterprises via Intrastat. SOSR updates the register of enterprises yearly on the basis of a threshold value for exports and imports.

A geographical breakdown of merchandise trade is available, as is a commodity breakdown according to the SITC.

Services

Generally, data on trade in services are derived from the "monthly report on foreign exchange income and payments" and the "monthly report on receipts and payments for the account of nonresidents." The first report contains transactions in foreign exchange, while the latter covers transactions in domestic currency. These reports are prepared by all commercial banks on the basis of the methodology prepared by the BOP section of the NBS. The commercial banks provide the data electronically to the Statistics Department of the NBS. The reporting forms are designed on the basis of *BPM5* and contain the information needed by the compilers.

Transportation

This category covers all modes of transportation, including transit and passenger services. Data on transportation are generally obtained from the "monthly report on foreign exchange income and payments" and the "monthly report on receipts and payments for the account of nonresidents." Several items, including pipeline transit, are reported directly by individual respondents (such as pipeline operators).

Other services

This category covers communications, installation services, processing and repair, insurance, royalties and license fees, government services, n.i.e., and other business services, following the *BPM5* classification.

Income

Compensation of employees

Data are derived from the “monthly report on foreign exchange incomes and payments” and the “monthly report on receipts and payments for the account of non-residents.” Estimates of transactions in the compensation of employees item, both debits and credits, are obtained from the SOSR. These cover both legal and illegal workers, Slovak resident employees of foreign embassies, and nonresidents working in Slovakia.

Investment income

This category covers income from direct investment (broken down into income on equity and income on debt; reinvested earnings are also available), portfolio investment (including income on equity and income on debt), and other investment (for which a sector breakdown is available). The entries are derived from reports submitted by commercial banks, enterprises, and NBS.

Current transfers

Data are derived from the “monthly report on foreign exchange incomes and payments” and the “monthly report on receipts and payments for the account of non-residents.” The credit entries for general government cover amounts received under foreign technical assistance projects and humanitarian aid. Debit entries cover contributions to the administrative budgets of international organizations. The entries for other sectors include workers’ remittances, inheritances, alimony payments, gifts, and pensions.

Capital Account

Capital transfers

Capital transfers are compiled following *BPM5*. Data are derived from the same sources as current transfers and primarily include migrants’ transfers and investment grants received and extended. Transfers are broken down into government and other sectors according to the institutional sector of the resident party to the transaction. Transactions under the PHARE technical assistance program are included.

Financial Account

Direct investment

The entries are derived from monthly reports sent by enterprises. In identifying a direct investment relation-

ship, compilers apply the criterion of shareholders owning more than 10 percent of equity capital. Data on reinvestment of earnings and other capital are also available. Direct investment is valued at market prices and is reported to NBS in Slovak crowns, which for balance of payments purposes are converted into U.S. dollars at the average rate of exchange.

Portfolio investment

In identifying portfolio investment, compilers apply the criterion of shareholders owning less than 10 percent of equity capital. In addition, portfolio investment includes bonds, notes, and money market instruments. The entries are derived from reports submitted by commercial banks, enterprises, brokers, and NBS.

Financial derivatives

Data on financial derivatives are compiled using existing commercial bank statements and the enterprise survey. Transactions are reported on a net basis. Regarding the instrument breakdown, only options can be separately identified.

Other investment

Other investment data are collected following the definitions of *BPM5*; the primary breakdown is according to assets and liabilities. Breakdowns by resident sector (monetary authorities, general government, banks, and other sectors) and by maturity (short- and long-term investment) are available. For each sector, a breakdown by instrument into trade credits, loans, currency and deposits, and other assets/liabilities is produced. The entries are derived from reports submitted by the commercial banks, enterprises, brokers, and the NBS.

Reserve assets

The entries cover the changes arising out of transactions and other changes in the reserve assets of NBS. The source of data is the Treasury Department (Operations) of NSB, which compiles and provides data daily. However, the data are disseminated to international institutions and the public on a weekly basis, and daily data are used only for internal analysis. The Treasury Department also provides breakdowns of reserve assets by type of instrument and by currency.

III. Specific Items: International Investment Position

Data are prepared on a quarterly basis in accordance with the recommendations of *BPM5* and are published on the NBS website. Data are obtained from the same sources as the transactions data.

Slovenia

The following text was confirmed as current in 2004.

I. General

In accordance with the national statistical program and the Law on Foreign Exchange Business, the Bank of Slovenia is responsible for the compilation of the balance of payments. In fulfillment of this responsibility, the Bank of Slovenia issued the "Decree on the Obligation of Domestic Persons to Report Transactions with Nonresidents." It provides that the central bank cannot publish or otherwise make available to any individual (or organization) statistics that would enable the identification of data for any individual person or entity.

The main reporting sources for Slovenia's international transactions reporting system (ITRS) are (1) customs declarations on exports and imports of goods and (2) reports on transactions settled via accounts between residents and nonresidents. These accounts comprise the banks' (including the central bank's) foreign correspondent accounts—nostro and loro. They also comprise nonbank nonresident accounts, which consist of accounts held directly with foreign banks, intercompany accounts between affiliated enterprises, and international clearings. Other data sources include reports on registered long-term loans and trade credits granted to and disbursed abroad, the analytical accounts of the banking sector and of the central bank, reports on direct investment, reports on short-term commercial credits, and direct reporting by other residents for transactions not included elsewhere.

The Slovene balance of payments uses estimation models to (1) adjust the valuation of imports data (c.i.f.-f.o.b.), (2) adjust the recording of the incoming travel and holdings of foreign currency and deposits by Slovene households, and (3) adjust the recording of traveling abroad. Nevertheless, standard reporting procedures do not cover some transactions. These relate mainly to the recording of technical assistance by foreign governments and international organizations, as well as the compensation of border workers paid in cash.

Slovenia's ITRS is a closed system, in that it integrates reporting on positions of the accounts and reporting on the transactions settled through these accounts. Transactions in euros below a threshold of 12,500 are reported under a special transaction code. In report forms on each nonresident account, the position at the end of the reporting period should equal the position at the beginning, plus the credit transactions minus the debit transactions. The classification of transactions is achieved through a description of transactions, provided by the banks' customers, and the assignment of transactions

codes. These transactions codes (more than 300) are the basis of the methodology that allows banking forms (the payment orders and the forms on incoming payments) to be used for balance of payments statistics.

The reports on transactions are denominated in the original currency. Transactions are converted into appropriate currency by using the exchange rate prevailing at the time of the transaction. The Slovene balance of payments is compiled in Slovenian tolar, euros, and U.S. dollars.

All reporting forms used in Slovenia for the balance of payments compilation are available on request at the Bank of Slovenia and on the Bank of Slovenia website (http://www.bsi.si/html/eng/financial_data/hit/ in English and http://www.bsi.si/html/financi_podatki/hit/ in Slovene).

The Slovene balance of payments conforms in most respects to the methodology of the *BPM5*. However, interest income for all sectors except monetary authorities data is reported on a cash rather than on an accrual basis. Historical data have been adjusted back to 1992 using *BPM5* methodology.

The Slovene balance of payments is compiled monthly and disseminated within six weeks after the reference month. The data are first released on the Bank of Slovenia's website. The monthly balance of payments is published in the *Monthly Bulletin* of the Bank of Slovenia. Contained in the bulletin are a summary statement of the balance of payments, detailed tables in conformity with the list of standard components in *BPM5*, and notes on methodology.

II. Specific Items: Balance of Payments

Current Account

Goods

General merchandise is calculated from the customs trade data (compiled by the Statistics Office). Effective the first quarter of 2001, imports of raw materials of the Export Processing Zone (EPZ) are classified under goods for processing components (debit). Adjustments for valuation of imports data and for coverage of imports and exports data are made to conform to balance of payments concepts. To adjust imports data for valuation from a c.i.f. basis to an f.o.b. basis, the Bank of Slovenia uses a coefficient to account for the share of freight and insurance in the import value of goods. The adjustment depends on the type of commodity, the means of transport, and the country of origin of the imported goods.

The coverage adjustment concerns goods for which data are not recorded by Customs but for which data are provided either from payment documents or directly from duty-free shops and consignment warehouses.

Services

Transportation

Transportation services are broken down by categories of transport (including rail and road) and services. The main source for recording transportation services is the ITRS.

Travel

The ITRS sources used in compiling the incoming travel item include (1) health- and education-related services, (2) payments made by nonresidents to Slovene tourist agencies, (3) expenditures in tolar of nonresidents, (4) money spent in casinos by nonresidents, (5) data on sales of goods to nonresidents in duty-free shops and consignment warehouses, (6) transactions with credit cards, and (7) the sales of tolar to nonresidents abroad.

The most important source—the sales of tolar to nonresidents in Slovenia—is estimated. The estimates are based on the number of nights spent by foreign travelers, the number of tourist arrivals/border crossings (from tourism statistics, compiled by the Statistical Office), and on the real effective exchange rate for the Slovene tolar.

Travel abroad consists of business and personal travel. The main source of the data is the ITRS, supplemented by adjustments to better reflect personal travel and the consumption by residents abroad. The estimates are based on the number of border crossings and average consumption. Average consumption is estimated using information from a 1993 survey of households.

Other services

Construction. The recording of cross-border activities by construction enterprises is based on the ITRS. Both short- and long-term construction works are recorded under construction services.

Insurance. Premiums on life and nonlife insurance are split into two components: (1) the service charge that is included in insurance services and (2) the premium that is recorded as a current transfer. The calculation of the services charge is based on a fixed percentage (25 percent) of the premium payments.

Government, n.i.e. This item includes all transactions settled through Slovene embassies' accounts held by foreign banks, as well as the transactions coded as government services settled through the Slovene banks' foreign correspondent accounts. (The item excludes transfers and the expenditures for locally recruited staff of Slovene embassies, which are recorded under transfers and under

compensation of employees.) The same rule applies for expenditures for locally recruited staff of the representative offices that Slovene enterprises have abroad.

Income

Compensation of employees

The ITRS is used as a source for recording compensation of employees, which in Slovenia relates mainly to border workers. However, because the ITRS is limited (many wage remittances are not channeled through domestic banks), supplementary estimates of such payments are made.

Investment income

Direct investment. Data on income on equity used in the Slovene balance of payments are available from the ITRS (for transactions settled through banks). Data on reinvested earnings are available from an annual survey of Slovene direct investors abroad and of foreign direct investors in Slovenia.

Other investment. The present recording of interest income is based on actual payments (ITRS). Separate data are available for interest on loans and commercial credits, debt securities, and deposits. Only for the sector "monetary authorities," data on income are recorded on an accrual basis since 2002.

Current transfers

The data on current transfers of other sectors are broken down into workers' remittances and other transfers, including insurance. The main sources for other transfers are the ITRS and customs documents (for grants in kind). The insurance item is calculated as the difference between the insurance premiums received and the claims paid on the credit side and vice versa on the debit side. See also the information under insurance services above.

Capital Account

Capital transfers

Migrants' transfers. This item covers both payments recorded by domestic banks and the changes in the residency of accounts held with these banks.

The debt forgiveness component is recorded from 2002 onwards on the basis of a special yearly survey about debt forgiveness, which is a supplement to a short-term credits survey. The item is calculated as a percentage of exports/imports of goods.

Financial Account

Direct investment

The recording of direct investment is based on the reporting of settlements by domestic banks and on data

from customs declarations. Before 1997, all transactions in equity were recorded under direct investment. Beginning in 1997, an equity ownership threshold of at least 50 percent and investments in shares to be held for more than seven years were introduced for recording direct investment transactions. This change was related to introducing new capital control measures. In September 1999, the equity ownership threshold was reduced to 10 percent. Since 2001, other capital transactions between affiliated enterprises have been included under *Direct investment, other capital*.

Portfolio investment

Before 1997, portfolio investment reflected only data on sales and purchases of debt securities settled through domestic banks. Beginning in 1997, it also included equity transactions involving an equity ownership of less than 50 percent and equities entitled to be resold in less than seven years. In September 1999, the equity ownership threshold was reduced to 10 percent.

Other investment

Until 2000, transactions between affiliated enterprises were recorded under other investment rather than as direct investment. Since 2001, other capital transactions between affiliated enterprises are included under *direct investment, other capital*. Short-term trade credits are estimated and recorded net, as changes in assets. The estimates are based on a comparison of data on imports and exports from customs declarations and the corresponding settlements. Currency and deposits of households are estimated using data on 1) net purchases of foreign currency from local foreign exchange offices, 2) estimated net sales of foreign exchange by nonresidents, 3) estimated expenditures abroad of resident households (see *Travel*), and 4) deposits and withdrawals from residents' foreign exchange accounts in domestic banks.

Reserve assets

Since 2002, data are recorded on an accrual basis. Transactions are recorded in the original currency and converted to the appropriate currency, using exchange rates prevailing at the time of the transaction.

III. Specific Items: International Investment Position

Sources of data for the international investment position of Slovenia are mainly the same as those used to compile the financial account of the balance of payments—reports on loans and long-term trade credits, balance sheet data of the Bank of Slovenia and commercial banks, and reports on accounts abroad of the nonbank sector. In addition, these data are supplemented by reports on direct investment and short-term commercial credits. The data do not include claims under negotia-

tion with the former Yugoslavia, as well as expropriated assets in these territories.

Direct investment

The data comprise all forms of investment (equity and other claims) where a direct investor holds equity ownership in incorporated enterprises of 10 percent or more. Since 1996, direct investment may include data on indirectly affiliated enterprises, covering other claims. Intercompany claims or liabilities between affiliated banks and affiliated financial intermediaries recorded under direct investment capital are limited to those associated with permanent debt (loan capital representing a permanent interest). Until 2000, all long-term intercompany claims and liabilities between affiliated banks and affiliated financial intermediaries were included in this item (not just permanent debt). Also included are investments in real estate abroad (except those of Slovene households, especially in neighboring Croatia).

Portfolio investment

Includes equity investments involving ownership of less than 10 percent of the shares of incorporated enterprises' holdings of debt securities.

Solomon Islands

I. General

The Economics Department of the Central Bank of Solomon Islands (CBSI) is responsible for the compilation and dissemination of balance of payments statistics for the Solomon Islands. The primary sources of data are the Statistics Division (SD) of the Department of Finance and the record of foreign exchange transactions (FET) through the banking system. These data are supplemented with information derived from the CBSI's debt report management system (DRMS) monthly reports and from the CBSI's half yearly survey of foreign aid, transportation and travel services, and the annual survey of international trade in services, foreign direct investment, and external debt. The FET coding system was reviewed in early 1997, and changes were effected from January 1, 1998. CBSI introduced new surveys in June 1999 and plans a further program of survey development to produce improved data in other areas.

Balance of payments statistics are produced on an annual basis and published in the CBSI's *Annual Report*. Quarterly estimates, based on FET data only, are also produced and published in the CBSI's *Quarterly Review*. Data are compiled in Solomon Islands dollars and conform as closely as possible to BPM4 standards. CBSI plans to compile data in accordance with BPM5 for the

1999 reference year. Exceptional financing transactions for 1993–98 are not reported.

II. Specific Items: Balance of Payments

Current Account

Goods

Goods trade data are derived from the international trade statistics that are produced and published by SD. These statistics are based on customs data. When data are not available from SD, provisional estimates are made from the FET; these are revised when actual data become available. Exports are valued at an f.o.b. level and imports at a c.i.f. level. At present, the various components of goods trade (that is, general merchandise, goods for processing, goods for repairs, goods procured in ports, and nonmonetary gold) are not separately available, and no adjustments are made for coverage, valuation, or timing. It is planned to introduce these data for the 1999 reference year.

Services

Transportation

Included here are passenger and freight services. Data are derived mainly from FET records.

Travel

Data on travel credits and debits are compiled from FET records. The disaggregation into business and personal travel is estimated from 1998.

Other services

Data are obtained from FET records. Included are all services transactions not covered under transportation or travel. Insurance services, government services, and royalties and licence fees data are provided separately. Data on other types of services (that is, communications, construction, financial, computer, other business, and personal, cultural, and recreational services) are available from 1998.

Current transfers

General government

Data on official transfers are compiled from two main sources. The cash component of external assistance is obtained from FET records. Data on external assistance in the form of goods and services, including technical assistance, are derived from CBSI's annual foreign aid survey, which is sent to the high commissions, consulates, embassies, and international organizations that are resident in the Solomon Islands. CBSI introduced a half-yearly survey in 1999 and plans to conduct this survey on a quarterly basis in the future.

Other sectors

FET records supply data for both credit and debit entries. These comprise gifts and donations and transfers by temporary residents. CBSI plans to conduct a survey of nongovernmental organizations in 2000.

Capital Account

Central government capital transfers comprise foreign aid capital transfers derived from CBSI's foreign aid survey. Private sector capital transfers comprise migrants' transfers; the data source is FET records.

Financial Account

Direct investment

Data are obtained from FET records, reports from the Foreign Investment Board, and the CBSI's survey of foreign direct investment that was introduced in 1998.

Other investment

Data on official transactions are derived from the DRMS, which records all government loan disbursements, repayments, and arrears. Private capital transactions, such as loan disbursement and amortization, are derived from the FET records and the CBSI's annual debt survey.

Reserve assets

Data are derived from CBSI records. Transactions are estimated as differences in the amounts outstanding at the beginning and end of each period and therefore include valuation changes.

South Africa

I. General

The South African Reserve Bank (SARB) is officially responsible for the compilation of South Africa's balance of payments. Data are obtained from various sources, including the South African Revenue Service (SARS) (which incorporates a division previously known as the Commissioner of Customs and Excise), government departments, public corporations, and the private banking sector. Besides gaining information from foreign exchange transactions records, the SARB conducts several surveys to collect data on service payments and receipts, investment income, transfers, and nonbank private sector financial flows.

The SARB compiles South Africa's balance of payments quarterly in South African rand and publishes this statement in its *Quarterly Bulletin* and on its website

<http://www.resbank.co.za>. The analytical presentation of the balance of payments is largely in accordance with the methodology recommended in *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

The main source of information for merchandise trade (imports and exports) is the monthly data on trade flows collected at custom posts by the SARS. Since the beginning of 1998, customs export figures are divided between exports of the other SACU members (Botswana, Lesotho, Swaziland, and Namibia) to the rest of the world and South African exports to countries other than the "other" SACU members. South African exports are therefore adjusted to include South African exports to other SACU members. Similar adjustments are made to include South African imports from these countries. Besides the above-mentioned adjustments for territorial coverage, valuation and timing adjustments are also made to customs figures in accordance with the *BPM5* methodology.

The value of South Africa's net gold exports (defined as the net foreign sales of gold plus changes in the gold holdings of the Reserve Bank and other banking institutions) is calculated according to the directive of the *System of National Accounts*. Net gold exports are classified separately in the current account, and no distinction is made between monetary and nonmonetary gold. Reliable statistics are furnished by the SARB, the Rand Refinery, and various mining houses responsible for marketing their production.

Services

Transportation

This category covers freight and passenger services; information is obtained from the SARS, transport operators, and other organizations involved in these transactions.

Travel

Estimates are based on statistics compiled by Statistics South Africa, regarding the number of foreign tourists visiting South Africa and the number of South African tourists traveling abroad. Data are taken from periodic surveys conducted by the South African Tourism Board and from questionnaires completed during buying and selling of foreign exchange.

Other services

Insurance. Information about freight insurance is obtained from transport operators. Data related to other

insurance services are collected from questionnaires completed by the insurance industry.

Royalties and license fees. Data are obtained from sample surveys and exchange records of authorized dealers in foreign exchange.

Other business. Entries for other services include, among other things, management fees, advertising, communication, and professional services. In addition to quarterly surveys conducted by the Research Department of the SARB, use is made of information obtained from exchange records of foreign exchange dealers.

Government, n.i.e. Credit entries are estimates based on information from foreign exchange transactions records. Debit entries are derived from data from the Department of Foreign Affairs.

Income

Compensation of employees

The remuneration of migrant workers is based on estimates of the number of foreign workers and their average earnings, classified by industrial sector. Information is obtained from the Chamber of Mines, the Employment Bureau of Africa, and official publications of foreign countries. Estimates of compensation received by South Africans abroad are based on foreign exchange transactions records.

Investment income

Investment income is calculated from information collected through quarterly and annual sample surveys of organizations in the nonbank private sector. It is also calculated from accounting information of the Department of Finance, public corporations, and the private banking sector in South Africa. Using the results of the various quarterly/annual sample surveys, the SARB calculates direct and other investment income.

Current transfers

General government

Estimates are based on information provided by government departments.

Other sectors

Estimates cover payments made and received for missionary societies, legacies, alimony, and contributions to international organizations.

Capital Account

Capital transfers

Capital transfers consist largely of migrants' transfers to and from South Africa.

Financial Account

Direct investment

The main sources of data on inward and outward direct investment are the quarterly and annual sample surveys. Information on reinvested earnings will in the future be shown separately.

Portfolio investment

Data are obtained primarily from the JSE Securities Exchange South Africa, the Bond Exchange of South Africa, nominee companies, and the private banking sector. Transactions in share placements are obtained directly from banking institutions and/or the private non-banking sector.

Other investment

Data are obtained through quarterly/annual sample surveys of organizations in the private banking and non-banking sector, the Department of Finance, and public corporations.

Reserve assets

Reserve assets refer to the gross foreign reserves of the SARB and private banking institutions.

Spain

The following text was confirmed as current in 2004.

I. General

Since 1991, the agency entrusted with preparing the balance of payments has been the Banco de España (Bank of Spain—BOS). Until 1990, the Ministry of Economy and Finance compiled the data.

The two basic sources of information used are the foreign trade statistics for transactions in goods and BOS's international transactions reporting system (ITRS) for other transactions. In addition, other complementary sources of information are used. In most of the cases, the aim is merely to substantiate the quality of data obtained from the two primary sources of information. Particularly important, so far as data substantiation is concerned, are the data from balance sheets on the external positions of all financial institutions that extend credit.

The foreign trade data are prepared in the Customs Department of the State Tax Revenue Service (Customs). The data on trade in goods between Spain and non-European Union (non-EU) countries are based on customs declarations. Those on trade with EU members draw on the information gathered through the Intrastat sys-

tem. The EU designed this system to gather trade data from member states following the abolition of their customs borders.

Spain's ITRS is a closed system (i.e., both stocks and flows are reported and reconciled) and is based on reporting by resident banks and by households and enterprises holding bank and intercompany accounts abroad. The ITRS, operated by the BOS, records all transactions between residents and nonresidents, whether they are settled through an account held in a resident financial institution or in a nonresident financial institution. The ITRS also records transactions settled through intercompany accounts—a common practice among companies of a single group (parent companies, subsidiaries, and branches).

The ITRS likewise records clearing transactions not giving rise to cash receipts or payments, including long-term trade credits. Short-term trade credit transactions are not captured and therefore are reflected in net errors and omissions. Reinvested profits are not recorded either. Transactions amounting to less than EUR 3,000 before January 2001 and to less than EUR 12,500 from this date are reported but without specifying the nature of the transaction. The BOS assigns them to the various balance of payments categories, using the distribution of transactions for amounts immediately above that threshold as an indicator and historical information.

In recent years, the BOS has started to complement the sources mentioned above and, in due course, replace the collection system currently in place. While the design of the new collection system has not yet been completed, some features are already in place and are described as follows.

Since December 2001, information on tradable securities is collected using a new system based on indirect, but also direct, security-by-security reporting through custodians and financial intermediaries. This information has already been incorporated in the international investment position (IIP) statistics (from December 2002 data onwards), and BOS plans to use it in the future also for balance of payments purposes. Starting in 2002, owing to the introduction of euro banknotes, estimates of the travel item have been complemented with tourism indicators. The BOS has started to use more intensively information from the Register of Foreign Direct Investment of the Ministry of Industry, Tourism, and Commerce, to incorporate into the balance of payments certain direct investment transactions for which it is difficult to obtain data using the usual reporting system. The use of stock information from this source to compile direct investment in the IIP is being studied. Information on *other services* will be collected from surveys carried out by the National Statistics Institute. In the future, the European Centralized Securities Database (CSDB) will be used to enrich the geographical and sec-

toral information currently obtained and also for checking purposes.

In general, the data are prepared following the methodological guidelines of the *BPM5*. This is the case both for the content of the standardized categories and the criteria of residence, valuation, and time of recording. The following section on specific items indicates those instances where the *BPM5* guidelines are not fully adhered to. The accrual principle recommended in the *BPM5* for the time of recording of interest income is applied only to income payments by general government. Most services transactions are recorded when the related receipts or payments take place; this does not always represent the time the services are rendered.

After collecting from the ITRS the information on transactions in the original currency, the BOS converts the data into euros: for transactions settled through resident financial institutions, it uses the prevailing average ten-day exchange rate. For all other transactions, it uses the monthly exchange rate.

For goods, the valuation in euros is that of the foreign trade statistics. In transactions with other EU countries, this is based on the exchange rate reported by the enterprises, whereas in extra-Union transactions it is the rate applied by the customs authorities.

The BOS first applied the methodology of the *BPM5* in preparing the 1993 figures. Moreover, the BOS has estimated time series for 1990, 1991, and 1992 according to the *BPM5* methodology, using the original data from the exchange control records and supplementary information from other sources. This has enabled the BOS to obtain series for these years that may be considered reasonably comparable with those for subsequent years. No such statistical work has so far been performed for the years before 1990. Therefore, users should exercise extreme caution when comparing those data with the data for later years.

The BOS prepares the Spanish balance of payments monthly and publishes the data in its *Statistical Bulletin* and on the Internet site <http://www.bde.es>. Each year the BOS publishes a volume devoted to the balance of payments, with more detailed data than those in the monthly publication. One chapter of this volume describes the methodology for preparing the data, while several others offer an economic analysis of the results. The 2003 *Annual Report* incorporates significant changes from previous years' editions: it includes a specific chapter on the IIP, an overview chapter, and a specific section dedicated to the methodology with the aim of highlighting key developments in 2003 and methodological changes. The BOS' *Economic Bulletin* also includes a quarterly analysis of the figures. Balance of payments data are disseminated with a maximum lag of two months and fifteen days after the end of the refer-

ence period. The data are sent to Eurostat (the EU's Statistical Office), the European Central Bank, the OECD, the Bank for International Settlements (BIS), and the International Monetary Fund (IMF).

Beginning in 1992, the BOS has prepared data on the international investment position (IIP) in accordance with the *BPM5* and consistent with the balance of payments statistics. Data for prior years are tentative estimates of the IIP concept based on existing data. Users must bear in mind that an important methodological break exists.

The sources for compiling the IIP since 1992 are bank balance sheets for most of the banking data, the Central Security Depositary (IBERCLEAR) for foreign investment in domestic bonds and notes issued by the general government, the BOS Foreign Loans Register for loans between residents other than banks and nonresidents (including those between companies with direct investment relationships), and accounting data of the BOS for reserve assets. Stock data have been valued at market prices, using the exchange rates prevailing at the end of the reference period.

When stock data were not available, the BOS compiled the figures by aggregating balance of payments flows. In these cases, the BOS has always corrected for the exchange rate effect. Corrections to reflect changes in the value of the assets have been made only when appropriate indices were available.

The information obtained from the new security-by-security system on tradable securities has been used for the first time to compile the portfolio investment position in 2004, coinciding with the publication of December 2003 data and incorporating data from December 2002. This new system enables the collection of pure stock data at market prices. Historical data (1992–2002) have been revised in the case of *equity securities-other sectors* taking into account the evolution of prices.

Since September 2003, the BOS has been publishing quarterly data on external debt, broken down by institutional sector, maturity, and type of investment. The series begin from December 2002 and are compiled in accordance with the methodology set out in *BPM5* and the *External Debt Statistics Guide*. The data are consistent with the IIP statistics and are disseminated on the BOS website (<http://www.bde.es/bpagos/estadis/deuda.pdf>).

II. Specific Items: Balance of Payments

Current Account

Goods

The basic source of data is the foreign trade statistics, complemented with ITRS data on merchandise not crossing borders and on goods procured in ports by car-

riers. Data for imports in the trade statistics are recorded on a c.i.f. basis. The c.i.f. value of imports is adjusted to f.o.b. values using conversion factors to exclude the freight and insurance components of imports c.i.f. The freight component was estimated combining information from 1) foreign trade statistics for trade according to means of transportation; and 2) the main transportation companies for freight rates. The insurance component was estimated with information from the resident insurance companies. The conversion factor is 4.2 percent for freight and 0.3 percent for insurance.

Services

Travel

The information gathering system does not allow for a breakdown by purpose of travel (business or personal). Starting in 2002, data on settlements have been complemented by indicators of supply and demand.

Other services

Construction. The data for construction services reflect the application of a precise definition of the concept of residence for the firms involved. However, in practice, problems arise in applying the concept of residency for the establishment. Therefore, the dividing line between construction services and direct investment by construction firms is somewhat blurred. Moreover, this item possibly includes receipts and payments that are not construction services in the strict sense (material, machinery, manpower, etc.). This is owing to the difficulties in distinguishing between the many components of transactions that are often billed together. Each case is decided separately.

Insurance. Insurance services include the national accounts estimates on the value of the service in the strict sense. For reinsurance, receipts reflect the net amount of the reinsurance policy accepted, and payments reflect that of the reinsurance policy ceded.

Income

Compensation of employees

Because these data are obtained from bank records, the part of this income spent in the territory in which it is obtained may not be recorded. Loss of information because of reporting thresholds particularly affects the coverage of this item.

Investment income

There is a very limited coverage of undistributed earnings and transfers from direct investors to their direct investment companies to compensate losses. BOS compilers compute interest paid by nonresident parent companies to their resident subsidiaries as a reduction in direct investment income debits. Under this same heading, they compute interest payments by resident

parent companies to their nonresident subsidiaries as a reduction in the credit entries.

BOS records interest on investment income payments by the Spanish general government sector on its domestic issues of negotiable securities by applying the accrual principle. In other cases, it has recorded income on a cash basis. BOS is planning to improve the application of the accrual principle, in the future, with the information obtained from the new security-by-security information system on tradable securities and from the European Centralized Securities Database. According to the reporting instructions, interest rate swaps and forward rate agreements (FRAs) associated with a transaction (a loan, for instance) should be reported as independent transactions. Nevertheless, owing to the difficulty in differentiating between these payments, these transactions could have been included net in the investment income of the category corresponding to the underlying instrument.

This account does not include as income the profits arising from participation in mutual funds and earnings on securities issued at a discount.

Current transfers

General government

The most important part of this item is transfers whose counterpart is the EU. The Spanish government, which provides this data directly, also provides information on the final destination of the funds. This allows for the breakdown of current transfers, aimed at financing consumption, and the breakdown of capital transfers, aimed at financing investment projects.

Capital Account

Capital transfers

General government

See note on current transfers.

Acquisition/disposal of nonproduced, nonfinancial assets

This item reflects mostly transactions on nonproduced intangible assets. Transactions involving land and subsoil assets are of lesser significance.

Financial Account

Direct investment

Generally, direct investment enterprises are defined as those in which the investor's equity participation is equal to or greater than 10 percent. This includes all forms of financing, whatever their maturity, between related companies—not only those between direct investment enterprises and direct investors. In most cases, financing obtained through entities established abroad with the only purpose of routing funds from nonresi-

dent banks to related enterprises is not classified under direct investment but under other investment. Direct investment also includes real estate investment. Foreign direct investment in Spain in the form of listed equities is estimated from data provided by the Ministry of Industry, Tourism, and Commerce (in the ITRS all investments in listed securities are reported as a lump sum).

Portfolio investment

Transactions in negotiable securities are assigned to the related institutional sector on the basis of the resident issuer, in the case of liabilities, and to the resident sector underwriting or buying the securities, in the case of assets.

Financial derivatives

Included under this item are options issued over-the-counter or on organized markets, financial futures issued on organized markets, warrants on both shares and debt securities, over-the-counter futures contracts, FRAs, currency or interest rate swaps, and other swaps.

Other investment

The defining criterion for distinguishing between this category and portfolio investment is as follows: any asset or liability incurred through a private contract, or through the issue of nonnegotiable debt securities, is assigned to other investment. Some of these issues, such as private issues of notes, commercial paper, euronotes, etc., are recorded as portfolio investment because of their negotiable nature, even if they do not trade on organized markets.

Specifically included under *other investment* are the following: loans (excluding in most cases those between related companies; see *direct investment*), trade credits of over one year, financial leasing, sight and time deposits, assets arising from the execution of guarantees, purchases of nonnegotiable financial instruments, repo sales and purchases, and changes in holdings of foreign banknotes by residents. The long-term assets in the general government sector encompass membership contributions to international organizations.

Reserve assets

Transactions in reserve assets are compiled from the accounts of the BOS, as reported through the ITRS.

III. Specific Items: International Investment Position

Direct investment

Equity capital data of the nonfinancial sector have been compiled by accumulation of flows; these data have been corrected for exchange-rate valuation but not for

market-price effects. Direct investment in Spain includes an estimate of investment made through the acquisition of quoted shares. Equity capital data of the financial sector are obtained from their balance sheets.

Other data on capital are taken from the BOS Foreign Loans Register as stock data. Included are all kinds of loans between related companies—not only those between direct investors and their subsidiaries and affiliates (and vice versa).

Information on reinvested earnings of other resident sectors is not available.

Portfolio investment

Until December 2003, data on nonresidents' investments in shares issued by nonfinancial resident companies were compiled by the accumulation of flows, corrected for valuation changes arising from both exchange rates and market prices.

For the financial sector, data were obtained from their balance sheets and valued at market prices. Stock data on foreign investments in Spanish mutual funds were obtained from reports to the Spanish Stock Exchange Commission.

BOS obtains the stock of nonresident investment in domestic bonds and notes issued by the general government, valued at market price, from IBERCLEAR. Data on banks' foreign investments (assets) are sourced from the banks' balance sheets.

The remaining items were calculated by the accumulation of balance of payments flows, corrected for the exchange rate valuation.

Since December 2002, data on all portfolio investment items are calculated on the basis of the new security-by-security information system on tradable securities. This new system enables the production of pure stock data valued at market prices.

Data on the stock of financial derivatives are not available all through the period.

Other investment

Banks' stock data come from their balance sheets. For general government and other sectors, data on loan stocks are available from the BOS Foreign Loans Register.

The account excludes loans between related companies (see *direct investment* above). The account includes data on the stock of the insurance companies' technical reserves.

For other instruments of the general government and other sectors, data have been compiled by the accumulation of flows corrected for the exchange rate effect.

Reserve assets

Data are obtained from the BOS balance sheets.

Sri Lanka

The following text was confirmed as current in 2004.

I. General

The Central Bank of Sri Lanka (CBSL) is responsible for compiling the balance of payments statistics in Sri Lanka. The major sources of data are the Sri Lanka Customs, the Tourist Board of Sri Lanka (SLTB), commercial banks and other financial institutions, the Ministry of Finance (MOF), public corporations, private enterprises, the Board of Investment of Sri Lanka (BOI), the Public Enterprise Reform Commission (PERC), the Colombo Stock Exchange (CSE), Sri Lanka Bureau of Foreign Employment, Sri Lanka Telecom Ltd., and CBSL records.

The CBSL compiles balance of payments data monthly and publishes quarterly data in its *Monthly Bulletin* and annual data in its *Annual Report*. Data are published in millions of Sri Lanka rupees and in millions of U.S. dollars. Transactions recorded in other foreign currencies are converted into Sri Lanka rupees and U.S. dollars using period average exchange rates. Stock data in other currencies are converted using end-of-period exchange rates. Balance of payments data are compiled in accordance with the international standards recommended in the *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

General merchandise. The main source of data is the monthly trade statistics schedule prepared by the Sri Lanka Customs on the basis of export and import declarations. These data record the physical movement of goods across the Sri Lankan customs boundary. Values of goods exported and imported are recorded on an f.o.b. and a c.i.f. basis, respectively, and, for balance of payments purposes, are converted to an f.o.b. basis by deducting 10 percent for freight and insurance. In addition, these data are adjusted for coverage, valuation, and timing by obtaining additional data from relevant institutions where available. Petroleum products, wheat grain, fertilizer, crude oil, and ships and aircraft, including spare parts, are some of the items subject to these

adjustments. Transactions in nonmonetary gold are included in the merchandise account.

Services

Transportation

This category, which covers all modes of transport and port services, is divided into subcategories of passenger fares, freight, other (port and other) earnings and expenditure, and other related transactions. The main source of data is the International Transactions Reporting System (ITRS) of commercial banks, which records values of transactions by purpose and currency of each transaction. In addition, data on port-related services and passenger fares are obtained from relevant institutions, using a sample survey to check the consistency of data recorded by the ITRS. The cost of freight is assumed to be 90 percent of the difference between the c.i.f. and f.o.b. values of imports.

Travel

This category includes receipts and payments on official, business, medical, and educational travel. The ITRS is the main source of data. Necessary adjustments to receipts on travel are made, based on data provided by the SLTB on the number of tourist arrivals, their average duration of stay, and their average daily expenditure.

Other services

Telecommunications. Data on receipts and payments related to telecommunications services are obtained from Sri Lanka Telecom Ltd., which provides facilities and services to the other telecommunication service providers.

Construction. Information on receipts in relation to construction services is obtained from various institutions providing such services.

Insurance. Included in this category are receipts and expenditure for all types of direct insurance. The ITRS is the main source of data. In addition, the CBSL conducts a sample survey of insurance companies for a consistency check. The cost of insurance is assumed to be 10 percent of the difference between c.i.f. and f.o.b. values of imports.

Computer and information. The BOI provides most of the computer and information service receipt data since most of these transactions affect enterprises that come under the BOI; the information is also supplemented by a survey of information technology exporters.

Other services. Entries for other services include receipts or expenses related to financial services, royalty payments, expenses on education, rent and lease payments, consultancy fees, and receipts or payments on various other services. The main source of data is the ITRS.

Government, n.i.e. The ITRS is the main source of data. Data on expenditure related to government services are obtained from other relevant sources (e.g., the Ministry of Foreign Affairs) to check the consistency with the ITRS data.

Income

Compensation of employees

This item includes receipts and payments on account of salaries and consultancy fees. The ITRS is the main source of data.

Investment income

Direct investment. Inflows and outflows on earnings from direct and portfolio investment are included in this category. The main source of data is the ITRS, which records all Share Investment External Rupee Account transactions.

Other investment. Receipts are mainly on the external assets of the banking system and include earnings of both the CBSL and commercial banks. Data on income from external reserves of the CBSL are obtained directly from CBSL records. Data on income from commercial banks' assets are derived using annual LIBOR for U.S. dollar deposits and the total assets of the commercial banks at the end of the relevant period. Under payments, interest payments on Non Resident Foreign Currency (NRFC) accounts and Resident Foreign Currency (RFC) accounts are obtained from the ITRS. Interest payments on long-term foreign loans of public corporations and private sector institutions are obtained from the half-yearly survey conducted by the CBSL. The interest payments on government loans are provided on a monthly basis by the External Debt Monitoring Unit (EDMU) of the External Resources Department (ERD) of the MOF. Interest payments on short-term borrowings by the Ceylon Petroleum Corporation and trade credit are provided by relevant institutions.

Current transfers

General government

Grants in the form of program and commodity aid and technical assistance given by international organizations and foreign governments and agencies to the government of Sri Lanka are covered in this category. The data are provided quarterly by the ERD.

Other sectors

Transfer receipts consist mainly of private voluntary worker remittances for maintenance of dependents and migrant current transfers. These data are obtained from the ITRS and also from a sample survey of commercial banks conducted by the CBSL for a consistency check.

Payments on transfers of assets, savings accounts, and bank balances are obtained from the ITRS.

Capital Account

Capital transfers

General government

This category includes receipts on project grants given by international organizations and foreign governments and agencies to the government of Sri Lanka. The ERD provides the data on a quarterly basis.

Other sectors

This category includes data on migrants' capital transfers. The main source of the data is the ITRS. For a consistency check, the CBSL conducts a sample survey of commercial banks.

Financial Account

Direct investment

Direct investment receipts data are provided by the BOI. Most of these investments are in respect of enterprises that come under the BOI. Data on outflows of direct investment are provided by the Exchange Control Department of the CBSL and supplemented by ITRS data.

Portfolio investment

Data on sales and purchases of shares, bonds, debentures, etc. in quoted companies are reported by the CSE.

Data on the foreign investment in the shares of the privatized public enterprises are obtained from PERC, which is handling all activities related to the privatization of state enterprises.

Other investment

Details on loan disbursements and repayments of public corporations and private sector enterprises are obtained from the semiannual survey conducted by the CBSL. Information on disbursements and repayments of loans of the general government sector is provided mainly by the EDMU.

Commercial bank assets and liabilities reflect the changes in foreign assets and liabilities of the commercial banks. The commercial bank data are obtained from the balance sheets provided by the commercial banks at the end of each month.

Reserve assets

Reserve assets reflect the changes in foreign assets of the government and the CBSL. The data are prepared by the CBSL.

Sudan

The following text was confirmed as current in 2004.

I. General

The Balance of Payments Division, Statistics Department, Bank of Sudan (BOS) is responsible for compiling Sudan's balance of payments statistics. The main sources of data are the Foreign Trade Division of the Statistics Department, commercial banks, and the Ministry of Finance. The division prepares the data on a quarterly basis and publishes them in the BOS's *Economic and Financial Statistics Review*. It also prepares the data on an annual basis and publishes these in the Central Bureau of Statistics' *Annual Report*. Staff compile data in millions of U.S. dollars. The division converts transactions denominated in Sudanese dinars or other foreign currencies to U.S. dollars, using the exchange rate at the end of the period under review. Since January 1996, the BOS has compiled and classified Sudan's balance of payments statistics according to the guidelines of the *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

The BOS bases data on goods on the foreign trade statistics compiled by Sudan Customs; they include all exports and imports registered in Sudan's main ports and airports, through which most of Sudan's foreign trade passes. The data record the physical movement of goods through Sudanese customs and from abroad. Since 1997, the BOS values imports and exports on an f.o.b. basis.

Services

Transportation

Freight and passenger services. This category covers all modes of transport and port services. Commercial banks and Sudan Customs are the main source of data for freight and passenger services.

Travel

Sources are the reports of the commercial banks and the foreign exchange bureaus; the reports include purchases of foreign currencies by residents at home and abroad and sales of Sudanese dinars to nonresidents in Sudan and abroad. The use of travelers' checks and credit cards is another source of information on travel.

Other services

Communications. This item measures gross Sudanese receipts and payments for international telecommunica-

tion services. Estimates are based on transactions of communications companies as reported by commercial banks.

Construction. This item records the majority of foreign construction activity; the primary source of data is the commercial banks, which record movements in the accounts of these construction companies.

Insurance. Entries cover net receipts of and net payments by Sudanese insurance companies, arising from (1) reinsurance assumed to be from insurance companies resident abroad and (2) primary insurance sold to nonresidents.

Financial. The data, reported by commercial banks, primarily cover commissions and other payments for financial services provided, or received, by Sudanese general license and international license banks.

Government, n.i.e. The BOS sources the data from commercial banks and its own records. This item includes money transfers to Sudanese embassies abroad and to foreign embassies in Sudan; BOS treats these transfers as a proxy for expenditures by these embassies and their staffs.

Income

Investment income

This item includes all distributed earnings, profits, and returns on capital on residents' investments abroad and those on nonresidents' investments in Sudan. Estimates are based on data from the commercial banks and on a percentage of the value of crude oil exports (for debit entries).

Current transfers

General government

Estimates are based on data submitted monthly by the commercial banks and the Foreign Exchange Department of the BOS; the data reflect all receipts from national transfer taxes from Sudanese nationals working abroad. The Ministry of Finance and National Economy reports cash grants. Beginning in 2002, Sudan Customs reports commodity grants.

Other sectors

This item includes all private transfers, whether received by individuals or firms. Commercial banks record these transfers when residents deposit or withdraw them from their accounts.

Capital Account

Capital transfers

Debt forgiveness. The Ministry of Finance collects the information quarterly on Sudanese debt forgiveness. No

information is collected on debt forgiveness from other sectors.

Financial Account

Direct investment

Since January 1996, the Balance of Payments Division has sought to collect data on this item through surveys of companies listed on the general registry of companies.

Other investment

This item covers entries on banks' short-term loans, other assets, and other liabilities. In addition, it encompasses changes in general government assets and liabilities. The BOS derives the data from bank reports and government records, respectively.

Reserve assets

The main source of these data is the balance sheet of the BOS.

Suriname

The following text was confirmed as current in 2004.

I. General

The Central Bank of Suriname (CBS) is responsible for compiling the balance of payments statements for Suriname. CBS collects data for the balance of payments statistics mainly from the commercial banks and its own records through an international transactions reporting system (ITRS). Additional sources are the bauxite companies operating in Suriname, some other domestic companies that are allowed to keep foreign exchange accounts abroad, and other documents, especially for transactions that take place outside the banking system. Suriname requires by law that payments take place through the banking system in case nonresidents are involved. The residency principle is fully applied.

CBS compiles the Suriname balance of payments in conformity with the guidelines of the fifth edition of the *Balance of Payments Manual (BPM5)*. It compiles the data on a quarterly basis, distributing them to official institutions, commercial banks, and the IMF. Until the first half of 1993, the balance of payments statements were compiled in Suriname guilders. From then on, CBS has compiled the balance of payments statistics in U.S. dollars, to avoid considerable valuation complications as a consequence of substantial depreciation of the currency.

II. Specific Items: Balance of Payments

Current Account

Goods

CBS derives data on export and import of goods from the ITRS. Compilers adjust the data to cover import and export figures from the bauxite companies and other domestic companies. Exports and imports are valued on an f.o.b basis.

Services

Transportation

CBS derives transportation information from the ITRS, which provides a breakdown (i.e., sea transport, air transport, and other transportation). Adjustments are made with data received from the national airline company.

Travel

For the travel component, CBS derives data from the ITRS. Adjustments are made to include data provided by the national carrier.

Other services

Insurance. Information on this item comes from the ITRS, supplemented with information provided by the domestic insurance companies.

Government, n.i.e. The debit entries for this item refer to money transfers to Suriname embassies abroad, as well as to international organizations. CBS takes the information from its foreign exchange records.

Income

Investment income

The compilers derive the data from the ITRS; they collect additional data from the monthly reports of the direct investment enterprises, including the bauxite sector.

Current transfers

Other sectors

Workers' remittances. The ITRS supplies data on transfers abroad by foreign workers in Suriname.

Other transfers. This category includes private grants, religious and charitable gifts, private grants to the government, etc. ITRS supplies the information.

Capital Account

Capital transfers

General government

CBS derives the data including grants in cash from the ITRS.

Migrants' transfers. Commercial banks supply the information. This item covers payments recorded by domestic banks and changes in the residency status of accounts held with these banks.

Financial Account

Direct investment

CBS compilers collect entries for this item from the monthly surveys of the direct investment enterprises.

Other investment

The International Relations Department of the CBS provides data for drawings and repayments on loans. CBS obtains additional data from the commercial banks and domestic enterprises.

Reserve assets

CBS collects data from its foreign exchange records. The entries cover changes in the CBS deposits with banks abroad. The Accounting Department provides supplementary information.

Swaziland

I. General

The agency responsible for balance of payments data in Swaziland is the International Economics Office of the Research Department in the Central Bank of Swaziland (CBS). The International Economics Office obtains its primary data from a variety of sources, which include the Central Statistics Office (CSO), Government Treasury, United Nations Development Program (UNDP), the Domestic Economy Office (DEO), the Money and Banking Office, and an annual survey of organizations with foreign transactions conducted by the International Economics Office. Other data sources are the private sector, government ministries, and parastatals. Data are prepared on an annual basis and published in the CBS quarterly and annual reports. Collection of data is by way of both questionnaire and telephonic surveys, which run as a continuous process throughout the year. Such surveys are conducted during January on an annual basis, and a continuous follow-up is made until the next annual survey is launched. Data are compiled in emalangeni, and foreign currency transactions are converted at the prevailing exchange rate at the time of the transaction. Changes in stock positions obtained from balance sheets are converted at end-of-period exchange rates.

The presentation is both in thousands of emalangeni (in the quarterly reports) and millions of emalangeni (in the

annual reports). The conversion of national data from the *BPM4* presentation to the *BPM5* presentation has been completed. The annual data since 1986 conform with *BPM5* methodology and presentation.

II. Specific Items: Balance of Payments

Current Account

Goods

Data on exports are obtained from individual exporters through the annual survey questionnaire, which obtains data on exports as reported by companies in their financial statements. Timing adjustments are made to the export estimates to reflect the different accounting periods of reporting companies (i.e., data are not always reported on a calendar year basis). The major export timing adjustment is for sugar. Shipments of sugar are effected for stockpiling at the neighboring Maputo harbor in Mozambique. To conform to balance of payments principles, sugar exports are recorded only when the sale has been concluded, and this occurs when there is a shipment from the Maputo harbor to an importer elsewhere in the world. Imports data, on the other hand, are estimated within the Research Department using final CSO data as a base. The main adjustment to imports is for valuation. This is based on an all-duty rate, calculated on total customs duties collected, to arrive at an adjustment for the reclassification of imports by personal shoppers. Reconciliation exercises between CBS and CSO relating to import and export data are carried out at regular intervals. Final balance of payments data normally represent the reconciled data.

Services

Transportation

Data for transportation services are derived from various sources. The main source is the annual survey returns from transportation companies and their agencies. Supplementary data are obtained from the service and banking sector.

Travel

Data are compiled from a combination of sources, including a hotel survey carried out by the Domestic Economy Section within the Research Department; this section also conducts surveys of curio/gift shops, car hire agencies, and educational institutions. Banking statistics are another source (mainly for official travel).

Other services

Insurance. Data are obtained through the annual survey of companies and the only insurance corporation in Swazi-

land, which reports on reinsurance with companies abroad and primary insurance sold to nonresidents.

Royalties and license fees. This item consists mainly of debit entries constituting payments by leading multinational enterprises and is obtained from the annual survey of enterprises with transactions with nonresidents.

Government, n.i.e. These data are derived from relevant government ministries and from the Exchange Control Department of the Bank. At present, the Central Bank does not conduct an annual survey of embassies, consulates, and international organizations, but it envisages conducting such a survey in the future.

Income

Compensation of employees

This category consists of labor income generated/earned mainly by Swazi workers in South African mines and, to a lesser extent, by those employed in other sectors of South Africa. Income generated in the mining sector is obtained from the Employment Bureau of Africa, an enterprise that recruits solely for the mines. Data on income earned from other sectors are obtained from the South African Reserve Bank.

Investment income

Direct investment. Data on direct investment income (equity, debt, and reinvested earnings) are derived from the annual survey of companies with foreign transactions.

Portfolio investment. Data on earnings and payments related to portfolio investment assets and liabilities are obtained from a combination of sources, including the annual survey of companies with foreign transactions, banking statistics, and government agencies.

Other investment. The same sources of data as for portfolio transactions are utilized for other investment transactions.

Current transfers

Data are derived from the UNDP annual report, which provides information with a two-year lag, and the Aid Unit of the Ministry of Economic Planning and Development. Current estimates are based on the latest UNDP report. Other data are derived from banking statistics.

Capital Account

Capital transfers

Migrants' transfers. The main source of information on migrants' transfers is the banking records of the Exchange Control Department, supplemented by additional data derived from the annual survey of companies to partly account for underreporting, owing to the absence of exchange controls between South Africa and Swaziland.

Financial Account

Direct investment

Data on this item are collected through the annual survey of organizations with foreign transactions, covering both assets and liabilities.

Portfolio investment

Data on portfolio investment are largely generated through the annual company survey, supplemented by banking statistics. Investment mainly involves trading in the South Africa securities market and secondary interests in Swazi concerns.

Other investment

Transactions in other investment assets and liabilities are derived from the annual survey of organizations and from banking statistics. (Banks are also covered by the survey as business entities.) Government assets and liabilities are obtained from government agencies, in particular the Treasury Department. Monetary authorities data are obtained from the CBS balance sheet. Data on transactions in the external assets and liabilities of banks are collected by the Banking and Monetary Section of the Research Department of the CBS.

Reserve assets

Data are obtained from the CBS Banking Department and from the Treasury Department. Gold holdings are valued at cost in the CBS balance sheet. The holdings are not revalued at prevailing market rates, and there are no transactions affecting the changes in gold stocks. Foreign exchange entries represent changes in stocks of foreign currency holdings after conversion to emalangen equivalents using end-of-period exchange rates.

Sweden

The following text was confirmed as current in 2004.

I. General

The agency responsible for compiling Sweden's balance of payments and international investment position (IIP) is Sveriges Riksbank, the central bank of Sweden. The Riksbank's data collection is mainly based on monthly surveys on financial transactions, positions, and income. These data are supplemented by merchandise trade data and quarterly surveys on services and transfers from Statistics Sweden.

Data on the balance of payments are published quarterly. More detailed data on portfolio investment are published monthly. IIP data are published biannually.

Data are compiled in Swedish kronor. Items recorded in other currencies are converted into Swedish kronor, using market or monthly average exchange rates for transactions and exchange rates at the end of the period for stock data.

The classification of accounts corresponds to the international standard recommended in *BPM5*. Sweden's balance of payments and international investment position were adapted to the *BPM5* standards in October 1997. As deficient underlying material limited the possibility of adjusting historical data, there is a break in the time series for most subitems. For the Current Account, the main items have been revised back to 1992, while a break in the series has been necessary for more detailed data.

The new Capital Account has been reconstructed back to 1992.

For the Financial Account (previously the Capital Account), the lack of material for a reconstruction of subitems has necessitated a break in the series between September and October 1997.

II. Specific Items: Balance of Payments

Current Account

Goods

General merchandise data are based on trade statistics compiled by Statistics Sweden, which also makes some adjustments to the data for inclusion in the national accounts that are included in the balance of payments. Trade within the European Union (EU) is compiled according to the Intrastat system. Nonmonetary gold is compiled within the trade statistics.

Services

Transportation

Transportation data are based on a survey compiled by Statistics Sweden.

Travel

Three sources are used: (i) reports from banks and currency dealers on sales and purchases to/from the public of banknotes and travelers' checks; the report also covers banks' sales and purchases of Swedish banknotes vis-à-vis foreign banks; (ii) reports on transactions made with credit cards; the estimation is made on gross flows of Swedish banknotes exchanged abroad by travelers from Sweden and resold to the public by foreign banks; and (iii) quarterly surveys covering, for example, travel agencies. A recurrent supplementary household survey serves as a basis for estimation of a split between tourism and business travel; it also supplies information for geographical breakdown estimates.

Other services

The main source for other services is settlements data, supplemented by direct reporting.

Construction. All payments and receipts for construction services are treated as services, unless subsidiaries are formed.

Insurance. Data are based on direct reporting from insurance companies under Swedish supervision. Some insurance transactions are based mainly on settlements data. The service element of insurance transactions is calculated for this item, whereas the rest is recorded as transfers or in the financial account, respectively.

Financial. Data on financial services are collected from settlements and direct reporting. In addition, an estimate is made for commission on mediation of equity shares.

Government, n.i.e. Data are based on quarterly surveys and administrative sources.

Income

Investment income

Direct investment. The main sources are monthly surveys of larger enterprises/investors and an annual sample survey of profits in direct investment enterprises. Reinvested earnings are calculated as the difference between total profit after tax (following the Current Operating Performance Concept) and dividends paid. Dividends are reported when payable, while profits are assigned to the year in which they were earned and distributed over the months. As of October 1997, interest income is reported on an accrual basis.

Portfolio investment. For dividends and interest, a partly new system for portfolio investment income was introduced at the beginning of 2003. For the major part of the component, for both equity and debt securities, estimations are used. However, income on Swedish debt securities denominated in foreign currency is collected by monthly surveys from the Swedish issuers. Up to 2003, dividends were reported on a cash basis.

Other investment. Interest on financial assets and liabilities is reported as of October 1997 mainly on an accrual basis. Information for earlier periods is reported on a payment basis. The sources are monthly and quarterly surveys on income from foreign assets and liabilities.

Current transfers

General government

The source is surveys of government authorities.

Other sectors

The main source is quarterly surveys. Concerning data on non-life insurance, see above under insurance services.

Capital Account

The item is reported separately in accordance with *BPM5*, beginning in October 1997. Sources are the same as for Current Transfers.

Financial Account

Direct investment

As from October 1997, the central bank applies the *BPM5* definition of direct investment. It compiles data from monthly surveys on transactions. The calculation of reinvested earnings is described under the investment income above.

Portfolio investment

Sources for the statistics are monthly surveys of brokers and banks acting as intermediaries of security transactions, and from other entities that trade directly with other countries. The central bank also uses surveys of Swedish issuers on issues to and repurchases of their securities from the rest of the world.

Financial derivatives

Financial derivatives data are based on monthly and quarterly surveys sent to major banks and enterprises.

Other investment

The item is compiled mainly from monthly surveys to the financial and government sectors and quarterly surveys to other sectors. Data on trade credits are supplied by Statistics Sweden on the basis of a quarterly survey. Concerning data on life insurance, see above under insurance services.

Reserve assets

Data are based on Sveriges Riksbank's balance sheet and show changes in stock data adjusted for valuation changes.

III. Specific Items: International Investment Position

Direct investment

Data are based on an annual sample survey. Direct investment is reported at book value, but data at a market value are calculated and published. Private nonbusiness real estate investment, which was calculated on the basis of settlement data, is now estimated.

Portfolio investment

Equity securities

Annual surveys are conducted by Sveriges Riksbank on custodians of Swedish holdings of foreign equities and

by Statistics Sweden on foreign holdings of Swedish equities. Equities are valued at market prices. For compilation, when survey results are not available, estimates are based on transactions data, adjusted for movements in foreign share prices and exchange rates.

Debt securities

Information about Swedish holdings of interest-bearing securities issued by nonresidents is based on monthly reports from Swedish custodians and from entities that hold securities deposited abroad. The data are presented in nominal amounts.

Data on foreign holdings of debt securities in foreign currency issued by Swedish residents are based on monthly reports from players who have issued securities abroad. Transaction data are used to adjust stocks for repurchases of securities denominated in foreign currency.

Information on foreign holdings of SEK-denominated securities is based on monthly reports from custodians. Adjustment is made for securities that constitute collateral in repo transactions. Custodians report in nominal amounts; other data are at market values. A method for market valuation of deposited stocks is used with regard to SEK-denominated securities.

Financial derivatives

Stock data on financial derivatives are based on monthly and quarterly surveys of the largest entities.

Other investment

Statistics Sweden compiles statistics on customer and supplier credits to the rest of the world on the basis of a quarterly survey. Intragroup credits are reported under direct investment. Data on loans (including deposits, financial leasing, repos) are based on monthly surveys to major players in the government and financial sector and on quarterly surveys to other sectors. Savings in the form of life and pension insurance are estimated from accumulated transactions, adjusted for movements in exchange rates, interest rates, and stock market prices.

Reserve assets

Data are based on Sveriges Riksbank's balance sheet and reflect market values.

Switzerland

The following text was confirmed as current in 2004.

I. General

According to the Federal Act on the Swiss National Bank (National Bank Act) of October 3, 2003 and the Implementing Ordinance on the National Bank Act of March 18, 2004, the Swiss National Bank (SNB) is authorized to collect the required statistical data for compiling the balance of payments statistics and the statistics on the international investment position. Pursuant to the Appendix to the Implementing Ordinance of the National Bank Act, legal entities and companies are obliged to supply information if (1) the transaction value of a reporting item exceeds CHF 100,000 per quarter (CHF 1 million for a reporting item in the financial account of the balance of payments); (2) their financial claims or liabilities vis-à-vis other countries exceed CHF 10 million at the time of the survey, or (3) their direct investment abroad or direct investment received from abroad exceeds CHF 10 million at the time of the survey.

II. Specific Items: Balance of Payments

Current Account

Goods

The data cover exports (f.o.b.) and imports (c.i.f.) according to the foreign trade statistics of the General Directorate of Customs, which exclude precious metals, precious stones, and gems, as well as objets d'art and antiques. As from 1995, the special trade data have also included aviation fuel.

The data on exports and imports of electricity do not include substitution energy. The data also include adjustments for precious metals, precious stones, and gems, as well as objets d'art and antiques, the processing of goods for foreign account, the processing abroad of goods for domestic account, exports and imports of returned goods, the purchase and sale of Rhine vessels, transportation costs and insurance premiums on imports, unchecked goods trade, small consignments, imports of industrial gold and silver, and goods procured in ports. The data sources are the Customs Authority (for the special trade data and the data on goods for processing), the Federal Energy Office (for the data on electrical energy), and the SNB (for data on other merchandise).

Services

Transportation

The data cover transport services for goods exported and imported, for goods traffic through Switzerland on behalf of nonresidents, and for supporting services provided in connection with air and rail travel. The modes of transport include rail, air, sea, and transport by the Rhine fleet. The data sources are the annual and quarterly surveys carried out by the SNB.

Travel

The data cover business and personal travel, stays at health resorts and hospitals, travel related to studies, same-day travel, and transit travel, as well as adjustments for small volumes in cross-border traffic, duty-free shops, and consumption expenditure by border workers. The data sources are surveys carried out by the Federal Statistical Office (FSO) and the SNB.

Other services

The data cover private insurance; merchanting; postal and courier services; telecommunications; financial services (bank commissions); technological services (construction services, commercial, and technical counseling, royalties, and license fees including management fees); purchases of goods and services by foreign representatives in Switzerland, by Swiss representatives abroad, and by international organizations in Switzerland; management of domiciliary companies, law offices, and fiduciary companies; cultural services; state revenue from stamp duty, etc. The data sources are surveys carried out by the SNB and government reports.

Income

Compensation of employees

The data cover the gross wages and salaries of Swiss cross-border commuters and of residents with foreign employers (international organizations and consular representatives in Switzerland); and the gross wages and salaries of foreign cross-border commuters including employer and employee contributions to social security schemes (i.e. Old Age and Survivors' Insurance, disability insurance, governmental military compensation, and unemployment insurance). The data estimates are based on the number of border workers and on average income earned.

Investment income

Direct investment. The data cover the transferred and reinvested earnings arising from direct investment. The data sources are surveys carried out by the SNB.

Portfolio investment. The data cover income on equity securities and income on debt securities. The estimates of income are based on surveys of holdings of securities and their yields.

Other investment. The data cover income on the lending and deposits of banking institutions; earnings from fiduciary investment; income on investments of the SNB and the Confederation; other investment income (financial leasing fees, etc.); and claims by private households abroad on pension fund reserves. Interest earnings on loans by nonbanks are not included. The data sources are surveys of banking institutions carried out by the SNB and government reports in the case of the data on

claims by private households abroad on pension fund reserves.

Current transfers

General government

The data cover contributions of Swiss nationals abroad and foreign cross-border commuters to social security schemes in Switzerland; withholding tax of cross-border commuters, and other taxes and fees including transportation tax; social security transfers abroad; Swiss contributions to international organizations and other remittances abroad; tax refunds to cross-border commuters' countries of residence; and government aid to foreign countries. The source of the data is a government report.

Other sectors

The data cover transfers by Swiss emigrants; transfers by foreign insurance schemes, etc.; remittances of immigrant workers; total premiums minus the estimated service charge and claims payable by private insurance companies; annuities and indemnity payments; pension payments; financial support; foreign aid of private aid agencies, etc. The estimates are based on data from the SNB and the FSO.

Capital Account

Capital transfers

The data cover debt forgiveness and financial assistance grants by the Confederation, as well as private capital transfers and the acquisition/disposal of nonproduced nonfinancial assets. The sources are a government report and surveys carried out by the SNB.

Financial Account

Direct investment

The data on direct investment abroad cover direct investment by domestic enterprises in enterprises in other countries (subsidiaries, branch offices, participations). The data on direct investment in Switzerland cover direct investment by foreign enterprises in enterprises in Switzerland. The data shown relate to equity capital (paid-up capital; the establishment, acquisition, or liquidation and sale of subsidiaries and affiliated companies; the provision of capital stock and operating capital to branch offices), reinvested earnings, and inflows and outflows of credits. The data sources are the quarterly and annual surveys carried out by the SNB.

Portfolio investment

The data on portfolio investment assets (i.e., portfolio investment abroad) cover investment by residents in debt instruments and equity securities of foreign issuers

(money market instruments, bonds, shares, participation certificates, investment fund certificates). The data are net, i.e., new investments, minus liquidation of investments and redemptions. The source is data reported by the banks on the acquisitions of securities by domestic customers. The data on acquisitions by banks and enterprises are derived from information on their foreign borrowing and lending.

The data on portfolio investment liabilities (i.e., portfolio investment in Switzerland) cover foreign investment in debt instruments and equity securities of domestic issuers (money market instruments, bonds, medium-term rates, shares, participation, certificates, and investment fund certificates).

The data are net, i.e., new investment, minus liquidation of investments and redemptions. The data sources are reports by the banks on the acquisition of securities by foreign customers. The data on bonds floated abroad by domestic enterprises are derived from the statistics on the foreign borrowing and lending of enterprises.

Other investment

General government. The data cover cross-border financial flows of the Confederation, the cantons and communes, and the social security organizations. Assets cover the short- and long-term lending abroad by the public sector. Liabilities cover the short-term liabilities of general government vis-à-vis other countries. The data source is a government report.

Banks. The data cover assets and liabilities of the banking sector. Assets cover claims abroad arising from interbank lending operations, i.e., the net change in long- and short-term credits to banks including precious metals claims; the net change in lending to customers and mortgage loans; and precious metals claims. Liabilities cover liabilities abroad arising from interbank deposit operations, i.e., long- and short-term deposits of banks including precious metals liabilities; long-term customer deposits; deposits in the form of savings and investment; and short-term customer deposits including precious metals liabilities. The transaction figures recorded in the balance of payments represent the net change in the individual positions, i.e., the inflow of new funds, minus repayment of outstanding liabilities. The data sources are reports by domestic banks on foreign borrowing and lending.

Other sectors. The data cover information on the corporate sector and other nonfinancial sectors. The data for the corporate sector cover (1) claims abroad: the net change in short- and long-term lending by domestic private and government enterprises to natural persons, banks, and enterprises abroad excluding intra-group lending, i.e., without credits granted to subsidiaries, branch offices, and affiliated companies abroad; and (2)

liabilities abroad: the net change in short- and long-term lending by natural persons, banks, and enterprises abroad to domestic private and government enterprises excluding intra-group lending, i.e., without credits granted to domestic subsidiaries, branch offices, and affiliated companies. The data sources are reports submitted by the enterprises to the National Bank.

The data for the other nonfinancial sectors comprise (1) fiduciary claims and liabilities—claims include the outflow of residents' fiduciary funds that are invested abroad; liabilities include the inflow of nonresidents' fiduciary funds that are invested in Switzerland; (2) imports and exports of precious metals—gold and silver as raw materials and as coin; (3) the Confederation's participation in capital increases of international organizations; (4) the sale of real estate in Switzerland to persons abroad, less the sale of real estate in Switzerland by nonresidents to residents; (5) financial flows between nonbanks and banks abroad; and (6) the change in the National Bank's liabilities. Domestic fiduciary funds, which according to the National Bank's estimates are accounted for by nonresidents and financial flows between banks and international organizations domiciled in Switzerland, are entered as adjustment items under the other nonfinancial sectors.

The data sources for fiduciary claims and liabilities are reports by domestic banks on their foreign liabilities. The data on the imports and exports of precious metals are obtained from the trade statistics. (The imports of precious metals recorded in the current account are deducted from the total.) The data on real estate are based on actual changes in the ownership according to the statistics of the Federal Department of Justice on the sale of real estate to nonresidents.

Reserve assets

The data cover changes in gold holdings, foreign exchange holdings, the reserve position in the International Monetary Fund (as from 1992), SDRs, and other reserves. The data source is the records of the SNB.

III. Specific Items: International Investment Position

Direct investment

The data on direct investment in Switzerland cover direct investment of foreign investors in domestic enterprises. Real estate property in Switzerland of nonresident investors is also included in foreign direct investment in Switzerland. The data show the equity capital and other capital.

The data sources are yearly reports on the direct investment position of domestic enterprises submitted to the

SNB. The SNB estimates quarterly data. It estimates real estate data based on changes in ownership according to the statistics of the Federal Department of Justice.

Portfolio investment

The data sources are the reports of banks on cross-border security holdings of resident and nonresident customers and reports of banks and nonbank companies on their holdings. The surveys are carried out by the SNB monthly.

Other investment

General government. The data source is a quarterly government report.

Banks. The data sources are monthly reports by domestic banks on foreign borrowings and lendings.

Other sectors. The data sources are (1) quarterly reports submitted by the enterprises to the SNB; (2) fiduciary claims and liabilities claims held by nonbanks but invested abroad by resident banks on a fiduciary basis; liabilities of nonresidents invested in Switzerland through resident banks on a fiduciary basis; the data sources are monthly reports of banks; (3) the Confederation's participation in the capital of international organizations; the data sources are quarterly reports of the Confederation; and (4) the liabilities of the SNB reported by the SNB.

Reserve assets

The data source is the records of the SNB.

Syrian Arab Republic

I. General

The Research Department of the Central Bank of Syria (CBS) is responsible for compiling Syria's balance of payments. To the extent possible, the methodology is generally in accord with the recommendations of the *BPM5*. Exceptions are noted below. The most important exception is that a payments basis is used rather than a transactions basis for the compilation, because the system is based on the reporting of transactions of nonresidents by the commercial bank and other related government institutions.

The principal sources of data are (1) the customs trade statistics, (2) the foreign exchange records of the CBS and the Commercial Bank of Syria (CB), and (3) information obtained from Syrian and foreign airlines, the

Ministry of Finance, the Planning Commission of the State, and various institutions and government departments. More information, for instance on direct investment, is obtained by direct surveys of important enterprises. The CBS compiles the balance of payments on an annual basis.

II. Specific Items: Balance of Payments

Current Account

Goods

The basic sources of data for exports and imports of general merchandise are the international trade statistics published by the General Directorate of Customs. Customs statistics value exports on an f.o.b. basis and imports on a c.i.f. basis. For compiling the balance of payments data, the CBS adjusts the customs statistics for coverage; it deducts the value of freight and insurance, and adds the value of exports and imports of electricity and of commodities not included in the customs statistics. It also deducts goods purchased by travelers, which are included in the customs data, and reclassifies them under travel.

Customs values all imports and exports in Syrian pounds at the neighboring exchange rate. The CBS compiles the balance of payments in U.S. dollars, using the appropriate exchange rates for each transaction.

Services

Transportation

Data for freight debits are calculated at about 13 percent of c.i.f. imports from nonneighboring countries; this is based on a sample survey of imports. For trade with neighboring countries, Syrian shippers report the actual freight costs.

Data on passenger services are derived from information provided by the Syrian airline company (for credits) and foreign airlines (for debits). These data are cross-checked with information obtained from the foreign exchange records.

Travel

CBS compilers estimate travel credits by using the information on the number of arriving foreign travelers, their nationality, the class of hotel, and standard expenditure samples obtained from surveys.

Compilers obtain travel debits from a similar survey, which determines typical expenditures of Syrian residents traveling abroad. The travel debits also include goods purchased abroad by Syrian travelers and recorded by Customs.

Other services

Data on communications, insurance, and commercial commissions are obtained from direct surveys of the major enterprises in these fields of activity and from the foreign exchange records.

Income

Compensation of employees

The item covers mainly the compensation of Syrian seasonal workers in Lebanon; the estimate is based on the number of these workers and a sample survey of their remuneration.

Investment income

Direct investment. The foreign oil companies operating in Syria are direct investment enterprises in joint ventures with the government. After production costs have been deducted, the profits of the oil exports are apportioned between the government and the direct investment enterprises. The latter is shown as direct investment debit.

Other investment. Other investment income credit covers interest earned from foreign assets held abroad, whereas other investment debit covers interest payments on liabilities to nonresidents. Data for both credits and debits are obtained from the foreign exchange records and records of the Ministry of Finance. Investment income is recorded on a payments basis.

Current transfers

General government

Credit data are obtained from the Planning Commission of the State for various governmental departments that receive foreign aid and from the UN High Commission for Refugees (UNHCR) on its expenses in Syria supporting Palestinian refugees.

Debit data cover (1) contributions to the administrative budgets of international and regional organizations (the data are obtained from the foreign exchange records) and (2) government human assistance abroad.

Other sectors

Workers' remittances are the primary data in this category. Data are derived from the foreign exchange records and from a survey of Syrian workers residing abroad.

Capital Account

Capital transfers

The capital transfers recorded under this category cover (1) transfers in kind (mainly equipment) received by the UNHCR in its operations in Syria for Palestinian refugees (the data are obtained from the UNHCR) and (2) damage compensation paid to Syrian workers in Kuwait owing

to the 1991 Gulf War (the data are obtained from the records of the CBS and the Ministry of Finance). Data on capital transfers of migrants are not available.

Financial Account

Direct investment

Data on direct investment transactions cover investment inflows, where a nonresident or an affiliated group of nonresidents holds at least 10 percent of the equity. The source of this information is the required reports furnished by all enterprises with any foreign participation.

Other investment

Loans

Data are obtained from the foreign exchange records, the Ministry of Finance, and the Planning Commission.

Currency and deposits

Data on bank deposits are compiled from the assets and liabilities statements reported monthly by the banks.

Other assets and liabilities

The credit entries include short-term facilities acquired abroad, whereas the debit entries include repayments of these liabilities. They also include net deposits, with the commercial banks, of foreign companies operating in Syria. Data are obtained from the commercial banks and foreign exchange records.

Reserve assets

Transactions in reserve assets are obtained from the accounts of the CBS and CB and cover the foreign exchange reserves managed by the Foreign Exchange Board at both institutions.

Tanzania

The following text was confirmed as current in 2004.

I. General

The Bank of Tanzania (BoT) is responsible for compiling the Tanzanian balance of payments. Within the BoT, the International Economics Department (IED), under the Directorate of Economic Policy, compiles the balance of payments. IED obtains statistics from many institutions and agencies, including commercial banks, Customs, the Treasury, and other Tanzanian government agencies. Usually, IED prepares a monthly report on the current account of the balance of payments for publication

in the *Monthly Economic Review*. It also prepares quarterly and annual reports for the *Quarterly Economic Bulletin* and *Operations Reports*. The quarterly and annual reports contain the complete balance of payments statistics. IED has converted all balance of payments statistics to the *BPM5* format covering the period from 1997.

The balance of payments is normally presented in both U.S. dollars and in Tanzanian shillings. When the balance of payments is compiled, most transactions in other currencies are converted to U.S. dollar equivalents using the period average exchange rate. However, some transactions are converted using the end-of-period exchange rate; these include the changes in reserve assets, which are extracted from the monthly monetary survey.

II. Specific Items: Balance of Payments

Current Account

Goods

The trade data for both exports and imports are compiled on the basis of customs documents/reports. However, imports data from the Customs Department that are on a c.i.f. basis are adjusted to f.o.b. using a factor based on information obtained from the pre-shipment inspection agency. Currently, the c.i.f. value is adjusted by 9 percent of the total value of imports.

Data on goods for processing, repairs on goods, and goods procured in port by carriers are currently included in the data on merchandise goods. However, efforts are underway to obtain a disaggregation of these data from the Customs, to facilitate compilation of trade statistics in accordance with the *BPM5* methodology.

Services

Transportation

The main entry under transportation relates to freight transactions. Data on freight and insurance imports are computed as ratios of total imports. The ratios are derived from detailed data on imports obtained from an inspection company. Currently, 9 percent of total imports is assumed to cover payments of both freight and insurance services (with freight accounting for about 97 percent of that amount, and insurance accounting for the remaining 3 percent).

Travel

Data on travel credits and debits are obtained from exchange records by commercial banks and from bureaus of exchange. The Ministry of Tourism and Natural Resources, in collaboration with the BoT, the National Bureau of Statistics, the Immigration Department, and the Zanzibar Commission for Tourism, has completed a

tourism sector exit survey to obtain more reliable data on travel credits. The results of this survey are currently being processed.

Other services

The credit entries for insurance services are obtained from the Insurance Supervisory Board. The debit entries cover premiums on merchandise insurance on imports derived from trade statistics (estimated to be 3 percent of the c.i.f adjustment applied to imports transactions). Data for the categories *other business services* and *government n.i.e.* are obtained from exchange records.

Income

Investment income

Presently, there are no data on portfolio investment income. Data for direct investment income credits are estimated based on information from the exchange records. Information on direct investment income debits and other investment income debits and credits (i.e., loans) is obtained from the Debt Department of the BoT and the commercial banks. Data on credit entries for income on investment by the monetary authority, obtained from the Foreign Market Department of the BoT, are used to supplement the credit information obtained from the commercial banks.

Current transfers

The data are obtained from the exchange records and information on donors obtained through the Ministry of Finance.

Capital Account

Capital transfers

Debt forgiveness. Information on official debt forgiveness is obtained from the External Debt Department of the BoT. Private sector debt forgiveness data are not available.

Migrants' transfers. Data for migrants' transfers are currently obtained from the banking system. However, there is no information available on migrants' noncash transfers.

Financial Account

Direct investment

Data on direct investment are estimated on the basis of projects approved by the TIC and results of the capital flow survey in the second half of year 2000. The BoT, collaborating with the TIC and National Bureau of Statistics (NBS), has conducted a census on foreign direct investment entities, the results of which have been used

to update the foreign direct investment information for 1998 and 1999. Another survey targeted at information for 2000 and 2001 was conducted during the second half of 2002 through the first half of 2003, and the results are currently being processed.

Other investment

Transactions in other government assets and liabilities are obtained from data provided by the External Debt Department of the BoT, supplemented by information obtained from the Treasury. Data on changes in the monetary authorities are available from the monetary surveys conducted by the Research Department of the BoT. Data on changes in external assets and liabilities are available from the balance sheets of banks, as reported monthly to the BoT.

Reserve assets

Information on transactions in monetary gold is obtained from the monetary surveys compiled by the BoT Monetary and Financial Affairs Department, and this information is limited to transactions in refined gold held by the BoT. Transactions in foreign exchange reflect changes in BoT holdings of foreign currencies during the reporting period; this information is based on BoT monetary surveys, which are reported in Tanzania shillings. To derive data in U.S. dollar terms, the data are calculated by changing the stock data to U.S. dollars using the end-of-period exchange rate and then taking the difference in stocks to estimate the flows in U.S. dollars.

Thailand

The following text was confirmed as current in 2004.

I. General

The Bank of Thailand (BOT) is responsible for compiling Thailand's balance of payments and international investment position (IIP) statistics. Thailand's balance of payments compilation system combines data from two main sources: international trade statistics obtained from the Customs Department and an international transactions reporting system (ITRS) maintained by the BOT (for services, investment income, transfers, and the financial account). To supplement the two main sources when appropriate, the BOT uses data from other sources, including other government agencies, state enterprises, and other agencies.

The BOT compiles and publishes Thailand's balance of payments statistics on a quarterly basis in its *Economic and Financial Statistics*; the HTML and downloadable for-

mats are also available on the BOT's website (www.bot.or.th). Balance of payments estimates are compiled in millions of baht; transactions denominated in other currencies are converted to baht equivalents at the average exchange rate for the appropriate period. BOT bases the exchange rate conversion for exports and imports on a single market rate—the midpoint between buying and selling rates of the commercial banks—in order for the international trade statistics to be in accordance with the *BPM5* methodology. Additionally, the classification of accounts used in Thailand's balance of payments generally corresponds with that recommended in the *BPM5*.

The IIP statistics are also compiled in accordance with the methodology set out in *BPM5*. The *Bank of Thailand News* publishes preliminary annual data for the reference year in millions of U.S. dollars showing the standard detailed breakdown, as well as the net position. Data are disseminated also on the BOT's website on an annual basis with a timeliness of 9 months.

II. Specific Items: Balance of Payments

Current Account

Goods

The BOT bases the estimates on external trade data obtained from the Customs Department. Export and import data are valued on an f.o.b. basis. Imports f.o.b. are estimated by excluding 1 and 9 percent of imports c.i.f. for insurance and freight, respectively. In the past, the exchange rate conversion for the international trade statistics into local currency was based on the commercial banks' buying rate for exports and selling rate for imports. The practice was appropriate because the gap between the two rates was small. Since the change to the managed float system on July 2, 1997, the exchange rate conversion for exports and imports has been based on a single market rate—the midpoint between buying and selling rates of the commercial banks. This is in order for the international trade statistics to better reflect the international trade activities, as well as to be in accordance with the *BPM5* methodology. The customs data record the physical movement of goods across the Thai customs boundary. Therefore, some adjustments are made in respect of coverage, valuation, and time of recording to bring these statistics into conformity with the balance of payments concepts. Adjustments are made to include items such as imports and exports of aircraft and aircraft components sent abroad for repairs, Thai military imports, electricity imports from and exports to neighboring countries, and satellites. Adjustments are also made to exclude diplomatic shipments, personal effects, and temporary imports and exports.

Services

Transportation

The freight category covers all modes of transport. The data are compiled by combining 9 percent of the value of imports c.i.f. with relevant transactions derived from the ITRS. The estimates for passenger services are derived from the ITRS and reports from Thai Airways International. The entries for other transportation are derived from the ITRS.

Travel

Entries for travel credits are compiled by combining the number of foreign visitors and their average length of stay, obtained from the Tourism Authority of Thailand (TAT), with adjusted estimates of average expenditures per person per day. The estimates are adjusted annually before 1999, and quarterly since, and the average expenditures per person per day are based on expenditure surveys of foreign visitors carried out by the TAT. Since 1992, BOT travel receipts have been adjusted upward by approximately 5 percent from the TAT baseline figures. This is to reflect the difference in the coverage and concepts used by the two institutions (i.e., the TAT defines the length of stay as between one and ninety days, whereas the BOT's definition is up to one year to conform with *BPM5*). Entries for travel debits are derived from foreign exchange records and quarterly surveys of Thai travelers carried out by the TAT.

Other services

Communications. These estimates are derived from the ITRS.

Construction. These estimates are derived from the ITRS.

Insurance. Insurance on goods is estimated as 1 percent of the value of imports c.i.f. The data on insurance on nongoods are compiled from exchange records. The credit entries comprise nonlife premiums received, net of claims paid, and the debit entries comprise nonlife premiums paid, net of claims received.

Royalties and license fees. These estimates are derived from the ITRS transactions representing the use of and/or acquisition/disposal of patents, copyrights, etc.

Other business services. Entries for other services include commissions, management and agency fees, contract and professional charges, financial services, etc. In general, the data are compiled from the ITRS. However, during the period from 1992 to 2001, reports from other agencies on brokerage and financial fees have supplemented financial services data (i.e., brokerage fees were estimated at 0.5 percent of the total value of foreign turnover in the stock market). Entries for foreign exchange fees are estimated from the amount of cross-border transactions in nonresident baht accounts and equity

securities, and the average spread between the exchange rates for buying and selling baht and U.S. dollars.

Government, n.i.e. The entries are derived from the ITRS.

Income

Compensation of employees

Credit entries are derived mainly from the exchange records, supplemented by bank reports on transactions in nonresident baht accounts. Owing to data limits, the estimates also include remittances by workers with a length of stay of more than one year.

Comparable debit entries are included indistinguishably as a part of other services.

Investment income

The principal data sources used in compiling investment income transactions are the ITRS, nonresident baht account transactions, the BOT records of its interest earnings on international reserves, indirect payments, and the Ministry of Finance (MOF) for interest payments on public sector debt. This item reports investment income on debt and equity separately but does not separately identify the estimates for direct, portfolio, or other investment.

Current transfers

The data are based primarily on exchange records but are supplemented by bank reports on transactions in nonresident baht accounts and data from relevant government agencies. The estimates include migrants' transfers.

Financial Account

Direct investment

Direct investment, comprising equity investment and direct investment-related loans, is compiled from data obtained from the ITRS, bank reports, and a nonbank debt survey. Direct investment data still exclude transactions in debt securities and suppliers' credits between direct investors and subsidiaries, branches, and affiliates.

Portfolio investment

Portfolio investment data are derived mainly from the ITRS, supplemented by reports from banks, the MOF, state enterprises, and a nonbank external debt survey.

Other investment

Other investment includes loans, trade credits, deposits, and other claims and liabilities. Data on loans and trade credits of the BOT, general government, and state enterprises are obtained from the BOT's balance sheet, MOF's reports, and reports from the individual state enterprises, respectively. Data on the financial transactions

of the private sector are obtained from the ITRS. Data on loans and debt securities are also adjusted using data from the quarterly nonbank external debt survey. Reports from oil companies also supplement trade credit data from the ITRS.

Reserve assets

The primary data sources are the balance sheet of the BOT and data supplied by the Fund on SDR holdings and the reserve position in the Fund. Reserve assets are classified into monetary gold, SDRs, reserve position in the Fund, and foreign exchange assets. Data on gold and securities are adjusted to the current market price weekly. All foreign currency-denominated assets are converted to the U.S. dollar equivalent using the mid-rate at the end of the reference period.

III. Specific Items: International Investment Position

Thailand's international investment position (IIP) statistics cover all sectors and all standard investment items. Data on the IIP are disseminated in millions of U.S. dollars, showing the components of external assets and liabilities positions—(1) direct investment (abroad/in Thailand), (2) portfolio investment (equity and debt securities), (3) other investment (monetary authorities, general government, bank, and other sectors), and (4) reserve assets. Transactions are recorded when a "change of ownership" is evidenced and are, consequently, reflected in the position at the end of the reference period. The exchange rate used is the mid-rate between the buying and selling rates quoted by commercial banks of the last day of the reference month. This mid-rate applies to all data on stocks of external assets and liabilities reported in foreign currencies.

Data on the external assets and non-debt liabilities of general government and state enterprises are obtained from reports. The BOT obtains position data on debt items from reports submitted regularly by the MOF and the individual state enterprises.

An annual survey supplies data on the external assets and liabilities of commercial banks and international banking facilities. The positions that are reported in the ITRS are then used to cross-check the survey responses.

Data on the external assets and nondebt liabilities of nonbank corporations and individuals are obtained through an annual survey, sent to approximately 2,700 companies, obtained from the Department of Trade Registration, Ministry of Commerce. Originally conducted on a semiannual basis, the survey has now been carried out on an annual basis to comply with corporate accounting practices where the balance sheet is audited once a year. A benchmark (population) survey is con-

ducted once every two years. Position data on debt-related liabilities are obtained from a separate set of enterprise surveys—the nonbank external debt survey. Survey questionnaires are distributed quarterly to approximately 3,000 companies, and information on enterprises engaged in external transactions is recorded in the BOT database.

Togo

I. General

The National Office of the Central Bank of West African States (BCEAO) is authorized by Regulation No. R09/98/CM/UEMOA of December 20, 1998 to collect from economic agents established on Togolese territory any information needed for compiling balance of payments statistics. In this context, the BCEAO, acting as Secretary of the National Balance of Payments Committee which is the official agency responsible for preparing and approving balance of payments statistics, compiles the balance of payments each year on behalf of the government. This committee is chaired by the Secretary-General of the Ministry of Economy and Finance.

Until 1995, the balance of payments was drawn up in terms of transactions in accordance with the methodology prescribed by the fourth edition of the IMF *Balance of Payments Manual (BPM4)*. As of 1996, Togo's balance of payments are prepared in accordance with the fifth edition of the *Balance of Payments Manual (BPM5)*.

The compilers collect data from various information sources, namely, industrial and commercial enterprises, customs statistics, local representative offices of international donors and lenders, embassies, international organizations, nongovernmental organizations, groups of exporters or importers, etc. A representative sample of the enterprises established in Togo is defined and updated each year. A standard questionnaire is sent to each enterprise of the sample, which records the outstanding financial liabilities to nonresidents at the beginning and end of the period, as well as transactions leading to changes in these liabilities during the period.

II. Specific Items: Balance of Payments

Current Account

Goods

The official source of trade statistics is the Directorate of Statistics, which compiles data on imports and exports

under various customs regimes. Imports are declared c.i.f., and exports, f.o.b. The information gathered relates to the statistics on special trade and data in the supplementary statements recording warehouse movements, temporary admissions, etc.

To broaden the coverage of these statistics, an additional survey is carried out of the major exporters and importers. For instance, data are obtained through such a survey on the exports and imports of electricity, precious metals, etc.

The c.i.f. value of imports is adjusted to arrive at their f.o.b. value by deducting the costs of the freight and insurance representing 16 percent of the declared value. This ratio was established on the basis of empirical observations of the import certificates issued to importers.

Services

Transportation

Freight. Credit entries for freight largely comprise the receipts of resident transportation companies. Debit entries cover the estimated amounts of freight on imports paid to nonresidents.

Other transportation services. Under this heading, data are recorded relating to port services and passenger services, excluding freight. Entries are made on the basis of questionnaires sent to the port, airlines and shipping companies, domestic carriers, transit and consignment companies, etc. The data also include ticket issues, leased transportation, fueling, etc.

Travel

This heading covers tourism transactions and expenditure on business travel and pilgrimages. It also covers the expenditure of Togolese students abroad. The sources of these data are the hotels, the Ministry of Tourism, the Directorates of Finance and of Scholarships and Training Courses, the organizations dealing with pilgrimages to the holy places, the university and regional schools, etc.

Other services

The following are covered by this heading: (1) transactions of insurance companies, banks, real estate firms, and all sorts of services that generate remuneration in the form of commission (the data sources are questionnaires sent to these specific providers of services) and (2) government transactions not elsewhere classified. These government transactions essentially record as credits the expenditure of diplomatic missions and international organizations and of comparable institutions established in Togo and, as debits, the expenditure of Togolese embassies abroad. The data are collected from a survey of embassies and from the Ministry of Finance.

Income

Investment income

For this item, the data compilers enter as debits or credits the dividends distributed or received, reinvested earnings, interest payable on the external debt, and earnings from investment abroad. These figures are based on questionnaires sent to enterprises and data provided by the Directorate of Public Debt of the Ministry of Finance and Economy. Very little information is available on portfolio investments, except regarding government securities operations, which has become available only very recently.

Current transfers

General government

All official international assistance is recorded under this heading. Credit entries cover mainly data from surveys of foreign diplomatic missions and the nongovernmental organizations. Debit entries concern the various government payments and contributions to nonresident entities and are drawn from reports of the Directorate of Finance in the Ministry of Economy and Finance. Compilers also use the UNDP Annual Report as a source for grants received.

Other sectors

These data are based on postal statistics of the issuance and receipt of money orders and transfers considered to represent workers' remittances. The data are adjusted afterward on the basis of bank reports on the dispatch and receipt of funds that are higher than the threshold of CFAF 100,000. Transfers of foreign residents' savings are derived from the questionnaires sent to their employers. The same applies to assistance from the nongovernmental organizations.

Financial Account

Direct investment

Data refer to direct investment made through majority shareholding in the equity capital of subsidiaries and branches of nonresident companies. Compilers derive information for these entries from questionnaires sent to the enterprises.

Other investment

The entries for the general government cover mainly public external debt operations. Entries include drawings for the year, amortization payable, and accruals and reductions of arrears, where applicable. External debt data are obtained from the Directorate of Public Debt, Ministry of Finance and Economy. Additional data on external debt are obtained from the UNDP report, which records sources of financing and the characteristics of each operation.

The entries for other sectors reflect mainly trade credits and accounts receivable. These data are derived from the enterprise surveys.

Reserve assets

The data on reserve assets are obtained from the central bank's statement. They cover the reserve position in the Fund, SDR holdings, and foreign exchange assets, mainly those in the Operations Account with the French Treasury.

Trinidad and Tobago

I. General

The Central Statistical Office of Trinidad and Tobago is officially responsible for the compilation of Trinidad and Tobago's balance of payments statistics. Since 1989, however, the statistics have been produced in collaboration with the Central Bank of Trinidad and Tobago. Data used in the compilation are obtained from a variety of sources. These include the Central Statistical Office, the central bank, government departments and agencies, commercial banks, and enterprises (through quarterly enterprise surveys).

Data are prepared on a quarterly basis; they are published in the *Annual Balance of Payments Report* and in the economic and statistical bulletins of the Central Bank of Trinidad and Tobago. The statistics are reported in U.S. dollars. The classification and compilation of the national balance of payments accounts conform as closely as possible to the standards recommended in the *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

Data are based on trade statistics compiled by the Central Statistical Office from customs documents. Goods exported and imported are valued on an f.o.b. and a c.i.f. basis, respectively. The data undergo several adjustments related to timing, coverage, and valuation. Returned goods and the personal and household effects of travelers are excluded. Goods procured in local ports by foreign carriers are added to exports.

Services

Transportation

Subsumed under this category are passenger services, port services, and the provision of freight services by the

national airline. Passenger fares (credit) relate to the passenger fares and excess baggage receipts accruing from nonresidents. Passenger fares (debit) pertain to similar payments by residents to foreign-owned carriers, as reported in the airline surveys. The national airline also supplies information on the value of freight services it provides to nonresidents (credit).

Travel

Estimates of travel credits are derived from expenditure surveys conducted by the Central Statistical Office and from tourist arrival and departure information from the same source. Also included are estimates of expenditures by foreign students enrolled at the University of the West Indies. Travel debits are sourced from banking records.

Other

Credit and debit estimates of most other services are derived from a combination of banking records and surveys.

Communications. Data include Trinidad and Tobago's receipts and payments for international communications services. Estimates are based on surveys of the main providers and on banking records.

Insurance. Credits for merchandise insurance are obtained from company surveys. Nonmerchandise insurance credits represent foreign premium income and foreign receipts in settlement of reinsurance claims. Nonmerchandise debits are sourced from banking records.

Other business. Credit and debit entries here include management and technical fees, royalties and patents, commissions, rentals, and advertising fees. These are based on banking records. Also included here are oil processing fees, for which the data are obtained directly from the company involved.

Income

Investment income

On the credit side, data on investment income include interest earned by the central bank, commercial banks, and the central government on their investments abroad, as recorded by these entities. Information on interest earned by direct investment enterprises and other key private sector enterprises is obtained from returns submitted to the central bank by the enterprises. On the debit side, this category records interest outflows on behalf of the central government, public sector enterprises, and direct investment companies, as recorded by these entities. Retained profits, distributed profits, and dividends, which also are recorded here, are obtained from the survey of direct investment enterprises.

Current transfers

General government

Credit entries include grants in cash and in kind received for development, training, or technical assistance. Debit entries cover subscriptions to international organizations and payments of pensions to citizens of Trinidad and Tobago residing abroad. Withholding taxes are also taken into account here; the data come from a survey of direct investment enterprises.

Other sectors

Credit entries cover remittances to individuals and private nonprofit institutions. Data are derived from bank records.

Capital Account

Capital transfers

Debt forgiveness. Credit entries are obtained from the Debt Monitoring Unit of the central bank.

Migrants' transfers. Credit entries are derived from the trade records of the Central Statistical Office.

Financial Account

Direct investment

Direct investment in Trinidad and Tobago covers financial transactions between direct investment enterprises and their head offices abroad. The transactions include reinvested profits, increases in share capital, and changes in head office balances. The relevant information is sourced from quarterly surveys of direct investment enterprises. A direct investment enterprise is one in which at least 10 percent of total equity is held by foreigners. In addition, direct investment includes direct expenditure in the local petrochemical sector by foreign enterprises. Data for this item are also derived from enterprise surveys.

Portfolio investment

Portfolio investment (assets and liabilities) reflects primarily net investment flows with other Caribbean countries as reported by the stock exchange in Trinidad and Tobago.

Other investment

Other investment (assets and liabilities) is classified according to sectors, specifically the public and private sectors. Public-sector entries under this section pertain mainly to the external debt transactions of the central government, the central bank, and state enterprises. This information is obtained from the Debt Monitoring Unit of the central bank.

Private-sector entries include net capital flows arising from commercial banks' net changes in external assets and liabilities. The data are obtained from the banks' returns to the central bank. Private-sector entries also include trade financing, which represents the net change in foreign trade receivables and foreign trade payables. These, together with other financial flows related to the nonfinancial private sector, including loans and changes in balances in currency and deposits, are derived from various surveys.

Reserve assets

Reserve assets represent those of the monetary authorities, comprising the central government and the central bank. Data on the central government's external assets are derived from returns submitted by the Treasury Department to the central bank. The central bank's component includes its external assets that are readily available for balance of payments support. It also covers the country's holdings of SDRs and its reserve tranche position with the Fund as adjusted for reserve liabilities, including use of Fund credit. The information is provided by the central bank.

Tunisia

I. General

Statistics for Tunisia's balance of payments and international investment position are compiled by the Central Bank of Tunisia (CBT). The methodology follows the recommendations of the *BPM5*. Within the Bank, the Debt and Balance of Payments Unit (Service de la Dette et de la Balance des Paiements—SDBP) collects the required data from several sources. Bank transfers for the purchase and sale of foreign exchange and travelers' checks are reported daily by authorized intermediaries resident in Tunisia. These data are provided in the form of statistical statements and reflect, for the previous day's value date, all financial flows recorded between resident and nonresident economic transactors in respect of goods and services, unrequited transfers, and capital flows. They are coded by type of operation, country, and currency, based on specially designed standard tables. Supplementing these data, using the same coding system, are data on activity in foreign accounts in convertible dinars, purchases and sales of foreign banknotes, and financial operations carried out by the CBT, in particular on behalf of the government. These data are used for the preparation of the overall statement of financial settlements, a fundamental component of the balance of payments. All of these data are subject to systematic plausibility checks. The economic

transactors involved are often asked to provide supplementary data in this connection, to ensure that the balance of payments is as accurate as possible.

The SDBP also collects data from outside the financial system in respect of operations that do not generate settlements. These primarily involve commercial transactions carried out on trade credit, contributions in kind by Tunisians residing abroad, equipment used by foreign enterprises operating in Tunisia, grants, and other unrequited transfers. The most important of these sources is the highly detailed customs records, which the CBT receives monthly. These data are reviewed and, if necessary, adjusted by the National Institute of Statistics for the publication of Tunisia's balance of trade (c.i.f. imports and f.o.b. exports).

Banking and customs data are often cross-checked with those taken from surveys of pertinent economic transactors. The same procedure is used annually with (1) embassies and other foreign diplomatic missions located in Tunisia and (2) Tunisian embassies abroad, for the purpose, inter alia, of obtaining comprehensive data on technical assistance, grants, and other unrequited transfers.

The accounts are denominated in Tunisian dinars. Foreign currencies used in external payments are converted to Tunisian dinars using average monthly exchange rates.

II. Specific Items: Balance of Payments

Current Account

Goods

General merchandise is estimated on the basis of the settlement statements and foreign trade statistics compiled by the National Institute of Statistics from customs records. The following adjustments are often required after cross-checking these two data series: (1) coverage adjustment. This adjustment consists of adding to transactions included in the statement on a settlements basis all merchandise operations that have not been recorded by the banking system. This applies especially to exports and imports of goods to be processed or financed with purchaser or supplier credits, transactions carried out on the basis of bilateral payments agreements, grants in kind, etc. (2) Classification adjustment. Imports are expressed in c.i.f. values and are adjusted to an f.o.b. basis. (3) Timing adjustment. The differences between customs and settlements data for trade are used to determine the amount of trade credits. The merchandise data are compiled on a transaction basis.

With regard to other goods categories: (1) customs statistics are the only data source for goods imported or exported for processing; (2) financial settlement records are used for goods procured in ports by carriers, supple-

mented with transactions recorded by customs; (3) repairs on goods include only purchases of spare parts, the value of services rendered being included under "other business services"; and (4) transactions involving non-monetary gold are included under general merchandise.

Services

Transportation

Data are collected using periodic surveys of airlines and shipping lines operating in Tunisia, in addition to the bank settlement statements.

Travel

Operations not subject to a settlement in connection with studies and internships are obtained from surveys of the pertinent government agencies and organizations.

Income

Compensation of employees

Some data are classified as factor income. Related operations also include monetary transfers, repatriations of goods, and miscellaneous personal effects.

Investment income

The source of data on investment income is bank reports and surveys of oil companies and other direct investment enterprises. The data are classified as income from equities, debt investments, and reinvested earnings.

Financial Account

Direct investment

The dichotomy between equities classified as direct and portfolio investments is based on the concept of control of the project under consideration. Direct investment enterprises are defined as foreign equity participations of more than 10 percent. All imports of construction equipment for projects lasting more than one year are considered direct investment.

Other investment

This category comprises all flows relating to loan transactions between residents and nonresidents. The private sector's financial loans are derived from commercial bank exchange records. The central bank provides information on drawings and repayments on public debt. In addition, an annual survey is conducted among banks, economic transactors, and government agencies, to determine imports and exports of merchandise carried out with medium- and long-term credit, in order to survey all medium- and long-term credit received by Tunisia. In addition to improving the accuracy of the balance of payments, these data make it possible to determine the outstanding external debt and to adjust its repayment schedule.

Reserve assets

International reserves comprise monetary gold, SDR holdings, reserve position in the Fund, and foreign exchange. Flows are calculated monthly, based on changes in outstanding amounts valued at end-of-period exchange rates.

III. Specific Items: International Investment Position

Direct investment

The CBT started to compile the international investment position statistics in 1960. For that year, the net direct investment flows were used to approximate the stock of direct investment liabilities. For each of the following years, the estimation method was to first calculate the additional stock for the year concerned using the rate of return for investment (assumed to be higher than the interest rate prevailing during the preceding three years) and the amounts of available direct investment income recorded during the year. The result was then added to the stock of the preceding year after actualizing it by the gross formation of fixed capital (GFFC) deflator for the year concerned. The year 1990 was chosen as base year.

Portfolio investment

The procedure used to estimate the stock of direct investment was also used for calculating the stock of portfolio investment.

Other investment

Medium- and long-term liabilities. This refers to medium- and long-term outstanding debt by source of funds (public or private) and by category of borrower (government or business). Data on outstanding debt are available in the external debt database managed by the CBT and are consistent with those published by the Ministry of Economic Development.

Short-term liabilities. These are broken down into financial and commercial liabilities. For the first category, data are from the CBT's monetary statistics derived from banks' reports comprising, in particular, various types of nonresident deposits with Tunisia's financial system. Commercial liabilities are deducted from the balance of payments statement: net flows recorded for one year can be, in fact, considered equal to outstanding amounts insofar as these commercial credits mature in one year or less.

Assets. Short-term credits were estimated by similar methods to those used to estimate liabilities.

Medium- and long-term claims. The stock of medium- and long-term assets held abroad by Tunisian residents was obtained by surveying the entities, including some of CBT's own departments, in charge of monitoring these

claims. The claims refer to payment facilities granted by Tunisia to certain partner countries, often as a result of intergovernmental agreements.

Reserve assets

Reserve assets are derived from the central bank's monetary statistics and include foreign exchange assets, monetary gold, SDR holdings, and the reserve position in the IMF.

Turkey

The following text was confirmed as current in 2004.

I. General

The Balance of Payments Division, Statistics Department, Central Bank of the Republic of Turkey (CBRT) is responsible for compiling and disseminating the balance of payments statistics of Turkey.

The methodology used in the compilation is essentially the methodology set forth in the Fund's *BPM5*. However, transactions are recorded on a cash basis rather than on the accrual based accounting principles of the *BPM5*.

The CBRT obtains data for compiling the balance of payments statistics from a variety of sources. These include the international transactions reporting system (ITRS), which records the foreign exchange transactions of the CBRT and the banks, and the State Institute of Statistics (SIS), which provides data on merchandise trade, freight, tourism receipts and expenditure, and shuttle trade. Regarding the foreign exchange transactions of the banks, every transaction is identified according to a coding system.

Banks compile the data in original currencies and convert them to U.S. dollars using the exchange rate prevailing at the transaction date. After compiling the data in this manner, the banks aggregate the data monthly and report them to CBRT's Balance of Payments Division.

Dissemination formats for balance of payments data include press releases, electronic dissemination on the CBRT's Internet website (<http://www.tcmb.gov.tr>), and the IMF's DSBB.

II. Specific Items: Balance of Payments

Current Account

Goods

CBRT bases the data for general merchandise exports on the trade statistics compiled by the SIS from the de-

claration forms of exporters and importers. The Balance of Payments Division adjusts the data to account for goods purchased in Turkey by shuttle traders, mainly from Russia. The division compiles estimates of shuttle trade through surveys conducted by the SIS by estimating average "per capita" expenditures and using the related number of foreign visitors engaged in this activity as multipliers.

The division also converts import data, compiled on a c.i.f. basis, to an f.o.b. basis by excluding the payments for freight and insurance. The amounts deducted for freight and insurance services provided by nonresidents are entered in *transportation (freight)* and in *insurance* respectively.

Services

Transportation

SIS provides freight and insurance expenses, decomposed by the residency of operations and modes of transportation. Since freight and insurance income data become available with a one-year lag, these data are estimated based on the previous years' ratios.

CBRT also obtains data for passenger fares, excess baggage, and other transportation receipts and expenditures from the banks' foreign exchange records, showing them under *passenger* and *other transportation* respectively.

Travel

CBRT bases travel data on sample surveys conducted by the SIS on behalf of the central bank. These surveys cover the expenditure per capita of foreign visitors and citizens living abroad and of residents on their trips abroad. Estimates are then computed by multiplying the number of foreign visitors, citizens living abroad, and of residents traveling abroad by the related average expenditure, obtained from surveys. In the surveys, business and personal travel are identified separately.

Other services

The banks' records are also the source of data on other services. The central bank compiles data for construction services, financial services, license fees, other business services, including merchanting and other trade related services, operational leasing, other personal, cultural and recreational services, miscellaneous business services, and government services.

Income

Investment income

CBRT derives most data on direct investment, portfolio investment, and other investment income from the banks' foreign exchange records. It records income in the current account on a cash basis.

Current transfers

The credit entries for current transfers cover grants in cash and in kind received by the general government. The source of these data is the records of the commercial banks and the central bank.

Central bank compilers derive workers' remittances by Turkish workers residing abroad from the banks' foreign exchange records. Other current transfer credits cover mainly "imports with waiver," that is, imports financed by earnings of Turkish nationals living abroad. SIS collects these data from customs documents.

Financial Account

Direct investment

CBRT compiles data on direct investment on a directional basis, with a breakdown for equity capital and reinvested earnings. It obtains data for equity capital and reinvested earnings from bank records.

Portfolio investment

The central bank derives data on assets of equity securities, and bonds and notes from the foreign exchange records of the banks. For liabilities of equity securities, the Istanbul Stock Exchange provides the data; CBRT derives bonds and notes from their stocks, which provide a breakdown into assets and liabilities and a further breakdown by sectors.

Other investment

CBRT obtains the data on loans, currency and deposits, and other assets and liabilities from bank records. SIS provides, both for the assets and the liability side, data on the disbursements of trade credits that commercial banks are not obliged to follow up, as per related regulations. An estimation method is used for repayments of these data.

On the asset side, CBRT has included data on trade credits provided by the SIS in the balance of payments statistics since May 2003, with adjustments made for previous years' data to 1999. Data are available by sector and by maturity.

Reserve assets

CBRT derives data on changes in reserve assets from its internal records.

III. Specific Items: International Investment Position

The central bank disseminates Turkey's IIP data on (1) assets and liabilities for (a) direct investment, (b) portfolio investment (broken down into equities and securi-

ties), (c) other investment, and (2) reserve assets. It compiles the data largely in accordance with the methodology specified in the *BPM5*.

Direct investment

CBRT collects data on direct investment in Turkey through an annual survey of foreign direct investment enterprises.

For direct investment abroad, the central bank bases data on the banks' foreign exchange records for the banking sector and the Treasury's records for the non-banking sector.

Portfolio investment

The central bank obtains data on portfolio investment assets from an annual survey based on the data obtained from end-investors, covering banks, intermediary institutions, and resident enterprises.

For data on portfolio investment liabilities, the Treasury provides the stock of the bond issues abroad, while the custodians provide other liabilities data.

Other investment

CBRT bases data on stocks of other investment assets on stock data derived from its foreign exchange records and those of banks, as well as the Bank for International Settlements (BIS) statistics. Since BIS statistics cover only deposit accounts of the nonbank sector abroad, the other investment assets heading does not include foreign currencies held by households as a store value.

For other investment liabilities, the CBRT uses stock data on public and private medium- and long-term external debt, compiled by the Undersecretariat of the Treasury and the CBRT, and stock data derived from the banks' foreign exchange records.

Reserve assets

CBRT derives reserve assets from its foreign exchange records.

Turkmenistan

I. General

The Central Bank of Turkmenistan (CBT) compiles the balance of payments of Turkmenistan based on data obtained from internal sources at the CBT, the National Institute of Statistics and Forecasting (Turkmenstatprognoz), the State Customs Committee (Customs), and

other agencies. Quarterly and annual data are compiled in U.S. dollars and in accordance with the recommendations of the *BPM5*. The final version of the balance of payments data is submitted to the Cabinet of Ministers of Turkmenistan along with commentary, supplementary tables, and explanatory notes every quarter.

II. Specific Items: Balance of Payments

Current Account

Goods

Customs' statistics are the primary source of data on transactions in goods. Ministries and departments/agencies provide additional data for separate commodities (e.g., natural gas, cotton, electricity) and countries. Data on imports are measured on a c.i.f. basis. A 10 percent adjustment factor is applied to bring the data to an f.o.b. basis. Exports and imports of goods registered by Customs are adjusted to include transactions in goods that, owing to a number of reasons, were not covered by Customs' statistics. Data on imports of goods by individuals (shuttle trade) have been obtained from Customs since 1988. Data on the purchase of goods by carriers in ports are obtained from export documents supplied by Customs.

Services

Transportation

Data on transportation services are sourced from bank payment documents as well as from information supplied by transport companies and other sources. Data on freight on imports are not separately available; they are estimated at 9 percent of the c.i.f. value to bring them to an f.o.b. price.

Travel

Data are obtained from the banking system on settlements between national and foreign travel agencies for group and individual travel, payments made by credit cards, and expenses for business, training, and health trip costs. The CBT survey also includes data obtained from hotels and tourist agencies and from the National Institute of Statistics and Information of Turkmenistan.

Other services

Communications. Data on postal and telecommunications services are derived from banking data. For the compilation of the annual balance of payments statement, additional data are requested from the enterprises providing such services.

Construction. Data on construction services are derived from information supplied by various ministries, Turk-

menstatprognoz, and the State Agency for Foreign Investment.

Government, n.i.e. The credit entries include the receipts and expenditures of foreign diplomatic entities and other international organizations as recorded by the banking system. The debit entries cover expenditures of Turkmenistan's embassies abroad.

Income

Investment income

Data on receipts and payments of investment income are based on information provided by the CBT, Vnesheconombank (the State Bank for Foreign Economic Affairs of Turkmenistan), and other commercial banks. Direct investment income is consolidated by the CBT using reports from enterprises. Receipts and payments of interest by the state sector cover mainly interest on loans extended and received by the Turkmenistan government. Receipts and payments of interest by other sectors are obtained from commercial banks and international organizations investing in the economy of Turkmenistan.

Capital Account

Capital transfers

Data on capital transfers cover mainly debt forgiveness given by the government of Turkmenistan as well as grants received from foreign countries.

Financial Account

Direct investment

Data on direct investment in Turkmenistan are calculated on the basis of surveys of nonfinancial enterprises, submitted to the CBT. The CBT collects additional data from commercial banks and from the State Agency for Foreign Investment. These data are compiled in accordance with the *BPM5*.

Other investment

The entries for long-term loans extended by the government cover mainly arrears arising from nonpayment by some CIS countries on accounts of goods imported from Turkmenistan. These arrears were converted into long-term loans. Data are recorded by the CBT. The entries under liabilities for trade credits represent amounts of advance receipts against cotton and petroleum exports. Trade credits decrease when actual exports take place. The entries for loans received by the government represent both project and cash loans received by the government of Turkmenistan from non-CIS countries. The Vnesheconombank provides these data. The CBT compiles data on the foreign assets and liabilities of the

banking sector from balance sheet data provided by the commercial banks.

Other assets and liabilities

Entries for assets cover changes in the claims of the CBT and commercial banks to foreign banks. The claims are in both convertible and nonconvertible currencies. Entries for liabilities consist mainly of changes in the deposits of central banks in the CIS and non-CIS countries with the CBT.

Reserve assets

Transactions in reserve assets are based on CBT records. They include foreign exchange held by the CBT in the form of deposits with resident banks and banks abroad and the currency of the Foreign Exchange Reserve Fund.

Uganda

The following text was confirmed as current in 2004.

I. General

The Uganda Bureau of Statistics (UBOS) has delegated to the Bank of Uganda (BOU) the responsibility to collect, compile, and disseminate monetary and external sector statistics.

Uganda's balance of payments statistics are published quarterly in economic quarterly reports by BOU and annually in the BOU annual report and the statistical abstract published by the UBOS.

Since 1997, Uganda has been gradually implementing the conceptual framework and classification structure recommended in the fifth edition of the Fund's *Balance of Payments Manual (BPM5)*.

II. Specific Items: Balance of Payments

Current Account

Goods

Institutionally, it has been agreed that all trade statistics should be derived mainly from the international trade statistics, which are based on data from the Customs Department of the Uganda Revenue Authority. The UBOS and the BOU compile these data. For consistency checks of data from the customs department, several other data sources are used.

In case of differences in the export figures, compilers use the data from development authorities and associa-

tions for the major export crops, major industrial producers and miners, line ministries, and civil aviation authority, which are considered to be superior to those obtained from the Customs Department. In principle, exports are valued f.o.b., but in practice a mix of valuations of ex-factory, free on rail and truck, as well as f.o.b., is used. Efforts are being made to value exports on an f.o.b. basis. To take account of unidentified informal trade, compilers adjust export data based on estimates provided by Uganda's Investment in Developing Export Agriculture (IDEA) on a project funded by the U.S. Agency for Internal Development (USAID). However, UBOS has finalized a study on cross-border trade, which is expected to give a better measure of the magnitude of this trade.

Import data are based on customs data, records from authorized foreign exchange dealers (commercial banks and foreign exchange bureaus), and BOU. In addition, oil import data are collected by the Research Department of Uganda Revenue Authority from the oil companies and passed on to BOU. Imports of goods are valued c.i.f. and therefore include service payments for insurance and freight. These are converted to an f.o.b. basis using ratios of insurance and freight rates. These ratios are based on a study undertaken in 2001 on import figures from the Intertek Testing Services (a preshipment inspection company).

The results of the study indicated that on average, 15 percent of the c.i.f. import value is freight, 1.5 percent insurance, and 83.5 percent cost.

However, the data obtained from customs are not entirely accurate, owing to (1) under-declaration of the value of imports by some importers, (2) smuggling, and (3) omission of classified imports (mainly military hardware and equipment). As a result, the Research Department of BOU has to adjust the import numbers monthly. It is assumed that total sales of foreign exchange, by the commercial banks and the foreign exchange bureaus, less sales of foreign exchange for domestic transactions, result in outflows of foreign exchange to settle transactions between residents and nonresidents. Daily, commercial banks submit to the BOU returns giving their total foreign exchange transactions. These daily transactions are aggregated to give a total turnover for any given month. In addition, the foreign exchange bureaus submit on a weekly and monthly basis their total foreign exchange transactions to the Trade and External Debt Department (TEDD) of the BOU. The total foreign exchange transactions by both the commercial banks and the foreign exchange bureaus are aggregated to obtain total inflows and outflows of foreign exchange in a given month. Total foreign exchange outflows for the entire private sector, including parastatals, are taken as an indicative total for all debit transactions of any given month.

From the control total, all identified outflows of foreign exchange of properly classified transactions are deducted to obtain the unidentified outflows of foreign exchange. The identified outflows include imports of goods and services, income, transfers, and financial transactions. For the period 1992/93 to 1995/96, the practice was to allocate the difference between imports of goods and services in a ratio of 65:35 percent. However, since 1996/97, the monthly foreign exchange returns from the commercial banks are used to impute the ratios used to allocate the unidentified sales of foreign exchange among the various uses as follows:

On a monthly basis, commercial banks submit monthly foreign exchange position returns to the Bank of Uganda. In these forms, commercial banks indicate the source or purpose of foreign exchange transactions through the banks. For each fiscal year beginning with the year 1996/97, the average percentage share for each outflow category is computed from the total outflows reported in the monthly returns from the commercial banks. These ratios are then applied to the control total. The identified outflows are then deducted from the different amounts obtained for the various categories of debit items, to arrive at the unidentified amount for each category of transactions. These have been referred to as estimated outflows.

The differences between these imputed totals and the already identified outflows for each respective category are then labeled estimated imports of goods, estimated imports of services, estimated income outflows, estimated private transfer outflows, and estimated private loan repayments.

This holds for fiscal years 1996/97 to 2000/01. From years 2001/02 onwards, the ratios used in the year 2000/01 have been maintained pending improvement in the reporting (in terms of comprehensiveness and proper classification) of foreign exchange transactions by foreign exchange authorized dealers.

Services

Transportation

This category is intended to cover all modes of transport. Transport services (credits) are based on data derived from surveys of the major transport enterprises. Debit entries are the freight and auxiliary service amounts obtained after adjusting imports from c.i.f. values to f.o.b. values.

Travel

Travel (credit) estimates are projected forward from results of a survey conducted in 1993–94 for the years up to 1999/2000. These travel estimates were derived from data on the number of travelers (recorded in immigration forms) with estimates for the average length of stay and the daily expenditures of foreign travelers. Figures from

1999/2000 onwards are based on results from a survey conducted by the Ministry of Trade Tourism and Industry (MTTI) in 2001 and data on travel (arrivals of nonresidents) provided by UBOS compiled from data provided by the Immigration Department. Total travel credits are then computed as a product of the weighted average expenditure by the inward travelers computed by the MTTI and the number of travelers per quarter. The total expenditure figures have been updated to cater for the expenditure by those travelers who enter through other border posts not considered by UBOS. There are plans to revise travel services (credits) using the results of a survey recently concluded by the Ministry of Trade, Tourism and Industry (MTTI) for the year 2003 on people visiting Uganda. There are currently no travel debits, but there are plans to obtain these from a product of average expenditure abroad of Ugandan residents returning from abroad obtained through a survey and data from UBOS on the number of travelers. In addition, a distinction will be made between official and personal travel, based on the MTTI survey results of 2003.

Other services

Communication services data are based on a survey of communication providers. Initiated in 2001, the survey is conducted on a quarterly basis and covers both credits and debits. The communication services are broken down into postal and courier services and telecommunication services.

Estimates of government services n.i.e. (credits) are based on a survey conducted in 1993–94. A questionnaire to collect data on these was designed, and a survey was implemented in 2003. However, owing to the high nonresponse rate, the results have not been in the BOP statement. Debit entries on government services not included elsewhere, starting from July 2002, are compiled from the BOU External Operations Department and the Ministry of Finance.

Both insurance and reinsurance debits (except for freight insurance) and credits are based on surveys of the insurance companies. Freight insurance debits are obtained by adjusting imports from c.i.f. values to f.o.b. (see section on imports).

Other services (debits) are obtained from the commercial banks and foreign exchange bureau returns. This category also includes an estimate for all unidentified services, which is a percentage of total unidentified uses of sales of foreign exchange (see above).

Income

Compensation of employees

Compensation of employees (debits) captures technical assistance attributed to government projects financed by inflows of project aid. The estimates on project aid inflows are obtained from MFPED. It is assumed that

about 90 percent of the budgeted amount for technical assistance in the Public Investment Plan (PIP) in any fiscal year is spent and of that amount, 90 percent is spent on expatriates on short-term assignments. Expatriates on long-term assignments are considered residents. There are no credit entries of compensation of employees; however, earnings of local staff employed by foreign missions are to be compiled using data from the survey of foreign embassies, consulates, and international organizations.

Investment income

Direct investment. There are no estimates for income credits on direct investment income. Debits (outflows) on account of dividends, and distributed branch profits are recorded. These are obtained from monthly returns submitted to the BOU by authorized dealers. Re-invested earnings estimates are based on the results of the annual private capital flows survey conducted by BOU.

Portfolio investment. There are no credit estimates for portfolio investment income. Debit estimates for portfolio investment income are obtained from the Central Depository System of BOU for interest earned on money market instruments and government bonds.

Other investment. For the monetary authorities, credit entries are obtained from a monthly return on receipts and payments, while debits are from a monthly report on debt service from BOU.

There are no credit entries made for general government. Debit entries are obtained from a monthly report on public debt payments also prepared by BOU.

Commercial bank interest claims (credits) and liabilities (debits) are obtained from the profit and loss statements of the commercial banks submitted to the Bank of Uganda quarterly.

There are no credit entries made for other sectors. Interest debits for the other sectors are obtained from the monthly reports on foreign exchange transactions submitted to the BOU by the authorized foreign exchange dealers for the period prior to 2001 and thereafter based on the private sector investment survey by BOU.

Current transfers

General government

The data cover grants received for the general government budget, government development projects, and HIPC grants. Data are derived from reports received from the Ministry of Finance Planning and Economic Development (MFPED) and information available at the BOU.

Other sectors

The data cover donations from nongovernmental and intergovernmental organizations abroad and remit-

tances from Ugandans living abroad. Transfers to non-government organizations (NGOs) are estimated by applying ratios derived from the monthly foreign currency reports of all authorized dealers to the total estimate for private transfers. The total estimate for private transfers is a residual number arrived at by taking total inflows as reported by the foreign exchange authorized dealers, less identified inflows. *Worker remittances* form the other part. Since a substantial fraction of the identified inflows is estimated, the residual that is labeled as private transfers is likely to include the unidentified inflows from other categories. Therefore, the BOU plans to improve its estimation techniques for private transfers.

Capital Account

Capital transfers

Data are provided by the External Debt Management Office section in the Trade and External Debt Department of BOU and the Public Debt Unit of the Ministry of Finance, covering official grants for debt relief. There are no data for migrant transfers, debt forgiveness attributable to the other sectors, or acquisition/disposal of nonproduced, nonfinancial assets; this information is not available.

Financial Account

Direct investment

The current information in the balance of payments statistics is based on results of enterprise surveys carried out since 1997.

In the past, the main source of data for inward investment was the Uganda Investment Authority, which is responsible for issuing licenses to foreign investors, supplemented with information on privatization, obtained from the Privatization Unit of MFPED. In 2001, the BOU conducted an enterprise survey of capital flows, the results of which indicated that much of foreign direct investment into the country is in the form of loans from interrelated companies. Therefore, this change in size and composition of the estimates of direct investment in Uganda in the balance of payments statistics was reflected in the revised data, based on the ratios obtained from the survey. Beginning in 2001/02, all foreign direct investment in Uganda is based on the results of the Private Sector Investment Survey conducted in 2003 for years 2001 and 2002, and thereafter estimates are grown in line with Uganda's US\$ nominal GDP growth rate.

There are no estimates for direct investment abroad. However, the survey of private capital flows conducted in 2001 revealed that there are investments abroad, although the magnitude did not appear to be significant.

Portfolio investment

There are currently no estimates made for portfolio investment assets; however, for liabilities, estimates are derived for equity securities from registrars of companies floated on the Uganda Securities Exchange (USE) with effect from 2000. Estimates for debt securities are obtained from the Central Depository System at the Bank of Uganda with effect from 2002.

Other investment

Other investment is a residual category that includes all financial transactions not covered under direct and portfolio. Other investments comprise loans, trade credits, and holdings of financial institutions. These are further divided into sectors of domestic creditor (i.e., general government, monetary authority, and other sectors).

Trade credits. Trade credit inflows of buyers credit and repayments are estimated to grow in line with exports, while inflows of suppliers credit and repayments are based on the private sector investment survey of 2001 and increase in line with imports thereafter. These are estimated for the other sectors of the economy (excluding general government and the monetary authority). We do not have any data on trade credit assets yet, but plans are underway to obtain these from the private sector investment surveys.

Loans. Information on other investment for general government is obtained from MFPED and TEDD (BOU). This includes disbursements of new loans, both budget and project support, and repayments of principal. Information on monetary authority (other investment) is available at the BOU. This comprises the use of Fund credit and loans from the Fund. Inflows (credits) of loans to the other sectors are estimates based on earlier information from the commercial banks, while outflows (debits) are derived from the information available from the monthly returns from authorized foreign exchange dealers prior to 2001. In 2001, both disbursements and repayments are derived from the Private Investment Survey (2003) and are grown thereafter in line with Uganda's US\$ nominal GDP growth rate.

Currency and deposits. These are obtained from the commercial banks' balance sheets for banks and are estimated as a residual of the private sector gap (total forex inflows less outflows in the private sector) after subtracting banks' currencies and deposits and central bank intervention.

Reserve assets

Data on the change in reserve assets are obtained from the BOU cashflow, which records all inflows and outflows of foreign exchange transactions through the Bank of Uganda.

III. Specific Items: International Investment Position

Direct investment

Currently, no estimates are made for direct investment abroad. Estimates for direct investment in Uganda are based on enterprise surveys conducted by the Bank of Uganda. The most recent survey results are for 2001. These surveys collect data in U.S. dollars converted from Uganda shillings using end-period exchange rates. Thereafter, projections are made based on 2001 figures taking into account estimated flows of direct investment. The information used for the balance of payments is based on book values of direct investment and is likely to be less than the market values.

Portfolio Investment

Currently, no estimates are made for outward portfolio investment. For inward investment, information is compiled for general government liabilities. This constitutes money market instruments (treasury bills) starting in 2003 and is compiled from the Central Depository System (CDS) at the Bank of Uganda. End-period exchange rates are used to convert the treasury bills stocks to U.S. dollars.

Other Investment

Other investment assets are comprised of loans and currency and deposits of banks derived from the official records of the Bank of Uganda. Other investment liabilities include loans to general government and IMF credit to Bank of Uganda also derived from official records of Bank of Uganda. Also included are loans to other sectors derived from annual enterprise surveys conducted by the Bank of Uganda for the period up to 2001. Thereafter, estimates are made for the other sectors stock of debt taking into account estimates for new disbursements and repayments of previous loans. Currency and deposits and other liabilities of banks are compiled from Bank of Uganda's official records.

Reserve Assets

Information on official reserves is recorded in the Bank of Uganda's balance sheet compiled by the Accounts Department and is converted to U.S. dollars using end-period exchange rates. This includes other revaluation gains and losses.

Ukraine

The following text was confirmed as current in 2004.

I. General

The National Bank of Ukraine (NBU) has the overall responsibility for the compilation of the balance of payments. The balance of payments compilation is based on an international transactions reporting system (ITRS), which is under the responsibility of NBU, supplemented by a survey-based system, which is under the responsibility of the State Statistics Committee (SSC). The ITRS compilation system was introduced in January 1993. Under this system, two categories of respondents are obliged to report to the NBU: (1) domestic banks that undertake international transactions both for their own accounts and on behalf of their customers and (2) resident enterprises that have opened foreign accounts outside the domestic banking system. Both categories of respondents are required to report directly to the NBU on a monthly basis. The ITRS is a closed reporting system, in which opening balances of the non-resident accounts, gross movements (credits and debits) in the required details, and closing balances of the accounts are reported. Transactions are reported in the original currency, in aggregated and coded form in accordance with the *BPM5* standard classification. The NBU converts the data to U.S. dollar equivalents using monthly average exchange rates.

The SSC has initiated quarterly surveys on services and foreign direct investments. Regional offices of the SSC collect data from enterprises and submit this information to the SSC's Accounting Center. The NBU uses these data to supplement the ITRS. The NBU also uses other official sources of information such as the State Customs Committee (SCC), Ministry of Finance, Ministry of Economy and European Integration, and other institutions.

The NBU compiles the balance of payments statistics on a quarterly basis in accordance with the standards recommended in the *BPM5*. The data are published in the quarterly publication *Balance of Payments of Ukraine*, available on the NBU website (www.bank.gov.ua).

II. Specific Items: Balance of Payments

Current Account

Goods

The primary source of data is the foreign trade statistics. They are compiled by the SSC from declarations on imports and exports of goods collected by the SCC and from enterprise surveys on goods not covered by SCC. These include goods procured in ports by carriers. These data are adjusted for coverage (informal trade) and classification (revaluation of imports from c.i.f. into f.o.b. basis, repairs on goods). The informal

trade data, which are not included in the customs trade statistics, are estimated by the NBU. These estimates are based on customs information on the number of privately imported cars, taxes and duties paid by individuals for cars, and goods imported into the Ukraine, an annual survey for data on the value of goods sold in domestic nonfood markets, and bilateral trade data of major partner countries. Data on repairs on goods and goods procured in ports by carriers are obtained from SSC report forms on the exports and imports of goods and services. Data on goods for processing are obtained from customs declarations.

Services

Transportation

For freight and passenger services, the main sources of data are banking reports and the SSC survey of transportation companies. However, coverage is incomplete, and it is necessary to estimate missing information, especially for the debit entries. These estimates for freight are used in the conversion of c.i.f. imports data from Customs to an f.o.b. basis.

Travel

Entries for this item are obtained by combining information derived from an SSC survey and bank reports on the purchase/sale of foreign currency and travelers' checks. The SSC survey includes information supplied by hotels and tour companies.

Other services

Data for these transactions are obtained from monthly banking surveys that provide information on receipts and payments coded in accordance with the *BPM5* classifications and from an SSC quarterly survey that distinguishes between different categories of services. For government services n.i.e., money transfers to Ukrainian embassies abroad are taken from supplementary information provided by the Ministry of Finance.

Income

Investment income

Income transactions are largely derived from the ITRS. Data on reinvested earnings are obtained from the quarterly SSC survey of direct investment enterprises. Interest income is recorded on a due-for-payment basis. The source of these data is information obtained from the Ministry of Finance on government guaranteed debt and bank reports on nonguaranteed loans.

Current transfers

General government

The credit entries for current general government transfers are derived from information on technical assistance

provided by the Ministry of Economy and European Integration. Receipts and payments related to general government transfers in cash are recorded in the ITRS system.

Other sectors

The debit and credit entries for other current transfers of other sectors and workers' remittances are derived from the banking survey.

Capital Account

Capital transfers

Data on debt forgiveness are derived from bank reports and Ministry of Finance (MOF) information on government external debt. Migrants' transfers and data on the acquisition/disposal of nonproduced nonfinancial assets are recorded by the ITRS. They refer primarily to foreign currencies brought into Ukraine by immigrants.

Financial Account

Direct investment

The data sources for direct investment are quarterly enterprise surveys, conducted by the SSC, bank reports concerning the cross-border flows of capital in the form of direct investment, and ITRS data. This information is supplemented by administrative data on revenue from privatization received from nonresidents. From 2003 onward, data on loans to direct investment enterprises have been reclassified from the *other investment* component to the *other capital* component of FDI.

Portfolio investment

Data on portfolio investment transactions are derived from bank reports on the cross-border flows of capital in the form of portfolio investment, ITRS data, and MOF information on external debt. Data on debt securities (liabilities) received from the MOF are adjusted to include purchases back of these securities by the residents of Ukraine on foreign markets.

Other investment

The data sources are MOF data on government external debt, bank reports on nonguaranteed external debt, bank reports on cross-border flows and capital in the form of other investment, balance sheets of the banks, ITRS data, and SSC data on accounts receivable and payable. Estimates of the prepayments received on export and payments for nonsupplied import are included in the BOP statistics starting from the first quarter of 2004.

Reserve assets

The balance sheet of the NBU is the source of these data. The entries reflect changes in the NBU's holdings of monetary gold, SDRs, and foreign exchange. These

changes are initially obtained as differences in amounts outstanding; then valuation changes are eliminated. The reserve assets of the NBU do not include NBU's holdings of foreign exchange with resident banks.

III. Specific Items: International Investment Position

The international investment position (IIP) of Ukraine uses classification and standard components of the *BPM5*.

The IIP and the financial account of the balance of payments are compiled using the same sources, namely, the survey and administrative data from banks, the NBU, the SSC, MOF, and other ministries and agencies, as well as the estimates.

The IIP data are compiled in millions of U.S. dollars. Stock data denominated in other currencies are converted into U.S. dollars. Other currencies are converted into U.S. dollar equivalents at the market exchange rate at the end of the reference period.

The external financial assets and liabilities are valued at market prices. The accounting of equity securities (direct and portfolio investment) is made at book value, because the majority of them have no quoted prices.

Direct investment

The direct investment data are compiled from ITRS data, bank data on cross-border direct investment flows, and quarterly enterprise surveys carried out by SSC. The information on revenue from privatization is also added.

From 2003 onward, data on loans to direct investment have been reclassified from the *other investment* component to the *other capital* component of FDI.

Portfolio investment

Data on portfolio investment are based on ITRS data, bank data on cross-border portfolio investment flows, and MOF data on government debt securities. In addition, the Coordinated Portfolio Investment Survey results are used (including partner country data).

Other investment

Data on foreign assets and liabilities in the form of other investment are compiled from the external debt data provided by MOF, transactions on external loans and deposits, ITRS data, and enterprise surveys on accounts receivable and payable carried out by the SSC.

Reserve assets

The main source of information for this component is the NBU's balance sheet. Data include liquid foreign ex-

change assets of the NBU, SDRs, monetary gold holdings of the NBU, and reserve position in the IMF.

United Kingdom

The following text was confirmed as current in 2004.

I. General

The compilation of the United Kingdom's balance of payments is carried out on the basis of data submitted to both the Office for National Statistics (ONS) and the Bank of England, with the ONS responsible for compiling the overall aggregates. The ONS, which collects data from nonbank financial institutions and nonfinancial corporations, is the government agency responsible for compiling, analyzing, and disseminating most of the United Kingdom's economic, social, and demographic statistics. These include the national accounts, retail price index, trade figures, and labor market data, as well as a periodic census of the population and health statistics. The Bank of England collects data from UK banks and is responsible for compiling banking and money supply data.

The ONS produces balance of payments accounts for the United Kingdom consistent with the fifth edition of the IMF's *Balance of Payments Manual (BPM5)*. The full implementation took place in September 1998 and included production of extensive detailed historic quarterly data on a consistent basis back to 1987. For the key economic indicators, data have been reestimated consistent with *BPM5* for almost 50 years.

Adopting *BPM5* required several complementary activities, such as interpreting the new framework within the UK context and identifying new data sources for concepts and transactions not previously identified. Inevitably, some parts of the new accounts are more firmly based than others. For instance, where new information has been required, this has been more readily available for recent periods than for the more distant past.

To produce a full and consistent set of *BPM5* accounts, the ONS and the Bank of England had to undertake numerous initiatives. Because the United Kingdom uses a survey-based system, this meant changing the inquiry forms to collect new information, which was not previously required. A prime example was the quarterly inquiry into trade in services where there was a greater need for product detail.

The Bank of England also implemented changes to its inquiries in its Banking Statistics Review. It fully implemented these changes early in 1998. All changes to inquiries are discussed with respondents.

One of the major changes to the coverage of the accounts was the removal of the offshore centers (i.e., the Channel Islands and the Isle of Man). This change to the "definition" of the United Kingdom will bring the balance of payments into line with the rest of the National Accounts, as specified for the European Union (EU) Gross National Income Directive.

A key priority of the ONS is that the UK economic accounts, including the balance of payments and national accounts, are compiled in an integrated fashion and published fully in alignment.

II. Specific Items: Balance of Payments

Current Account

Goods

The balance of payments statistics of trade in goods compiled by the ONS are derived principally from data provided by HM Customs and Excise on the physical goods exported from and imported to the UK. However, this information is on a different basis from that required for balance of payments statistics. Accordingly, to conform to the IMF definitions, the ONS must adjust the data in various ways to include certain transactions that are not reported to HM Customs and Excise and to exclude certain transactions that are reported to them but where there is no change of ownership.

In addition, balance of payments methodology requires that the value of the goods be taken at the point of export (i.e., the customs border of the exporting country) rather than at the point of arrival in the UK. Therefore, the freight and insurance costs of transporting the goods to the UK need to be deducted from the values recorded by HM Customs and Excise.

Services

Transportation

Sea transport. The Chamber of Shipping (COS), a trade association that conducts inquiries into its members' trade with nonresidents, provides sea transport statistics relating to UK operators' receipts. Inquiries covering all COS members are made annually, supplemented by a quarterly sample survey. Because UK operators are not able to distinguish between fares received from UK residents and nonresidents, fares collected abroad are taken as an estimate of fares received from nonresidents. Estimates of disbursements in the UK by nonresident operators come from various sources, such as the Immigration Service, Trinity House, HM Customs and Excise, and the Department of Trade and Industry. Estimates of passenger fares paid to nonresident operators are derived from the ONS International Passenger Survey.

Air transport. The airline companies supply returns to the Civil Aviation Authority from which the transactions of UK airlines are derived. The credits and debits of non-resident airlines are derived from the ONS' International Passenger Survey (IPS), other ONS surveys, and UK airports. Other transport exports and imports include road freight, rail transport, and pipeline transport.

Travel

This item covers goods and services provided to UK residents during trips of less than one year in foreign countries (and provided to nonresidents during similar trips to the UK), net of any purchases made with money earned or provided locally. The estimates are based primarily on the IPS, which seeks information on expenditure from samples of foreign visitors leaving the UK and of UK residents returning from abroad. The survey distinguishes several purposes of visits, which are then aggregated as either business or personal. For package tourists, estimates of the transport elements are deducted from the reported total package costs. Estimates of expenditure by UK residents on personal imports of cars are derived from the data received by HM Customs and Excise.

Other services

Communications. This comprises international telephone and surface mail services. Various telecommunications companies and the Post Office supply figures.

Insurance. Estimates are based on information from Lloyds' of London and ONS inquiries to insurance companies and brokers.

Financial. These include estimates for underwriting, brokerage, foreign exchange dealing, commissions, and banking charges. The estimates are based on returns made to the Bank of England and ONS, plus data from other sources such as the Baltic Exchange.

Other business. Included here are estimates for the legal profession, market research agencies, chartered surveyors, architects, management consultants, process engineers, North Sea oil and gas companies, and Lloyd's register of shipping. Estimates come from various sources, including the ONS ITIS inquiry, Bank of England, Lloyd's Register of Shipping, and the Commercial Bar.

Income

Compensation of employees

Estimates are produced in line with *BPM5*. Data are collected via the IPS and government administrative sources.

Investment income

Direct investment. Both credits and debits are estimated from the results of quarterly and annual inquiries carried

out by the ONS and by the Bank of England. The inquiries cover a sample of the UK companies that either have foreign affiliates or are affiliated to a foreign parent. Returns are imputed for businesses that are not approached in the inquiries but are known to have direct investment links.

The Bank of England collects information on earnings by the UK registered banks, from their foreign branches, affiliates, and associates, and on foreign-registered companies from their UK banking affiliates. The Bank collects these estimates quarterly from a selection of banks and annually from all banks that are, or have, a direct investment enterprise.

Portfolio investment. Income estimates are predominately derived from quarterly and annual inquiries carried out by the ONS and the Bank of England. For outward investment, the largest proportion of these earnings comes from investment carried out by the UK financial institutions, principally UK banks, securities dealers, insurance companies, and pension funds. Lloyd's of London annually supplies figures on earnings by its members.

For inward investment, estimates of earnings on British government stocks, UK company securities, and sterling treasury bills are derived by applying the appropriate rate of interest/yield to the outstanding levels. The Bank of England supplies estimates for interest payments on money market instruments issued by UK banks.

Other investment. For banking institutions' lending and deposits, income estimates are derived from returns made by UK banks to the Bank of England. Estimates for the remaining nonbanks' income come from inquiries carried out by the ONS and the Bank of England, from direct reports to the ONS by other government departments, and from international bodies, such as the European Investment Bank (EIB) or the Bank for International Settlements (BIS).

Current transfers

General government

Current transfer credits mainly reflect receipts from EU institutions. Debits include contributions and subscriptions to EU institutions, NATO, the European Development Fund, agencies of the United Nations, and the Department for International Development. They also include bilateral aid, military grants, and payments of social security benefits.

Other sectors

Current transfer credits reflect receipts from EU institutions. Included within private transfers are cash gifts to dependents, legacies, the value of gifts sent by post, pensions, and workers' remittances. Debits reflect payments to EU institutions and private transfers

Capital Account

Estimates are produced in line with *BPM5*. Estimates of migrants' assets are derived from the IPS. EU capital transfers to the UK are collected from administrative sources. The Bank of England and the Export Credit Guarantee Department provide estimates for debt forgiveness. Sales and purchases of nonproduced, nonfinancial assets are identified from the extended quarterly inquiry into trade in services.

Financial Account

Direct investment

The estimates of direct investment include the investor's share of the unremitted profits of the subsidiary or associated company, the net acquisition of share and loan capital, changes in intercompany accounts, and changes in branch/head office indebtedness. They are derived from annual and quarterly inquiries carried out by the ONS and the Bank of England. Estimates for investment in property are derived from quarterly and annual ONS inquiries and from information supplied by the Inland Revenue.

Portfolio investment

Information on investment abroad is obtained from inquiries to UK banks and nonbank financial institutions (e.g., securities dealers, insurance companies, pension funds, and unit and investment trusts). Estimates of portfolio investment transactions on private nonfinancial corporations are derived from asset levels. Estimates of investment in UK company ordinary shares are derived from quarterly inquiries run by the ONS and the Bank of England. These are adjusted to take account of total levels of foreign investment in shares indicated by the results of the ONS' annual share ownership survey. Information on investment in British government securities is derived from banking statistics and information on the holders of British government stocks.

Estimates of total foreign investment in UK company bonds have been obtained by assuming that any net transactions in UK securities not attributed to the domestic sectors of the UK (using all available data sources) are attributable to residents of the rest of the world. Estimates for both UK and nonresident investment money market instruments either are reported directly to the Bank of England on monthly/quarterly surveys or come from quarterly/annual surveys carried out by the ONS.

Financial derivatives

Estimates for financial derivatives are currently unavailable except for settlement payments and receipts on UK banks' interest rate swaps, which are supplied by the Bank of England.

Other investment

Government transactions include intergovernmental loans to and from the UK, subscriptions to international bodies such as the EIB, and government liabilities on nonresidents' holdings of sterling coinage. Loans also include those extended by UK banks under the Export Credit Guarantee Department's (ECGD's) guarantee, and loans acquired by the ECGD from UK banks under those refinancing agreements. Estimates for foreign currency borrowing and lending of the banking sector are calculated from the end-quarter balances of claims and liabilities as reported by all UK banks and similar institutions to the Bank of England. The estimates for sterling borrowing and lending abroad are also derived from changes in the external balances, as well as from Bank of England banking statistics.

Transactions for other sectors include estimates for borrowing and lending by securities dealers, private nonfinancial corporations, and any other UK residents. These data are derived from annual and quarterly inquiries carried out by the ONS, the Bank of England, the European Investment Bank, and the Bank for International Settlements.

Reserve assets

This item consists of drawings on, and additions to, gold, convertible currencies, and SDRs held in the Exchange Equalization Account, and of changes in the UK reserve position in the Fund. The Bank of England records changes to the Exchange Equalization Account.

III. Specific Items: International Investment Position

Direct investment

Estimates for UK companies, except banks, are derived from ONS survey data. Until 1990, the ONS conducted a triennial census of assets; after 1990, it discontinued the census in favor of the limited balance sheet information collected in the annual inquiry. Estimates for the most recent year are a projection from the previous year's annual inquiry taking into account flows of direct investment, exchange rate changes, and other projected revaluations.

The Bank of England carries out similar inquiries on a quarterly and annual basis. The surveys relate to total net assets attributable to investing companies, that is, book values of fixed assets, less accumulated depreciation provisions, plus current assets, less current liabilities. The book values of direct investment are likely to be less than the values at recorded replacement cost and less than the market values.

Portfolio investment

Estimates of outward portfolio investment are based on a combination of banking statistics, collected by the

Bank of England, information from ONS surveys to other financial institutions, and data from Lloyd's of London. Assets held by private nonfinancial corporations are derived from the quarterly Financial Assets and Liabilities Survey.

For inward investment, most of the information on public sector liabilities is based on official records and banking statistics. The market value of inward investment in listed ordinary shares from 1989 onwards is based on the results of share register surveys, carried out yearly from 1989 to 1994 and yearly from 1997. An estimate is also made for the market value of inward investment in unquoted shares. Inward investment in UK company bonds is estimated from information derived from Bank of England and London Stock Exchange records of UK company bonds issues, nonresident financial transactions, and exchange rate and price movements. Estimates for money market instruments either are reported directly to the Bank of England on monthly/quarterly surveys or come from quarterly/annual surveys carried out by the ONS.

Financial derivatives

Estimates for financial derivatives are currently not included in the UK international investment position.

Other investment

Information on the assets and liabilities of general government is derived from the official records of government departments. Figures for UK banks' claims and liabilities in sterling and foreign currencies are derived mainly from banking statistics (which are completed by all UK banking institutions). Foreign currency figures are translated to sterling at end-year middle-market closing exchange rates. Estimates for the assets and liabilities of other UK residents come from various sources, including the ONS, the Bank of England, the EIB, and the BIS.

Reserve assets

Information on the official reserves is recorded within the Exchange Equalization Account by the Bank of England. Gold is valued at end-year market rates, while SDRs and convertible currencies are valued at closing middle-market rates of exchange.

United States

The following text was confirmed as current in 2004.

I. General

The Bureau of Economic Analysis (BEA), U.S. Department of Commerce, is responsible for compiling the

U.S. international transactions accounts and the U.S. international investment position accounts. BEA obtains primary data from various sources, including the Commerce Department's Bureau of the Census, the Department of the Treasury, the Federal Reserve Board, other U.S. government agencies, international organizations, foreign statistical agencies, and industry and trade associations. In addition, it conducts its own surveys for most services and for income and financial flows data relating to direct investment.

BEA prepares international transactions estimates on a quarterly basis and publishes them on the Internet (www.bea.gov) and in the *Survey of Current Business*. The bureau compiles the data in U.S. dollars. To convert transactions denominated in other currencies to U.S. dollars, the bureau uses the exchange rate prevailing at the end of the reporting period for most transactions, such as those derived from balance sheets of data providers. For other transactions, it uses the average exchange rate for the period. The classification of accounts used in the U.S. international transactions accounts generally corresponds with that recommended as an international guideline in the *BPM5*.

A short description of the sources, compilation, and coverage of the major groups of standard components follows. For further details, see the following publication of the U.S. Department of Commerce: *The Balance of Payments of the United States, Concepts, Data Sources, and Estimating Procedures*, May 1990. See also July issues of the *Survey of Current Business* (June issues before 1996), which document changes in sources and methods since the May 1990 volume was published. The *Survey of Current Business* is available on the Internet at www.bea.gov.

BEA also compiles and publishes an annual statement of the U.S. international investment position. The statement shows the value of outstanding U.S. assets abroad and foreign assets in the United States. The statement records most assets at market value. For certain types of assets, such as short-term instruments, it uses face value. BEA publishes the U.S. international investment position with the direct investment positions on a market-value basis, as well as on a current-cost (replacement-cost) basis.

II. Specific Items: Balance of Payments

Current Account

Goods

BEA bases estimates of general merchandise transactions on data compiled by the Census Bureau, U.S. Department of Commerce. The data record the physical movement of goods across U.S. customs boundaries, including goods shipped between affiliated firms in the United States and abroad and goods under financial

lease. Data are adjusted to correct for timing discrepancies, which arise when exports or imports of goods are reported to the Census Bureau in one period but are actually shipped or received in another. This adjustment is based on information provided by the Census Bureau.

Further adjustments are made for coverage and valuation, to bring them into conformity with balance of payments concepts. The largest adjustment to exports involves deducting the value of transfers under foreign military sales contracts. The largest adjustments to imports include an addition for inland freight charges on imports from Canada and a deduction for imports by U.S. military agencies. Adjustments relating to military exports and imports are made because these are included with services in separate accounts that measure U.S. government military transactions.

Services

Transportation

Freight, port services, and passenger services. This category covers all modes of transport and port services. For freight, the main sources of data are mandatory BEA surveys of airline and ship operators; Census Bureau compilations of U.S. exports and imports by method of transportation, type of service (liner, tramp, and tanker), shipping weight of cargo, freight and insurance charges on imports, and flag of vessel; and Maritime Administration information on the nationality of ocean vessel operators. BEA uses data from the U.S. Department of Transportation (DOT) to estimate transborder trucking. For port services, the main sources of data are BEA surveys, the Census Bureau, and the Maritime Administration.

The bureau bases passenger service estimates on data on numbers of travelers (provided by the Department of Homeland Security (DHS)) and estimates of average passenger fares (developed from a travel survey administered by the U.S. Department of Commerce (DOC)).

Travel

BEA prepares travel estimates (except for transactions with Canada and Mexico) by combining data on numbers of travelers, provided by the DHS, with estimates of average expenditures, obtained from a DOC survey of travelers. The bureau derives estimates of travel transactions between the U.S. and Canada and between the U.S. and Mexico from data prepared by Statistics Canada and the Bank of Mexico.

Other services

Communications. Estimates cover gross U.S. receipts and payments for international telecommunication services. BEA obtains the data from its *Quarterly Survey of Transactions between U.S. and Unaffiliated Foreign Persons in Selected Services and in Intangible Assets*.

Construction. Estimates cover construction receipts and payments. BEA obtains data primarily from its *Quarterly*

Survey of Transactions between U.S. and Unaffiliated Foreign Persons in Selected Services and in Intangible Assets. The bureau derives net receipts by deducting foreign expenses and exports of goods related to the provision of these services from gross receipts. It estimates payments on a gross basis from data derived from its *Quarterly Survey of Transactions between U.S. and Unaffiliated Foreign Persons in Selected Services and in Intangible Assets*.

Insurance. Estimates cover receipts and payments for direct (primary) insurance and for reinsurance. BEA bases its estimates of insurance services on data from its *Quarterly Survey of Insurance Transactions by U.S. Insurance Companies with Foreign Persons*. BEA measures insurance services as premiums less "normal" losses, where normal losses are inferred from the relationship between actual losses and premiums averaged over several years. BEA's measure of insurance services includes two other components: the expected investment income of insurance companies on their reserve funds held to settle future claims; and auxiliary insurance services such as agents commissions, insurance brokering services, and actuarial services.

Financial. Estimates cover (1) explicit commissions and other transactions fees paid by nonresidents to U.S. securities and commodities brokers (credit) or paid by residents to nonresident securities brokers (debit) and (2) noninterest income receipts and payments of U.S. banks and other financial institutions. BEA bases its estimates of financial services on its *Quarterly Survey of Financial Services Transactions Between U.S. Financial Services Providers and Unaffiliated Foreign Persons*, the U.S. Department of the Treasury's International Capital (TIC) reporting system, BEA's estimates of new securities issues and redemptions, information provided by the Federal Reserve Bank of New York, and information provided by securities brokers and dealers.

Computer and information. Estimates cover receipts and payments of computer and information services. BEA obtains data from its *Quarterly Survey of Transactions between U.S. and Unaffiliated Foreign Persons in Selected Services and in Intangible Assets*.

Royalties and license fees. Estimates cover transactions with nonresidents involving intangible assets and proprietary rights. BEA obtains the data from its *Quarterly Survey of Transactions between U.S. and Unaffiliated Foreign Persons in Selected Services and in Intangible Assets*.

Government, n.i.e. BEA estimates credit entries for transactions with foreign governments and international organizations by applying an average dollar-per-person figure (excluding compensation of employees) to the number of each foreign government's diplomatic personnel in the United States. Data sources are the U.S. State Department's *Diplomatic List* and *Foreign Consular Offices in the United States* and the United Nations' *Perma-*

ment Missions to the United Nations. BEA derives credit entries for international organizations located in the United States largely from data voluntarily provided by the respective organizations. BEA bases U.S. government credit and debit entries on its reviews of U.S. government budgetary documents and reports of U.S. government agencies.

Income

Compensation of employees

Receipts (credits) include compensation received by U.S. residents employed by international organizations and foreign embassies located in the United States. The credits also include estimates of compensation received by U.S. residents working abroad.

Payments (debits) include compensation paid to (1) Canadian and Mexican residents who commute to work in the United States in the border area, (2) foreign students who work while studying at colleges and universities in the United States, (3) foreign professionals temporarily employed in the United States, and (4) temporary agricultural and nonagricultural workers in the United States.

Investment income

Direct investment. BEA bases interest and distributed earnings (credit) data on the U.S. parent companies' books. The bureau includes the funds whether they are paid in cash, through debt creation, or in kind. When funds are not actually transferred to U.S. parents, the bureau makes an offsetting entry under direct investment in the financial account. Data are from BEA surveys.

BEA bases debit entries on the U.S. affiliates' books. The bureau includes the funds whether paid in cash, through debt creation, or in kind. When funds are not actually transferred to foreign parents, the bureau makes an offsetting entry under direct investment in the financial account. Data are from BEA surveys.

BEA takes figures on reinvested earnings (credit) from the books of the foreign affiliates, and it takes debit entries from the books of the U.S. affiliates. The BEA's surveys provide the data.

Portfolio investment. For securities other than U.S. Treasury securities, BEA derives income estimates from applying representative yields to average quarterly outstanding claims on, or liabilities to, nonresidents. Periodic comprehensive surveys establish holdings of securities and their yields; the bureau bases subsequent changes in income on transactions data. Data are from U.S. Treasury Department surveys.

For U.S. Treasury securities, BEA allocates to investment income of foreign residents a portion of total U.S. Treasury interest payments to the public, based on the proportion of U.S. Treasury debt held by foreigners.

The bureau bases the proportion of foreign ownership on U.S. Treasury Department surveys of foreign holdings and U.S. public debt records.

Other investment. For banking institutions and securities brokers, the bureau derives income estimates from applying representative yields to average quarterly outstanding claims on, or liabilities to, nonresidents. Data on claims and liabilities are from a mandatory survey of institutions with foreign claims or liabilities of \$50 million or more. Data are from U.S. Treasury Department surveys.

For nonbanking business enterprises, the bureau uses the same approach. Data on claims and liabilities are from mandatory surveys by the U.S. Treasury Department of nonbanking enterprises whose financial end-of-quarter claims or liabilities are \$50 million or more and whose commercial end-of-quarter claims or liabilities are \$25 million or more. BEA supplements these data with data from foreign statistical authorities.

Current transfers

General government

BEA bases estimates on data that U.S. government operating agencies submit quarterly under an Office of Management and Budget Directive. Where necessary, BEA adjusts the reported data for timing; it bases the adjustments on supplementary information, including published statements, congressional submissions, and financial and operating records of government agencies.

Other sectors

Data sources for workers' remittances and other current transfers include a BEA survey of philanthropic institutions, the exchange of balance of payments data with a few major countries, and BEA's estimates of immigrants' and emigrants' remittances.

Capital Account

The capital account includes estimates of debt forgiveness by the U.S. government, transfers of assets of immigrants to the United States and of emigrants' transfers abroad, and sales and acquisitions of some nonproduced, nonfinancial assets. The estimates of sales and acquisitions of nonproduced, nonfinancial assets include only transactions in natural resources and a few large transactions in other types of such assets.

Financial Account

Direct investment

BEA collects data on direct investment through a number of mandatory surveys. It conducts separate surveys for outward and inward investment. It conducts comprehensive benchmark surveys periodically and con-

ducts sample surveys quarterly to provide countrywide estimates and details by type of activity based on the benchmark survey data.

Portfolio investment

BEA estimates net U.S. purchases of foreign securities and net foreign purchases of U.S. securities on the basis of data it obtains from the TIC reporting system. Data are reported on a transactions basis—that is, on the total amount of money debited or credited on the payment or settlement date. The reported amounts represent the cost of purchases, plus commissions and other charges, or the proceeds of sales, less commissions, taxes, and other charges incurred in the transactions. BEA adjusts purchases to exclude commissions, which are part of financial services in the current account. BEA makes other adjustments to the TIC data to include transactions not covered in the TIC data, such as exchanges of stock and prepayments and early liquidation of asset-backed debt.

Other investment

BEA makes quarterly estimates of transactions in other nonmonetary government assets and liabilities from data that U.S. government operating agencies submit. BEA supplements these data with information from quarterly statements of receipts, expenditures, and balances of foreign currency holdings provided by the U.S. Treasury Department; published financial statements, annual reports, and other submissions to the United States Congress; and financial and operating records of U.S. government agencies.

BEA bases estimates of monetary authorities' other assets and liabilities (including U.S. currency shipments) on quarterly reports of the Federal Reserve Board.

BEA estimates transactions reported by banks and securities brokers in other assets and liabilities, payable either in dollars or in foreign currencies, which cover loans, advances, and overdrafts; placements of funds; acceptance financing and depositing; interbank transfers; and borrowing through repurchase agreements. BEA makes quarterly estimates of these transactions on the basis of data on outstanding claims and liabilities at the end of a period that are reported on the TIC survey forms.

BEA also makes quarterly estimates of transactions in other assets and liabilities of nonbank sectors on the basis of (1) data on outstanding assets and liabilities reported on the TIC survey nonbanking forms, (2) data on futures transactions on exchanges located in the United States, and (3) data supplied by foreign statistical authorities.

Reserve assets

Monetary gold. BEA estimates quarterly U.S. government gold transactions on the basis of U.S. Treasury data on

changes in amounts outstanding at the beginning and end of the period. BEA adjusts the data to exclude revaluations of the gold stock owing to changes in the par value of gold, U.S. Treasury public sales of gold, and the consumption and replacement of the gold stock used for medallions and commemorative and bullion coins.

Foreign exchange. Data represent net transactions that affect the U.S. Treasury Department and Federal Reserve System holdings of the foreign currencies constituting U.S. official international reserves. Changes in these holdings are caused by a number of transactions, including those associated with U.S. exchange market intervention through the Exchange Stabilization Fund and the Federal Reserve System, and foreign currency transactions with the Fund. *BEA estimates quarterly transactions on the basis of (1) U.S. Treasury and Federal Reserve Bank of New York data on transactions, (2) the amount of foreign currencies outstanding at the beginning and end of the period, and (3) the realized gains or losses from transactions undertaken. This item does not include unrealized gains and losses.*

III. Specific Items: International Investment Position

Direct investment

BEA bases the international investment position estimates of U.S. direct investment abroad and of foreign direct investment in the United States on the benchmark surveys it conducts. It carries forward the accumulated stock of direct investment from the latest benchmark survey by adding net capital flows (equity capital flows, intercompany debt flows, and reinvested earnings) and valuation adjustments to the previous year's position. Valuation adjustments consist of currency conversion adjustments, adjustments for capital gains and losses, and other adjustments. The other adjustments partly reflect differences between transaction values (which are used to estimate flows) and book values (used to record positions). The bureau prepares adjustments to historical-cost data for market valuation (beginning with estimates for 1982) and for current replacement costs (beginning with estimates for 1976).

The direct investment position is equal to the parent companies' contributions to the total assets of their affiliates in the form of debt and equity. Thus, the position measures the parents' share of the affiliates' assets, not the total value of the affiliates.

Portfolio investment

BEA bases data on U.S. holdings of foreign securities on U.S. Treasury benchmark surveys, annual surveys, and accumulated transactions reported in the TIC reporting system. The bureau adjusts positions periodically,

based on research it conducts. When survey data are not available, it adjusts the positions for price and exchange rate changes to derive outstanding holdings at market value. It bases the price adjustment for foreign bonds on market indices. It develops the price adjustment for foreign stocks from indices of stock prices in the relevant foreign countries. It applies exchange rate adjustments to foreign stocks and some foreign-currency denominated bonds.

BEA bases foreign holdings of U.S. securities, other than U.S. Treasury securities, on U.S. Treasury benchmark surveys, annual surveys, and accumulated transactions reported in the TIC reporting system. When survey data are not available, the bureau adjusts the positions for price and exchange rate changes to reflect market values. For U.S. corporate and federally sponsored agency bonds, it adjusts year-end values by market price indices. It uses an adjustment for exchange rate changes for U.S. corporate bonds that are denominated in foreign currencies. For stocks, the measure of price changes is the Standard and Poor's Index of 500 stocks. Foreign holdings include those of foreign official agencies and those of other foreign residents. BEA bases foreign holdings of U.S. Treasury securities (by foreign official agencies and by other foreign residents) on data from U.S. Treasury benchmark surveys, annual surveys, and accumulated transactions reported in the TIC reporting system. When survey data are not available, it adjusts positions for price changes to reflect market values.

Other foreign assets and liabilities

Other foreign assets and liabilities consist of bank and nonbank claims on, and liabilities to, unaffiliated foreign residents. BEA obtains the source data, maintained in terms of outstanding amounts (and generally at face value), from data reported in the TIC reporting system, data provided by other U.S. government agencies, and some foreign institutions, including the Bank for International Settlements. Most claims and liabilities are denominated in U.S. dollars, although claims and liabilities denominated in foreign currencies have grown in importance in recent years. The bureau converts values of foreign-currency-denominated assets and liabilities to U. S. dollar equivalents at end-of-period exchange rates. Liabilities also include U.S. currency held by nonresidents.

Reserve assets

U.S. official reserve assets consist of assets held by the U.S. Treasury Department and the Federal Reserve System. BEA reports the assets in terms of outstanding amounts at market value. The bureau adjusts the value of official U.S. gold holdings for changes in the market price. It converts the values of all other reserve assets to U.S. dollar equivalents at end-of-period exchange rates.

Uruguay

The following text was confirmed as current in 2004.

I. General

The agency responsible for compiling Uruguay's balance of payments and international investment position statistics is the Programing Department (Departamento de Programación Financiera—DPF) of the Economic Policy Division of the Central Bank of Uruguay (Banco Central del Uruguay—BCU).

The DPF obtains primary data from a variety of sources, including the National Customs Directorate (Customs), the government-owned Bank of the Republic, the Ministry of Tourism, and other BCU departments and divisions. The DPF, in addition, conducts its own surveys to obtain data on transactions with nonresidents related to various services and income and financial flows arising from direct investment in Uruguay.

Data are compiled in U.S. dollars. To the extent possible, DPF converts transactions that take place in other currencies into U.S. dollars using the exchange rates prevailing at the time of the transaction. The department prepares the balance of payments statements on a quarterly basis, which is the basic frequency of the primary data obtained from the various sources (except for foreign direct investment (FDI) surveys that are conducted annually).

Uruguay's balance of payments is published on an annual basis in the National Statistics Institute's *Statistical Yearbook* (*Anuario Estadístico*) and disseminated quarterly on the BCU website. The classification of accounts used in the presentation of Uruguay's balance of payments statement generally corresponds with that recommended as an international standard in the *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

General merchandise. The data sources are the documents known as the single export document (documento único de exportación—DUE) and the single import document (documento único de importación—DUI). Customs delivers these documents to the BCU, which, after verifying them for consistency, processes them in its Computer Services Department. The customs documents contain information for both exports and imports on an f.o.b. basis, according to the nomenclature of the Customs Cooperation Council Harmonized System.

The Economic Statistics Area of the BCU, which publishes Uruguay's foreign trade statistics, makes coverage

adjustments for electricity imports and exports and timing adjustments for imports, to correct the delays in the submission of documents for processing by the Customs.

The DPF compiles information on goods acquired in ports by carriers from the quarterly survey of domestic transportation enterprises, from agents of foreign transportation enterprises, and from monthly data provided by the Public Petroleum Enterprise (bunkers exports).

Services

Transportation

DPF derives information on freight on imports from the customs documents. It obtains data for freight on exports and for freight between foreign ports from annual surveys of resident producers of such services. It conducts a survey of the main carriers on a quarterly basis. It compiles port and airport services from information provided by the National Ports Administration and the Directorate General of Aeronautical Infrastructure. The agents of foreign transportation companies provide data with respect to pilotage, stevedoring, and tugboat services provided by private companies.

DPF derives data for passenger fares from the annual survey of resident land, sea, and air transport companies and agents of foreign companies. It also conducts a survey of the main carriers on a quarterly basis.

Travel

Estimates for both travel credits and debits are compiled by the Ministry of Tourism on the basis of sample surveys of both inward and outward tourism, supplemented with data provided by the National Migration Directorate on the number of travelers.

Other services

Communications. Estimates are based on information provided by the National Telecommunications Administration and private mobile telephone companies.

Insurance. Insurance services are estimated as the difference between receipts for premiums and the related payments for claims. Since 1995, the Superintendency of Insurance and Reinsurance (a central bank agency) has been responsible for collecting information from insurance companies operating in Uruguay. Before the passage of the new insurance law, the DPF undertook an annual survey of domestic insurance companies and agents of foreign companies.

Financial. DPF derives the data from the financial reports submitted to the BCU by the financial institutions authorized to operate in Uruguay.

Royalties and license fees. DPF derives the data from the annual survey of foreign direct investment enterprises and others with franchising arrangements.

Government, n.i.e. The credit entries cover the amounts reported annually by the Latin American Integration Association (LALA), which is headquartered in Montevideo, and an estimate of the expenditure of foreign government representations located in Uruguay. The debit entries cover Uruguayan government expenditure on its representations abroad, as reported annually by the Ministry of External Relations.

Income

Investment income

Direct investment. DPF uses an annual survey conducted by the BCU to base its data on interest and profits (distributed or reinvested) on direct investment in Uruguay.

Portfolio investment. The debit entries cover interest paid on treasury bills and treasury bonds issued by the Uruguayan government. DPF calculates the holdings of these securities by nonresidents as the difference between the amounts in circulation and the holdings reported by the national financial system and social security institutions. The credit entries cover income receipts on financial sector assets.

Other investment. Data on interest received and paid by the national financial system and the monetary authorities are taken from their financial statements and annexes prepared for balance of payments purposes. For the general government and the rest of the nonfinancial public sector, the BCU Indebtedness Unit and debtor institutions provide the data. Estimates for interest receipts and payments of the nonfinancial private sector are based on Bank for International Settlements (BIS) data and FDI surveys, respectively.

Current transfers

General government

DPF bases these estimates on annual reports prepared by the United Nations Development Program on the technical assistance Uruguay receives.

Other sectors

The credit entries cover amounts received by resident individuals from foreign governments on account of pensions and war reparations, as reported by their consulates, and workers' remittances reported by private agencies.

Financial Account

Direct investment

To obtain data on direct investment flows to Uruguay, DPF uses the annual survey of enterprises with foreign capital participation. For investment in real estate

(mainly in the ocean resort areas), DPF bases estimates on the total square meters of construction permits issued and the share of nonresident purchasers in total sales, as reported by the local governments and real estate companies, respectively. Since 2003, entries include estimates of FDI in land, based on data provided by the *Instituto Nacional de Colonización*.

Portfolio investment

To compile these estimates, DPF uses the same methodology and sources as are described for this type of instrument under investment income. The department records placements (issues) of treasury bills at their effective (issue) value. It records the difference between that value and the nominal value as interest under the portfolio investment income heading. It records treasury bonds at their nominal value.

Other investment

DPF takes the data for transactions on other investment assets and liabilities of the national financial system (including the monetary authorities) from their respective financial statements. The department derives the entries as changes in stocks outstanding and, therefore, includes changes resulting from currency realignments.

Data for the general government and the rest of the non-financial public sector come from the BCU Indebtedness Unit, the information provided by the debtor institutions, and the statements of accounts of the creditor institutions.

For the nonfinancial private sector, the entries cover commercial credits provided directly by foreign creditors. DPF derives the data from the annual survey of private foreign direct investment enterprises and public enterprises. It derives estimates of currency and deposits abroad from BIS data.

Reserve assets

DPF derives the entries, covering the reserve assets of the BCU, from the BCU's balance sheets. The entries for other claims cover changes in balances held under the LAIA Reciprocal Credit Agreements, which are settled every four months. The entries exclude changes not attributable to transactions.

III. Specific Items: International Investment Position

Sources of information on international investment position data are the same as those used for the balance of payments. Data on portfolio investment assets also include information from the IMF's Coordinated Portfolio Investment Survey.

Vanuatu

The following text was confirmed as current in 2004.

I. General

The Reserve Bank of Vanuatu (RBV) is responsible for compiling the balance of payments statistics of Vanuatu. Data for the balance of payments are obtained from various sources, including an enterprise survey of companies covering the domestic and offshore banks, the National Statistics Office, other government ministries and departments, international organizations in Vanuatu, and the RBV. Data are prepared on both a quarterly and an annual basis; the RBV publishes the data in its *Quarterly Economic Review* and reports them to the Fund. Balance of payments estimates are compiled in millions of vatu and are consistent with the recommendations of the *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

The main source of data is the trade statistics compiled by the Statistics Office in collaboration with the Customs Department. They include both exports and imports of Vanuatu to/from the rest of the world. Goods exported and imported are valued on an f.o.b. and c.i.f. basis, respectively; adjustments are made to conform to a *BPM5* basis. An adjustment of 16.5 percent is made to convert import data on a c.i.f. basis to an f.o.b. basis for the balance of payments statistics. This adjustment factor for the insurance/freight element in the imports data—the c.i.f. basis—is estimated from a sample of import declarations processed by the Customs Department.

Services

Transportation

This category covers freight and passenger services by all modes of transport (i.e., sea and air) and port services. Entries for transportation services are derived from information provided by airport and seaport authorities, Air Vanuatu, and stevedoring companies. Entries for freight are estimated on the basis of past surveys of information on freight and insurance in the customs declaration forms. These are allocated to sea and air transportation according to fixed ratios.

Travel

Entries for travel credits are derived from information on the number of foreign visitors, their average daily ex-

penditures, and their average length of stay. The expenditure estimates are based on the 1997 Visitor's Survey conducted by the Tourism Council of the South Pacific and rated forward using CPI movements. Data on the number of visitors and length of stay are obtained quarterly from migration statistics published by the Statistics Office.

Entries for travel debits are derived from banking records, supplemented with information provided by the Department of Finance and the Statistics Office. Expenditure in Vanuatu by expatriates employed for the short term under foreign aid programs is included in travel credits. Also included is 70 percent of the value of training scholarships (the contra-entry is included in *current transfers, general government*).

Other services

The primary data source for all other services components is the survey of enterprises, with the ITRS as a secondary source. Where appropriate, these data are compared with data derived from other sources.

Insurance. Data are derived from adjustments (as indicated above) of import statistics for freight and insurance.

Other business. Data for other services are derived from various sources, including enterprise surveys, financial institutions' reports, the Post and Telecommunications Department, Telecom Vanuatu Ltd., commercial banks (through the ITRS), and foreign insurance companies operating through agencies.

Government, n.i.e. Data are derived from information provided by relevant ministries, international organizations based in Vanuatu, and the ITRS. The credit entries include expenditures of foreign embassies and international organizations in Vanuatu. The debit entries cover expenditures abroad of Vanuatu's diplomatic missions.

Income

Compensation of employees

Data are derived from information obtained from the RBV survey of donors. The entry is a contra-entry to 80 percent of short-term foreign technical assistance.

Investment income

Direct investment. Data on direct investment income are estimated from quarterly enterprise surveys of foreign companies operating in Vanuatu. Data cover reinvested earnings of foreign direct investment companies, dividends and distributed profits, and net rent receipts of nonresident landlords from leases of structures in Vanuatu.

Portfolio investment. Complete data on assets and incomplete data on liabilities are obtained through the survey of enterprises.

Other investment. Data on other investment income are derived mainly from the RBV, the Department of Finance, commercial banks, and other sectors. The credit entries cover the interest receipts of the RBV and the commercial banks, whereas the debit entries include interest payments on public external debt and interest payments by commercial banks and other sectors.

Current transfers

General government

Data are derived from information provided by various government agencies, foreign embassies, and international organizations. The entries include foreign technical assistance and shipping and company fees. Data on other intergovernmental grants are derived from information provided by the Department of Finance and various donor countries through the RBV survey of donors.

Other sectors

The debit entry covers the outward transfers of resident expatriate workers. Data are derived from the ITRS.

Capital Account

Capital transfers

General government

Data are derived from information provided by various government agencies, foreign embassies, and international organizations. The entries include grants in cash and in kind (foreign aid grants) received for developmental purposes, and migrants' transfers.

Financial Account

Direct investment

Data on direct investment in Vanuatu are collected from quarterly enterprise surveys. Foreign direct investment enterprises are defined to include enterprises in which 10 percent or more of paid-up capital is held by nonresident investors.

Portfolio investment

Data are collected through the survey of enterprises.

Other investment

Data on drawings and repayments of external public debt are derived from the Department of Finance records, while information on foreign private loans is obtained from the BOP Enterprise Survey. Included are the changes in holdings of foreign exchange by commercial banks.

Reserve assets

The entries for foreign exchange reflect changes in the holdings of the RBV.

República Bolivariana de Venezuela

The following text was confirmed as current in 2004.

I. General

The Central Bank of Venezuela (CBV), through the External Sector Statistics Department, attached to the office of economic statistics, is responsible for compiling the balance of payments statistics and the international investment position (IIP). The CBV disseminates the balance of payments data every quarter on the Internet (<http://www.bcv.org.ve>) and publishes the data annually in the *Economic Report* and *Yearbook of Balance of Payments*. These publications use the analytic presentation.

The data are compiled according to international standards and conventions described in the fifth edition of the IMF's *Balance of Payments Manual (BPM5)* and are disseminated to the IMF and other international agencies.

The international investment position (IIP) has been prepared since 1997, covering all the institutional sectors and components. The IIP quarterly data are disseminated on the CBV internet website.

The CBV has reviewed the methodology used in preparing the balance of payments and gradually adapted it to follow the guidelines of *BPM5*, which have been partially applied since 1996. The process of adaptation has required new data-gathering sources and instruments and the updating of the statistical base starting from 1997. In this edition, the CBV introduces the 1997–2002 revised statistical series and preliminary information for 2003, as well as general notes on applied methodologies.

In the data-gathering process, the CBV uses information from sources internal and external to the institution. The principal external sources include public agencies in charge of customs registries, movement of merchandise and passengers, and the rendering of related services; ministries and agencies responsible for administering resources and services in different activities; superintendent offices of banks, insurance, and foreign investment; public companies producing goods and services; public and private financial institutions; and a representative sample of enterprises in the nonfinancial private sector generating goods and services, among others.

In some cases, the CBV obtains data through information systems and, in others, through surveys and administrative registries. Some sources of primary information do not meet the methodological specifications of the balance of payments, and consequently on some occasions adjustments are made to modify or complement

the data from administrative registries, with a justification of the reasons for the changes.

The balance of payments and IIP are compiled in U.S. dollars, with the value at market prices normally prevailing.

II. Specific Items: Balance of Payments

Current Account

Goods

Exports and imports are estimated on the basis of monthly information supplied by the National Institute of Statistics (INE), previously OCEI, referring to f.o.b values recorded in customs documents, expressed in U.S. dollars.

Coverage and time of recording adjustments are made. The adjustments of coverage of exports refer to those of the oil sector, supplied by *Petróleos de Venezuela (PDVSA)*, including orimulsion and bunker and aircraft fuel. The adjustments also add exports of iron ore and electricity reported by the enterprises, nonmonetary gold registered by the CBV, deep-sea fishing, and an estimate of contraband of gold, diamonds, and gasoline.

The adjustments to the time of recording add data supplied by exporting public enterprises through their financial statements, substituting those of the INE, to preserve the base concept received and to harmonize with the System of National Accounts (SNA). Estimated data on repairs and on goods acquired in ports by ships and aircraft are also included.

For imports, the compilers use all the data from the customs documents except for petroleum import data, which PDVSA supplies. Coverage adjustments are made to take account of military procurement not recorded by customs, contraband seized by the National Guard, repairs and goods acquired in ports by ships and aircraft, and other adjustments for omissions in customs data.

Services

Transportation

This item includes the national oil industry's income and the private air companies' freight services and sale of tickets for international flights. The CBV uses surveys to gather both sets of data. The item also includes income from ports, airports, and navigation routes received by the national oil industry, the National Institute of Canals, and the principal ports and airports of the country. The CBV obtains these data through questionnaires and administrative registries.

Debit entries are registered for freight, which is estimated through a coefficient applied to total imports of

goods f.o.b., according to the nandina (Andean Community customs tariff), modality of transportation, region, etc. The item also includes payments for passenger transport on nonresident airlines and payments for port and airport services that the public oil industry and private airline companies make, estimated through surveys and indicators of volume of aircraft that the principal airport of the country reports.

Travel

The CBV measures credits and debits through a sample survey the INE and CBV carry out every quarter in the principal airport of the country. Compilers obtain data on average daily spending in U.S. dollars by category of traveler and reason for visit, average number of nights spent, and other indicators that allow an evaluation of the general profile of the traveler. These sample data are extrapolated by the total number of foreign visitors reported by the airports.

In addition, this category includes expenses for scholarships and missions that the public petroleum sector and nonpetroleum public sector incur abroad. The CBV validates the estimate through indicators of the activity, interviews for opinions in the principal hotels and travel agencies of the country, as well as reports and specialized journals.

Other services

Communications. This category includes income and expenditure of the principal companies of the sector, especially for basic telephone services by international correspondents, obtained through their financial statements and indicators of volume and rates of international traffic. Also included are income and expenses of the other communications services and added value, reported by the private enterprises through questionnaires. In addition, the category comprises income and expenses of the Instituto Postal Telegráfico (IPOSTEL) and private courier companies for postal and telegraph services; the CBV obtains these data through financial statements and administrative reports.

Insurance. This category includes income from reinsurance companies for premiums accepted and commissions received. In expenditures, it includes expenses for premiums assigned and commissions paid. The CBV obtains all the information from the balance sheets of reinsurance companies. In addition, insurance is included on merchandise paid by national companies, estimated through a coefficient applied to total imports of merchandise f.o.b., according to the type of nandina, modality, region, etc.

Financial. The debit entries cover fees paid abroad for the public debt and letters of credit on imports by the government and public enterprises. The CBV obtains the data from the Ministry of Finance on commissions paid.

Other business services. Data include the different entrepreneurial, personal, and technical services of the public and private petroleum industry and private nonpetroleum companies. Also included are the commissions paid to airline agents. The CBV obtains the information through questionnaires.

Government, n.i.e. Credits include the local expenditure of diplomatic missions accredited to Republica Bolivariana de Venezuela. The debit entries relate to expenditure abroad by Republica Bolivariana de Venezuela's embassies, consulates, and other official agencies. The CBV obtains these data from its own records, the Ministry of External Relations (MER), and the Ministry of Finance.

Income

Compensation of employees

Credits include compensation received by local staff working at foreign diplomatic missions in Republica Bolivariana de Venezuela. The CBV obtains this information from an annual survey applied to a sample of foreign embassies in the country. The debit entries cover payments to local staff working at Venezuelan embassies and consulates abroad. The CBV obtains the data quarterly from a MER survey.

Also included is quarterly information gathered through surveys of public companies on remunerations paid to foreign personnel working in the country less than one year.

Investment income

Direct investment. Credits include dividends, distributed earning of branches, and reinvested earning of public and private enterprises, including the national oil industry and commercial and universal banks. The CBV obtains these data from quarterly surveys and financial statements. Debits include dividends, profits sent from branches, reinvested earnings, and interest on debt with related parties, the private oil and nonpetroleum companies, and financial institutions. This information is sourced from financial statements, quarterly and annual surveys, and reports of the Caracas Stock Exchange. Interest on debt is derived from average yields applied to the stocks.

Portfolio investment. Credits refer to interest and dividends generated by the holdings of portfolio instruments kept by the monetary authority, the government (including capitalized interest of zero coupon bonds that are constituted as collateral of the Brady Bonds), banks, and other financial institutions, as well as the yields obtained by the nonfinancial private sector. The CBV obtains this information primarily from the quarterly coordinated portfolio investment survey and the balance sheets of the financial sector.

Debits include income paid by bonds and other debt securities issued in international financial markets by the

government, the public oil company, and private oil and nonpetroleum companies. Moreover, they include dividends paid by banks and private enterprises, as well as interest paid by the monetary authority to nonresident investors who acquire securities in the stock market of the country. For these measurements, the CBV uses diverse sources, such as its own reports, registries of foreign debt of the Ministry of Finance, and quarterly surveys sent to the public and private enterprises and to the financial institutions that are custodians of securities.

Other investment. Credits are registered as interest accrued from long-term commercial advances, loans, deposits, and other accounts receivable, by public and private entities of the country. Included are the monetary authority, government, public and private financial institutions, public companies, and the nonfinancial private sector. The CBV gathers the information from monthly and annual financial statements and quarterly surveys. The interest of the nonfinancial private sector is derived from average international yields applied to the outstanding stocks of deposits calculated in each period.

Debits refer to the interest of the public external debt in loans and trade credits, registered by the Ministry of Finance and the quarterly surveys sent to public companies. In addition, debits include interest from loans and deposits declared in the financial statements of the monetary authority and banks. The CBV derives the income paid by the private sector from average international yields applied to the outstanding stocks of liabilities.

Current transfers

Income from transfers includes donations, technical assistance, insurance indemnities, pensions, and worker remittances. The information on credits for donations and technical assistance is compiled in the annual survey of a sample of embassies and agencies accredited in the country. The registries for insurance indemnities have been declared in the quarterly surveys of public companies.

The CBV obtains data on pensions received by residents of the country from the annual survey applied to the embassies accredited in the country. It compares the data with the registries of exchange operators. Remittances of workers are estimated on the basis of the system of exchange information of the commercial banks and exchange houses. Premiums for exported reinsurance are obtained from the annual surveys applied to the companies.

Expenses reflect the contributions of general government to international agencies and remittances of workers, declared in the exchange registries of the Central Bank, the commercial banks, and the exchange houses. In addition, this item includes the component of transfers of insurance premiums paid abroad by public and private companies.

Capital Account

No important transactions have been detected for inclusion in this account.

Financial Account

Direct investment

In the country. This category records transactions derived from the participation of foreign investors in share capital (greater than or equal to 10 percent) and in reinvested earnings in financial institutions and public and private nonfinancial companies. For companies other than banks, insurance companies, and reinsurance companies, debts are incorporated among related companies, including trade credits.

The CBV obtains data on financial institutions (banks, and insurance and reinsurance companies) and private oil companies through quarterly surveys. It complements this data with information from registries of the Ministry of Energy and Mines, the Venezuelan Petroleum Corporation, the bank supervisors, insurance supervisors, and the Caracas Stock Exchange, as well as from financial statements available for these sectors.

In the case of nonpetroleum private companies, the CBV obtains the data on shares from the administrative registries of the Superintendency of Foreign Investment and the Ministry of Energy and Mines. These data are complemented with information from the National Securities Commission, the Development Bank, and survey results. In respect of reinvested earning and other capital, data are estimated on the basis of annual surveys and surveys through quarterly sampling.

Abroad. This refers to investments in subsidiaries and branches abroad (in shares, reinvested earnings, and other transactions that represent assets or liabilities between affiliated enterprises). It also refers to investments in noncommercial real estate, made by bank institutions and public and private and nonpetroleum companies. The CBV gathers the information from monthly financial statements and quarterly and annual surveys.

Portfolio investment

Assets. This involves operations in equity securities (less than 10 percent of capital stock) and debt securities issued by nonresidents and owned by the monetary authority, the general government, financial institutions, and a sample of private companies.

The CBV acquires this information from its own accounting registries and those of the Banco de Desarrollo Económico y Social de Venezuela (BANDES) (formerly Venezuela Investment Fund). It also acquires the information through quarterly surveys by instrument on own investments and trusts in favor of third parties di-

rected to commercial, universal, mortgage, and investment banks, savings and loan associations, money market funds, financial leasing companies, exchange houses, mutual funds, insurance and reinsurance companies, and private companies regulated by the National Securities Commission. Using the information in the surveys, compilers calculate the transactions starting from the balances, after eliminating the effects of price variations, exchange rates, and others. Holdings in zero coupon bonds are registered at present value.

Liabilities. This item includes nonresident investments in domestic equity securities that represent less than 10 percent of the capital of the banks and nonfinancial private enterprises. The source of the data is a quarterly survey (security-by-security) of domestic custodian banks. The transactions are calculated by variations of quantities and market price.

In addition, the item includes debt securities issued by CBV, the government, the public oil company, and nonfinancial private enterprises (petroleum and those regulated by the National Securities Commission), held by foreign investors.

Liabilities of the monetary authority are determined starting from account registries and domestic custodian banks.

The CBV obtains entries for the general government's bonds and notes, valued at market prices, from the Ministry of Finance. These data are adjusted to exclude bonds acquired by residents in the secondary market.

For the rest of the sectors, the CBV carries out quarterly and annual surveys on the primary issue of securities of public and private petroleum and nonpetroleum companies. The transactions are valued at market prices.

Other investment

Assets and liabilities of the general government. Assets include external deposits (including collateral of the Brady Bonds) and the participation of Venezuela in international agencies. Liabilities refer to suppliers' credits, loans, and other obligations of the Republic. The CBV procures the information from the Ministry of Finance and through financial institutions that administer the trust funds of the government.

Assets and liabilities of the monetary authority. Assets are registered for long- and short-term loans, currency and deposits, and other assets of the CBV not considered as international reserves. Liabilities include the use of IMF credit and loans, bilateral agreements, letters of credit, short-term loans, and currency and deposits of Central Banks and international agencies. The balance sheet of the central bank is the source of these data.

Assets and liabilities of the banking sector. These principally involve transactions of long- and short-term loans and

different modalities of deposits of the banks and loan associations, gathered through the quarterly survey of portfolio investment, and the monthly and annual financial statements.

Assets and liabilities of other sectors. Assets and liabilities refer to trade credits, short- and long-term loans, deposits, and other accounts receivable and payable of financial institutions other than banks (insurance, reinsurance, public funds, mutual funds, money market funds, exchange houses, and other financial auxiliaries and intermediaries) and of nonfinancial private and public enterprises.

The CBV compiles the information from registries of foreign debt of public companies processed by the Ministry of Finance, monthly and annual financial statements for the sectors (where available), and quarterly surveys applied to the census of financial institutions and public companies. Nonfinancial private companies are estimated starting from the results of a quarterly sample survey. In the estimation of assets in deposits, the CBV considers a set of indicators on the evolution of exchange, monetary and financial markets, transactional demand of the sectors of the economy, as well as international bank statistics referring to the country.

Reserve assets

Central Bank of Venezuela. The CBV calculates the international reserves position classified by securities such as monetary gold, SDRs, reserve position in the Fund, and foreign exchange. These classifications are broken down into instruments such as currency and deposits, banks, bonds and notes, money market instruments, and other assets (capital participation and account "A"—bilateral agreements). Revaluations of foreign exchange and prices are excluded. All assets are valued at market prices.

Data from the former Venezuelan Investment Fund (VIF) were included in reserves until 2001. When the VIF became a development bank (BANDES), its foreign currency assets were included in other investment in the financial account. The Macroeconomics Stabilization Fund (FIEM), now Fondo de Estabilización Macroeconómica (FEM), is included in reserve assets. The CBV obtains the data from its own reports; data are broken down into instruments such as deposits and securities.

III. Specific Items: International Investment Position

The IIP is presented according to the sectoral coverage and instrument classification of the financial account of the balance of payments. The methodologies are based—in the majority of cases—on the determination of transactions through balance sheets of financial assets and liabilities and the distinction of variations from exchange fluctuations, prices, and reclassifications. The

data sources used to compile Venezuela's international investment position are the same as those used to compile the financial account.

West Bank/Gaza

I. General

The Balance of Payments Division of the Palestinian Central Bureau of Statistics (PCBS) and the Research and Monetary Policies Department of the Palestine Monetary Authority (PMA) are jointly responsible for compiling the balance of payments statistics, which are published on an annual basis according to the standards set out in the fifth edition of the *Balance of Payments Manual* (BPM5). The PMA obtains primary data from banks, while the PCBS collects data from various sources including surveys and administrative records. The data are collected in Jordanian dinars, new Israeli sheqalim, and U.S. dollars and compiled in U.S. dollars.

Data are presented showing transactions between residents and nonresidents, including Jerusalem. However, because of the paucity of data for Jerusalem, three additional tables are disseminated showing the balance of payments statistics for (1) the Palestinian Territories, (2) the Remaining West Bank and Gaza, and (3) Jerusalem alone.

II. Specific Items: Balance of Payments

Current Account

Goods

The data are based on the trade statistics compiled by the PCBS's Foreign Trade Statistics (FTS) and Economic Surveys (ES), and comprise general merchandise and goods for processing. Most of these transactions are with the Israeli economy. Goods exported and imported are valued on an f.o.b. and c.i.f. basis, respectively. Imports are converted from a c.i.f. basis to an f.o.b. basis using an adjustment factor of 10 percent of the c.i.f. value of imports.

Services

Transportation

This item consists of the transportation costs of passengers and goods, as well as auxiliary services, such as storage, cargo handling, etc. The data are obtained from economic surveys conducted by the PCBS. The data also include an estimate for the freight element of the

c.i.f./f.o.b. adjustment to the foreign trade statistics, namely, 8 percent of the c.i.f. value of imports.

Travel

The main sources used to compile the data on travel credits and debits are economic surveys, a hotel survey, the Palestinian expenditure and consumption survey (PECS), a labor force survey, and data from the Ministry of Islamic Affairs, the Ministry of Health, and the Ministry of High Education. These surveys and administrative records cover (for the debit data) all travel transactions of residents abroad, such as students abroad, medication costs abroad, part of the wages of Palestinian border workers in Israel, the expenditure of pilgrims (visitors to the holy city of Micah), etc. The credit data cover nonresidents coming to the Palestinian Territories, such as tourists, foreign employees of consulates, representatives, international organizations, and those visiting relatives, etc.

Other services

Communications. The data are obtained from the annual administrative records of the major telecommunications companies (Paltel and Jawwal), which import these services from the Israeli Communication Company (Bezek).

Insurance. In principle, output is estimated, as being premiums earned, plus premium supplements, minus claims. The sources for this estimation are data obtained from the financial and insurance survey, and the insurance element of the c.i.f./f.o.b. adjustment to the foreign trade statistics, namely, 2 percent of the c.i.f. value of imports.

Other business services. This component covers receivables and payables for (1) merchanting and other trade-related services, (2) operational leasing, and (3) miscellaneous business services. The data on merchanting and other trade-related services consist of the sales, net of purchases, of goods bought from, and sold to, nonresidents. The main sources for these data are the foreign trade statistics and economic surveys. The data on miscellaneous business services cover legal, accounting, management consulting, public relations, administration and marketing, research and development, and other professional and technical services.

Personal, cultural, and recreational. The data are obtained from the annual administrative records of the Ministry of High Education and the Ministry of Health, and from economic surveys.

Government, n.i.e. The data for government services receipts (credits) are obtained from the administrative records of embassies, consulates, representatives, and international organizations located in the Palestinian Territories. The data for the debit entries are obtained from the relevant government ministries and include information on aid missions and government tourist, in-

formation, and promotion offices, located in economies abroad. In addition, this item includes the contra-entry to official transfers for technical assistance.

Income

Compensation of employees

This item includes data on wages, salaries, and social contributions received by border workers in Israel and settlements located in Palestinian Territories obtained from a labor force survey. The item also includes data on salaries received by Palestinian employees of foreign diplomatic embassies, consulates, and representatives, and international organizations, especially UNRWA, obtained from annual administrative records, as well as data on expenditure abroad obtained from the Palestinian National Fund Budget.

Investment income

Direct investment. The data on interest and dividends payments and receipts between direct investment enterprises and direct investors are obtained from economic surveys, the PECS, and the PMA records obtained from banks.

Portfolio investment. The data on payments and receipts for portfolio investment income are obtained from economic surveys, the PECS, and the PMA records obtained from banks.

Other investment. Other investment income covers interest payments and receipts on loans, deposits, and other commercial and financial claims and liabilities. These data are derived from economic surveys, the PECS, the PMA records obtained from banks, and UNRWA records.

Current transfers

General government

This item covers the government inflows (in cash and in kind) of grants in aid from foreign governments, donor's matrix, and international organizations, and includes technical assistance and the remittances of border workers in Israel. The principal sources are data from the Ministry of Planning and International Cooperation (MOPIC), and administrative records from embassies, consulates and representatives, and the labor force survey of the Ministry of Labor.

Other sectors

This item covers inflows (in cash and in kind) from sectors other than government of gifts, donations, grants in aid from foreign governments, relatives abroad, and international organizations, including private technical assistance, foreign social security, remittances of border workers in Israel, duties, and taxes. The data also cover inflows and outflows related to insurance (supplements and claims). The principal sources are data from the MOPIC, the labor force sur-

vey of the Ministry of Labor, economic surveys, the PECS, and UNRWA records.

Capital Account

Capital transfers

General government

The data cover investment grants of foreign governments, donor's matrix, and international organizations (including cash transfers for purchases of investment goods), and debt forgiveness. The principal sources are data from MOPIC, and administrative records from embassies, consulates, and representatives.

Other sectors

The data include migrants' transfers and relatives' grants in cash, mainly to finance buildings, and are derived from the PECS and economic surveys.

Financial Account

Direct investment

In practice, the distinguishing criterion for inclusion in this category is that the owner should hold at least 10 percent of the ordinary shares in the company. In Palestine, direct investment is mainly in the form of equity capital, i.e., shares. However, this item may also take the form of reinvested earnings. The data sources are economic surveys, the PECS, and the PMA records obtained from banks.

Portfolio investment

Portfolio investment includes transactions involving shares, bonds, bills, notes, and money market instruments that are not classified under either *direct investment* or *reserve assets*. The principal sources are the PECS, data from the Palestinian National Fund Budget on the expenditure of governmental institutions abroad, and the PMA records obtained from banks.

Other investment

This category is a residual category that includes all transactions in financial assets and liabilities that are not classified under *direct investment*, *portfolio investment*, *financial derivatives*, or *reserve assets*. The most important of these are currency, deposits, loans, and trade credits. The sources for the data are the MOPIC, the PMA records obtained from banks, reports from donor's matrix, UNRWA records, and the PECS.

Reserve assets

The data include financial assets that are (1) controllable by the PMA, (2) accessible to the PMA at relatively short notice for balance of payments purposes, and (3) de-

nominated in a convertible currency. As “controllability” is a wider criterion than ownership, reserve assets can, in addition to assets owned by the PMA, include assets owned by commercial banks if they can be readily mobilized by the PMA. The only source of the data on reserve assets is the PMA records.

Yemen, Republic of

The following text was confirmed as current in 2004.

I. General

In accordance with the Central Bank of Yemen Law No.14 of 2000, the Central Bank of Yemen (CBY) is responsible for compiling balance of payments statistics. The Balance of Payments Department (BOPD) of the CBY's Research and Statistics General Directorate collects data from various sources, including government ministries and agencies, and conducts surveys of foreign direct investment companies, airline companies, and commercial banks. It also uses balance sheets of commercial banks submitted to the CBY and information from the CBY's internal records.

The CBY compiles balance of payments statistics on a quarterly basis, which are published yearly in the *Balance of Payments Report*. It also publishes balance of payments data in its *Annual Report* and *Monthly Monetary and Banking Review Bulletin*, and on its website www.central-bank.gov.ye. Balance of payments data are compiled in millions of Yemeni rial and in millions of U.S. dollars. Since 1999, the compilation of balance of payments statistics in Yemen follows the fifth edition of the *Balance of Payments Manual (BPM5)*. Historical data since 1990 have been converted to be compatible with the *BPM5*.

II. Specific Items: Balance of Payments

Current Account

Goods

Exports and imports of goods are based on trade statistics compiled by the Central Statistics Organization (CSO). The BOPD adjusts import data upward by 20 percent for coverage of unrecorded goods, and downward by 12 percent of the c.i.f. value for classification to derive imports on an f.o.b. basis. Due to the decline of unrecorded goods, the upward adjustment in 2003 was 10 percent. Data on exports are adjusted for crude oil exports from CBY records of crude oil exports (government's share) and from the Ministry of Oil's data on crude oil exports (oil companies' share). BOPD adds

bunkering of foreign airplanes and vessels, as reported by companies, to the export data obtained from the CSO.

Services

Transportation

Data on debit entries for freight are estimated at 10 percent of the c.i.f. value of imports. Credit and debit entries for air transportation are derived from an airline survey. BOPD records the data it collects from airport authorities as credit entries under other air transportation, while it records data it collects from seaport authorities as credit entries under other sea transportation.

Travel

The Ministry of Tourism collects data from the immigration authorities on the number of foreign tourist arrivals. Number of tourist nights is estimated through a comprehensive survey to estimate the travel receipts. The BOPD reflects the data obtained from the Ministry of Tourism in the balance of payments statistics. Travel debits are estimated from the CBY records and the monthly ITRS survey of commercial banks for students studying abroad, Yemeni pilgrims, and health treatments of Yemeni nationals abroad.

Other services

Communications. The BOPD conducts surveys to collect communications transactions (credit and debit), which represent receipts and payments for telephone, Internet, telex, fax, and mail services by communications companies.

Construction. Debits are estimated at 20 percent of the grant and loan drawings.

Insurance. Debits are estimated at 2 percent of the c.i.f. import values.

Other business services. Owing to the lack of a breakdown of service expenditures from oil companies, the debit entries cover 38 percent (average for previous periods) of oil companies' expenditures on services.

Government n.i.e. The CBY collects data from its internal records for the Yemeni government's expenditure for its embassies, consulates, and trade/military attachés abroad and revenues from these embassies. For receipts and payments of foreign embassies, consulates, and international and regional institutions operating in Yemen, the CBY collects data from a monthly survey of commercial banks.

Income

Investment income

Direct investment. Debit entries for direct investment income are estimated as follows: (1) exports of oil companies minus cost recovery as reported by the Ministry of

Oil, and (2) profits of branches of foreign banks, and communications companies.

Other investment. For general government, debit entries cover interest obligations on the general government loans as reported by the CBY's Debt Management and Financial Analyses (DMFAS) unit. For monetary authorities, the credit entries represent the interest receipts on the CBY reserves, while the debit entries represent interest obligations of the CBY's liabilities on IMF loans, AMF loans, and other liabilities. Information is obtained from CBY's internal records. In the banking sector, the credit entries represent interest receipts as reflected in the balance sheets of the commercial banks.

Current transfers

General government

Credit entries represent grant receipts of the general government, while debit entries represent the government contributions to the international and regional institutions. Information is obtained from the CBY's records.

Other sectors

Workers' remittances. Debit entries are derived from monthly surveys of commercial banks and CBY's records, which cover remittances by nonresident workers in Yemen. Credit entries represent remittances from Yemenis working abroad. In 1996, the estimate was based on the number of workers abroad obtained from the immigration authorities, their average salaries, and assumptions about the proportion of their salary remitted to Yemen. Since then a growth of 1 or 2 percent is assumed on the basis of economic situations in the region.

Other current transfers. Credit entries represent compensation received by Yemeni workers who previously worked abroad and have returned home. Information is obtained from the CBY's internal records.

Capital Account

Capital transfers

The credit entries represent debt forgiveness of general government loans. The source of these data is the CBY's DMFAS unit.

Financial Account

Direct investment

For oil companies, direct investment in Yemen refers to their expenditures (inflow) minus their cost recovery (outflow) as reported by the Ministry of Oil and Mineral Resources. For direct investment in Yemen in commercial banks, the CBY's Banking Control Sector collects

data from the balance sheets of commercial banks. For direct investment in Yemen in other companies, BOPD conducts a survey to collect the information.

Portfolio investment

The portfolio investment claims reflect Yemeni commercial banks' shares in foreign banks abroad. BOPD collects the information from the consolidated balance sheet of commercial banks as reported by the CBY's Banking Control Sector.

Other investment

Trade credits

Trade credits represent short-term credits given to crude oil importers and repayments collected from them. Information is obtained from the CBY's records.

Loans, currency and deposits, and other assets/liabilities

The assets of banks in the form of currency and deposits reflect changes in commercial banks' foreign assets as identified in the consolidated balance sheet of commercial banks. The liabilities of monetary authorities consist of (1) drawings and repayments of IMF loans, (2) drawings and repayments of AMF loans, and (3) other liabilities, LCFAR of CBY, as reflected in the balance sheet of the CBY. The CBY obtains these data from its DMFAS unit and from its internal records. It derives the liability of general government from drawings, repayments, and reschedulings of foreign loans of the general government as reported by the DMFAS unit. The banks' liability represents changes in foreign liabilities of commercial banks as reflected in the consolidated balance sheet of commercial banks.

Reserve assets

The financial account transactions reflect changes in SDR holdings, currency and deposits, and securities representing CBY's foreign assets as reflected in the balance sheet of the CBY, net of valuation changes.

III. Specific Items: International Investment Position

The BOPD compiled IIP statistics for the first time in 1999 using the same basis as the revised balance of payments statistics. While still in progress, the IIP covers important sectors of the national economy and will be expanded further. The IIP components for Yemen at present are as follows:

Assets

Portfolio investment and *currency and deposits* are the stocks of foreign assets of commercial banks as reflected in their consolidated balance sheet.

Reserve assets cover CBY's holdings of SDRs, currency and deposits, and securities constituting CBY's foreign assets position as reflected in the CBY's balance sheet.

Liabilities

Direct investment. In 1999 the BOPD obtained stocks of direct investment in Yemen in oil companies. Since then and due to the unavailability of the stock data, the data on stocks in the subsequent years are estimated by adding net flows from the balance of payments. Data on stocks for foreign direct investment banks and other direct investment companies are obtained using survey forms.

Other investment. For monetary authorities, the data on position cover IMF loans, AMF loans, and other liabilities, LCFAR of the CBY, as reflected in its balance sheet. For general government, the data show foreign loans of the general government as reported by the CBY's DMFAS unit. For banks, the data include foreign liabilities of commercial banks as reflected in the consolidated balance sheet of commercial banks reported by the CBY's Banking Control Sector.

Zambia

I. General

The Bank of Zambia (BoZ) is the designated official compiler of balance of payments statistics in Zambia. Before the BoZ assumed this responsibility, the Central Statistics Office (CSO) had the primary responsibility of compiling balance of payments statistics. The Economics Department of the BoZ is in charge of all matters relating to balance of payments statistics, while the Balance of Payments Unit (BOPU), created within the Balance of Payments and Debt Division of the Economics Department, is responsible for compiling balance of payments statistics.

Since 1998, balance of payments statistics in Zambia have been compiled and presented in accordance with the methods and procedures recommended in the fifth edition of the Fund's *Balance of Payments Manual (BPM5)*. The BoZ produces balance of payments statistical tables in both the standard and analytic presentations in line with *BPM5*. The balance of payments statistics are presented in millions of U.S. dollars.

The BoZ compiles balance of payments statistics on a quarterly and annual basis. It disseminates the quarterly tables within two months after the end of the reference quarter and the annual tables with a timeliness of six months.

The BoZ publishes balance of payments statistics in its *Annual Report*, while the Ministry of Finance and National Planning (MoFNP) publishes them in its *Economic Report*. Annual balance of payments statistics are also reported to the Southern Africa Development Committee's (SADC) for publication in *Recent Economic Developments and Statistics for SADC*. Data are also available to interested users through the Public Relations Office of the BoZ on demand and when available.

Data sources include the Zambia Revenue Authority (ZRA), the MoFNP, the CSO, the Zambia Investment Center (ZIC), the Zambia Privatization Agency (ZPA), the Ministry of Foreign Affairs (MFA), the Ministry of Mines and Mineral Development (MMMMD), the Lusaka Stock Exchange (LuSE), mining companies, and the Zambia Electricity and Supply Corporation (ZESCO).

II. Specific Items: Balance of Payments

Current Account

Goods

The CSO officially compiles monthly trade statistics. However, owing to problems of timeliness, the BoZ compiles preliminary trade statistics to include in the balance of payments statistics.

Exports are compiled from three sources:

1) Data on metal exports (copper and cobalt), accounting for an average of 65 percent of total exports, are based on reports submitted by the mining companies. The privatization in March 2000 of the Zambia Consolidated Copper Mines Company, a government-owned company that was responsible for metal mining, resulted in five private mining companies. These companies report production and sales volumes, the values of sales (f.o.b. basis), and unit prices on special forms designed by the BoZ. The value of freight and insurance is reported separately and is recorded as credit entries under other transport in services. Therefore the BoZ does not adjust the classification of this source data. The mining statistics are available with a timeliness of 4 weeks.

2) BoZ compiles nontraditional exports, excluding electricity exports, based on the ZRA's Customs Export Declaration (CED) forms, which the ZRA collects directly from the major customs ports, and the BoZ staff processes. A coverage adjustment is made to the preliminary data on the basis of information from a survey undertaken by the Export Board of Zambia (EBZ). This organization is responsible for promoting nontraditional exports. Data on nontraditional exports are reported on a c.i.f. basis. Of the total value, 5.5 percent is reclassified as freight and recorded as a credit under "other trans-

port, freight in services." Exports documents are usually available with a timeliness of two weeks.

3) Electricity exports are part of nontraditional exports. The data are compiled from reports submitted by the electricity company (ZESCO) and are provided on a quarterly basis with a timeliness of two months.

Data on imports are estimates based on the data from the ZRA's computerized database. Because of the partial coverage by the ZRA data, the Bank of Zambia makes a coverage adjustment to the basic data to estimate for missing import values. It computes the adjustment factor by using data on import taxes, which tend to have a more comprehensive coverage. The share of taxes from computerized ports (i.e., the ports providing data on the value of imports) is divided into total taxes for the period. Imports are valued at c.i.f., and the BoZ reclassifies 10 percent of the total value of imports as freight, which is recorded as a debit entry under "other transport, freight in services."

The imports component also shows a breakdown of analytically important categories of imports. Data on these categories are obtained directly from the importing agencies or enterprises. Metal sector imports are compiled from data reported by the mining companies. Fertilizer imports are compiled from data reported by the Ministry of Agriculture, the Food Reserve Agency, and two private fertilizer companies, Sasol and Omnia. Petroleum imports are compiled from data reported by the Zambia National Oil Company (ZNOC), a government-owned enterprise, and from a survey of private enterprises involved in importing petroleum products. Maize imports are compiled from data reported by the Ministry of Agriculture and the Food Reserve Agency. Other imports are derived as a residual.

Goods procured in ports by carriers comprise bunker fuel sales to carriers and are based on data provided by the oil companies (BP Zambia Limited and Mobil Zambia Limited), which sell aviation fuel to foreign airlines in the major airports.

Services

Transportation

Credit data comprise freight services only, which are estimated as 5.5 percent of the c.i.f. value of nontraditional exports, plus data on inland freight reported by the mining companies on their metal exports.

Debits comprise estimates for freight, passenger, and other transport services. Freight debits are estimated as 10 percent of the c.i.f. value of imports. Data on passenger transport and other transport services are estimated based on historical data. The BoZ plans to launch two enterprise surveys that would form the basis of compiling estimates of passenger and other transport services.

These would consist of a quarterly survey of resident transportation companies and a survey of agents of non-resident airlines, primarily designed to capture data on passenger transportation.

Travel

Prior to June 1999, the BoZ compiled data on travel credits from reports the Zambia National Tourist Board (ZNTB) submitted. In June 1999 the Ministry of Tourism took over from ZNTB the task of conducting surveys of enterprises involved in providing travel services. The BoZ, collaborating with the Ministry of Tourism, has designed quarterly survey forms to capture, primarily, tourism revenues from hotels and companies involved in tours, car hire, and air charters. The first survey was launched in October of 2000 but has not been sustained, owing to lack of funding.

Travel debits are estimated based on data on government employees' travel allowances and on government and quasi-government employees studying abroad. However, the BoZ is establishing reporting arrangements with the Ministry of Finance, the Ministry of Education, and the Cabinet Office for data on official expenditure on travel for purposes of education, medical, and training. In the past, this information was captured from the banks and the exchange bureau reporting system on purchases and sale of foreign exchange. However, the liberalization of the foreign exchange market in Zambia resulted in incomplete coverage. That is, banks are no longer obliged to report all their foreign exchange transactions, and ordinary customers are not legally required to declare the purpose of the foreign currency that they purchase from banks and bureaus of exchange.

Other services

Communications. Data are obtained from a monthly survey of major enterprises that provide communication services. It supplies information on transactions in communication services involving nonresidents.

Construction. Credit data are not available. Debit data are estimated based on the 1998 enterprise survey of construction companies. The BoZ plans to launch a general balance of payments survey of all major construction companies in the future.

Insurance. The data are based on information from a monthly survey of major insurance enterprises, reporting foreign revenues and expenditures for insurance services provided to nonresidents.

Other business services. Data on debits, covering only miscellaneous business services, are based on historical data.

No data are presently available for the rest of the services categories. The BoZ has recently made efforts to improve this situation. To obtain information for com-

piling credit data primarily on government services, it launched in October 2000 a survey of foreign embassies and international organizations located in Zambia. However, the response rate to this survey was low. To obtain information from which to compile debit data, the BoZ has also established reporting arrangements with the MFA for data on Zambian embassies' expenditure abroad.

Income

Compensation of employees

The debit data comprise wages and salaries of expatriate workers employed by the mining sector. The data are estimated from the foreign exchange receipts and disbursements reports submitted by the copper mining companies, which show expatriate emoluments.

Investment income

Portfolio investment income credits cover only interest income, which is estimated as a 5 percent annual return on the amount of commercial banks' gross foreign assets. The amount is obtained from the monetary survey. To revise the adequacy of the assumption about the 5 percent annual return on gross foreign assets of commercial banks, the BoZ is conducting a general balance of payments enterprise survey (Monitoring of Private Capital Flows Survey). The survey would determine data on expatriate emoluments, income on equity, and debt on direct, portfolio, and other investments.

Other investments income are BoZ estimates of earnings accrued on loans, and currency and deposits. The item shows estimates separately for the monetary authorities (BoZ), general government, banks, and other nonfinancial private sector.

The credit data for monetary authorities' other investment income are estimates of BoZ's earnings on its foreign currency and deposits abroad. The debit data for monetary authorities' other investment income comprise interest payments on IMF loans. The source of the data is the BoZ's Finance Department, which records income received and payments made abroad.

The debit data for general government other investment income comprise interest payments on loans obtained by the Zambian government from multilateral and bilateral institutions and creditors. The data are recorded on a due-for-payment basis, showing categories of interest forgiven, rescheduled, paid, and in arrears. The data are obtained from the administrative records of the MoFNP's External Recourse Mobilization Department (ERMD), which maintains a complete database on official debt, showing debt service due, written-off, in arrears, rescheduled, and paid.

For the banking sector, only credit data are recorded for other investment income. The data are estimates, based

on an assumed 5 percent annual return on commercial banks' currency and deposits held in nonresident banks. The source of the data is the monetary survey.

The credit data for the private sector other investment income comprise the interest earnings of the nonfinancial nonmetal private sector on their currency and deposits abroad. It is assumed that 70 percent of the proceeds of nontraditional exports in any given period are held abroad. A 5 percent annual interest rate is applied to this average stock holding to calculate the return. No corresponding estimates are made for the metal sector. However, with the privatization of the mining sector, the BoZ is determining the percentage of earnings on metal sales that should form the basis of estimating interest earnings by the metal sector.

The debit data for the private sector are estimates covering both the metal and nonmetal sectors and comprise interest payments on loans. The source for the interest payments for the metal sector is the receipts and disbursements of foreign exchange reports obtained from the mining companies. Debit data for the nonmetal sector are obtained from the private sector debt database of the Debt Unit within the BoZ's Economics Department. This includes data on the BoZ's short-term debt, debt of public enterprises, and nonfinancial enterprises' debt stock and flows.

Current transfers

The BoZ records data on current transfers for the general government and the private sector (other sectors). Current transfers for general government correspond, primarily, to grants disbursed by donors in the form of balance of payments support to the Zambian government. The data are available annually from the administrative records of the MoFNP ERMD.

Capital Account

Capital transfers

The credit data on capital transfers cover only estimates of project assistance grants. They are based on quarterly and annual data from the administrative records of the MoFNP ERMD. The BoZ has also made requests to MoFNP ERMD to report data on debt forgiveness.

Financial Account

Direct investment

Data on foreign direct investment are obtained from three administrative sources: the ZIC, the ZPA, and the MMD.

To report on new capital investments, the ZIC obtains information from investment pledges made with foreign capital. It also conducts surveys to determine implemen-

tation rates on the initial pledges. The implementation rate is applied on the initial figure for pledges to derive an estimate that is recorded as direct investment under *equity capital, liabilities to direct investors*.

The ZPA reports the amount of the total receipts obtained from the sale of public enterprises to foreigners during the period, which is also recorded as direct investment under equity capital, liabilities to direct investors.

The MMMD reports data on estimated expenditures on mining exploration by foreign enterprises.

Portfolio investment

Data on transactions in portfolio investments are currently obtained from the LuSE's monthly reports. In the past, this data was obtained from the international transactions reporting system (ITRS), whose coverage became incomplete following the economic liberalization program.

Other investment

Only loans and currency and deposits are recorded under other investment. Data for other investment assets correspond to commercial bank loans issued and currency and deposits held with nonresidents. Data on loan liabilities cover disbursements and amortization of the monetary authorities (BoZ), general government, and other sectors. Loan disbursements and repayments are divided between IMF loans and short-term loans. The data are obtained from the Debt Unit within the Economics Department of the BoZ.

Loan disbursements of the general government are divided into balance of payments support (program) loans and project loans. Debt relief and amortization flows are also recorded under the general government loans category. The source of the data is the MoFNP ERMD.

Loan disbursements of the private sector are classified into metal sector and other nonmetal sector. The metal sector data, covering the loans and amortization flows of the mining companies, are obtained from the receipts and disbursement reports of the mining companies. Loan disbursements of the nonmetal sector are compiled from the BoZ's private sector debt database.

Reserve assets

The reserve assets data cover only data on the foreign currency and deposits of the BoZ with foreign banks. The data are obtained from the statement of receipts and payments on gross international reserves of the BoZ reported by the Finance Department.

III. Specific Items: International Investment Position

The BOPU of BoZ does not compile information on the international investment position (IIP) at present. However, the BoZ, collaborating with other agencies, is conducting a survey on foreign private capital flows and stocks, and it is hoped that the results will enable the bank to start compiling IIP tables in the future.
