Balance of Payments Statistics Yearbook (BOPSY): Issued in three parts, this annual publication contains balance of payments and international investment position data. Part I provides detailed tables on balance of payments statistics for approximately 167 countries and international investment position data for 96 countries. Part 2 presents tables of regional and world totals of major balance of payments components. Part 3 contains description of methodologies, compilation practices, and data sources used by reporting countries.

"Country" in this publication does not always refer to a territorial entity that is a state as understood by international law and practice; the term also covers the euro area, the Eastern Caribbean Currency Union, and some nonsovereign territorial entities, for which statistical data are provided internationally on a separate basis.

SELECTION OF STATISTICAL PUBLICATIONS

International Financial Statistics (IFS)

Acknowledged as a standard source of statistics on all aspects of international and domestic finance, *IFS* publishes, for most countries of the world, current data on exchange rates, international liquidity, international banking, money and banking, interest rates, prices, production, international transactions (including balance of payments and international investment position), government finance, and national accounts. Information is presented in tables for specific countries and in tables for area and world aggregates. *IFS* is published monthly and annually. *Price*: Subscription price is US\$495 a year (US\$247 to university faculty and students) for twelve monthly issues and the yearbook. Single copy price is US\$65 for a monthly issue and US\$95 for a yearbook issue.

Balance of Payments Statistics Yearbook (BOPSY)

Issued in three parts, this annual publication contains balance of payments and international investment position data. Part 1 provides detailed tables on balance of payments statistics for approximately 167 countries and international investment position data for 96 countries. Part 2 presents tables of regional and world totals of major balance of payments components. Part 3 contains descriptions of methodologies, compilation practices, and data sources used by reporting countries. *Price*: US\$98.

Direction of Trade Statistics (DOTS)

Quarterly issues of this publication provide, for about 156 countries, tables with current data (or estimates) on the value of imports from and exports to their most important trading partners. In addition, similar summary tables for the world, industrial countries, and developing countries are included. The yearbook provides, for the most recent seven years, detailed trade data by country for approximately 186 countries, the world, and major areas. *Price*: Subscription price is US\$155 a year (US\$129 to university faculty and students) for the quarterly issues and the yearbook. *Price* for a quarterly issue only is US\$25, the yearbook only is US\$70, and a guide only is US\$12.50.

Government Finance Statistics Yearbook (GFSY)

This annual publication provides detailed data on transactions in revenue, expense, net acquisition of assets and liabilities, other economic flows, and balances of assets and liabilities of general government and its subsectors. The data are compiled according to the framework of the 2001 *Government Finance Statistics Manual*, which provides for several summary measures of government fiscal performance. *Price*: US\$80.

CD-ROM Subscriptions

International Financial Statistics (IFS), *Balance of Payments Statistics (BOPS)*, *Direction of Trade Statistics (DOTS)*, and *Government Finance Statistics (GFS)* are available on CD-ROM by annual subscription. The CD-ROMs incorporate a Windows-based browser facility, as well as a flat file of the database in scientific notation. *Price of each subscription*: US\$450 a year for single-user PC license (US\$225 for university faculty and students). Network and redistribution licenses are negotiated on a case-by-case basis. Please contact Publication Services for information.

Subscription Packages

Combined Subscription Package

The combined subscription package includes all issues of *IFS*, *DOTS*, *BOPSY*, *GFSY*, and *Staff Papers*, the Fund's economic journal. *Combined subscription price*: US\$749 a year. Airspeed delivery available at additional cost; please inquire.

Combined Statistical Yearbook Subscription

This subscription comprises *BOPSY*, *GFSY*, *IFS*, and *DOTSY* at a combined rate of US\$265. Because of different publication dates of the four yearbooks, it may take up to one year to service an order. Airspeed delivery available at additional cost; please inquire.

IFS on the Internet

The Statistics Department of the Fund is pleased to make available to subscribers the *International Financial Statistics (IFS)* database through an easy-to-use online service. The *IFS* database contains time series data beginning in 1948. The browser software provides a familiar and easy-to-use Windows interface for browsing the database, selecting series of interest, displaying the selected series in a spreadsheet format, and saving the selected series for transfer to other software systems, such as Microsoft Excel®. Single user license price for the *IFS Online Service* is \$495, and \$247 for academic users. Dependent on certain criteria, a range of scaled discounts is available. For full details of qualification for these discounts and online payment, please visit <http://www.imfststatistics.org> or email us directly at publications@imf.org.

INTRODUCTION¹

Volume 55 of the *Balance of Payments Statistics Yearbook*, published by the International Monetary Fund (the Fund), contains balance of payments data that member countries have reported to the Fund. The Fund is indebted to these countries for their cooperation in providing these data. For some of these countries, some data have been supplemented by details Fund economists have derived from other sources.

The yearbook consists of three parts. Part 1 presents balance of payments and international investment position (IIP) data of individual countries. Part 2 contains regional and world totals for major components of the balance of payments. Part 3 provides technical descriptions of selected reporting countries. Part 1 is separately bound, and Parts 2 and 3 are bound together.

This volume of the yearbook continues the features introduced in Volumes 46 through 54. As in Volume 46, balance of payments data are presented in accordance with the standard components of the fifth edition of the *Balance of Payments Manual (BPM5)*.² However, the standard components have changed with the publication of *Financial Derivatives, a Supplement to the Fifth Edition (1993) of the Balance of Payments Manual*, published in 2000 and amended in 2002. Thereafter, references to *BPM5* include the supplement and its addendum. In conformity with the recommendations in the addendum, this yearbook reflects the decision of the IMF Committee on Balance of Payments Statistics (BOPCOM) that the financial derivative transactions involving affiliated enterprises should be included in the financial derivatives component of the balance of payments statistics and the IIP. Similarly, as in Volume 47, IIP data also are presented in the *BPM5* format, and Part 3 of the yearbook publishes detailed reviews of the methodologies, compilation practices, and sources of data for most of the countries included in the volume.

¹French and Spanish translations of this introduction appear after the annexes; data on individual countries follow immediately thereafter.

²Volume 1 of the yearbook, published in 1949, was based on the first edition of the Fund's *Balance of Payments Manual*, issued in 1948; Volumes 2-12 were compiled pursuant to the second edition of the manual, issued in 1950; Volumes 13-23 were based on the third edition of the manual, issued in 1961; and Volumes 24-29 were associated with that edition as well as the *Balance of Payments Manual: Supplement to Third Edition*, issued in 1973. Volumes 30-45 followed the guidance of the fourth edition of the manual, published in 1977.

³International Monetary Fund, *Balance of Payments Manual*, fifth edition, Washington, D.C., September 1993, and *Financial Derivatives, A Supplement to the Fifth Edition (1993) of the Balance of Payments Manual*, 2000.

The *BPM5*³ introduced a number of methodological changes in the compilation of balance of payments data. Chapter I of the *BPM5* describes these changes in detail. Since Volume 46, a set of data codes has accompanied data presented in this yearbook under the standard components of the *BPM5*. These data codes were developed jointly by the Fund, the Organisation for Economic Cooperation and Development (OECD), and the Statistical Office of the European Union (Eurostat). An annex to this introduction explains the structure of the codes. In addition, beginning with Volume 46, the yearbook no longer presents quarterly balance of payments data for those countries that report quarterly balance of payments statistics to the Fund. Such quarterly data are published in the monthly Fund publication *International Financial Statistics (IFS)* and are available on the Balance of Payments Statistics CD-ROM.

Data conversion work undertaken by the Fund staff has made possible the presentation in the *BPM5* format of both historical data from the Fund's database and more recent statistics reported by those member countries who are still compiling their data in the format of the fourth edition of the *Balance of Payments Manual (BPM4)*. In 1995, the Fund staff developed formulas to transform reported balance of payments data for each country in the Fund's database to approximate the *BPM5* methodology and presentation. Converted data for each reporting country were sent to the respective authorities for review, and their comments were incorporated in the new *BPM5* database. In 1996, the Fund staff, in collaboration with country authorities, completed a similar conversion of the *BPM4* IIP data into the *BPM5* presentation. In principle, the IIP of a country is a balance sheet of its stock of external financial assets and liabilities.

The technical descriptions of reporting countries' methodologies, compiling practices, and data sources, shown in Part 3 of the yearbook, are largely based on information that the countries provide to the Fund. The descriptions are intended to enhance users' understanding of the coverage, as well as of the limitations, of individual country data published in this yearbook. They are also designed to inform compilers of data sources and practices used by their counterparts in other countries. In addition, detailed information on countries' practices in compiling direct investment (DI) statistics is available to compilers from the 2001 survey of DI methodologies, conducted jointly by the Fund and the OECD. Compilers can consult the Internet database that

contains the DI metadata at <http://www.imf.org/external/np/sta/di/mdb97.htm>.

The balance of this introduction is organized as follows:

- Section I describes essential features of the tables published in Part 1 of this volume of the yearbook. (Readers can find details on coverage for Parts 2 and 3 in the separately bound publication.)
- Section II offers information on the accessibility of the Fund's balance of payments data on CD-ROM.
- There are six annexes. Annex I shows an analytic presentation of balance of payments components (and related data codes) arranged in a summary form. Annex II presents the standard components of the *BPM5* (and related data codes). Annex III explains the data coding scheme. Annex IV presents the standard components for IIP as shown in the *BPM5*. Annex V provides the conceptual framework of the balance of payments. Annex VI explains the coverage of major components of the balance of payments accounts, as set forth in the *BPM5*.

I. Part 1 of the Yearbook: Individual Country Data

Part 1 of the yearbook presents country pages alphabetically. "Country" in this publication does not always refer to a territorial entity that is a state as understood by international law and practice; the term also covers the euro area, the Eastern Caribbean Currency Union, and some nonsovereign territorial entities for which statistical data are provided internationally on a separate basis.

For most countries, balance of payments data are presented in two tables. Table 1 is an analytical summary of the more detailed data of Table 2. This table provides an array of balance of payments components to highlight the financing items (the reserves and related items). (See also Annex I.) Table 2 displays data in the standard components described in the *BPM5*. (See also Annex II.)

For countries for which IIP statistics are available, Table 3 presents those data. Tables 1, 2, and 3 present data for the years 1996–2003 for each country. Unless otherwise indicated, the tables report figures for calendar years.

Analytic Presentation

In the analytic presentation, shown in Table 1, balance of payments components are classified into five major data categories (groups A through E), which the Fund regards as useful for analyzing balance of payments developments uniformly. The se-

lected groups, however, should not be considered to reflect the Fund's recommendation about the analytic approach appropriate for every country. Other analytical presentations could be arrayed by regrouping the standard components of Table 2 in other ways to take account of the special circumstances of a specific country or to serve particular analytical requirements.

Note that the figures shown in Tables 1 and 2 differ for some countries for balances of the current account, the capital account, and the financial account. This is because in Table 1 certain transactions under these accounts are excluded and reclassified as "exceptional financing" under reserves and related items. "Exceptional financing" refers to transactions undertaken by the authorities to finance balance of payments needs, including such items as external borrowing, payment arrears, and debt forgiveness. Exceptional financing does not include reserves.

Standard Presentation

The standard components of *BPM5*, shown in Table 2, list a more detailed classification of goods and services than appears in *BPM4*. The designated "capital and financial account" has separate components for the "capital" and the "financial account." Under the "financial account," components are classified by types of investment (i.e., direct investment, portfolio investment, financial derivatives,⁴ other investment, and reserve assets), assets/liabilities, domestic sectors (monetary authorities, general government, banks, and other sectors), and original maturity.

International Investment Position

IIP data, as shown in Table 3, are arrayed in accordance with the standard components for IIP, as set forth in the *BPM5*. (See also Annex IV.)

Although the classification of the IIP components in Table 3 is consistent with that of the financial account of the balance of payments as shown in Table 2, there are several differences between the two tables. As mentioned earlier, IIP data reflect a country's external financial assets and liabilities at a specific point in time. Table 3, therefore, provides the basic presentation of the IIP components under two general categories, namely, assets and liabilities, as opposed to the functional types of invest-

⁴Owing to the unique nature of financial derivatives, and the manner in which some institutions record transactions, some countries can provide only net transactions data. While such net data could be included under assets, in this yearbook it has been decided to include these net transactions, and net positions when reported, under liabilities. The reason is that one common source of demand for these instruments is from entities that are hedging cash flows associated with debt liabilities.

Box. International Investment Position

Countries in the early stages of IIP compilation are encouraged to submit partial IIP statements. In general, these partial statements include data on the monetary authorities (including international reserves) and at least one other sector. IIP statements for reporting countries are shown as Table 3 in the country pages. No totals are shown for partial IIP statements. Because of these data limitations, a country's IIP statement should be read in conjunction with the notes included in Part 3—Methodologies, Compilation Practices, and Data Sources—for that particular country. As countries collect more IIP data, the coverage of the IIP for these countries will be expanded in subsequent volumes of the yearbook.

Readers may refer to Chapter XXIII of the *BPM5* for a full discussion of the concept of international investment position.

External debt is not a separate component of the IIP but can be derived by summing up the non-equity liability components of the IIP (i.e., all recorded liabilities other than equity securities and direct investment equity capital [including reinvested earnings], and financial derivatives). Such a view is in general concordance with the core definition of gross external debt in the *External Debt Statistics: Guide for Compilers and Users*, prepared by the Inter-Agency Task Force on Finance Statistics. The Task Force was chaired by the IMF, and the work on the Guide involved representatives from the BIS, the Commonwealth Secretariat, the European Central Bank, Eurostat, the IMF, the OECD, the Paris Club Secretariat, the United Nations Conference on Trade and Development, and the World Bank.

Key Components ¹

A. Assets

1. *Direct investment*
 - 1.1 Equity capital and reinvested earnings
 - 1.2 Other capital²
2. *Portfolio investment*
 - 2.1 Equity securities
 - 2.2 Debt securities⁴
3. *Financial derivatives*
 - 3.1 Monetary authorities
 - 3.2 General government
 - 3.3 Banks
 - 3.4 Other sectors
4. *Other investment*
 - 4.1 Trade credits
 - 4.2 Loans
 - 4.3 Currency and deposits
 - 4.4 Other assets
5. *Reserve assets*
 - 5.1 Monetary gold
 - 5.2 SDRs
 - 5.3 Reserve position in the Fund
 - 5.4 Foreign exchange
 - 5.5 Other claims

B. Liabilities

1. *Direct investment*
 - 1.1 Equity capital and reinvested earnings
 - 1.2 Other capital³
2. *Portfolio investment*
 - 2.1 Equity securities
 - 2.2 Debt securities^{3,4}
3. *Financial derivatives*
 - 3.1 Monetary authorities
 - 3.2 General government
 - 3.3 Banks
 - 3.4 Other sectors
4. *Other investment*
 - 4.1 Trade credits³
 - 4.2 Loans³
 - 4.3 Currency and deposits³
 - 4.4 Other liabilities³

¹ Not all components are shown, such as those broken down by sector (monetary authorities, general government, banks, and other) and, in some cases, by maturity.

² Liabilities to affiliated enterprises, a component of other capital, are included in external debt.

³ Liabilities to direct investors, a component of other capital, are included in external debt.

⁴ Includes bonds, notes, and money market instruments.

ment (direct investment, portfolio investment, financial derivatives, other investment, and reserve assets) shown in Table 2. Also, the data in Table 3 reflect a country's IIP at the end of the reporting period, as opposed to transactions during the period shown in Table 2. Furthermore, unlike Table 2, which shows the value of financial transactions over a period, the valuation of a country's IIP shown in Table 3 reflects the value of financial transactions, valuation changes, and other adjustments at the end of the reporting period. The net IIP shown in Table 3 is derived by taking the difference between the value of reported external financial assets and that of reported external financial liabilities.

Data Codes

Tables 1, 2, and 3 show codes for each data category and component. As mentioned earlier, these codes were developed jointly by the Fund, the OECD, and Eurostat and are intended to facilitate international data reporting. The codes are designed for the standard components of balance of payments and international investment position data as defined in the *BPM5*, as well as for the OECD/Eurostat components for trade in services.

There are six digits/characters for each code shown in the yearbook. The first digit designates credit/debit/net, with the number "2" assigned to credit, "3" to debit, and "4" to net (the difference between credit and debit). The next three digits are used to classify balance of payments components. For example the current account is coded 993, the capital account, 994, and the financial account, 995. Readers may refer to Annex III for details of the coding scheme.

The fifth and sixth digits/characters of the code shown in the yearbook denote special features about specific data components. For example, in Table 1, the fifth character Z indicates that the component excludes exceptional financing; W is used to show where exceptional financing and use of Fund credit and loans from the Fund are excluded. Letters A, B, C, and D in Table 1 differentiate the various domestic sectors. In Table 2, the letters A, B, and C indicate nonstandard subcomponents, such as those for transportation (viz., passenger, freight, and other).

Credits and Debits

In Tables 1 and 2, the transactions data are shown as gross credit or gross debit entries in the current and capital accounts. In the financial account, they are shown as net credit or net debit entries (to reflect net changes in liabilities and net changes in assets). Credit entries, gross or net, are positive (but without a plus sign), and debit entries, gross or net, are negative (with a minus sign). Thus, decreases in assets and increases in liabilities (credits) are shown as pos-

itive, and increases in assets and decreases in liabilities (debits) are shown as negative.

Nil or Unavailable Entries

It is often difficult to discern in data reported by countries whether missing numbers are not available or are zero or insignificant. In the yearbook tables, dots (...) indicate that data are either not available, zero, or insignificant.

A Note on the Components of *Income* and *Other Investment*

In Table 2, Standard Presentation, the data reported by certain countries under "income" and "other investment" are at a level of aggregation that does not allow all the individual components within this category to be separately identified. In these cases, therefore, the aggregate data for certain subcategories cannot be derived by summing the components for these subcategories. The same principle applies to "other investment" shown in Table 3, International Investment Position.

Previously, in Volumes 46 through 49, the tables showed data for "other investment" (assets and liabilities) under "long-term" and "short-term." Beginning with volume 50, tables now show the data for "other investment" (assets and liabilities) for monetary authorities, general government, banks, and other sectors as totals (of long- and short-term financing) and as "of which: short-term." (For "loans, monetary authorities," tables show the data as totals, as "of which: use of Fund credit and loans from the Fund," and as "of which: short-term.") However, in Annex II, the Standard Presentation has not been modified.

Rounding of Figures

Most data in the tables are expressed in units of one million; users should not assume that any table showing smaller units necessarily contains more accurate figures. The unit is chosen to present the figures conveniently. Because of the calculation routines used, there may be rounding differences between an aggregate and the sum of its components.

Currency Conversion

Most of the balance of payments data reported to the Fund are expressed in national currencies or in U.S. dollars, although some countries report certain data in SDRs. To ease comparisons among countries, all balance of payments statements published in the yearbook are expressed in U.S. dollars. In addition, all countries' reported data on transactions with the Fund and transactions in SDRs are replaced with data obtained from the Fund records, which are kept in SDRs. This information is, in turn, converted to U.S. dollars.

For countries that do not report in U.S. dollars, balance of payments data are converted using the country conversion rates shown at the bottom of Table 1. These rates are normally the average exchange rates for a country for the relevant period taken from the *IFS*. For example, the *IFS* pages for the Netherlands contain line "rf," giving average rates for guilders per U.S. dollar. Conversions of transactions data from SDRs into U.S. dollars are made at the rates shown in line "sb" of the *IFS* pages for the United States. For countries reporting quarterly data in national currencies, annual U.S. dollar totals are obtained by aggregating the quarterly U.S. dollar figures.

For countries that do not report IIP data in U.S. dollars, data are converted using the country conversion rates shown at the bottom of Table 3. These rates are normally the end-of-period exchange rates for a country (line "ae") for the relevant period taken from *IFS*.

Readers may find more information on the exchange rates that are used in the introduction to *IFS*, Section 1.

II. CD-ROM Subscription

Statistics published in the yearbook are also available on CD-ROM. The number of countries and time series covered in the CD-ROM version is slightly larger than that appearing in the printed version of the yearbook, as is the number of periods for which data observations of time series are given. Quarterly data reported by countries are also available on the CD-ROM. Moreover, the CD-ROM includes updates and revisions of the data as they become available. Inquiries about the CD-ROM should be addressed to:

ANNEX III. IMF/OECD/EUROSTAT CODING SYSTEM FOR BALANCE OF PAYMENTS, INTERNATIONAL INVESTMENT POSITION, AND TRADE IN SERVICES¹

This coding system incorporates all the standard components and supplementary information lines of the fifth edition of the *Balance of Payments Manual*, as well as the components and memorandum items of the OECD-Eurostat classification for international trade in services.

The code consists of three components or sections as follows:

- <position> one decimal digit (selected from the range of 1 to 8) that describes the position of the subject in the international investment position (IIP)/balance of payments (BOP) accounts;
- <BOP topic> three decimal digits (selected from the range of integers from 100 to 998) that identify all the BOP, trade-in-services, and selected supplementary information components; and
- <tag> a user-defined component that may be of any length.

The complete code would take the form <position><topic><tag>. However, the tag component is optional. In contrast, the position and the topic components of the code are always required. Thus, a common implementation of the code will take the form <position><topic>.

The first section of the code describes the position in the IIP and BOP accounts and is defined as follows:

Code	Position in IIP/BOP Accounts
1	stock at the beginning of the period
2	credit flows
3	debit flows
4	net flows
5	price valuation adjustment
6	exchange rate valuation adjustment
7	other adjustments
8	stock at the end of the period
0	other

The first digit of the topic component identifies the section of the balance of payments as follows:

Code	Section of the accounts
1	goods
2	services
3	income and current transfers
4	capital account
5	direct investment
6	portfolio investment
7	other investment
8	reserves
9	aggregates, financial derivatives and supplementary information

The second and third digits of the component are generally sequential counts of the components with some gaps to allow for the possibility of additional codes being included at a later time. In addition, with the exception of the direct investment accounts, the second digit of the topic component takes the numbers 0, 1, 2, 3, or 4 for assets and 5, 6, 7, 8, or 9 for liabilities in the financial accounts.

Examples of data codes for "Other Investment" of the financial account are shown below.

Topic	Single Field			Multiple Field		
	Credit	Debit	Net	Credit	Debit	Net
Other investment	2700	3700	4700	2700	3700	4700
Liabilities	2750	3750	4750	2750	3750	4750
Loans	2762	3762	4762	2762	3762	4762
General govt.	2767	3767	4767	2767	3767	4767
Long-term	2768	3768	4768	2768	3768	4768
Short-term	2769	3769	4769	2769	3769	4769
Banks	2770	3770	4770	2770	3770	4770
Long-term	2771	3771	4771	2771	3771	4771
Short-term	2772	3772	4772	2772	3772	4772
Other sectors	2773	3773	4773	2773	3773	4773
Long-term	2774	3774	4774	2774	3774	4774
Short-term	2775	3775	4775	2775	3775	4775

When considering credits and debits for loans, the language that is commonly used is drawings and repayments. The *BPM5* recommends reporting of all drawings and repayments for long-term loans as a supplementary classification. Most other financial account items are presently collected by the Fund on a net basis. Nevertheless, the coding system provides for the identification of all flows on a credit, debit, and net basis.

¹ This is adopted from International Monetary Fund, "Balance of Payments Codes for Standard Components and Additional Items," Washington, D.C., March 3, 1995.

ANNEX V. CONCEPTUAL FRAMEWORK OF THE BALANCE OF PAYMENTS AND INTERNATIONAL INVESTMENT POSITION

This annex is reproduced from Chapter II of the BPM5. Please note that paragraph and page numbers cited in this annex refer to those that appear in the BPM5.

Definitions

12. Part one of this *Manual* deals with the conceptual framework of balance of payments accounts and the international investment position. Part one covers their relationship to national accounts; to concepts of residence, valuation, and time of recording; and to the unit of account and conversion.

13. The balance of payments is a statistical statement that systematically summarizes, for a specific time period, the economic transactions of an economy with the rest of the world. Transactions, for the most part between residents and nonresidents,¹ consist of those involving goods, services, and income; those involving financial claims on, and liabilities to, the rest of the world; and those (such as gifts) classified as transfers, which involve offsetting entries to balance—in an accounting sense—one-sided transactions. (See paragraph 28.)² A transaction itself is defined as an economic flow that reflects the creation, transformation, exchange, transfer, or extinction of economic value and involves changes in ownership of goods and/or financial assets, the provision of services, or the provision of labor and capital.

14. Closely related to the flow-oriented balance of payments framework is the stock-oriented international investment position. Compiled at a specified date such as year end, this investment position is a statistical statement of (i) the value and composition of the stock of an economy's financial assets or the economy's claims on the rest of the world, and (ii) the value and composition of the stock of an economy's liabilities to the rest of the world. In some instances, it may be of analytic interest to compute the difference between the two sides of the balance sheet. The calculation would provide a measure of the net position, and the measure would be equivalent to that portion of an economy's net worth attributable to, or derived from, its relationship with the rest of the world. A change in stocks during any defined period can be attributable to transactions (flows); to valuation changes reflecting changes in exchange rates, prices, etc.; or to other adjustments (e.g., uncompensated seizures). By contrast, balance of payments accounts reflect only transactions.

¹The exceptions to the resident/nonresident basis of the balance of payments are the exchange of transferable foreign financial assets between resident sectors and, to a lesser extent, the exchange of transferable foreign financial liabilities between nonresidents. (See paragraph 318.)

²The definitions and classifications of international accounts presented in this *Manual* are intended to facilitate reporting of data on international transactions to the Fund. These definitions and classifications do not purport to give effect to, or interpret, various provisions (which pertain to the legal characterization of official action or inaction in relation to such transactions) of the *Articles of Agreement of the International Monetary Fund*.

Principles and Concepts

15. The remainder of this chapter deals with the conceptual framework of international accounts, that is, the set of underlying principles and conventions that ensure the systematized and coherent recording of international transactions and stocks of foreign assets and liabilities. Relevant aspects of these principles, together with practical considerations and limitations, will be thoroughly discussed in subsequent chapters.

Double Entry System

16. The basic convention applied in constructing a balance of payments statement is that every recorded transaction is represented by two entries with equal values. One of these entries is designated a credit with a positive arithmetic sign; the other is designated a debit with a negative sign. In principle, the sum of all credit entries is identical to the sum of all the debit entries, and the net balance of all entries in the statement is zero.

17. In practice, however, the accounts frequently do not balance. Data for balance of payments estimates often are derived independently from different sources; as a result, there may be a summary net credit or net debit (i.e., net errors and omissions in the accounts). A separate entry, equal to that amount with the sign reversed, is then made to balance the accounts. Because inaccurate or missing estimates may be offsetting, the size of the net residual cannot be taken as an indicator of the relative accuracy of the balance of payments statement. Nonetheless, a large, persistent residual that is not reversed should cause concern. Such a residual impedes analysis or interpretation of estimates and diminishes the credibility of both. A large net residual may also have implications for interpretation of the investment position statement. (See the discussion in Chapter XXIII.)

18. Most entries in the balance of payments refer to transactions in which economic values are provided or received in exchange for other economic values; those values consist of real resources (goods, services, and income) and financial items. Therefore, the offsetting credit and debit entries called for by the recording system are often the result of equal amounts having been entered for the two items exchanged. When items are given away rather than exchanged, or when a recording is one-sided for other reasons, special types of entries—referred to as *transfers*—are made as the required offsets. (The various kinds of entries that may be made in the balance of payments are discussed in paragraphs 26 through 31.)

19. Under the conventions of the system, a compiling economy records credit entries (i) for real resources denoting exports and (ii) for financial items reflecting reductions in an economy's foreign assets or increases in an economy's foreign liabilities. Conversely, a compiling economy records debit entries (i) for real resources denoting imports and (ii) for financial items reflecting increases in assets or decreases in liabilities. In other words, for assets—whether

ANNEX V. CONCEPTUAL FRAMEWORK OF THE BALANCE OF PAYMENTS AND INTERNATIONAL INVESTMENT POSITION *(continued)*

real or financial—a positive figure (credit) represents a decrease in holdings, and a negative figure (debit) represents an increase. In contrast, for liabilities, a positive figure shows an increase, and a negative figure shows a decrease. Transfers are shown as credits when the entries to which they provide the offsets are debits and as debits when those entries are credits.

20. The content or coverage of a balance of payments statement depends somewhat on whether transactions are treated on a gross or on a net basis. The recommendations in this *Manual* specify which transactions should be recorded gross or net. The recommendations are appropriately reflected in the list of standard components and in suggested supplementary presentations.

Concepts of Economic Territory, Residence, and Center of Economic Interest

21. Identical concepts of economic territory, residence, and center of economic interest are used in this *Manual* and in the *SNA*. (These concepts are discussed fully in Chapter IV.) Economic territory may not be identical with boundaries recognized for political purposes. A country's economic territory consists of a geographic territory administered by a government; within this geographic territory, persons, goods, and capital circulate freely. For maritime countries, geographic territory includes any islands subject to the same fiscal and monetary authorities as the mainland.

22. An institutional unit has a center of economic interest and is a resident unit of a country when, from some location (dwelling, place of production, or other premises) within the economic territory of the country, the unit engages and intends to continue engaging (indefinitely or for a finite period) in economic activities and transactions on a significant scale. (One year or more may be used as a guideline but not as an inflexible rule.)

Principles for Valuation and Time of Recording

23. A uniform basis of valuation for the international accounts (both real resources and financial claims and liabilities) is necessary for compiling, on a consistent basis, any aggregate of individual transactions and an asset/liability position consistent with such transactions. This *Manual* generally uses, as the basis of transaction valuations, actual market prices agreed upon by transactors. (This practice is consistent with that of the *SNA*.) Conceptually, all stocks of assets and liabilities are valued at market prices prevailing at the time to which the international investment position relates. A full exposition of valuation principles; recommended practices; limitations; and the valuation of transfers, financial items, and stocks of assets and liabilities appears in Chapter V. (The exposition includes cases in which conditions may not allow for the existence or assumption of market prices.)

24. In the *Manual* and the *SNA*, the principle of accrual accounting governs the *time of recording* for transactions. Therefore, transactions are recorded when economic value

is created, transformed, exchanged, transferred, or extinguished. Claims and liabilities arise when there is a change in ownership. The change may be legal or physical (economic). In practice, when a change in ownership is not obvious, the change may be proxied by the time that parties to a transaction record it in their books or accounts. (The recommended timing and conventions for various balance of payments entries, together with exceptions to and departures from the change of ownership principle, are covered in Chapter VI.)

Concept and Types of Transactions

25. Broadly speaking, changes in economic relationships registered by the balance of payments stem primarily from dealings between two parties. These parties are, with one exception (see footnote 1), a resident and a nonresident, and all dealings of this kind are covered in the balance of payments. Recommendations for specific entries are embodied in the list of standard components (see Chapter VIII) and are spelled out in detail from Chapter IX onward.

26. Despite the connotation, the balance of payments is not concerned with *payments*, as that term is generally understood, but with *transactions*. A number of international transactions that are of interest in a balance of payments context may not involve the payment of money, and some are not paid for in any sense. The inclusion of these transactions, in addition to those matched by actual payments, constitutes a principal difference between a balance of payments statement and a record of foreign payments.

Exchanges

27. The most numerous and important transactions found in the balance of payments may be characterized as *exchanges*. A transactor (economic entity) provides an economic value to another transactor and receives in return an equal value. The economic values provided by one economy to another may be categorized broadly as real resources (goods, services, income) and financial items. The parties that engage in the exchange are residents of different economies, except in the case of an exchange of foreign financial items between resident sectors. The provision of a financial item may involve not only a change in the ownership of an existing claim or liability but also the creation of a new claim or liability or the cancellation of existing ones. Moreover, the terms of a contract pertaining to a financial item (e.g., contractual maturity) may be altered by agreement between the parties. Such a case is equivalent to fulfillment of the original contract and replacement by a contract with different terms. All exchanges of these kinds are covered in the balance of payments.

Transfers

28. Transactions involving *transfers* differ from exchanges in that one transactor provides an economic value to another transactor but does not receive a quid pro quo on which, according to the conventions and rules adopted for the system, economic value is placed. This absence of value

ANNEX V. CONCEPTUAL FRAMEWORK OF THE BALANCE OF PAYMENTS AND INTERNATIONAL INVESTMENT POSITION *(concluded)*

on one side is represented by an entry referred to as a *transfer*. Such transfers (economic value provided and received without a quid pro quo) are shown in the balance of payments. **Current transfers** are included in the **current account** (see Chapter XV) and *capital transfers* appear in the **capital account**. (See Chapter XVII.)

Migration

29. Because an economy is defined in terms of the economic entities associated with its territory, the scope of an economy is likely to be affected by changes in entities associated with the economy.

30. Migration occurs when the residence of an individual changes from one economy to another because the person moves his or her abode. Certain movable, tangible assets owned by the migrant are, in effect, imported into the new economy. The migrant's immovable assets and certain movable, tangible assets located in the old economy become claims of the new economy on the old economy. The migrant's claims on, or liabilities to, residents of an economy other than the new economy become foreign claims or liabilities of the new economy. The migrant's claims on, or liabilities to, residents of the new economy cease to be claims on, or liabilities to, the rest of the world for any economy. The net sum of all these shifts is equal to the net worth of the migrant, and his or her net worth must also be recorded as an offset if the other shifts are recorded. These entries are made in the balance of payments where the offset is conventionally included with transfers.

Other imputed transactions

31. In some instances, transactions may be imputed and entries may be made in balance of payments accounts when no actual flow occurs. Attribution of reinvested earnings to foreign direct investors is an example. The earnings of a foreign subsidiary or branch include earnings attributable to a direct investor. The earnings, whether distributed or reinvested in the enterprise, are proportionate to the direct investor's equity share in the enterprise. Reinvested earnings are recorded as part of direct investment income. An offset-

ting entry, with opposite sign, is made in the *financial account*, under direct investment, reinvested earnings, to reflect the direct investor's increased investment in the foreign subsidiary or branch. (Reinvested earnings are discussed in Chapters XIV and XVIII.)

Changes Other Than Transactions

Reclassification of claims and liabilities

32. The classification of financial items in the *Manual* reflects characteristics designed to reveal the motivation of creditor or debtor. Changes in motivation affect the characteristics, and financial items are subject to reclassification in accordance with such changes. A case in point is the distinction drawn between *direct investment* and other types of investment. For example, several independent holders of *portfolio investment* (in the form of corporate equities issued by a single enterprise abroad) may form an associated group to have a lasting, effective voice in the management of the enterprise. Their holdings will then meet the criteria for *direct investment*, and the change in the status of the investment could be recorded as a reclassification. Such a reclassification would be reflected, at the end of the period during which it occurred, in the international investment position but not in the balance of payments. Similarly, claims on nonresidents can come under, or be released from, the control of resident monetary authorities. In such cases, there are reclassifications between *reserve assets* and assets other than reserves.

Valuation changes

33. The values of real resources and financial items are constantly subject to change stemming from either or both of two causes: (i) The price at which transactions in a certain type of item customarily take place may undergo alteration in terms of the currency in which that price is quoted. (ii) The exchange rate for the currency in which the price is quoted may change in relation to the unit of account that is being used. Valuation changes are not included in the balance of payments but are included in the international investment position.

ANNEX VI. CLASSIFICATION AND STANDARD COMPONENTS OF THE BALANCE OF PAYMENTS

This annex is reproduced from Chapter VIII of the BPM5. Please note that paragraph and page numbers cited in this annex refer to those that appear in the BPM5.

Structure and Classification

139. Part two of this *Manual* deals with the structure and classification of balance of payments accounts and the international investment position. Part two encompasses the standard components of both sets of accounts and contains discussions and elaboration of the **current account**, the **capital and financial account**, selected supplementary information, and the international investment position.

140. Balance of payments statistics must be arranged within a coherent structure to facilitate their utilization and adaptation for multiple purposes—policy formulation, analytical studies, projections, bilateral comparisons of particular components or total transactions, regional and global aggregations, etc. (See paragraph 7.)

141. The standard classification and the list of components reflect conceptual and practical considerations, take into account views expressed by national balance of payments experts, and are in general concordance with the *SNA* and with harmonization of the expanded classification of international transactions in services with the Central Product Classification (CPC). (See Appendix III.)

142. The scheme also reflects efforts to link the structure of the **capital account** to income accounts and to the international investment position classification. The scheme is designed as a flexible framework to be used by many countries in the long-term development of external statistics. Some countries may not be able to provide data for many items; other countries may be able to provide additional data.

Standard Components

143. The determination of standard components (see list at end of this chapter) is based on a number of considerations. Those that have been given the greatest weight are:

The item should exhibit distinctive behavior. The economic factor or factors that influence the item should be different from those that influence other items, or the item should respond differently to the same factor or combination. This response to economic influences is what the balance of payments purports to make evident.

The item should be important for a number of countries. Importance may be defined as a function of behavior (unusual variability, for example) or as absolute size.

It should be possible to collect statistics for the item without undue difficulty. However, the desirability of collection should be evaluated according to the two previous criteria.

The item should be needed on a separate basis for other purposes, such as incorporation into, or reconciliation with, the national accounts. The list of stan-

dard components should not be unduly long. A large number of countries, including many that are statistically less advanced, are asked to report uniformly on the components.

To the extent practicable, standard components should be in concordance with, and apply to, other IMF statistical systems, the *SNA*, and, for **services** in particular, the CPC.

144. The list of standard components carries no implication that recommendations made in this *Manual* are intended to inhibit countries from compiling and publishing additional data of national importance. IMF requests for information will not be limited to standard components when further details are needed to understand the circumstances of particular countries or to analyze new developments. Supplementary information can also be most useful for verifying and reconciling the statistics of partner countries and, for example, analyzing exceptional financing transactions. (See the table entitled *Selected Supplementary Information* at the end of this chapter.) IMF staff will, from time to time, consult with countries to decide on the reporting of additional details.

145. Few countries are likely to have significant information to report for every standard component. Furthermore, several components may be available only in combination, or a minor component may be grouped with one that is more significant. The standard components should nevertheless be reported to the IMF as completely and accurately as possible. National compilers are in better positions than IMF staff to make estimates and adjustments for those components that do not exactly correspond to the basic series of the compiling economy.

Net Errors and Omissions

146. Application of the principles recommended in this *Manual* should result in a consistent body of positive and negative entries with a net (conceptual) total of zero. In practice, however, when all actual entries are totaled, the resulting balance will almost inevitably show a net credit or a net debit. That balance is the result of errors and omissions in compilation of statements. Some of the errors and omissions may be related to recommendations for practical approximation to principles.

147. In balance of payments statements, the standard practice is to show separately an item for net errors and omissions. Labeled by some compilers as a balancing item or statistical discrepancy, that item is intended as an offset to the overstatement or understatement of the recorded components. Thus, if the balance of those components is a credit, the item for net errors and omissions will be shown as a debit of equal value, and vice versa.

148. Some of the errors and omissions that occur in the course of compilation usually offset one another. Therefore, the size of the residual item does not necessarily provide any indication of the overall accuracy of the statement. Nonetheless, interpretation of the statement is hampered by a large net residual.

ANNEX VI. CLASSIFICATION AND STANDARD COMPONENTS OF THE BALANCE OF PAYMENTS *(continued)*

Major Classifications

149. The standard components, which are listed at the end of this chapter, are comprised of two main groups of accounts:

The **current account** refers to *goods and services, income, and current transfers*.

The **capital and financial account** refers to (i) *capital transfers and acquisition/disposal of non-produced, nonfinancial assets* and (ii) financial assets and liabilities.

This arrangement is based on common historical usage in most countries and on a major change introduced in this *Manual*. The former capital account has been relabeled **capital and financial account**. Reflecting harmonization with the *SNA*, this change introduces that system's distinction between *capital transfers* and *current transfers* in balance of payments accounts and concordance of the account with *SNA* capital and financial accounts.

150. **Current account** entries for most items in the list of standard components should show gross debits and credits. Most **capital and financial account** entries should be made on a net basis; that is, each component is shown only as a credit or a debit. (The recommended treatments for specific items and exceptions are discussed in appropriate chapters.) Inflows of real resources, increases in financial assets, and decreases in liabilities should be shown as debits; outflows of real resources, decreases in financial assets, and increases in liabilities should be shown as credits. Transfers, both in sections 1.C and 2.A, should be numerically equal with opposite sign to the entries for which they provide offsets.

Detailed Classifications

151. The following classifications of standard components have been developed in accordance with the criteria set out in paragraph 143. The structure and characteristics of the **current account** and the **capital and financial account** and significant changes from the fourth to the fifth edition of the *Manual* are discussed in chapters IX and XVI, respectively. The standard components of the **current account** are described fully in chapters X through XV, and those of the **capital and financial account** are covered in chapters XVII through XXI, and in *Financial Derivatives, A Supplement to the Fifth Edition (1993) of the Balance of Payments Manual, 2000*.

Current Account (1.)

152. Covered in the **current account** are all transactions (other than those in financial items) that involve economic values and occur between resident and non-resident entities. Also covered are offsets to current economic values provided or acquired without a quid

pro quo. Specifically, the major classifications are *goods and services, income, and current transfers*.

Goods and services (1.A.)

Goods (1.A.a.)

153. *General merchandise* covers most movable goods that are exported to, or imported from, non-residents by residents and that, with a few specified exceptions, undergo changes in ownership (actual or imputed).

154. *Goods for processing* cover exports (or imports, in the compiling economy) of goods crossing the frontier for processing abroad and subsequent reimport (or export, in the compiling economy) of the goods, which are valued on a gross basis before and after processing. This item is an exception to the change of ownership principle.

155. *Repairs on goods* cover repair activity on goods provided to or received from nonresidents on ships, aircraft, etc. Although the physical movement of these goods is similar to that described in paragraph 154, the repairs are valued at the prices (fees paid or received) of the repairs and not at the gross values of the goods before and after repairs are made.

156. *Goods procured in ports by carriers* cover all goods (such as fuels, provisions, stores, and supplies) that resident/nonresident carriers—air, shipping, etc.—procure abroad (in the compiling economy). The classification does not cover the provision of auxiliary services (towing, maintenance, etc.), which are covered under *transportation*.

157. *Nonmonetary gold* covers exports and imports of all gold that is not held as a reserve asset (monetary gold) by the authorities. *Nonmonetary gold* is treated the same as any other commodity and is subdivided, when feasible, into gold held as a store of value and other (industrial) gold.

Services (1.A.b.)

158. *Transportation* covers most of the services, performed by residents for nonresidents and vice versa, that were included in shipment and other transportation in the fourth edition of the *Manual*. However, freight insurance is now included with *insurance services* rather than with *transportation*. *Transportation* includes freight and passenger transportation by all modes of transportation and other distributive and auxiliary services, including rentals of transportation equipment with crew. Certain exceptions are noted in chapters X, XI, and XIII.

159. *Travel* covers goods and services—including those related to health and education—acquired from an economy by nonresident travelers (including excursionists) for business purposes and personal use during their visits (of less than one year) in that economy. *Travel* excludes international passenger services, which are included in *transportation*. Students and

ANNEX VI. CLASSIFICATION AND STANDARD COMPONENTS OF THE BALANCE OF PAYMENTS *(continued)*

medical patients are treated as travelers, regardless of their length of stay. Certain others—military and embassy personnel and nonresident workers—are not regarded as travelers. However, expenditures by nonresident workers are included in *travel*, while those of military and embassy personnel are included in *government services, n.i.e.* These cases are noted in chapters XII and XIII.

160. *Communications services* cover communications transactions between residents and nonresidents. Such services comprise postal, courier, and telecommunications services (transmission of sound, images, and other information by various modes and associated maintenance provided by/for residents by/for nonresidents).

161. *Construction services* cover construction and installation project work that is, on a temporary basis, performed abroad/in the compiling economy or in extraterritorial enclaves by resident/nonresident enterprises and their personnel. Such work does not include that undertaken by a foreign affiliate of a resident enterprise or by an unincorporated site office that, if it meets certain criteria, is equivalent to a foreign affiliate. Such residency aspects are covered in chapters IV and XIII.

162. *Insurance services* cover the provision of insurance to nonresidents by resident insurance enterprises and vice versa. This item comprises services provided for freight insurance (on goods exported and imported), services provided for other types of direct insurance (including life and non-life), and services provided for reinsurance. (For the method of calculating the value of insurance services, see paragraphs 256 and 257.)

163. *Financial services* (other than those related to insurance enterprises and pension funds) cover financial intermediation services and auxiliary services conducted between residents and nonresidents. Included are commissions and fees for letters of credit, lines of credit, financial leasing services, foreign exchange transactions, consumer and business credit services, brokerage services, underwriting services, arrangements for various forms of hedging instruments, etc. Auxiliary services include financial market operational and regulatory services, security custody services, etc.

164. *Computer and information services* cover resident/nonresident transactions related to hardware consultancy, software implementation, information services (data processing, database, news agency), and maintenance and repair of computers and related equipment.

165. *Royalties and license fees* cover receipts (exports) and payments (imports) of residents and nonresidents for: (i) the authorized use of intangible nonproduced, nonfinancial assets and proprietary rights such as trademarks, copyrights, patents, processes, techniques, designs, manufacturing rights, franchises,

etc. and (ii) the use, through licensing agreements, of produced originals or prototypes, such as manuscripts, films, etc.

166. *Other business services* provided by residents to nonresidents and vice versa cover merchanting and other trade-related services; operational leasing services; and miscellaneous business, professional, and technical services. (See the table on *Selected Supplementary Information* following this chapter and paragraphs 261 through 264 for details.)

167. *Personal, cultural, and recreational services* cover (i) audiovisual and related services and (ii) other cultural services provided by residents to nonresidents and vice versa. Included under (i) are services associated with the production of motion pictures on films or video tape, radio and television programs, and musical recordings. (Examples of these services are rentals and fees received by actors, producers, etc. for productions and for distribution rights sold to the media.) Included under (ii) are other personal, cultural, and recreational services, such as those associated with libraries, museums, and other cultural and sporting activities.

168. *Government services, n.i.e.* cover all services (such as expenditures of embassies and consulates) associated with government sectors or international and regional organizations and not classified under other items.

Income (1.B.)

169. *Compensation of employees* covers wages, salaries, and other benefits, in cash or in kind, and includes those of border, seasonal, and other nonresident workers (e.g., local staff of embassies).

170. *Investment income* covers receipts and payments of income associated, respectively, with holdings of external financial assets by residents and with liabilities to nonresidents. *Investment income* consists of direct investment income, portfolio investment income, and other investment income. The direct investment component is broken down into income on equity (dividends, branch profits, and reinvested earnings) and income on debt (interest); portfolio investment income is broken down into income on equity (dividends) and income on debt (interest); other investment income covers interest earned on other capital (loans, etc.) and, in principle, imputed income to households from net equity in life insurance reserves and in pension funds.

Current transfers (1.C.)

171. *Current transfers* are distinguished from *capital transfers*, which are included in the **capital and financial account** in accordance with the *SNA* treatment of transfers. Transfers are the offsets to changes, which take place between residents and nonresidents, in ownership of real resources or financial items and, whether the changes are voluntary or compulsory, do

ANNEX VI. CLASSIFICATION AND STANDARD COMPONENTS OF THE BALANCE OF PAYMENTS *(continued)*

not involve a quid pro quo in economic value. **Current transfers** consist of all transfers that **do not involve** (i) transfers of ownership of fixed assets; (ii) transfers of funds linked to, or conditioned upon, acquisition or disposal of fixed assets; (iii) forgiveness, without any counterparts being received in return, of liabilities by creditors. All of these are *capital transfers*. **Current transfers** include those of general government (e.g., current international cooperation between different governments, payments of current taxes on income and wealth, etc.) and other transfers (e.g., workers' remittances, premiums—less service charges, and claims on non-life insurance). A full discussion of the distinction between **current transfers** and *capital transfers* appears in Chapter XV; see also paragraphs 175 and 344.

Capital and Financial Account (2.)

172. The **capital and financial account** has two major components—the *capital account* and the *financial account*—that are in concordance with those same accounts in the *SNA*. Assets represent claims on nonresidents, and liabilities represent indebtedness to nonresidents. The two parties to a transaction in assets or liabilities are usually a resident and a nonresident but, in some instances, both parties may both be residents or nonresidents. (See paragraph 318.)

173. All valuation and other changes in foreign assets and liabilities, which do not reflect transactions (see paragraph 310), are excluded from the **capital and financial account** but are reflected in the international investment position. Supplementary statements identify certain items that are of analytical interest and that affect various accounts. Examples of such items are liabilities constituting foreign authorities' reserves and exceptional financing transactions, which are discussed in Chapter XXII.

174. Classification of the *financial account* and the income components of the **current account** are interrelated and must be consistent to facilitate analysis, to form an effective link between the balance of payments and the international investment position, and to be compatible with the *SNA* and other IMF statistical systems.

Capital account (2.A.)

175. The major components of the **capital account** are *capital transfers* and *acquisition/disposal of nonproduced, nonfinancial assets*. *Capital transfers* consist of those involving transfers of ownership of fixed assets; transfers of funds linked to, or conditional upon, acquisition or disposal of fixed assets; or cancellation, without any counterparts being received in return, of liabilities by creditors. *Capital transfers* include two components: (i) general government, subdivided into debt forgiveness and other, and (ii) other, subdivided into migrants' transfers, debt forgiveness, and other

transfers. (See Chapter XV for discussion of the distinction between *capital transfers* and **current transfers**. *Acquisition/disposal of nonproduced, nonfinancial assets* largely covers intangibles, such as patented entities, leases or other transferable contracts, goodwill, etc. This item does not cover land in a specific economic territory but may include the purchase or sale of land by a foreign embassy. (See paragraph 312.)

Financial account (2.B.)

176. The classification of standard components in the **financial account** is based on these criteria:

All components are classified according to type of investment or by functional breakdown (*direct investment*, *portfolio investment*, *financial derivatives*, *other investment*, *reserve assets*).

For the category of *direct investment*, there are directional distinctions (abroad or in the reporting economy) and for the equity capital, other capital.

For the categories of *portfolio investment*, *financial derivatives*, and *other investment*, there are the customary asset/liability distinctions.

Particularly significant for *portfolio investment* and *other investment* is the distinction by type of instrument (equity or debt securities, trade credits, loans, currency and deposits, other assets or liabilities). In this *Manual*, traditional and new money market and other financial instruments are included in *portfolio investment*.

For *portfolio investment*, *financial derivatives*, and *other investment*, there are distinctions by sector of the domestic creditor for assets or by sector of the domestic debtor for liabilities. These distinctions serve to facilitate links with the income accounts, the international investment position, the *SNA*, and other statistical systems.

The traditional distinction, which is based on original contractual maturity of more than one year or one year or less, between long- and short-term assets and liabilities applies only to *other investment*. In recent years, the significance of this distinction has clearly diminished for many domestic and international transactions. Consequently, the long- and short-term distinction is accorded less importance in the *SNA* and in this *Manual* than in previous editions. However, because the maturity factor remains important for specific purposes—analysis of external debt, for example—it is retained in the *Manual* for *other investment*.

177. *Direct investment*—reflecting the lasting interest of a resident entity in one economy (direct investor) in an entity resident in another economy (direct investment enterprise)—covers all transactions between direct investors and direct investment enter-

ANNEX VI. CLASSIFICATION AND STANDARD COMPONENTS OF THE BALANCE OF PAYMENTS *(concluded)*

prises. That is, *direct investment* covers the initial transaction between the two and all subsequent transactions between them and among affiliated enterprises, both incorporated and unincorporated. Direct investment transactions occurring abroad and in the reporting economy are subclassified into equity capital, reinvested earnings, other capital (intercompany debt transactions). For equity capital and other capital, claims on and liabilities to affiliated enterprises and to direct investors are distinguished. Transactions between affiliated banks and between other affiliated financial intermediaries are limited to equity and permanent debt capital. (See paragraph 372 of the fifth edition of the *Balance of Payments Manual*.)

178. *Portfolio investment* covers transactions in equity securities and debt securities; the latter are subclassified, into bonds and notes and money market instruments. Various new financial instruments, other than financial derivatives, are covered under appropriate instrument classifications. (Transactions covered under *direct investment* and *reserve assets* are excluded.)

179. The *financial derivatives* category covers financial instruments that are linked to other specific financial instruments, indicators, or commodities and through which specific financial risks (such as interest rate risk, foreign exchange risk, equity and commodity price risks, credit risk, etc.) can, in their own right, be traded in financial markets. Transactions in financial derivatives should be treated as separate transactions rather than as integral parts of the values of the underlying transactions to which they are linked.

180. *Other investment* covers short- and long-term trade credits; loans (including use of Fund credit, loans from the Fund, and loans associated with financial leases); currency and deposits (transferable and other—such as savings and term deposits, savings and loan shares, shares in credit unions, etc.); and other accounts receivable and payable. (Transactions covered under *direct investment* are excluded.)

181. *Reserve assets* cover transactions in those assets that are considered, by the monetary authorities of an economy, to be available for use in meeting balance of payments and, in some instances, other needs. Such availability is not closely linked in principle to formal criteria such as ownership or currency of denomination. The items covered are monetary gold, SDRs, reserve position in the Fund, foreign exchange assets (currency, deposits, and securities), and other claims.

182. Coverage and identification of *reserve asset* components are linked to an analytic concept, are in part judgmental, and are not always amenable to application of objective, formal criteria or clear rankings as to conditionality and other considerations. In contrast to the treatment in the fourth edition of the *Manual*, valuation changes in *reserve assets* are excluded, along with counterparts to such changes, in the fifth edition. Also excluded are the allocation/cancellation of SDRs, the monetization/demonetization of gold, and counterpart entries. These changes, which do not constitute transactions, are reflected in the international investment position.

INTRODUCTION

Le volume 55 du *Balance of Payments Statistics Yearbook* (Annuaire de statistiques de balance des paiements) (l'annuaire), publié par le Fonds monétaire international (FMI), présente les données de balance des paiements que lui ont communiqué ses pays membres. Le FMI est redevable à ces derniers d'avoir collaboré au présent ouvrage en lui fournissant ces informations. Pour certains pays, les données sont parfois complétées par des renseignements que les économistes ont tirés d'autres sources.

Le présent volume de l'annuaire se compose de trois parties. La première présente les données de la balance des paiements et de la position extérieure globale (PEG) pour les divers pays. La deuxième contient des totaux régionaux et mondiaux pour les principales composantes de la balance des paiements. La troisième partie fournit une description technique des méthodes de certains pays qui ont communiqué les données. La première partie constitue une publication distincte, et les deuxième et troisième parties sont reliées ensemble.

Les caractéristiques introduites dans les volumes 46 à 54 sont conservées dans le présent ouvrage. Comme dans le volume 46, les données de balance des paiements sont présentées conformément à la classification des composantes types adoptées dans la cinquième édition du *Manuel de la balance des paiements* (MBP5)¹. Il convient toutefois de noter que les composantes types ont été modifiées par suite de la publication, en 2000, puis de la modification en 2002, de l'ouvrage intitulé «*Dérivés financiers — Supplément à la cinquième édition (1993) du Manuel de la balance des paiements*» (le Supplément). À compter de cette date, toute référence au MBP5 renvoie également au Supplément et à son addendum. Conformément aux recommandations formulées dans l'addendum, le présent annuaire rend compte de la décision prise par le Comité d'experts de la balance des paiements créé sous les auspices du FMI (Comité d'experts) qui préconise d'inclure les transactions sur dérivés financiers effectuées par les entreprises apparentées dans la composante dérivés fi-

nanciers de la balance des paiements et de la position extérieure globale (PEG). Parallèlement, comme pour le volume 47, les données sur la PEG sont elles aussi présentées conformément au MBP5, et la troisième partie de l'annuaire présente une analyse détaillée des méthodologies, méthodes de calcul et sources de données utilisées par la plupart des pays compris dans l'annuaire. Le MBP5² apporte un certain nombre de changements à la méthodologie utilisée pour l'établissement des données de balance des paiements. Ces changements sont décrits en détail au chapitre I du MBP5. Depuis la publication du volume 46, une série de codes accompagne les données présentées dans le présent Annuaire conformément à la classification des composantes types du MBP5. Ces codes ont été mis au point conjointement par le FMI, l'Organisation de coopération et de développement économiques (OCDE) et l'Office statistique de l'Union européenne (Eurostat). La structure de ces codes est décrite en annexe. En outre, à partir du volume 46, l'annuaire ne présente plus de données trimestrielles de balance des paiements pour les pays qui communiquent ce type de statistiques au FMI. Ces données trimestrielles sont publiées dans l'édition mensuelle de *Statistiques financières internationales* (SFI), et sont également disponibles sur le CD-ROM de balance des paiements.

La conversion des données par les services du FMI a permis de présenter, selon la classification retenue dans le MBP5, les statistiques de la base de données du FMI qui se rapportent à des périodes antérieures, ainsi que les données communiquées pour des périodes plus récentes par les pays membres qui continuent à suivre les recommandations de la quatrième édition du *Manuel de la balance des paiements*. En 1995, les services du FMI ont mis au point des formules de conversion permettant de mettre sous une forme à peu près conforme à la méthodologie et à la présentation retenues dans la cinquième édition les données de balance des paiements reçues de chaque pays et figurant dans la base de données du FMI. Une fois converties, les données ont été soumises à l'examen des autorités des pays en question, et les observations formulées ont été incorporées dans la nouvelle base de données du MBP5. En 1996, avec la collaboration des autorités nationales, les services du FMI ont procédé d'une manière analogue pour présenter conformément au MBP5 les données sur la PEG établies selon les recommandations de la quatrième édition. En principe, la PEG d'un pays est un relevé du stock de ses avoirs et engagements financiers extérieurs.

La troisième partie présente une description technique des méthodologies, méthodes de calcul et

¹Le volume 1 de l'annuaire, paru en 1949, était fondé sur la première édition du Manuel de la balance des paiements du FMI, publiée en 1948; les volumes 2 à 12, sur la deuxième édition du Manuel, publiée en 1950; les volumes 13 à 23, sur la troisième édition du Manuel, publiée en 1961; et les volumes 24 à 29, sur la troisième édition, ainsi que sur le Manuel de la balance des paiements : supplément à la troisième édition, paru en 1973. Les volumes 30 à 45 ont été établis sur la base des directives de la quatrième édition du Manuel, publiée en 1977.

²Fonds monétaire international, Manuel de la balance des paiements, cinquième édition, Washington, Septembre 1993, et Dérivés financiers — Supplément à la cinquième édition (1993) du Manuel de la balance des paiements, Washington, 2000.

sources de données qui se fonde en grande partie sur les renseignements que les pays transmettent au FMI. Les descriptions ont pour but de mieux renseigner les utilisateurs sur la couverture et les limitations des données publiées pour les différents pays dans cet annuaire, de même que les statisticiens sur les sources de données et méthodes utilisées par leurs homologues étrangers. En outre, des renseignements détaillés sont mis à la disposition des statisticiens sur les pratiques d'établissement nationales des statistiques d'investissement direct suite à l'enquête sur l'application des normes méthodologiques concernant l'investissement direct menée conjointement en 2001 par le FMI et l'OCDE. Les statisticiens peuvent consulter la base de métadonnées sur l'investissement direct à l'adresse <http://www.imf.org/external/np/sta/di/mdb97.htm>.

Le reste de la présente introduction s'articule comme suit :

- La section I décrit les caractéristiques fondamentales des tableaux publiés dans la première partie du présent volume de l'annuaire. (Les lecteurs trouveront dans les deuxième et troisième parties des précisions sur le champ d'application des données.)
- La section II donne des indications sur l'abonnement aux données de balance des paiements du FMI sur disques optiques compacts (CD-ROM).
- Il y a six annexes. L'annexe I contient une présentation analytique des composantes de la balance des paiements (accompagnées des codes correspondants) sous forme résumée. L'annexe II présente les composantes types définies dans le *MBP5* (et les codes correspondants). L'annexe III explique le système de codage des données. L'annexe IV présente les composantes types de la PEG, telles qu'elles ressortent du *MBP5*. L'annexe V est consacrée au cadre conceptuel de la balance des paiements. L'annexe VI décrit le champ couvert par les principales composantes de la balance des paiements, telles qu'elles sont définies dans le *MBP5*.

I. Première partie de l'annuaire : données relatives aux pays

La première partie de l'annuaire présente les pages consacrées aux divers pays suivant un ordre alphabétique. Il convient de noter toutefois que, dans la présente publication, le terme «pays» ne désigne pas toujours une entité territoriale constituant un État tel qu'il est défini selon l'usage et le droit internationaux; ce terme recouvre également la zone euro, l'Union monétaire des Caraïbes orientales et certaines entités territoriales qui ne sont pas des

États souverains mais sur lesquelles des données statistiques sont disponibles séparément au niveau international.

Pour la plupart des pays, les données de balance des paiements se présentent sous la forme de deux tableaux. Le tableau 1 constitue un résumé analytique des données plus détaillées contenues au tableau 2, et présente toute une série de composantes de la balance des paiements de manière à mettre en relief les postes de financement (réserves et postes apparentés). (Voir aussi l'annexe I). Le tableau 2 présente des données correspondant aux composantes types décrites dans le *MBP5*. (Voir aussi l'annexe II). Dans le cas des pays pour lesquels on dispose de statistiques sur la PEG, ces dernières figurent au tableau 3. Les tableaux 1, 2 et 3 présentent, pour chaque pays, des données pour les années 1996 à 2003. Sauf indication contraire, les chiffres portent sur l'année civile.

Présentation analytique

Dans la présentation analytique, qui fait l'objet du tableau 1, les composantes de la balance des paiements sont réparties entre cinq grandes catégories (groupes A à E), que le FMI juge utiles à une analyse homogène de l'évolution de la balance des paiements. Cependant, le choix des groupes ne saurait être considéré comme découlant de la recommandation du FMI quant à l'approche analytique à retenir pour chaque pays. Il existe d'autres types de présentation analytique, qui consisteraient à regrouper les composantes types du tableau 2 d'une manière différente, soit pour tenir compte de la situation particulière d'un pays donné, soit pour répondre à des besoins analytiques précis.

Il convient de noter que les données présentées au tableau 1 sur le solde du compte des transactions courantes, du compte de capital et du compte d'opérations financières de certains pays ne concordent pas avec les données correspondantes du tableau 2. Cela tient au fait que, dans le tableau 1, certaines transactions relevant de ces comptes en sont exclues et sont reclassées en tant que «financement exceptionnel» à la rubrique des réserves et postes apparentés. Le «financement exceptionnel» se rapporte aux transactions que les autorités effectuent pour répondre aux besoins de financement de la balance des paiements et prend notamment la forme d'emprunts extérieurs, d'arriérés de paiements et de remises de dette. Le financement exceptionnel ne comprend pas les réserves.

Présentation type

Comme le montre le tableau 2, la liste des composantes types du *MBP5* présentée au tableau 2 fait apparaître une classification plus détaillée des biens et services que celle qui figure dans la quatrième édition. Le compte dénommé «compte de capital et

Encadré – Position extérieure globale

Les pays qui commencent seulement à établir des données sur la position extérieure globale PEG) sont encouragés à communiquer des relevés partiels. En général, ces relevés partiels comprennent des données sur les autorités monétaires (y compris les réserves internationales) et sur un autre secteur au moins. Les relevés de la PEG des pays déclarants font l'objet du tableau 3 aux pages par pays. Aucun total n'est présenté pour les relevés partiels de la PEG. En raison des limitations inhérentes à ces données, il convient, pour chaque pays donné, de lire le relevé de la PEG en consultant simultanément les notes de la troisième partie — Méthodologies, méthodes de calcul et sources de données — qui se rapportent au pays concerné. Au fur et à mesure que les pays recueilleront davantage de données pour la PEG, la couverture des données de la PEG de ces pays sera élargie dans les éditions ultérieures de l'Annuaire.

Voir le chapitre XXIII du *MBP5* pour une étude exhaustive du concept de position extérieure globale.

La dette extérieure ne constitue pas une composante distincte de la PEG, mais elle peut être calculée par addition des composantes de la PEG autres que le capital social (c'est-à-dire tous les engagements autres que les titres de participation et le capital social correspondant à des investissements directs [y compris les bénéfices réinvestis] et les dérivés financiers). Cette conception cadre dans l'ensemble avec la définition de référence de la dette extérieure brute qui est retenue dans l'ouvrage intitulé *Statistiques de la dette extérieure : Guide du statisticien et de l'utilisateur* (External Debt Statistics : Guide for Compilers and Users), mis au point par l'Équipe spéciale interinstitutions des statistiques financières. L'Équipe spéciale était présidée par le FMI et des représentants de la Banque centrale européenne, de la Banque mondiale, de la BRI, de la CNUCED, d'Eurostat, du FMI, de l'OCDE, du Secrétariat du Club de Paris et du Secrétariat du Commonwealth ont pris part aux travaux du Guide.

Position extérieure globale : composantes types¹

A. Avoirs

1. *Investissements directs*
 - 1.1 Capital social et bénéfices réinvestis
 - 1.2 Autres capitaux²
2. *Investissements de portefeuille*
 - 2.1 Titres de participation
 - 2.2 Titres de créance⁴
3. *Dérivés financiers*
 - 3.1 Autorités monétaires
 - 3.2 Administrations publiques
 - 3.3 Banques
 - 3.4 Autres secteurs
4. *Autres investissements*
 - 4.1 Crédits commerciaux
 - 4.2 Prêts
 - 4.3 Monnaie fiduciaire et dépôts
 - 4.4 Autres avoirs
5. *Avoirs de réserve*
 - 5.1 Or monétaire
 - 5.2 Droits de tirage spéciaux
 - 5.3 Position de réserve au FMI
 - 5.4 Devises étrangères
 - 5.5 Autres créances

B. Engagements

1. *Investissements directs*
 - 1.1 Capital social et bénéfices réinvestis
 - 1.2 Autres capitaux³
2. *Investissements de portefeuille*
 - 2.1 Titres de participation
 - 2.2 Titres d'engagement^{3,4}
3. *Dérivés financiers*
 - 3.1 Autorités monétaires
 - 3.2 Administrations publiques
 - 3.3 Banques
 - 3.4 Autres secteurs
4. *Autres investissements*
 - 4.1 Crédits commerciaux³
 - 4.2 Prêts³
 - 4.3 Monnaie fiduciaire et dépôts³
 - 4.4 Autres engagements³

¹ Les composantes ne sont pas toutes présentées, comme par exemple celles qui sont ventilées par secteur (autorités monétaires, administrations publiques, banques, autres secteurs) ou, dans certains cas, par échéance.

² Les passifs à l'égard des entreprises apparentées, qui entrent dans la composition des «Autres capitaux», sont inclus dans la dette extérieure.

³ Les passifs envers les investisseurs directs, qui entrent dans la composition des «Autres capitaux», sont inclus dans la dette extérieure.

⁴ Ce poste comprend les obligations, les effets et les instruments du marché monétaire.

d'opérations financières» comporte deux volets distincts, qui sont le «compte de capital» et le «compte d'opérations financières». Les composantes du «compte d'opérations financières» sont classées selon plusieurs critères : type d'investissement (c'est-à-dire investissements directs, investissements de portefeuille, dérivés financiers³, autres investissements et avoirs de réserve), avoirs et engagements, secteurs intérieurs (autorités monétaires, administrations publiques, banques et autres secteurs) et échéances initiales (long terme et court terme).

Position extérieure globale

Comme le montre le tableau 3, les données de la PEG sont disposées conformément à la classification des composantes types de la PEG retenue dans le *MBP5*. (Voir aussi l'annexe IV.)

La classification des composantes de la PEG présentée au tableau 3 correspond à celle des composantes du compte d'opérations financières de la balance des paiements figurant au tableau 2, mais plusieurs différences apparaissent toutefois entre les deux tableaux. Comme indiqué précédemment, la PEG est un relevé des avoirs et engagements extérieurs d'un pays à un moment précis. Par conséquent, au tableau 3, la présentation de base des composantes de la PEG comporte deux catégories générales, celles des avoirs et des engagements, par opposition à la classification fonctionnelle des investissements retenue au tableau 2 (investissements directs, investissements de portefeuille, dérivés financiers, autres investissements et avoirs de réserve). En outre, le tableau 3 présente la PEG d'un pays à la fin de la période considérée, alors que le tableau 2 retrace les transactions effectuées pendant cette période. Par ailleurs, contrairement au tableau 2, qui indique la valeur des transactions financières pendant une période, le tableau 3 présente de la PEG d'un pays une évaluation qui reflète les transactions financières, réévaluations et autres ajustements opérés à la fin de la période considérée. La PEG nette indiquée au tableau 3 est égale à la différence entre la valeur des avoirs financiers extérieurs recensés et celle des engagements financiers extérieurs recensés.

Codage des données

Aux tableaux 1, 2 et 3, chaque catégorie de données et chaque composante s'accompagnent d'un

³Compte tenu du caractère spécifique des dérivés financiers et de la manière dont certaines institutions comptabilisent les transactions, certains pays ne peuvent communiquer que des chiffres nets. Bien qu'il soit possible de classer ces transactions nettes parmi les actifs, il a été décidé dans le présent annuaire de les classer parmi les passifs, tout comme les positions nettes lorsqu'elles sont communiquées, parce que la demande de ces instruments émane habituellement d'entités qui couvrent des flux monétaires liés à des opérations d'endettement.

code. Comme indiqué plus haut, ces codes ont été établis conjointement par le FMI, l'OCDE et Eurostat en vue de faciliter la communication des statistiques au niveau international. Les codes s'appliquent aux composantes types de la balance des paiements et de la position extérieure globale, telles qu'elles sont définies dans le *MBP5*, ainsi qu'aux composantes de la classification OCDE/Eurostat pour le commerce des services.

Chaque code figurant dans l'annuaire est un code alphanumérique à six composantes. Le chiffre placé en première position indique s'il s'agit d'un crédit, d'un débit ou d'un solde; le chiffre «2» désigne un crédit, «3» un débit et «4» un solde (différence entre crédit et débit). Les trois chiffres suivants correspondent au code attribué à la composante de la balance des paiements. Par exemple, le compte des transactions courantes a pour code 993, le compte de capital, 994, et le compte d'opérations financières, 995. Pour plus de précisions sur le système de codage, les lecteurs pourront se référer à l'annexe III.

Les cinquième et sixième chiffres ou lettres du code figurant dans l'annuaire signalent l'existence de caractéristiques particulières à certaines composantes. Par exemple, dans le tableau 1, la lettre Z, placée en cinquième position, indique que la composante exclut le financement exceptionnel; W signifie que, outre le financement exceptionnel, les données excluent l'utilisation des crédits et les prêts du FMI. Au tableau 1, les lettres A, B, C et D différencient les divers secteurs intérieurs. Au tableau 2, les lettres A, B et C servent à indiquer qu'il ne s'agit pas de sous-composantes types, comme c'est le cas, par exemple, pour les postes ayant trait aux transports (passagers, fret et autres).

Écritures passées au crédit et au débit

Aux tableaux 1 et 2, les données sur les transactions sont présentées sous forme de chiffres bruts inscrits au crédit ou au débit du compte des transactions courantes et du compte de capital. Au compte d'opérations financières, les données sont présentées en chiffres nets au crédit ou au débit (pour rendre compte des variations nettes des passifs et des actifs). Les montants inscrits au crédit, qu'ils soient bruts ou nets, sont positifs (mais ne sont pas accompagnés du signe plus) et les montants portés au débit, bruts ou nets, sont négatifs (ils sont affectés du signe moins). En conséquence, la diminution des avoirs et l'augmentation des engagements (crédit) sont indiquées par des chiffres positifs, et l'accroissement des avoirs et la diminution des engagements (débit), par des chiffres négatifs.

Montants nuls ou non disponibles

Lorsqu'il manque des chiffres dans les statistiques communiquées par les pays, il est souvent

difficile de savoir si ces données font défaut parce qu'elles ne sont pas disponibles, ou parce qu'il s'agit de montants nuls ou négligeables. Dans les tableaux de l'annuaire, le symbole (...) indique que les données ne sont pas disponibles, ou que les montants sont nuls ou négligeables.

Note sur les composantes du Revenu et des Autres investissements

Au tableau 2, Standard Presentation (Présentation type), les chiffres que certains pays communiquent pour les postes "Income" (Revenu) et "Other Investment" (Autres investissements) présentent un niveau d'agrégation qui ne permet pas d'identifier séparément chaque composante de la catégorie intéressée. En pareil cas, il n'est donc pas possible de faire la somme des composantes de certaines sous-catégories pour calculer le total agrégé de ces mêmes sous-catégories. Il en va de même pour le poste "Other Investment" (Autres investissements) du tableau 3, International Investment Position (Position extérieure globale).

Auparavant, dans les volumes 46 à 49, les données concernant les «Autres investissements» (avoirs et engagements) étaient ventilées sous les rubriques «long terme» et «court terme». Depuis la publication du volume 50, les tableaux présentent dorénavant les chiffres des «autres investissements» (actifs et passifs) pour les autorités monétaires, les administrations publiques, les banques et les autres secteurs sous forme de totaux (du financement à long terme et du financement à court terme), avec une rubrique «dont : court terme». (Au poste «prêts, autorités monétaires», les chiffres sont présentés sous forme de totaux, avec une rubrique «dont : utilisation des crédits et des prêts du FMI» et une rubrique «dont : court terme»). La présentation type n'a toutefois pas été modifiée à l'annexe II.

Présentation de chiffres arrondis

La plupart des chiffres des tableaux sont exprimés en millions; les utilisateurs ne doivent pas présumer qu'un tableau présentant des chiffres exprimés en unités plus petites fournit nécessairement des données plus exactes. L'unité est choisie pour des raisons de commodité. Compte tenu des pratiques couramment utilisées pour le calcul, il peut exister un écart, dû au fait que les chiffres ont été arrondis, entre le total indiqué et la somme de ses composantes.

Méthodes de conversion

La plupart des données de balance des paiements communiquées au FMI sont exprimées en monnaie nationale ou en dollars E.U., bien que quelques pays fournissent certaines données en DTS. Pour faciliter les comparaisons entre pays, tous les états de balance des paiements publiés dans l'annuaire sont ex-

primés en dollars E.U. En outre, dans tous les cas, les données que les pays communiquent sur leurs transactions avec le FMI et sur leurs transactions en DTS sont remplacées par des données tirées des registres du FMI, qui sont exprimées en DTS; celles-ci sont à leur tour converties en dollars E.U.

Pour les pays qui communiquent des données de la balance des paiements exprimées en unités autres que le dollar E.U., les chiffres sont convertis à l'aide des taux de conversion figurant au bas du tableau 1. Ces taux de conversion sont normalement les taux de change moyens de la monnaie du pays pour la période considérée publiés dans *SFI*. Par exemple, les pages consacrées aux Pays-Bas dans *SFI* comportent la ligne «rf», qui présente le taux moyen du dollar en florins. Les données de flux exprimées en DTS sont converties en dollars E.U. à l'aide des taux indiqués à la ligne «sb» de la page consacrée aux États-Unis dans *SFI*. Pour les pays qui transmettent des données trimestrielles exprimées en monnaie nationale, le total annuel en dollars E.U. est égal à la somme des données trimestrielles en dollars E.U.

Pour les pays qui communiquent des données de position extérieure globale dans des unités autres que le dollar EU, les chiffres sont convertis à partir des taux de conversion figurant au bas du tableau 3. Ces taux sont normalement les taux de change en vigueur en fin de période (ligne «ae»), pour la période considérée, publiés dans *SFI*.

Les lecteurs trouveront à la section 1 de l'introduction de *International Financial Statistics (IFS)* de plus amples renseignements sur les taux de change retenus.

II. Abonnement aux disques optiques compacts (CD-ROM)

Les statistiques publiées dans l'annuaire sont également disponibles sur CD-ROM. Le nombre de pays et de séries chronologiques figurant sur les CD-ROM est légèrement supérieur à celui de la version imprimée de l'annuaire, et il en est de même pour le nombre de périodes auxquelles se rapportent les séries chronologiques. Les CD-ROM contiennent également les données trimestrielles communiquées par les pays, et présentent en outre des révisions et des mises à jour dès que les données actualisées sont disponibles. Les demandes de renseignements concernant les CD-ROM doivent être adressées à :

ANNEXE III. SYSTÈME DE CODAGE FMI/OCDE/EUROSTAT APPLICABLE À LA BALANCE DES PAIEMENTS, À LA POSITION EXTÉRIEURE GLOBALE ET AU COMMERCE INTERNATIONAL DE SERVICES¹

Le système de codage examiné ici s'applique à toutes les composantes types et aux postes complémentaires définis dans la cinquième édition du *Manuel de la balance des paiements*; il s'applique également aux composantes et postes pour mémoire de la classification OCDE-Eurostat des données sur le commerce international de services.

Le code a trois composantes ou sections, qui sont :

- <position> un nombre à un chiffre (compris entre 1 et 8) décrivant la position du poste dans les comptes de la position extérieure globale (PEG) ou de la balance des paiements (BP);
- <sujet> un nombre à trois chiffres (choisi parmi les nombres entiers compris entre 100 et 998) permettant d'identifier toutes les composantes de la balance des paiements et de la classification du commerce international des services et certains postes complémentaires;
- <sous-code> une composante définie par l'utilisateur et de longueur illimitée.

Le code complet comprendrait ces trois éléments dans l'ordre suivant : <position><sujet><sous-code>. Cependant, le sous-code est facultatif, contrairement au code de la position et au code du sujet. En conséquence, le code comportera, sous sa forme couramment utilisée, les composantes suivantes : <position><sujet>.

La première composante du code indique la position du poste dans les comptes de la position extérieure globale (PEG) et de la balance des paiements (BP); elle est définie comme suit :

Code	Position dans les comptes de la PEG et de la BP
1	Stock au début de la période
2	Flux, crédit
3	Flux, débit
4	Flux nets
5	Ajustement de la valeur en fonction des variations du prix
6	Ajustement de la valeur en fonction des variations du taux de change
7	Autres ajustements
8	Stock à la fin de la période
0	Autres

Le premier chiffre de la composante indicative du sujet correspond à la rubrique de la balance des paiements, c'est-à-dire :

Code	Rubrique de la BP
1	Biens
2	Services
3	Revenus et transferts courants
4	Compte de capital
5	Investissements directs
6	Investissements de portefeuille
7	Autres investissements
8	Avoirs de réserve
9	Principaux agrégats, dérivés financiers et détails complémentaires

Les deuxième et troisième chiffres de la composante sont généralement attribués dans un ordre consécutif et sont séparés par des espaces permettant l'inclusion ultérieure de codes additionnels, le cas échéant. En outre, dans le compte d'opérations financières, à l'exception des comptes des investissements directs, le deuxième chiffre de cette composante est 0, 1, 2, 3 ou 4 pour les avoirs et 5, 6, 7, 8 ou 9 pour les engagements.

Un exemple des codes appliqués aux «Autres investissements» dans le compte d'opérations financières est donné ci-après.

Sujet	Champ unique			Champ multiple		
	Crédit	Débit	Net	Crédit	Débit	Net
Autres investissements	2700	3700	4700	2700	3700	4700
Engagements	2750	3750	4750	2750	3750	4750
Prêts	2762	3762	4762	2762	3762	4762
Administrations publiques	2767	3767	4767	2767	3767	4767

Banques	2770	3770	4770	2770	3770	4770
Long terme	2771	3771	4771	2771	3771	4771
Court terme	2772	3772	4772	2772	3772	4772
Autres secteurs	2773	3773	4773	2773	3773	4773
Long terme	2774	3774	4774	2774	3774	4774
Court terme	2775	3775	4775	2775	3775	4775

Pour les prêts, les écritures passées au crédit et au débit servent à comptabiliser les transactions communément dénommées tirages et remboursements. La cinquième édition du *Manuel* recommande de classer tous les tirages sur prêts à long terme et tous les remboursements de ces prêts parmi les postes complémentaires. À l'heure actuelle, le FMI recueille des données nettes sur la plupart des autres postes du compte d'opérations financières. Néanmoins, le système de codage permet d'identifier tous les flux, qu'il s'agisse de transactions nettes ou de transactions inscrites au crédit ou au débit.

¹ Tiré de l'ouvrage du FMI intitulé «Balance des paiements : codes utilisés pour les composantes types et les postes complémentaires», Washington, DC, 3 mars 1995.

ANNEXE V. CADRE CONCEPTUEL DE LA BALANCE DES PAIEMENTS ET DE LA POSITION EXTÉRIEURE GLOBALE

La présente annexe reprend le texte du chapitre II de la cinquième édition du Manuel. Il convient de noter que les numéros de paragraphe et page cités dans cette annexe sont ceux du Manuel.

Définitions

12. La première partie du présent *Manuel* décrit le cadre conceptuel de la balance des paiements et de la position extérieure globale. Elle traite de leur relation avec la comptabilité nationale, du concept de résidence, des principes d'évaluation et de chronologie, enfin des notions d'unité de compte et de conversion.

13. La balance des paiements est un état statistique où sont systématiquement résumées, pour une période donnée, les transactions économiques d'une économie avec le reste du monde. Les transactions, pour la plupart entre résidents et non-résidents¹, sont celles qui portent sur les biens, services et revenus; celles qui font naître des créances financières sur le reste du monde ou des engagements financiers envers celui-ci; et celles qui, telles les donations, sont considérées comme des transferts, pour lesquels il y a lieu de passer des contre-écritures de manière à solder — au sens comptable du terme — les transactions à sens unique (voir paragraphe 28)². Une transaction se définit comme un flux économique découlant de la création, de la transformation, de l'échange, du transfert ou de l'extinction d'une valeur économique et faisant intervenir le transfert de propriété de biens ou d'actifs financiers, la prestation de services ou la fourniture de travail et de capital.

14. De même que la balance des paiements retrace des flux, la position extérieure globale est un relevé de stocks. C'est un état statistique qui présente, à une date donnée, par exemple en fin d'année, i) la valeur et la composition du stock des actifs financiers d'une économie ou de ses créances sur le reste du monde, ainsi que ii) la valeur et la composition du stock de ses engagements envers le reste du monde. Dans certains cas, il peut être utile, pour les besoins de l'analyse, de calculer la différence entre avoirs et engagements extérieurs de ce bilan pour évaluer la position nette de l'économie, qui équivaut à la partie de la valeur nette de son patrimoine attribuable à ses relations avec le reste du monde ou en résultant. Une variation des stocks pendant une période définie peut être attribuable soit à des transactions (flux), soit à des réévaluations (qui rendent compte des variations des taux de change, des prix, etc.), soit à d'autres ajustements (des confiscations sans dédommagement, par exemple). Au contraire, la balance des paiements n'enregistre que des transactions.

¹Sauf dans le cas d'échanges d'avoirs financiers extérieurs transférables entre secteurs résidents et, dans une moindre mesure, d'engagements financiers extérieurs entre non-résidents (voir paragraphe 318).

²Les définitions et classifications des comptes internationaux contenues dans le présent *Manuel* visent à faciliter la communication au FMI des données sur les transactions internationales, et non à donner effet ou à interpréter les diverses dispositions des statuts du Fonds monétaire international qui ont trait aux aspects juridiques de l'action (ou du manque d'action) officielle concernant ces transactions.

Principes et concepts

15. Le reste du présent chapitre est consacré au cadre conceptuel des comptes internationaux — c'est-à-dire l'ensemble de conventions et principes sous-jacents qui assurent l'enregistrement systématisé et cohérent des transactions internationales et des stocks d'avoirs et engagements extérieurs. Les aspects pertinents de ces principes, ainsi que les considérations et contraintes pratiques qui s'y rapportent, seront examinés en détail dans les chapitres suivants.

Système d'enregistrement en partie double

16. La convention de base à respecter pour l'établissement d'un état de balance des paiements est que toute transaction enregistrée doit donner lieu à deux inscriptions de montants égaux. L'un de ces montants est inscrit en crédit et est affecté du signe plus, tandis que l'autre est inscrit en débit et affecté du signe moins. En théorie, donc, la somme des montants inscrits en crédit est censée être identique à celle des montants inscrits en débit et le solde de toutes les inscriptions est égal à zéro.

17. Dans la pratique, toutefois, il arrive fréquemment que les comptes ne s'équilibrent pas. Les données servant à établir les estimations pour la balance des paiements sont souvent obtenues séparément de sources différentes. C'est pourquoi le solde peut être un crédit net ou un débit net, qui correspond au montant net des erreurs et omissions. Une écriture distincte, de montant égal mais de signe contraire, doit alors être passée pour équilibrer les comptes. Comme les estimations erronées ou manquantes peuvent s'annuler, on ne peut juger du degré d'exactitude de l'état de balance des paiements d'après le montant de la différence entre la somme des crédits et celle des débits. Néanmoins, il y a lieu de s'inquiéter lorsqu'il subsiste une différence non négligeable qui n'est pas corrigée, car cela gêne l'analyse ou l'interprétation des estimations et en mine la crédibilité (il peut en aller de même pour l'interprétation de l'état de la position extérieure globale dont il sera question au chapitre XXIII).

18. La plupart des inscriptions à la balance des paiements se rapportent à des transactions dans lesquelles des valeurs économiques sont fournies ou reçues en échange d'autres valeurs économiques; ces valeurs sont soit des ressources réelles (biens, services et revenus), soit des actifs financiers. Les écritures compensatoires en crédit et en débit que requiert le système d'enregistrement résultent donc souvent de l'inscription de montants égaux pour les deux éléments échangés. Dans le cas où il y a don, et non échange, ou quand, pour d'autres raisons, la transaction donne lieu à un enregistrement unique, et non à deux enregistrements, une écriture — dénommée *transfert* — spécifiquement conçue pour assurer la compensation nécessaire doit être passée. (Les diverses sortes d'inscriptions qui peuvent être faites à la balance des paiements sont décrites aux paragraphes 26 à 31.)

19. Par convention de ce système, les inscriptions effectuées en crédit par l'économie qui établit sa balance des paiements reflètent i) des exportations lorsqu'il s'agit de ressources réelles et ii) soit une diminution des avoirs ex-

ANNEXE V. CADRE CONCEPTUEL DE LA BALANCE DES PAIEMENTS ET DE LA POSITION EXTÉRIEURE GLOBALE (suite)

térieurs de l'économie, soit une augmentation de ses engagements extérieurs, lorsqu'il s'agit d'actifs financiers. Parallèlement, les inscriptions faites en débit par l'économie qui établit les données reflètent i) des importations lorsqu'il s'agit de ressources réelles et ii) soit une augmentation des avoirs, soit une diminution des engagements lorsqu'il s'agit d'actifs financiers. En d'autres termes, pour les avoirs — qu'ils soient réels ou financiers —, un chiffre positif (crédit) dénote une baisse, tandis qu'un chiffre négatif (débit) correspond à une hausse. Par contre, pour les engagements, un chiffre positif indique une augmentation et un chiffre négatif une diminution. Les transferts sont portés au crédit lorsque les inscriptions qu'ils compensent sont faites en débit et ils sont portés au débit lorsque ces inscriptions sont effectuées en crédit.

20. La teneur ou la composition d'un état de balance des paiements varie quelque peu selon que les transactions sont enregistrées sur une base brute ou sur une base nette; les recommandations énoncées dans le présent *Manuel* indiquent quelles transactions sont à enregistrer sur une base brute et lesquelles sont à comptabiliser sur une base nette. Les inscriptions qu'il est recommandé d'effectuer sont énumérées dans la liste des composantes types de la balance des paiements et des renseignements complémentaires qui peuvent être présentés séparément.

Concepts de territoire économique, de résidence et de pôle d'intérêt économique

21. Les concepts de territoire économique, de résidence et de pôle d'intérêt économique utilisés dans le présent *Manuel* sont identiques à ceux qui ont été adoptés dans le *SCN* et seront examinés en détail au chapitre IV. Le territoire économique ne correspond pas forcément à la zone délimitée par les frontières reconnues sur le plan politique. Il recouvre un territoire géographique administré par un gouvernement. À l'intérieur de ce territoire géographique circulent librement des personnes, des biens et des capitaux. Dans le cas de pays maritimes, le territoire géographique comprend toutes les îles régies par les mêmes autorités fiscales et monétaires que le territoire principal.

22. Une unité institutionnelle a son pôle d'intérêt économique dans un pays et est résidente dudit pays lorsqu'il existe, sur le territoire économique de celui-ci, un endroit (domicile, lieu de production ou locaux à autre usage) auquel ou à partir duquel elle exerce et a l'intention de continuer à exercer des activités économiques et effectue ou a l'intention de continuer à effectuer des transactions sur une grande échelle, que ce soit pendant une période de temps indéfinie ou déterminée — en principe d'un an au moins, mais c'est là un critère indicatif et non une règle absolue.

Principes d'évaluation et de chronologie

23. Il est nécessaire d'utiliser une base d'évaluation uniforme pour l'ensemble des transactions internationales (qu'elles portent sur des ressources réelles ou sur des créances et engagements financiers) afin de pouvoir établir de façon systématique et cohérente la somme des transactions individuelles et une position des avoirs et des

engagements qui corresponde bien à ces transactions. La base d'évaluation des transactions retenue dans le présent *Manuel* — comme dans le *SCN* — est généralement le prix de marché effectif convenu entre les agents. En théorie, tous les stocks d'avoirs et engagements doivent être évalués aux prix en vigueur sur le marché à la date à laquelle se rapporte la position extérieure globale. Les principes d'évaluation, les pratiques recommandées et leurs limites sont décrits au chapitre V, de même que la méthode d'évaluation des transferts, des actifs financiers et des stocks d'avoirs et engagements. (On y traitera aussi des cas où un prix de marché ne peut ni exister, ni être présumé.)

24. Dans le *Manuel* comme dans le *SCN*, c'est le principe de la comptabilité sur la base des faits générateurs (des droits constatés) qui régit le moment de l'enregistrement des transactions. Elles sont donc enregistrées au moment où une valeur économique est créée, transformée, échangée, transférée ou éteinte. Des créances et des engagements se créent lorsqu'il y a transfert de propriété. Le transfert peut être soit juridique, soit matériel (économique). Dans la pratique, lorsque le transfert de propriété n'est pas manifeste, on peut considérer comme une approximation raisonnable de cette date celle à laquelle les parties à une transaction l'enregistrent dans leurs livres ou dans leurs comptes. (Les principes de chronologie et les conventions qu'il est recommandé de respecter pour les diverses inscriptions à la balance des paiements, ainsi que les cas où il est possible de faire exception à la règle du transfert de propriété ou de s'en écarter, sont traités au chapitre VI.)

Le concept et les différents types de transactions

25. En général, les modifications des rapports économiques qu'enregistre la balance des paiements résultent principalement de la relation qui se noue entre deux parties, c'est-à-dire, à une exception près (voir la note 1), entre un résident et un non-résident, et toutes les transactions de cet ordre sont comptabilisées à la balance des paiements. Les inscriptions spécifiques qu'il est recommandé d'effectuer sont celles qui figurent dans la liste des composantes types (voir le chapitre VIII) et elles sont décrites en détail dans les chapitres IX et suivants.

26. En dépit de son appellation, la balance des paiements ne rend pas compte des *paiements*, au sens usuel du terme, mais des *transactions*. Un certain nombre de transactions internationales qui ont leur place à la balance des paiements peuvent ne pas donner lieu à un paiement monétaire et certaines ne comportent même aucun type de paiement. L'enregistrement de ces transactions, en plus de celles qui ont un paiement pour contrepartie, constitue la principale différence entre un état de balance des paiements et un relevé des paiements extérieurs.

Échanges

27. Parmi les transactions qui figurent à la balance des paiements, les plus nombreuses et les plus importantes sont celles qui peuvent être dénommées *échanges*. Un agent économique (entité économique) fournit une valeur économique à un autre et reçoit en échange une valeur

ANNEXE V. CADRE CONCEPTUEL DE LA BALANCE DES PAIEMENTS ET DE LA POSITION EXTÉRIEURE GLOBALE (fin)

égale. Les valeurs économiques fournies par une économie à une autre appartiennent à deux grandes catégories : les ressources réelles (biens, services, revenus), d'une part, et les instruments financiers, d'autre part. Les deux parties à l'échange sont des résidents d'économies différentes, sauf lorsqu'il s'agit d'échanges d'actifs financiers extérieurs entre secteurs résidents. Il se peut que la fourniture d'un instrument financier fasse intervenir non seulement le transfert de propriété d'une créance ou d'un engagement existant, mais aussi la création d'un nouvel avoir ou engagement ou l'annulation d'un avoir ou engagement existant. En outre, les modalités d'un contrat afférent à un instrument financier (par exemple son échéance) peuvent être modifiées par accord entre les parties; on considère dans ce cas que le contrat initial a été exécuté et est remplacé par un autre, assorti de modalités différentes. Tous les échanges de cet ordre doivent être enregistrés à la balance des paiements.

Transferts

28. Les transactions donnant lieu à un *transfert* diffèrent des échanges en ce qu'un agent économique fournit une valeur économique à un autre agent économique sans en recevoir une contrepartie qui, d'après les conventions et règles adoptées aux fins de ce système, a une valeur économique. La valeur qui fait défaut d'un côté de la transaction est représentée par une inscription dénommée *transfert*. Les transferts (valeurs économiques fournies et reçues sans réciprocité) doivent figurer à la balance des paiements. Les *transferts courants* figurent au **compte des transactions courantes** (voir le chapitre XV), tandis que les *transferts de capital* sont classés dans le **compte de capital** (voir le chapitre XVII).

Migration

29. Comme une économie se définit en fonction des entités économiques qui sont associées à son territoire, il est probable que toute modification touchant ces entités influera sur le champ que recouvre l'économie.

30. Il y a migration lorsqu'un particulier devient résident d'une nouvelle économie parce qu'il y transfère son lieu d'habitation principal. Certains avoirs mobiliers corporels appartenant au migrant sont effectivement importés dans la nouvelle économie; les avoirs immobiliers du migrant et certains de ses avoirs mobiliers corporels qui sont situés sur le territoire de l'ancienne économie deviennent des créances de la nouvelle économie sur l'ancienne; les créances du migrant sur les résidents d'une économie autre que la nouvelle ou ses engagements envers ceux-ci deviennent des créances ou engagements extérieurs de la nouvelle économie; et les créances du migrant sur les résidents de la nouvelle économie ou ses engagements envers ceux-ci cessent d'être des créances d'une économie, quelle qu'elle soit, sur le reste du monde, ou des engagements de cette économie envers celui-ci. La somme nette de tous ces changements est égale à la valeur nette du patrimoine du migrant, qui doit être inscrite en contrepartie si les autres changements sont enregistrés; ces inscriptions doivent être effectuées à la balance des paiements, où, par convention, la contre-écriture est passée sous la rubrique des transferts.

Autres transactions imputées

31. Dans quelques autres cas, des transactions peuvent être imputées et des inscriptions faites à la balance des paiements sans que des flux aient été effectivement engendrés. L'attribution des bénéfices réinvestis aux investisseurs directs étrangers en constitue un exemple. Les bénéfices d'une filiale ou succursale étrangère comprennent les bénéfices attribuables à l'investisseur direct. Ces bénéfices, qu'ils soient distribués ou réinvestis dans l'entreprise, sont proportionnels à sa participation au capital de l'entreprise. Les bénéfices réinvestis sont classés parmi les revenus des investissements directs. Un montant affecté du signe contraire est inscrit en contrepartie au poste investissement direct du *compte d'opérations financières* et représente l'augmentation de la participation des investisseurs directs étrangers au capital de la filiale ou succursale étrangère. (Les bénéfices réinvestis sont traités aux chapitres XIV et XVIII.)

Modifications non dues aux transactions

Reclassement des créances et engagements

32. Dans le *Manuel*, la classification des actifs financiers est établie en fonction de caractéristiques choisies de manière à révéler les intentions du créancier ou du débiteur. Les changements d'intentions influent sur les caractéristiques retenues, et il y a lieu de reclasser les actifs financiers en conséquence. L'un des cas typiques est celui de la distinction qui est faite entre les *investissements directs* et les autres catégories d'opérations financières. Par exemple, plusieurs détenteurs indépendants d'*investissements de portefeuille* (sous forme d'actions émises par une même entreprise à l'étranger) peuvent s'associer de manière à avoir, de façon durable, un pouvoir de décision effectif dans la gestion de l'entreprise. Leurs avoirs répondront alors à la définition de l'*investissement direct*, et la modification de la nature de l'investissement pourrait être assimilée à un reclassement. Ce reclassement se reflétera, à la fin de la période pendant laquelle il aura eu lieu, dans la position extérieure globale, mais non dans la balance des paiements. De même, les créances sur les non-résidents peuvent être soumises, ou cesser d'être assujetties, au contrôle des autorités monétaires résidentes. En pareil cas, il y aura reclassement entre les *actifs de réserve* et les actifs autres que les réserves.

Réévaluations

33. La valeur des ressources réelles et des actifs financiers est constamment sujette à variation. Cette variation peut être due à l'une ou à l'autre des causes suivantes, ou aux deux à la fois : i) le prix auquel les transactions sur une certaine sorte d'avoirs s'effectuent habituellement peut subir des variations qui sont liées à la monnaie dans laquelle le prix est exprimé; ii) le taux de change de la monnaie dans laquelle le prix est exprimé peut varier par rapport à l'unité de compte utilisée. Les réévaluations ne doivent pas être reportées à la balance des paiements, mais doivent figurer dans la position extérieure globale.

ANNEXE VI. CLASSIFICATION ET COMPOSANTES TYPES DE LA BALANCE DES PAIEMENTS

La présente annexe reprend le texte du chapitre VIII de la cinquième édition du Manuel. Il convient de noter que les numéros de paragraphe et de page cités dans cette annexe sont ceux du Manuel.

Structure et classification

139. La deuxième partie de ce *Manuel* a trait à la structure et à la classification des comptes de la balance des paiements et de la position extérieure globale. À l'examen des composantes types de ces deux séries de comptes succéderont l'analyse et la description détaillée du *compte des transactions courantes*, du *compte de capital et d'opérations financières*, des renseignements complémentaires qui peuvent être requis sur certains postes et de la position extérieure globale.

140. Il importe d'ordonner les statistiques de la balance des paiements selon une structure cohérente afin d'en faciliter l'utilisation et l'adaptation à des fins multiples : élaboration de politiques, études analytiques, projections, comparaisons bilatérales de telle ou telle composante ou de l'ensemble des transactions, agrégations régionales ou mondiales, etc. (Voir paragraphe 7.)

141. La classification et la liste des composantes types reposent sur des considérations théoriques et pratiques qui tiennent compte des opinions exprimées par les experts nationaux de la balance des paiements; elles concordent en général avec les définitions que donne le SCN. La classification élargie des transactions internationales au titre des services est conforme aux principes de la Classification centrale des produits (CCP). (Voir l'appendice III.)

142. Le système de classification est aussi le résultat d'efforts entrepris pour rattacher la structure du *compte de capital* aux comptes de revenu et à la classification de la position extérieure globale. Il a été conçu de manière à offrir un cadre flexible pouvant être utilisé par de nombreux pays pour développer au fil des années leurs statistiques extérieures. Certains pays ne sont peut-être pas en mesure de communiquer des chiffres pour de nombreux postes. D'autres sont peut-être en mesure de fournir des données supplémentaires.

Composantes types

143. Le choix des composantes types (dont la liste figure à la fin du présent chapitre) est fonction d'un certain nombre de considérations; celles qui suivent ont été jugées primordiales.

Le poste doit manifester un comportement distinct. Il doit être influencé par un facteur économique ou un ensemble de facteurs différents de ceux qui influent sur les autres postes, ou réagir différemment au même facteur ou ensemble de facteurs. C'est cette réaction aux facteurs économiques que la balance des paiements cherche à mettre en évidence.

Le poste doit revêtir de l'importance pour plusieurs pays; cette importance peut être fonction soit de son

comportement (par exemple une variabilité exceptionnelle), soit de son ordre de grandeur.

Les données relatives à ce poste ne doivent pas être excessivement difficiles à obtenir. L'utilité qu'il présente doit cependant être évaluée à la lumière des deux considérations qui précèdent.

Le poste doit être utilisable séparément à d'autres fins, par exemple pouvoir être incorporé dans la comptabilité nationale ou servir au rapprochement avec cette dernière. La liste des composantes types ne doit pas être trop longue. En effet, un très grand nombre de pays, dont beaucoup ne disposent pas d'un système statistique très développé, sont censés utiliser les mêmes catégories lorsqu'ils communiquent leurs données.

Dans la mesure du possible, les composantes types doivent être conformes et applicables aux autres systèmes statistiques du FMI et au SCN et concorder, pour les services en particulier, avec la CCP.

144. La liste type n'implique nullement que les recommandations formulées dans ce *Manuel* empêchent les pays d'établir et de publier d'autres données qu'ils jugent importantes. En fait, lorsque de plus amples détails sont nécessaires pour comprendre les circonstances particulières à tel ou tel pays ou pour analyser les situations nouvelles, les demandes de renseignements que le FMI adresse à ses pays membres ne se limitent pas aux composantes types. Des renseignements complémentaires peuvent être aussi très utiles pour vérifier et rapprocher les statistiques de pays partenaires, et, par exemple, pour analyser les financements exceptionnels. (Voir, à la fin du chapitre, le tableau intitulé *Renseignements complémentaires qui peuvent être requis sur certains postes*.) De temps en temps, les services du FMI tiennent des consultations avec les pays membres afin de déterminer avec eux quelles données complémentaires ils devraient lui communiquer.

145. Rares sont les pays qui ont des renseignements significatifs à communiquer pour chacune des composantes types. Il se peut aussi que certaines des composantes n'existent que regroupées ou qu'une composante mineure soit incluse dans une composante plus importante. Les composantes types doivent néanmoins être communiquées au FMI de manière aussi complète et exacte que possible. Les statisticiens nationaux sont incontestablement mieux placés que les services du FMI pour estimer et ajuster les composantes qui ne correspondent pas exactement aux séries de base de l'économie établissant ses statistiques.

Erreurs et omissions nettes

146. L'application des principes recommandés dans le présent *Manuel* devrait donner un ensemble cohérent d'inscriptions positives et négatives dont la somme est (en principe) égale à zéro. Or, en pratique, si l'on additionne toutes les inscriptions effectuées, on obtient presque inévitablement un crédit net ou un débit net. Ce solde est le

ANNEXE VI. CLASSIFICATION ET COMPOSANTES TYPES DE LA BALANCE DES PAIEMENTS (suite)

résultat d'erreurs et d'omissions dont certaines peuvent être liées aux méthodes d'approximation recommandées pour la mise en pratique des principes.

147. La balance des paiements comprend normalement un poste distinct réservé aux erreurs et omissions nettes, appelé par certains statisticiens «solde» ou «écart statistique». Ce poste vise à compenser la surévaluation ou la sous-évaluation des composantes enregistrées. Ainsi donc, si ces composantes se soldent par un crédit, le poste des erreurs et omissions nettes constituera un débit de valeur égale et vice versa.

148. Certaines erreurs et omissions qui se produisent au cours de l'établissement des données se neutralisent habituellement. C'est pourquoi le montant du solde ne renseigne pas nécessairement sur la précision globale du relevé. Cependant, l'interprétation du relevé devient difficile si ce solde est considérable.

Classification générale

149. Les composantes types, dont la liste est donnée à la fin du présent chapitre, sont réparties en deux principales sections :

Le compte des transactions courantes, qui se subdivise en : **biens et services, revenus et transferts courants**.

Le **compte de capital et d'opérations financières**, qui enregistre i) les *transferts de capital* et les *acquisitions ou cessions d'actifs non financiers non produits*, et ii) les opérations portant sur des avoirs et engagements financiers.

Cette répartition correspond à la pratique suivie par la plupart des pays depuis de longues années et dénote un changement important apporté dans le présent *Manuel*. L'ancien compte des mouvements de capitaux a été rebaptisé **compte de capital et d'opérations financières**. Dicté par un souci d'harmonisation avec le SCN, ce changement consiste à adopter pour la balance des paiements la distinction que le SCN établit entre les *transferts de capital* et les **transferts courants** et à faire concorder le nouveau compte avec le compte de capital et le compte financier du SCN.

150. Les inscriptions à la plupart des rubriques du **compte des transactions courantes** doivent faire apparaître les crédits ou débits bruts. La plupart des inscriptions au **compte de capital et d'opérations financières** doivent être effectuées sur une base nette, c'est-à-dire que chaque composante ne doit y figurer que comme un crédit ou un débit (le mode de traitement recommandé pour certains postes spécifiques et les exceptions seront examinés dans les chapitres correspondants). Les entrées de ressources réelles et les augmentations d'avoirs financiers (ou diminutions d'engagements) seront enregistrées au débit; les sorties de ressources réelles et les diminu-

tions d'avoirs financiers (ou augmentations d'engagements) seront enregistrées au crédit. Les transferts, dans les sections 1.C et 2.A, doivent avoir la même valeur numérique, mais affectée du signe opposé, que les inscriptions dont ils sont la contre-écriture.

Classification détaillée

151. La classification des composantes types qui suit a été mise au point conformément aux critères exposés au paragraphe 143. La structure et les caractéristiques du **compte des transactions courantes** et du **compte de capital et d'opérations financières**, sensiblement modifiées par rapport à la quatrième édition du *Manuel*, sont exposées aux chapitres IX et XVI, respectivement. Les composantes types du **compte des transactions courantes** sont décrites en détail aux chapitres X à XV, celles du **compte de capital et d'opérations financières** aux chapitres XVII à XXI et dans *Dérivés financiers — Supplément à la cinquième édition (1993) du Manuel de la balance des paiements*, Washington, 2000.

Transactions courantes (1.)

152. Sont incluses dans le **compte des transactions courantes** toutes les transactions portant sur des valeurs économiques (autres que des actifs financiers) entre entités résidentes et non résidentes. On y inscrit aussi les contreparties des valeurs économiques courantes qui sont fournies ou acquises sans réciprocité. Les grandes subdivisions (postes) sont les **biens et services**, les **revenus** et les **transferts courants**.

Biens et services (1.A)

Biens (1.A.a.)

153. La rubrique *marchandises générales* recouvre la plupart des biens meubles que les résidents exportent à destination de non-résidents ou qu'ils importent en provenance de non-résidents et qui, à quelques exceptions près, font l'objet d'un transfert de propriété (effectif ou présumé).

154. La rubrique *biens importés ou exportés pour transformation* recouvre les exportations (ou importations dans l'économie établissant sa balance des paiements) de biens franchissant une frontière pour faire l'objet à l'étranger d'une transformation, suivie d'une réimportation (ou exportation) des biens, dont la valeur est établie sur une base brute avant et après la transformation. Cette rubrique fait exception au principe du transfert de propriété.

155. La rubrique *réparations de biens* recouvre les travaux de réparation de biens — bateaux, avions, etc. — fournis à des non-résidents ou reçus de non-résidents. Bien que le mouvement physique de ces biens soit analogue à celui qui est décrit au para-

ANNEXE VI. CLASSIFICATION ET COMPOSANTES TYPES DE LA BALANCE DES PAIEMENTS (suite)

graphe 154, la valeur de la réparation correspond à son prix (c'est-à-dire au montant payé ou reçu pour cette réparation) et non à la valeur brute des biens avant et après la réparation.

156. La rubrique *achats de biens dans les ports par les transporteurs* recouvre tous les biens, tels que carburants, vivres, approvisionnements et fournitures, que les transporteurs résidents ou non résidents — aériens ou maritimes, par exemple — ont achetés à l'étranger (ou dans l'économie établissant sa balance des paiements). Cette rubrique n'enregistre pas les services auxiliaires fournis (remorquage, entretien, etc.), qui sont inclus dans les services de *transports*.

157. La rubrique *or non monétaire* recouvre les exportations et importations de tout or non détenu sous la forme d'avoir de réserve (or monétaire) par les autorités. L'*or non monétaire* est traité comme n'importe quel autre produit et se décompose, lorsque cela est possible, en or détenu à titre de réserve de valeur et or détenu à d'autres fins (industrielles).

Services (1.A.b.)

158. La rubrique *transports* recouvre la plupart des services fournis par les résidents aux non-résidents et vice versa, qui étaient précédemment classés aux rubriques *expéditions* et *autres transports* dans la quatrième édition du *Manuel*. Cependant, l'assurance du fret ne figure pas ici, mais à la rubrique des *services d'assurance*. Sous la rubrique *transports*, on enregistre le transport de marchandises et de passagers, quel qu'en soit le mode, ainsi que les autres services de distribution et services auxiliaires, y compris l'affrètement de véhicules de transport avec leur équipage. Certaines exceptions sont signalées aux chapitres X, XI et XIII.

159. La rubrique *voyages* recouvre les biens et les services acquis dans une économie par les voyageurs non résidents (y compris les excursionnistes), à des fins professionnelles ou personnelles — notamment pour des raisons de santé ou à titre éducatif —, au cours de leur séjour (de moins d'un an) sur le territoire de cette économie. Cette rubrique exclut les services internationaux fournis aux passagers, qui sont inclus dans les *transports*. Les étudiants et les personnes en traitement médical sont considérés comme étant des voyageurs, quelle que soit la durée de leur séjour, contrairement à certaines autres catégories — militaires, personnel des ambassades et travailleurs non résidents. Les dépenses des travailleurs non résidents sont toutefois comprises dans les *voyages*, tandis que celles des militaires et du personnel des ambassades sont incluses dans les *services fournis ou reçus par les administrations publiques, n.c.a.* Ces cas sont signalés aux chapitres XII et XIII.

160. La rubrique *services de communication* recouvre les opérations de communication entre résidents et non-résidents. Ce sont les services postaux (y compris les messageries) et les services de télécommunication

(transmission du son, des images et d'autres types d'information par divers moyens et entretien des installations correspondantes, assuré par des résidents pour le compte de non-résidents et vice versa).

161. La rubrique *services de bâtiment et travaux publics (BTP)* recouvre les travaux de construction et d'installation effectués à l'étranger (ou dans l'économie qui établit sa balance des paiements) ou dans les enclaves extraterritoriales, à titre temporaire, par les entreprises résidentes (ou non résidentes) et leur personnel mais qui ne sont effectués ni par une entreprise étrangère apparentée à une entreprise résidente, ni par un bureau sur place non constitué en société qui, dans certaines conditions, équivaut à une entreprise étrangère apparentée. Ces aspects de la résidence sont traités aux chapitres IV et XIII.

162. La rubrique *services d'assurance* recouvre les assurances fournies aux non-résidents par des compagnies d'assurances résidentes et vice versa. On entend par là l'assurance du fret (pour les biens exportés ou importés) et les autres types d'assurance directe (notamment l'assurance-vie et autres formes d'assurances), ainsi que la réassurance. (Pour la méthode de calcul de la valeur des services d'assurance, voir paragraphes 256 et 257.)

163. La rubrique *services financiers* (autres que ceux qui sont offerts par les compagnies d'assurances et les caisses de retraite) recouvre les services d'intermédiation financière et les services auxiliaires entre résidents et non-résidents. Sont inclus les commissions et les frais ayant trait aux services suivants : lettres de crédit, lignes de crédit, crédit-bail, opérations de change, services de crédit aux consommateurs et aux entreprises, opérations de courtage, souscriptions de titres, différentes formes de couverture des opérations à terme, etc. Les services auxiliaires se rapportent à l'administration et à la réglementation des marchés financiers, à la garde de titres, etc.

164. La rubrique *services d'informatique et d'information* recouvre les transactions entre résidents et non-résidents concernant le conseil en matériel, l'installation de logiciels, les services d'information (traitement de données, banques de données, agences de presse) et l'entretien et la réparation des ordinateurs et du matériel connexe.

165. La rubrique *redevances et droits de licence* recouvre les recettes (exportations) et paiements (importations) des résidents et non-résidents se rapportant à i) l'exploitation d'actifs incorporels non financiers non produits et de droits de propriété — marques, droits d'auteur, brevets, procédés, techniques, dessins, licences de fabrication, franchises, etc. — et à ii) l'utilisation, dans le cadre d'accords de licence, de brevets, d'œuvres originales ou de prototypes, tels que les manuscrits, films, etc.

166. La rubrique *autres services aux entreprises* recouvre les services fournis par des résidents à des non-résidents et vice versa : le négoce international et les

ANNEXE VI. CLASSIFICATION ET COMPOSANTES TYPES DE LA BALANCE DES PAIEMENTS (suite)

autres services liés au commerce, la location-exploitation et divers services aux entreprises, spécialisés et techniques. (Voir, à la fin du chapitre, le tableau des *Renseignements complémentaires qui peuvent être requis sur certains postes*, et les paragraphes 261 à 264 pour de plus amples détails.)

167. La rubrique *services personnels, culturels et relatifs aux loisirs* recouvre i) les services audio-visuels et connexes et ii) les autres services culturels fournis par des résidents à des non-résidents et vice versa. Sont compris dans la catégorie i) les services qui ont trait à la production de films cinématographiques (films ou bandes vidéo), d'émissions de radio ou de télévision et d'enregistrements musicaux, par exemple les droits de location, les redevances perçues par les acteurs, producteurs etc., pour les productions et pour les droits de distribution cédés aux médias. Dans la catégorie ii) figurent les autres services personnels, culturels et relatifs aux loisirs tels que ceux qui ont associés aux bibliothèques, musées et autres activités culturelles ou sportives.

168. La rubrique *services fournis ou reçus par les administrations publiques, n.c.a.* recouvre tous les services (auxquels correspondent par exemple les dépenses des ambassades et consulats) fournis ou reçus par le secteur public ou les organisations internationales ou régionales et non classés ailleurs.

Revenus (1.B.)

169. La rubrique *rémunération des salariés* recouvre les salaires, traitements et autres émoluments versés, en espèces ou en nature, aux travailleurs frontaliers, saisonniers et autres travailleurs non résidents, (par exemple le personnel local des ambassades).

170. La rubrique *revenus des investissements* recouvre les recettes et paiements se rapportant respectivement à la détention d'avoirs financiers extérieurs par les résidents et aux engagements envers les non-résidents. Cela comprend les revenus des investissements directs, les revenus des investissements de portefeuille et les autres revenus d'investissement. La composante investissements directs se subdivise en revenus des participations au capital (dividendes, bénéfices des succursales et bénéfices réinvestis) et en revenus des titres de créance (intérêts); les revenus des investissements de portefeuille se subdivisent en revenus des participations au capital (dividendes) et en revenus des titres de créance (intérêts); les autres revenus d'investissement recouvrent les intérêts provenant d'autres opérations financières (prêts, etc.) et, en principe, les droits nets des ménages sur les réserves techniques d'assurance-vie et les réserves des caisses de retraite.

Transferts courants (1.C.)

171. À l'instar du SCN, le *Manuel* distingue les **transferts courants** des **transferts de capital** (ces derniers sont enregistrés au **compte de capital et**

d'opérations financières). Les transferts sont la contrepartie des transferts de propriété, volontaires ou forcés, de ressources réelles ou d'actifs financiers entre résidents et non-résidents, qui ne reçoivent pas en échange une valeur économique. Les **transferts courants** sont tous ceux qui **ne font pas intervenir** i) le transfert de propriété d'un actif fixe, ii) le transfert de fonds lié ou subordonné à l'acquisition ou à la cession d'un actif fixe, ni iii) la remise, sans contrepartie, d'une dette par un créancier (toutes ces opérations sont des **transferts de capital**). Les **transferts courants** comprennent ceux des administrations publiques — par exemple la coopération internationale courante (entre des administrations publiques appartenant à différentes économies), les paiements des impôts courants sur le revenu et sur la fortune, etc. — et les autres transferts, tels que les envois de fonds des travailleurs, les primes (moins les commissions de service) et les indemnités au titre des assurances autres que l'assurance-vie, etc. La distinction entre les **transferts courants** et les **transferts de capital** fait l'objet d'un examen approfondi au chapitre XV (voir également les paragraphes 175 et 344).

Le compte de capital et d'opérations financières (2.)

172. Le **compte de capital et d'opérations financières** a deux principales composantes — le **compte de capital** correspond au compte de capital du SCN et le **compte d'opérations financières** au compte financier du SCN. Les avoirs (ou actifs) sont des créances sur les non-résidents et les engagements (ou passifs) des dettes envers les non-résidents. Les deux parties à une transaction portant sur des avoirs ou des engagements sont en général un résident et un non-résident mais, dans certains cas, il peut s'agir de deux résidents ou de deux non-résidents. (Voir paragraphe 318.)

173. Toutes les réévaluations et toutes les autres variations d'actifs et de passifs extérieurs qui ne sont pas dues à des transactions (voir paragraphe 310) sont exclues du **compte de capital et d'opérations financières** mais apparaissent dans la position extérieure globale. Des relevés complémentaires identifient certains postes qui présentent un intérêt pour l'analyse et qui relèvent de plusieurs comptes. C'est le cas, par exemple, des engagements qui constituent des réserves pour les autorités étrangères et des financements exceptionnels, dont il est question au chapitre XXII.

174. La classification des **opérations financières** et celle des composantes des revenus dans les **transactions courantes** sont liées et doivent être cohérentes pour faciliter l'analyse, permettre le rapprochement effectif entre la balance des paiements et la position extérieure globale, et assurer la compatibilité avec le SCN et avec les autres systèmes statistiques du FMI.

ANNEXE VI. CLASSIFICATION ET COMPOSANTES TYPES DE LA BALANCE DES PAIEMENTS (suite)

Compte de capital (2.A.)

175. Les grandes subdivisions du *compte de capital* sont les *transferts de capital* et les *acquisitions et cessions d'actifs non financiers non produits*. Les *transferts de capital* sont ceux qui font intervenir le transfert de propriété d'un actif fixe; le transfert de fonds lié ou subordonné à l'acquisition ou à la cession d'un actif fixe; ou la remise, sans contrepartie, d'une dette par un créancier. Ils se subdivisent en deux catégories : i) les transferts des administrations publiques, qui se décomposent en remises de dettes et autres transferts et ii) les autres transferts, qui se subdivisent en transferts des migrants, remises de dettes et autres transferts. (Voir le chapitre XV, qui traite de la distinction entre les *transferts de capital* et les *transferts courants*). Les *acquisitions et cessions d'actifs non financiers non produits* se rapportent généralement aux avoirs incorporels tels que les brevets, les contrats de location et autres contrats transférables, la marque, etc. Ce poste ne recouvre pas les propriétés non bâties situées sur le territoire d'une économie donnée mais peut inclure l'achat (ou la vente) de terrains par une ambassade étrangère. (Voir paragraphe 312.)

Compte d'opérations financières (2.B.)

176. La classification des composantes types comprises sous ce poste est fondée sur les critères suivants :

La nature des investissements ou leur ventilation fonctionnelle (*investissements directs*, *investissements de portefeuille*, *dérivés financiers*, *autres investissements* et *avoirs de réserve*).

Dans le cas des *investissements directs*, la distinction en fonction du sens des mouvements de capitaux — entre l'étranger et l'économie qui établit sa balance des paiements — étant entendu que, dans chaque sous-catégorie, les avoirs sont distingués des engagements.

Pour ce qui est des *investissements de portefeuille*, des *dérivés financiers* et des *autres investissements*, la distinction traditionnelle entre avoirs et engagements.

La nature de l'instrument est particulièrement importante pour les *investissements de portefeuille* et les *autres investissements* (titres de participation ou d'engagement, crédits commerciaux, prêts, monnaie et dépôts, autres avoirs ou engagements). Le présent *Manuel* regroupe dans les *investissements de portefeuille* les instruments du marché monétaire, ainsi que les autres instruments financiers, tant traditionnels que nouveaux.

Pour ce qui est des *investissements de portefeuille*, des *dérivés financiers*, et des *autres investissements*, on distingue le secteur dont relève le créancier intérieur en ce qui concerne les avoirs et le secteur dont relève le débiteur intérieur en ce qui concerne les engagements. Cette distinc-

tion facilite les rapprochements avec les comptes de revenu et la position extérieure globale ainsi qu'avec le SCN et les autres systèmes statistiques;

La distinction habituelle entre les avoirs et engagements à long et à court terme, le long terme étant défini par une échéance contractuelle initiale de plus d'un an et le court terme par une échéance ne dépassant pas un an, n'est faite que pour les *autres investissements*. Depuis quelques années, cette distinction a perdu à l'évidence beaucoup de son utilité pour de nombreuses transactions, intérieures ou internationales. C'est pourquoi la différenciation du long et du court terme a moins d'importance dans le présent *Manuel* — et dans le SCN — que dans les éditions précédentes. Cependant, parce qu'elle est importante à certains égards, par exemple pour l'analyse de la dette extérieure, elle est retenue dans le présent *Manuel* pour les *autres investissements*.

177. La rubrique *investissements directs* — lesquels témoignent d'un intérêt durable de la part d'une entité résidente d'une économie (l'investisseur direct) pour une entité résidente d'une autre économie (l'entreprise d'investissement direct) — recouvre toutes les transactions entre les investisseurs directs et les entreprises d'investissement direct. Les *investissements directs* recouvrent donc la transaction initiale entre les uns et les autres et toutes les transactions ultérieures entre eux, ainsi que les transactions entre les entreprises apparentées, constituées ou non en sociétés. Les opérations d'investissement direct effectuées à l'étranger et dans l'économie déclarante se décomposent en capital social, bénéfices réinvestis, autres opérations en capital (transactions liées aux dettes entre entreprises d'un même groupe). En ce qui concerne le capital social et les autres capitaux, les créances et les engagements à l'égard des entreprises affiliées et à l'égard des investisseurs directs sont ventilés séparément. Les transactions entre banques apparentées et entre autres intermédiaires financiers apparentés se limitent aux transactions portant sur des titres de participation (capital social) et des dettes/créances permanentes. (Voir paragraphe 372 de la cinquième édition du *Manuel de la balance des paiements*).

178. Les investissements de portefeuille comprennent les titres de participation et les titres de créance; ces derniers se subdivisent en obligations et autres titres d'emprunt, et instruments du marché monétaire. Divers nouveaux instruments financiers, autres que les dérivés financiers, sont classés dans les catégories d'instruments appropriées. (Les opérations classées parmi les investissements directs et les avoirs de réserve sont exclues.)

179. La catégorie des *dérivés financiers* recouvre les instruments financiers qui sont liés à un autre instrument ou indicateur financier ou produit de base spéci-

ANNEXE VI. CLASSIFICATION ET COMPOSANTES TYPES DE LA BALANCE DES PAIEMENTS *(fin)*

fique et par le biais desquels des risques financiers spécifiques (de taux d'intérêt, de taux de change, de participation ou de prix des produits de base, de crédit, etc.) peuvent être négociés en tant que tels sur les marchés financiers. Les opérations sur dérivés financiers doivent être traitées en tant qu'opérations distinctes et non comme faisant partie intégrante de la valeur des opérations sous-jacentes auxquelles elles sont liées.

180. La rubrique *autres investissements* recouvre les crédits commerciaux et les prêts à court et à long terme (y compris l'utilisation des crédits et des prêts du FMI, ainsi que les prêts/emprunts au titre de la location-vente; la monnaie fiduciaire et les dépôts (transférables et autres, tels que les dépôts d'épargne et les dépôts à terme, les parts des associations d'épargne et de prêt, des associations de crédit mutuel, etc.); et d'autres comptes à payer et à recevoir. (Les transactions classées parmi les *investissements directs* sont exclues de la présente rubrique.)

181. La rubrique *avoirs de réserve* recouvre les transactions portant sur les avoirs dont les autorités monétaires d'une économie considèrent qu'elles disposent

pour répondre aux besoins de financement de la balance des paiements et, dans certains cas, à d'autres besoins; en principe, cette disponibilité n'est pas étroitement liée à des critères formels tels que la propriété des avoirs ou la monnaie dans laquelle ils sont libellés. Les rubriques incluses sous ce poste sont l'or monétaire, les DTS, la position de réserve au FMI, les avoirs en devises (monnaie fiduciaire et dépôts, et valeurs mobilières) et les autres créances.

182. Le champ couvert par les composantes des *avoirs de réserve* et leur définition répondent aux besoins de l'analyse, comportent un élément d'appréciation et ne se prêtent pas toujours à l'application de critères objectifs formels ou de systèmes de classement précis fondés sur la conditionnalité ou sur d'autres facteurs. Contrairement à la quatrième édition du *Manuel*, la cinquième édition prescrit d'exclure de ce poste les réévaluations des *avoirs de réserve*, ainsi que leurs contreparties. Sont aussi exclues les allocations ou annulations de DTS, la monétisation ou la démonétisation de l'or et les inscriptions de contrepartie. Ces variations, qui ne sont pas des transactions, apparaissent dans la position extérieure globale.

INTRODUCCIÓN

El volumen 55 de *Balance of Payments Statistics Yearbook* (anuario) que publica el Fondo Monetario Internacional (FMI) presenta las estadísticas de balanza de pagos declaradas por los países miembros al FMI. El FMI agradece a los países miembros su cooperación en la declaración de estos datos. En el caso de algunos países, esta información se complementa con detalles que los economistas de la institución obtienen de diferentes fuentes.

El anuario consta de tres partes. En la parte 1 se presentan datos de balanza de pagos y datos sobre la posición de inversión internacional de cada país. En la parte 2 figuran los totales regionales y mundiales de los componentes principales de la balanza de pagos. En la parte 3 se presentan descripciones técnicas sobre algunos países declarantes. La parte 1 se publica en un tomo separado y las partes 2 y 3 en un mismo tomo.

En este volumen del anuario se mantienen las características introducidas en los volúmenes 46 al 54 inclusive. Como en el volumen 46, los datos de balanza de pagos se desglosan conforme a los componentes normalizados de la quinta edición del *Manual de Balanza de Pagos (Manual)*¹. No obstante, se han modificado los componentes normalizados tras la publicación de *Instrumentos financieros derivados: Suplemento a la quinta edición (1993) del Manual de Balanza de Pagos*, en 2000 y las modificaciones de dicha publicación en 2002. Por consiguiente, las referencias a la quinta edición del *Manual* incluyen el suplemento y el apéndice. De conformidad con las recomendaciones del suplemento y el apéndice, el presente anuario refleja la decisión del Comité del FMI de Estadísticas de Balanza de Pagos en el sentido de que las transacciones de instrumentos financieros derivados relacionadas con empresas afiliadas deben incluirse en el componente correspondiente a los instrumentos financieros derivados de las estadísticas de balanza de pagos y de la posición de inversión internacional. Además, como en el volumen 47, se in-

cluyen los datos sobre la posición de inversión internacional en el formato de la quinta edición del *Manual*, y en la parte 3 del anuario, se publican descripciones detalladas de las metodologías, los procedimientos de compilación y las fuentes de datos que se utilizan en la mayoría de los países incluidos en el presente volumen. En el *Manual*², se introducen varios cambios metodológicos en la compilación de los datos de balanza de pagos, cambios que se describen con detalle en el capítulo I del *Manual*. A partir del volumen 46, en este anuario los datos presentados conforme a los componentes normalizados del *Manual* están acompañados de una lista de códigos, preparada conjuntamente por el FMI, la Organización de Cooperación y Desarrollo Económicos (OCDE) y la Oficina Estadística de las Comunidades Europeas (Eurostat). La estructura de estos códigos se explica en un anexo de esta introducción. Además, a partir del volumen 46, no se presentan datos trimestrales de balanza de pagos en el caso de los países que declaran estadísticas trimestrales de balanza de pagos al FMI. Estos datos trimestrales se publican en las ediciones mensuales de la publicación del FMI *International financial statistics (IFS)* y también se presentan en el CD-ROM de balanza de pagos.

La conversión de los datos realizada por el personal del FMI ha permitido presentar en el formato de la quinta edición los datos históricos extraídos de la base de datos del FMI, así como los datos más recientes declarados por los países miembros en el formato de la cuarta edición del *Manual de Balanza de Pagos*. En 1995, el personal del FMI elaboró fórmulas para transformar la información de balanza de pagos de cada país incluida en la base de datos del FMI a fin de adaptarla a la metodología y presentación que se establecen en la quinta edición. Seguidamente se enviaron los datos convertidos a las autoridades de los respectivos países para su revisión y se incorporaron los comentarios recibidos a la nueva base de datos. En 1996, el personal del FMI, en colaboración con las autoridades de los países, convirtió en forma similar los datos sobre la posición de inversión internacional declarados en el formato de la cuarta edición a la presentación de la quinta edición. En principio, la posición de inversión internacional de un país es un balance general de las tenencias de activos y pasivos financieros frente al exterior.

En la parte 3 del anuario se incluyen las descripciones técnicas de la metodología, los procedimientos de compilación y las fuentes de datos que utilizan los países que declaran datos. Las descripciones se basan en gran medida en la infor-

¹El volumen 1 del anuario, publicado en 1949, se basó en la primera edición del *Manual de Balanza de Pagos* del FMI, publicado en 1948; los volúmenes 2-12 se basaron en la segunda edición del manual, publicada en 1950; los volúmenes 13-23 se basaron en la tercera edición, publicada en 1961, y los volúmenes 24-29 se basaron en esa edición así como en el *Manual de Balanza de Pagos: Suplemento a la tercera edición*, que apareció en 1973. Desde el volumen 30 al 45, las presentaciones siguieron las recomendaciones de la cuarta edición del manual, publicada en 1977.

²Fondo Monetario Internacional, *Manual de Balanza de Pagos*, quinta edición, Washington, septiembre de 1993, e *Instrumentos financieros derivados: Suplemento a la quinta edición (1993) del Manual de Balanza de Pagos*, 2000.

mación que los países suministran al FMI. Se incluyen estas descripciones para que los usuarios comprendan mejor la cobertura de los datos de los distintos países publicados en el anuario, así como sus limitaciones, y para informar a los compiladores sobre las fuentes de datos y los métodos utilizados por los compiladores de otros países. Además, los compiladores tienen acceso a información detallada sobre las prácticas de los países en materia de compilación de las estadísticas sobre la inversión directa (ID) como resultado del estudio sobre las metodologías relativas a la ID realizado conjuntamente por el FMI y OCDE en 2001. Los compiladores pueden consultar la base de datos en Internet que contiene los metadatos sobre la ID en <http://www.imf.org/external/np/cta/di/mdb97.htm>.

El resto de esta introducción se ha organizado de la siguiente manera:

- En la sección I se describen las características básicas de los cuadros que se publican en la parte 1 del anuario. (Pueden consultarse los detalles sobre cobertura de los datos de las partes 2 y 3 en el segundo tomo.)
- La sección II contiene información sobre la manera de acceder a la información del FMI sobre balanza de pagos en CD-ROM.
- Se han incluido seis anexos. En el anexo I se incluye una presentación analítica sucinta de los componentes de la balanza de pagos (y los códigos correspondientes). En el anexo II se presentan los componentes normalizados (con sus respectivos códigos) de la quinta edición del *Manual*. En el anexo III se explica el sistema de codificación empleado. En el anexo IV se presentan los componentes normalizados de la posición de inversión internacional que figuran en la quinta edición del *Manual*. En el anexo V se describe el marco conceptual de la balanza de pagos y, en el anexo VI, se explica la cobertura de los componentes principales de las cuentas de la balanza de pagos conforme a las directrices establecidas en la quinta edición del *Manual*.

I. Parte 1 del anuario: Datos de cada país

En la parte 1 del anuario se presentan las páginas de países en orden alfabético. Debe hacerse la salvedad de que el término "país", según se emplea en esta publicación, no siempre se refiere a una entidad territorial que constituya un Estado conforme al derecho y la práctica internacionales; el término también abarca la zona del euro, la Unión Monetaria del Caribe Oriental y ciertas entidades territoriales que no son Estados soberanos, sobre las cuales también se facilitan datos estadísticos a nivel internacional en forma separada.

Los datos de balanza de pagos de la mayoría de los países se presentan en dos cuadros. El cuadro 1 es un resumen analítico de los datos más detallados que se presentan en el cuadro 2. En el cuadro 1 se presentan los componentes de la balanza de pagos que están ordenados de tal manera que se destacan las partidas de financiamiento (reservas y partidas conexas). (Véase también el anexo I.) El cuadro 2 presenta los datos correspondientes a los componentes normalizados que se describen en la quinta edición del *Manual*. (Véase también el anexo II.) En el caso de los países sobre los que se dispone de información relativa a la posición de inversión internacional, los datos se presentan en el cuadro 3. En los cuadros 1, 2 y 3, los datos corresponden al período 1996–2003 para cada país. Los datos que figuran en los cuadros se declaran en base a los años calendario, salvo indicación contraria.

Presentación analítica

En la presentación analítica, que figura en el cuadro 1, los componentes de la balanza de pagos se clasifican en cinco categorías principales de datos (grupos A a E) que el FMI considera útiles para analizar de manera uniforme la evolución de la balanza de pagos. No obstante, no debe interpretarse que esta división en grupos refleja una recomendación del FMI sobre el enfoque analítico más apropiado para todos los países. Los componentes normalizados del cuadro 2 podrían agruparse conforme a una presentación analítica diferente en función de las circunstancias especiales de determinado país o de ciertos requisitos analíticos.

Obsérvese que las cifras que aparecen en los cuadros 1 y 2 en lo que respecta a los saldos de la cuenta corriente, la cuenta de capital y la cuenta financiera difieren en el caso de algunos países. Esto se debe a que en el cuadro 1 se excluyen ciertas transacciones que se clasifican en estas cuentas porque han sido reclasificadas como "financiamiento excepcional" en reservas y partidas conexas. El "financiamiento excepcional" se refiere a las transacciones efectuadas por las autoridades para financiar su balanza de pagos, e incluye la obtención de recursos en préstamo del exterior, los atrasos en los pagos y la condonación de deudas, pero no incluye las reservas.

Presentación normalizada

Los componentes normalizados conforme a la quinta edición del *Manual*, que figuran en el cuadro 2, ofrecen una clasificación más detallada de los bienes y servicios que en la cuarta edición. La llamada "cuenta de capital y financiera" agrupa diferentes componentes bajo la "cuenta de capital" y la "cuenta financiera". En esta última se clasifican los componentes según la clase de inversión (es decir, inversión directa, inversión de cartera, instrumentos financieros

Recuadro. Posición de inversión internacional

Se alienta a los países que se encuentran en las primeras etapas de compilación de la posición de inversión internacional a que presenten declaraciones parciales de la posición de inversión internacional. En general, estas declaraciones parciales contienen datos sobre las autoridades monetarias (incluidas las reservas internacionales) y por lo menos otro sector. Las declaraciones de la posición de inversión internacional de los países declarantes figuran como cuadro 3 en las páginas de países. No se presentan totales en el caso de las declaraciones parciales de la posición de inversión internacional. Debido a estas limitaciones de los datos, las declaraciones sobre la posición de inversión internacional de algunos países deben interpretarse teniendo en cuenta las notas que figuran en la parte 3 en la que se presentan las metodologías, los procedimientos de compilación y las fuentes de datos que utilizan estos países. A medida que los países sigan recopilando datos más completos, se publicará una presentación más extensa de los datos sobre la posición de inversión internacional de estos países en volúmenes subsiguientes del anuario.

Véase el capítulo XXIII de la quinta edición del *Manual* en el que se presenta un análisis detallado del concepto de posición de inversión internacional.

Deuda externa no es un componente aparte de la posición de inversión internacional sino que se deriva mediante la suma de los componentes del pasivo de la posición de inversión internacional que no corresponden a capital (es decir, todos los pasivos registrados que no sean títulos de participación en el capital ni acciones y otras participaciones de capital mediante inversión directa, incluidas las utilidades reinvertidas, y los instrumentos financieros derivados). Esta opinión concuerda, en general, con la definición básica de la deuda externa bruta adoptada en la publicación *Estadísticas de la deuda externa: Guía para compiladores y usuarios (Guía)* realizada por el Grupo de tareas interinstitucional sobre estadísticas financieras. Este grupo de tareas, que se reunió bajo la presidencia del FMI, se encargó de la elaboración de la *Guía* en la que participaron representantes del Banco de Pagos Internacionales, la Secretaría del Commonwealth, el Banco Central Europeo, Eurostat, el FMI, la OCDE, la Secretaría del Club de París, la Conferencia de las Naciones Unidas sobre Comercio y Desarrollo (UNCTAD) y el Banco Mundial.

Posición de inversión internacional: Componentes clave¹

A. Activos

1. *Inversión directa*
 - 1.1 Acciones y otras participaciones de capital y utilidades reinvertidas
 - 1.2 Otro capital²
2. *Inversión de cartera*
 - 2.1 Títulos de participación en el capital
 - 2.2 Títulos de deuda⁴
3. *Instrumentos financieros derivados*
 - 3.1 Autoridades monetarias
 - 3.2 Gobierno general
 - 3.3 Bancos
 - 3.4 Otros sectores
4. *Otra inversión*
 - 4.1 Créditos comerciales
 - 4.2 Préstamos
 - 4.3 Moneda y depósitos
 - 4.4 Otros activos
5. *Activos de reserva*
 - 5.1 Oro monetario
 - 5.2 Derechos especiales de giro
 - 5.3 Posición de reserva en el FMI
 - 5.4 Divisas
 - 5.5 A Otros activos

B. Pasivos

1. *Inversión directa*
 - 1.1 Acciones y otras participaciones de capital y utilidades reinvertidas
 - 1.2 Otro capital³
2. *Inversión de cartera*
 - 2.1 Títulos de participación en el capital
 - 2.2 Títulos de deuda^{3,4}
3. *Instrumentos financieros derivados*
 - 3.1 Autoridades monetarias
 - 3.2 Gobierno general
 - 3.3 Bancos
 - 3.4 Otros sectores
4. *Otra inversión*
 - 4.1 Créditos comerciales³
 - 4.2 Préstamos³
 - 4.3 Moneda y depósitos³
 - 4.4 Otros pasivos³

¹ No se indican todos los componentes, por ejemplo, los que están desglosados por sectores (autoridades monetarias, gobierno general, bancos y otros) y, en algunos casos, por vencimientos.

² Los pasivos frente a empresas filiales, componentes de otro capital, se incluyen en la deuda externa.

³ Los pasivos frente a inversionistas directos, componentes de otro capital, se incluyen en la deuda externa.

⁴ Incluye bonos, pagarés e instrumentos del mercado de dinero.

derivados³, otra inversión y activos de reserva), activos/pasivos, sectores internos (autoridades monetarias, gobierno general, bancos y otros sectores) y vencimiento original.

Posición de inversión internacional

Los datos sobre la posición de inversión internacional, que figuran en el cuadro 3, se agrupan conforme a los componentes normalizados de la posición de inversión internacional que se establecen en la quinta edición del *Manual*. (Véase también el anexo IV.)

La clasificación de los componentes de la posición de inversión internacional en el cuadro 3 coincide con la de la cuenta financiera de la balanza de pagos que figura en el cuadro 2. Sin embargo, hay varias diferencias entre los dos cuadros. Como se mencionó anteriormente, los datos sobre la posición de inversión internacional reflejan los activos y pasivos financieros de un país frente al exterior en un momento determinado. Por lo tanto, en el cuadro 3 los componentes de la posición de inversión internacional se agrupan en la presentación básica en dos categorías generales, a saber, activos y pasivos, a diferencia de la clasificación funcional de la inversión (es decir, inversión directa, inversión de cartera, instrumentos financieros derivados, otra inversión y activos de reserva) que figura en el cuadro 2. Además, los datos del cuadro 3 reflejan la posición de inversión internacional de un país al final del período de declaración de datos, a diferencia de las transacciones que tuvieron lugar durante el período, que se presentan en el cuadro 2. Asimismo, a diferencia del cuadro 2, en el que se indica el valor de las transacciones a lo largo de un período, la valoración de la posición de inversión internacional de un país, que se presenta en el cuadro 3, refleja el valor de las transacciones financieras, las variaciones por valoración y otros ajustes al final del período de declaración. La posición de inversión internacional neta, que figura en el cuadro 3, se calcula como diferencia entre el valor de los activos financieros externos declarados y el de los pasivos financieros externos declarados.

Códigos de datos

En los cuadros 1, 2 y 3 se indican los códigos de cada categoría y componente. Como se señaló anteriormente, los códigos fueron elaborados conjunta-

mente por el FMI, la OCDE y Eurostat, a efectos de facilitar la declaración de datos a nivel internacional. Los códigos corresponden a los componentes normalizados de la balanza de pagos y de la posición de inversión internacional según se definen en la quinta edición del *Manual*, así como a los componentes de la clasificación conjunta OCDE/Eurostat para el comercio de servicios.

Cada uno de los códigos que figuran en el anuario está formado por seis dígitos/caracteres. El primer dígito indica si se trata de un crédito, un débito o del valor neto (el número "2" corresponde a un crédito, el "3" a un débito y el "4" al valor neto, es decir, la diferencia entre créditos y débitos). Los tres dígitos siguientes se utilizan para clasificar los componentes de la balanza de pagos. Por ejemplo, para la cuenta corriente se utiliza el código 993, para la cuenta de capital 994 y para la cuenta financiera 995. Los detalles del sistema de codificación figuran en el anexo III.

Los dígitos/caracteres que ocupan los lugares quinto y sexto de los códigos que figuran en el anuario se reservan para indicar características especiales de ciertos componentes específicos. Por ejemplo, en el cuadro 1, la Z del quinto carácter señala que se excluye de ese componente el financiamiento excepcional; la W indica que se excluyen esta misma partida y el uso del crédito del FMI y préstamos del FMI. Las letras A, B, C y D del cuadro 1 indican los distintos sectores internos. En el cuadro 2, las letras A, B y C se refieren a subcomponentes no normalizados, como los de transportes (pasajeros, fletes y otros).

Créditos y débitos

En los cuadros 1 y 2, los datos sobre transacciones figuran como asientos de crédito bruto o débito bruto en la cuenta corriente y la cuenta de capital. En la cuenta financiera se presentan como asientos de crédito neto o débito neto (para reflejar variaciones netas de los pasivos y de los activos) en la cuenta financiera. Los asientos de crédito, bruto o neto, representan valores positivos (aunque no se indica el signo) y los asientos de débito, bruto o neto, son negativos (y sí se indica el signo). Por lo tanto, toda disminución de los activos y todo aumento de los pasivos (crédito) figuran como valores positivos y todo aumento de los activos y toda disminución de los pasivos (débito) aparecen con signo negativo.

Asientos nulos o carencia de datos

Con frecuencia es difícil discernir en la información declarada por los países si faltan cifras porque no se dispone de datos o porque el valor de esa partida es cero o insignificante. La inclusión de tres puntos (...) en los cuadros del anuario significa cualquiera de las dos posibilidades: bien que no se dispone de datos o bien que el valor es cero o insignificante.

³ Debido a la naturaleza única de los instrumentos financieros derivados, y a la forma en que algunas instituciones registran las transacciones, algunos países sólo pueden declarar datos en cifras netas. Si bien estos datos en cifras netas podrían incluirse en la categoría de activos, en el presente anuario estas transacciones se incluyen en cifras netas, y las posiciones en cifras netas cuando se declaran, en la categoría de pasivos, porque las entidades que negocian con flujos de efectivo relacionados con obligaciones de deuda son las que generan mayor demanda de estos instrumentos.

Nota sobre los componentes de renta y otra inversión

En el cuadro 2 relativo a la presentación normalizada, los datos declarados por algunos países en las categorías de "renta" y "otra inversión" presentan un grado de agregación que no permite identificar por separado cada uno de los componentes que figuran en esta categoría. Por consiguiente, en estos casos, los datos agregados de ciertas subcategorías no pueden obtenerse sumando los componentes de estas subcategorías. Lo mismo ocurre en el caso de los datos relativos a "otra inversión" que figuran en el cuadro 3 relativo a la posición de inversión internacional.

Anteriormente, en los volúmenes 46 al 49, en los cuadros se presentaban los datos correspondientes a "otra inversión" (activos y pasivos) desglosados en "a largo plazo" y "a corto plazo". Desde el Volumen 50, en los cuadros se presentan los datos correspondientes a "otra inversión" (activos y pasivos) de las autoridades monetarias, el gobierno general, los bancos y otros sectores en cifras totales (del financiamiento a largo plazo y a corto plazo) y en partidas "de los cuales: a corto plazo". (En el caso de los préstamos, autoridades monetarias, los datos se indican en cifras totales, desglosados en "de los cuales: uso del crédito del FMI y préstamos del FMI" y "de los cuales: a corto plazo".) Sin embargo, en el Anexo II, no se ha modificado la presentación normalizada.

Redondeo de las cifras

La mayor parte de las cifras de los cuadros se expresan en unidades de un millón; no debe suponerse que los cuadros que incluyen unidades más pequeñas representan, necesariamente, cifras más exactas. La unidad se elige con el fin de presentar las cifras de una manera práctica. Debido al redondeo en el cálculo de las cifras, puede haber diferencias entre un total y la suma de sus componentes.

Conversión de monedas

La mayoría de los datos de balanza de pagos declarados al FMI se expresan en unidades de moneda nacional o en dólares de EE.UU., pero algunos países declaran ciertos datos en DEG. Para facilitar la comparación de datos entre los países, todos los estados de balanza de pagos publicados en el anuario se expresan en dólares de EE.UU. Además, los datos sobre transacciones con el FMI y sobre transacciones en DEG declarados por todos los países se reemplazan por los datos que figuran en los registros del FMI, expresados en DEG. Esta información se convierte, a su vez, a dólares de EE.UU.

En el caso de los países que no declaran sus estadísticas en dólares de EE.UU., los datos se convierten utilizando el tipo de cambio que figura al pie del cuadro 1 para cada país, que normalmente es el tipo promedio vigente en el país en el período correspondiente y se obtiene de *IFS*. Por ejemplo, en las páginas de *IFS* correspondientes a los Países Bajos figura la línea "rf", en la que se indica el tipo de cambio promedio del florín frente al dólar de EE.UU. La conversión de los datos sobre transacciones de DEG a dólares de EE.UU. se efectúa a los tipos de cambio que se indican en la línea "sb" de las páginas de *IFS* correspondientes a Estados Unidos. En lo que respecta a los países que declaran datos trimestrales en unidades de moneda nacional, los totales anuales en dólares de EE.UU. se obtienen sumando los montos trimestrales en dólares de EE.UU.

En el caso de los países que no declaran datos sobre posición de inversión internacional en dólares de EE.UU., los datos se convierten utilizando las tasas de conversión para el país que figuran en la parte inferior del cuadro 3. Estas tasas son normalmente las del fin del período basado en los datos de *IFS* pertinente para el país (línea "ae").

En la introducción de *IFS*, sección 1, se presenta mayor información sobre los tipos de cambio empleados.

II. Suscripciones en CD-ROM

Las estadísticas publicadas en el anuario también se presentan en CD-ROM. El número de países y las series cronológicas que cubre la versión en CD-ROM son ligeramente mayores que en la versión impresa del anuario. También es mayor el número de períodos sobre los cuales se incluyen observaciones estadísticas en las series cronológicas. También se incluyen en la versión en CD-ROM los datos trimestrales declarados por los países. Además, la versión en CD-ROM incluye datos actualizados y corregidos a medida que se dispone de los mismos. Para mayor información, sírvase dirigirse a:

ANEXO III. SISTEMA DE CODIFICACIÓN FMI/OCDE/EUROSTAT PARA LA BALANZA DE PAGOS, LA POSICIÓN DE INVERSIÓN INTERNACIONAL Y EL COMERCIO DE SERVICIOS¹

Este sistema de codificación incorpora todos los componentes normalizados y las líneas de información suplementaria de la quinta edición del *Manual de Balanza de Pagos*, así como los componentes y partidas informativas de la clasificación OCDE/Eurostat para el comercio internacional de servicios.

El código consta de tres partes:

- <posición> Un dígito (del 1 al 8) que describe la posición de la partida en las cuentas de la posición de inversión internacional o de la balanza de pagos.
- <tema> Tres dígitos (del 100 al 998) que identifican todos los componentes de la balanza de pagos, del comercio de servicios y de información suplementaria seleccionada.
- < sufijo> Serie de caracteres definidos por el usuario; puede ser de cualquier longitud.

El código completo deberá tener la siguiente configuración: <posición><tema><sufijo>, aunque el sufijo es optativo. Los dígitos de posición y tema, en cambio, son obligatorios. Por esa razón, en la mayoría de los casos, la configuración del código es <posición><tema>.

El primer dígito del código describe la posición de la partida en las cuentas de la posición de inversión internacional y de la balanza de pagos, a saber:

Código Posición en las cuentas de la posición de inversión internacional y la balanza de pagos

- 1 Posición al comienzo del período
- 2 Flujos de crédito
- 3 Flujos de débito
- 4 Flujos netos
- 5 Ajuste por variaciones de precios
- 6 Ajuste por variaciones de tipos de cambio
- 7 Otros ajustes
- 8 Posición al final del período
- 0 Otros

El primer dígito del tema identifica la sección de la balanza de pagos, a saber:

Código Sección de las cuentas

- 1 Bienes
- 2 Servicios
- 3 Renta y transferencias corrientes
- 4 Cuenta de capital
- 5 Inversión directa
- 6 Inversión de cartera
- 7 Otra inversión
- 8 Activos de reserva
- 9 Agregados principales, instrumentos financieros e información suplementaria

El segundo y tercer dígito del tema corresponden al orden consecutivo de los componentes con interrupciones para poder incluir códigos adicionales posteriormente. Además, en la cuenta financiera, salvo las cuentas de inversión directa, el segundo dígito del tema puede ser 0, 1, 2, 3 ó 4 en el caso de los activos y 5, 6, 7, 8 ó 9 en el caso de los pasivos.

A continuación se presentan ejemplos de códigos para "Otra inversión" en la cuenta financiera.

Tema	Campo único			Campo múltiple		
	Crédito	Débito	Neto	Crédito	Débito	Neto
Otra inversión	2700	3700	4700	2700	3700	4700
Pasivos	2750	3750	4750	2750	3750	4750
Préstamos	2762	3762	4762	2762	3762	4762
Gobierno general	2767	3767	4767	2767	3767	4767
A largo plazo	2768	3768	4768	2768	3768	4768
A corto plazo	2769	3769	4769	2769	3769	4769
Bancos	2770	3770	4770	2770	3770	4770
A largo plazo	2771	3771	4771	2771	3771	4771
A corto plazo	2772	3772	4772	2772	3772	4772
Otros sectores	2773	3773	4773	2773	3773	4773
A largo plazo	2774	3774	4774	2774	3774	4774
A corto plazo	2775	3775	4775	2775	3775	4775

Tratándose de créditos y débitos correspondientes a préstamos, los términos que se emplean comúnmente son giros y reembolsos. La quinta edición del *Manual* recomienda declarar todos los giros y reembolsos de los préstamos a largo plazo en una clasificación suplementaria. Actualmente, el FMI recopila la mayoría de las demás partidas de la cuenta financiera en cifras netas. No obstante, el sistema de co-dificación permite identificar todos los flujos como créditos, débitos o flujos netos.

¹ Adoptado de "Balance of Payments Codes for Standard Components and Additional Items", FMI, Washington, 3 de marzo de 1995.

ANEXO V. MARCO CONCEPTUAL DE LA BALANZA DE PAGOS Y DE LA POSICIÓN DE INVERSIÓN INTERNACIONAL

Este anexo es la reproducción del capítulo II del Manual de Balanza de Pagos, 5a. edición. Los párrafos y los números de página citados en este anexo corresponden a los del Manual.

Definiciones

12. La primera parte de este *Manual* abarca el marco conceptual de las cuentas de la balanza de pagos y de la posición de inversión internacional, examinándose su relación con las cuentas nacionales y con los conceptos de residencia, valoración, momento de re-gistro, unidad de cuenta y conversión.

13. La balanza de pagos es un estado estadístico que resume sistemáticamente, para un período específico dado, las transacciones económicas entre una economía y el resto del mundo. Las transacciones, que en su mayoría tienen lugar entre residentes y no residentes¹, comprenden las que se refieren a bienes, servicios y renta, las que entrañan activos y pasivos financieros frente al resto del mundo y las que se clasifican como transferencias (como los regalos), en las que se efectúan asientos compensatorios para equilibrar—desde el punto de vista contable— las transacciones unilaterales (véase el párrafo 28)². Una transacción en sí se define como un flujo económico que refleja la creación, transformación, intercambio, transferencia o extinción de un valor económico y entraña traspasos de propiedad de bienes y/o activos financieros, la prestación de servicios o el suministro de mano de obra y capital.

14. En estrecha relación con el marco de la balanza de pagos, basado en los flujos, se encuentra la posición de inversión internacional, definida por las tenencias de recursos financieros. Esta última, que corresponde a una fecha específica como el fin del año, es un estado estadístico que representa i) el valor y la composición de las tenencias de activos financieros de una economía, o de los créditos adquiridos por una economía frente al resto del mundo, y ii) el valor y la composición de las tenencias de pasivos de una economía a favor del resto del mundo. En algunos casos, puede ser de interés analítico calcular la diferencia entre los dos lados del balance para tener una medida de la posición neta. Dicha medida sería equivalente a la porción del patrimonio de una economía atribuible a su relación con el resto del mundo, o derivado de ella. Toda variación de las tenencias en cualquier período definido puede atribuirse a transacciones (flujos), a variaciones de valoración debidas a

fluctuaciones del tipo de cambio, precios, etc., o a otros ajustes (por ejemplo, confiscaciones sin indemnización). En cambio, las cuentas de la balanza de pagos sólo reflejan transacciones.

Criterios y conceptos

15. El resto de este capítulo se refiere al marco conceptual de las cuentas internacionales, vale decir, al conjunto de criterios y convenciones básicos que permite el registro sistematizado y coherente de las transacciones internacionales y de las tenencias de activos y pasivos sobre el exterior. En los capítulos subsiguientes se analizarán detenidamente los aspectos sobresalientes de estos criterios, así como sus consideraciones y limitaciones prácticas.

Método de contabilidad por partida doble

16. El criterio básico aplicado a la preparación del estado de balanza de pagos es que toda transacción registrada está representada por dos asientos de igual valor. Uno de ellos se denomina crédito y tiene signo aritmético positivo. El otro se llama débito y tiene signo negativo. En principio, la suma de todos los asientos de crédito es igual a la suma de todos los asientos de débito y el saldo neto de la totalidad de los asientos del estado es igual a cero.

17. En la práctica, sin embargo, las cuentas no suelen estar en equilibrio. A menudo, los datos empleados para estimar la balanza de pagos suelen derivarse en forma independiente de diferentes fuentes; en consecuencia, puede haber un crédito neto o débito neto agregado (es decir, errores y omisiones netos en las cuentas). Para equilibrar las cuentas, se deberá efectuar un asiento separado por un monto equivalente pero de signo contrario. Debe observarse que, como hay estimaciones imprecisas o faltantes de signo contrario que suelen compensarse mutuamente, la magnitud del residuo neto no es indicativa de la exactitud relativa del estado de balanza de pagos. No obstante, la existencia de un residuo significativo y persistente que no se corrige debe ser motivo de preocupación, porque esta situación impide el análisis o la interpretación de las estimaciones y les resta credibilidad. Por otra parte, un residuo neto elevado también puede afectar a la interpretación del estado de la posición de inversión internacional. (Véase la explicación en el capítulo XXIII.)

18. La mayoría de los asientos de la balanza de pagos se refieren a transacciones en las que se entregan o reciben valores económicos a cambio de otros. Dichos valores comprenden recursos reales (bienes, servicios y renta) y financieros. Así, los asientos compensatorios de crédito y débito que exige el método de re-gistro suelen resultar del hecho de que se han anotado montos iguales para los dos recursos que se han intercambiado. Si en vez de ser intercambiados se ceden gratuitamente, o si el registro es unilateral por otras razones, se efectúan asientos especiales—llamados transferencias—para saldarlos. En los párrafos 26 a 31 se describen las distintas clases de asientos que pueden figurar en la balanza de pagos.

¹En la balanza de pagos, las únicas transacciones que no se efectúan entre residentes y no residentes son el intercambio de activos financieros sobre el exterior transferibles entre sectores residentes y, en menor medida, el intercambio de pasivos financieros sobre el exterior transferibles entre no residentes. (Véase el párrafo 318.)

²Cabe destacar que las definiciones y clasificaciones de las cuentas internacionales que se presentan en este Manual tienen por objeto facilitar a los países miembros la tarea de declarar al FMI la información sobre transacciones internacionales y no pretenden hacer efectivas ni interpretar las disposiciones del Convenio Constitutivo del Fondo Monetario Internacional que se refieren al carácter jurídico de la acción (o falta de acción) oficial en relación con dichas transacciones.

ANEXO V. MARCO CONCEPTUAL DE LA BALANZA DE PAGOS Y DE LA POSICIÓN DE INVERSIÓN INTERNACIONAL (continuación)

19. Conforme a las convenciones del método contable, una economía compiladora registra asientos de crédito i) para los recursos reales que denotan exportaciones y ii) para los recursos financieros que indican reducciones de sus activos sobre el exterior o aumentos de sus pasivos sobre el exterior. A su vez, registra asientos de débito i) para los recursos reales que denotan importaciones y ii) para los recursos financieros que indican aumentos de los activos o disminuciones de los pasivos. En otras palabras, en los activos —reales o financieros— una cifra con signo positivo (crédito) representa una disminución de las tenencias y una cifra con signo negativo (débito) indica un incremento. En cambio, en los pasivos, una cifra con signo positivo significa un aumento, y una cifra con signo negativo, una disminución. Las transferencias aparecen como créditos si compensan asientos de débito, y como débitos si saldan asientos de crédito.

20. El contenido o la cobertura del estado de balanza de pagos depende, en cierto modo, de que las transacciones sean tratadas en base a valores brutos o netos. Las recomendaciones de este *Manual* especifican cuáles deberán registrarse en valores brutos y cuáles en valores netos, como se refleja en la lista de componentes normalizados y en las presentaciones suplementarias sugeridas.

Conceptos de territorio económico, residencia y centro de interés económico

21. Los conceptos de territorio económico, residencia y centro de interés económico que se utilizan en este *Manual* son idénticos a los del SCN y se describen detalladamente en el capítulo IV. El territorio económico puede no coincidir con las fronteras políticas reconocidas. El territorio económico de un país comprende el territorio geográfico administrado por un gobierno dentro del cual circulan libremente personas, bienes y capital. En el caso de países marítimos, incluye también las islas que están sujetas a las mismas autoridades fiscales y monetarias que el territorio continental.

22. Una unidad institucional tiene un centro de interés económico y es residente de un país cuando desde algún lugar (vivienda, planta de producción u otro establecimiento), ubicado dentro del territorio económico del país, dicha unidad realiza e intenta seguir realizando (indefinidamente o durante un período finito) actividades económicas y transacciones en gran escala. (Se sugiere emplear un año o más como referencia, aunque no se trata de una regla inflexible.)

Criterios de valoración y momento de registro

23. Para compilar de manera uniforme cualquier agregado de transacciones individuales y registrar la posición de los activos y pasivos que les corresponden, es necesario contar con una base uniforme de valoración de las cuentas internacionales (tanto los recursos reales como los activos y pasivos financieros). En general, en este *Manual* se utiliza como base para la valoración de las transacciones el precio efectivo de mercado acordado por las partes que intervienen

en la transacción. (Este criterio coincide con el adoptado en el SCN.) Desde el punto de vista conceptual, todas las tenencias de activos y pasivos deberán valorarse de acuerdo a los precios de mercado vigentes en el momento al cual se refiere la posición de inversión internacional. En el capítulo V se presenta una exposición completa de los criterios de valoración, las prácticas recomendadas, las limitaciones y la valoración de transferencias, recursos financieros y tenencias de activos y pasivos. (Se incluyen también casos en que no existe un precio de mercado o no es posible suponerlo.)

24. En el *Manual* y en el SCN, el criterio que se aplica con respecto al momento de registro de las transacciones es el de contabilidad en valores devengados. Por lo tanto, las transacciones deben registrarse con referencia al momento en que se crea, transforma, intercambia, transfiere o extingue un valor económico. Se crean activos y pasivos cuando tiene lugar un traspaso de propiedad, ya sea de índole legal o física (económica). En la práctica, cuando no sea evidente el traspaso de propiedad, el momento en que éste ocurre puede determinarse de una forma aproximada utilizando la fecha en que las partes de una transacción la registran en sus libros o en sus cuentas. (El capítulo VI trata sobre los momentos de registro y convenciones recomendados para diferentes asientos de la balanza de pagos, e incluye excepciones y desviaciones del criterio de traspaso de propiedad.)

Concepto y clase de transacción

25. En general, las variaciones de las relaciones económicas que se registran en la balanza de pagos provienen básicamente de las transacciones realizadas entre dos partes. Dichas partes son, con una excepción (véase la nota 1), un residente y un no residente, y todas las transacciones de esta clase aparecen en la balanza de pagos. Las recomendaciones sobre los asientos específicos necesarios se hallan incorporadas en la lista de componentes normalizados (véase el capítulo VIII) y se detallan a partir del capítulo IX.

26. A pesar de su nombre, la balanza de pagos no se refiere a pagos en su acepción común, sino a transacciones. Algunas transacciones internacionales que revisten interés a efectos de la balanza de pagos pueden no entrañar un pago en efectivo y algunas no se pagan en ningún sentido. La inclusión de estas transacciones, además de las que tienen como contrapartida un pago, constituye la diferencia principal entre un estado de balanza de pagos y un registro de pagos externos.

Intercambios

27. Las transacciones más comunes e importantes de la balanza de pagos pueden caracterizarse como intercambios. Una parte (entidad económica) suministra un valor económico a otra y recibe a cambio un valor igual. Los valores económicos suministrados por una economía a otra pueden clasificarse en términos generales como recursos reales (bienes, servicios, renta) y recursos financieros. Las partes que intervienen en la transacción son residentes de distintas economías, salvo en el caso de intercambio de re-

ANEXO V. MARCO CONCEPTUAL DE LA BALANZA DE PAGOS Y DE LA POSICIÓN DE INVERSIÓN INTERNACIONAL (conclusión)

cursos financieros externos entre sectores residentes. El suministro de un recurso financiero puede suponer no sólo un traspaso de propiedad de un activo o de un pasivo existente sino también la creación de uno nuevo o la cancelación de uno existente. Es más, las condiciones de un contrato relativo a un recurso financiero (por ejemplo, el plazo de vencimiento contractual) pueden modificarse por acuerdo entre las partes, en cuyo caso se da por cumplido el primer contrato y se considera que éste ha sido remplazado por otro con condiciones distintas. Todos estos intercambios se deberán incluir en la balanza de pagos.

Transferencias

28. Las transacciones que comprenden *transferencias* difieren de los intercambios porque una de las partes entrega un valor económico a la otra sin recibir un *quid pro quo* que, según las normas y reglas adoptadas en el sistema, tiene valor económico. Esta ausencia de valor por un lado de la transacción está representado por un asiento denominado *transferencia*. Las transferencias de esta clase (valores económicos suministrados y recibidos sin *quid pro quo*) se registran en la balanza de pagos. Las **transferencias corrientes** se incluyen en la **cuenta corriente** (véase el capítulo XV), en tanto que las *transferencias de capital* aparecen en la **cuenta de capital** (véase el capítulo XVII).

Migración

29. Como una economía se define en función de las entidades económicas vinculadas a su territorio, su ámbito posiblemente se vea afectado por los cambios que tengan lugar en las entidades vinculadas a ella.

30. Se produce una migración cuando la residencia de una persona se traslada de una economía a otra por haber cambiado su domicilio. Ciertos bienes muebles del emigrante se importan, de hecho, a la nueva economía. Sus bienes inmuebles y ciertos bienes muebles que se encuentran en la economía anterior se transforman en activos de la nueva economía frente a la anterior. Sus activos o pasivos frente a residentes de otra economía distinta de la nueva pasan a ser activos o pasivos sobre el exterior de la nueva economía. Sus activos o pasivos frente a residentes de la nueva economía dejan de ser activos o pasivos de una economía frente al resto del mundo. La suma neta de todas estas variaciones es igual al patrimonio del emigrante, que también debe registrarse como asiento compensatorio, si se registran los demás cambios. Estos asientos se efectúan en la balanza de pagos donde, por norma, se incluyen en las transferencias.

Otras transacciones imputadas

31. En algunos casos, las transacciones pueden ser imputadas y pueden efectuarse asientos en las cuentas de la

balanza de pagos cuando no exista un flujo efectivo. Cabe citar como ejemplo la atribución de las utilidades reinvertidas a inversionistas directos extranjeros. Las utilidades de una filial o sucursal extranjera incluyen utilidades atribuibles a un inversionista directo residente. Dichas utilidades, independientemente de que se hayan distribuido o reinvertido en la empresa, son proporcionales a la participación del inversionista directo residente en el capital de la empresa. Las utilidades reinvertidas se registran como parte de la renta de la inversión directa. Se efectúa un asiento compensatorio, con signo contrario, en el rubro inversión directa de la *cuenta financiera* para reflejar el hecho de que aumentó la inversión del inversionista directo extranjero en la filial o sucursal extranjera. (En los capítulos XIV y XVIII se trata el tema de las utilidades reinvertidas.)

Otras variaciones que no entrañan transacciones

Reclasificación de activos y pasivos

32. En este *Manual*, la clasificación de los recursos financieros se basa en características que revelan los motivos del acreedor o del deudor. Si cambian los motivos, varían también dichas características, de modo que los recursos financieros quedan sujetos a reclasificación en función de dichos cambios. Cabe destacar la diferencia que se establece entre la *inversión directa* y otras clases de inversión. Por ejemplo, varios tenedores independientes de *inversiones de cartera* (en forma de acciones y otras participaciones de capital social emitidas por una sola empresa en el extranjero) pueden asociarse para adquirir una participación efectiva duradera en la dirección de la empresa. Sus tenencias reúnen así las condiciones de una *inversión directa* y el cambio de situación de la inversión puede registrarse como reclasificación. Dicha reclasificación se reflejará, al final del período en el que tuvo lugar, en la posición de inversión internacional, pero no en la balanza de pagos. Análogamente, ciertos activos frente a no residentes pueden pasar al control de las autoridades monetarias residentes o quedar fuera de su control, lo cual da lugar a una reclasificación entre *activos de reserva* y activos que no constituyen reservas.

Variaciones de valoración

33. El valor de los recursos reales y financieros está sujeto a constantes cambios, que pueden atribuirse a una de las dos, o a las dos, causas siguientes: i) el precio habitual al que se efectúan transacciones de ciertos tipos de recursos puede variar en relación con la moneda en que se cotiza dicho precio; ii) el tipo de cambio de la moneda en que se cotiza el precio puede variar en relación con la unidad de cuenta utilizada. Las variaciones de valoración no se registran en la balanza de pagos, pero sí en la posición de inversión internacional.

ANEXO VI. CLASIFICACIÓN Y COMPONENTES NORMALIZADOS DE LA BALANZA DE PAGOS

Este anexo es la reproducción del capítulo VIII del Manual de Balanza de Pagos, 5ª edición. Los párrafos y los números de página citados en este anexo corresponden a los del Manual.

Estructura y clasificación

139. En la segunda parte de este *Manual* se definen la estructura y la clasificación de las cuentas de la balanza de pagos y de la posición de inversión internacional. Abarca, asimismo, los componentes normalizados de ambos grupos de cuentas; se examina y explica la forma de preparar la **cuenta corriente**, la **cuenta de capital y financiera**, la información suplementaria seleccionada y la posición de inversión internacional.

140. Las estadísticas de balanza de pagos deben organizarse dentro de una estructura coherente para facilitar su utilización y adaptación para diferentes fines, tales como formulación de la política económica, estudios analíticos, proyecciones, comparaciones bilaterales de componentes específicos o transacciones totales, agregados regionales y mundiales, etc. (Véase el párrafo 7.)

141. La clasificación y la lista de componentes normalizados reflejan consideraciones de índole conceptual y práctica, toman en cuenta opiniones expresadas por expertos nacionales en balanza de pagos y, en general, concuerdan con el SCN y con la armonización entre la nueva clasificación de las transacciones internacionales de servicios y la Clasificación Central de Productos (CCP). (Véase el apéndice III.)

142. Se ha hecho todo lo posible para vincular la estructura de la **cuenta de capital** a las cuentas de renta y a la clasificación de la posición de inversión internacional. El objetivo es que muchos países puedan utilizarla como marco flexible para desarrollar a largo plazo sus estadísticas del sector externo. Si bien puede ocurrir que algunos países no puedan proporcionar datos para muchas partidas, este marco permitirá a otros países declarar datos adicionales.

Componentes normalizados

143. La determinación de los componentes normalizados (véase la lista al final de este capítulo) depende de una serie de factores, considerándose los más importantes los siguientes:

La partida debe exhibir un comportamiento característico, que indique que influyen en ella un factor o una combinación de factores económicos distintos de los que influyen en las demás partidas o que responde de diferente manera ante el mismo factor o combinación de factores. En la balanza de pagos se trata precisamente de poner de manifiesto esta respuesta ante las influencias económicas.

La partida debe ser importante para una serie de países, ya sea en función de su comportamiento (por ejemplo, variabilidad excepcional) o de su valor absoluto.

Deberá ser posible obtener los datos estadísticos de la partida sin demasiada dificultad, aunque cabe tener en cuenta la conveniencia de recopilarlos en razón de las dos primeras consideraciones citadas.

La partida deberá también ser necesaria para otros fines, por ejemplo, para incluirla en las cuentas nacionales o conciliarla con éstas. La lista de componentes normalizados no debe ser demasiado larga, dado el gran número de países, entre ellos muchos con sistemas estadísticos menos adelantados, a los cuales se solicita que presenten esos datos de manera uniforme.

En la medida en que sea posible, los componentes normalizados deberán ser compatibles con otros sistemas estadísticos del FMI, el SCN y, en el caso específico de los **servicios**, con la CCP.

144. La presentación de una lista de componentes normalizados no significa que las recomendaciones formuladas en este *Manual* tengan por objeto disuadir a los países de compilar y publicar otros datos de importancia nacional. Si se requieren mayores datos para comprender las circunstancias que rodean a determinados países o para analizar nuevas situaciones que puedan surgir, la información que solicite el FMI a los países miembros no se limitará a la lista de componentes normalizados. La información suplementaria también puede ser sumamente útil para verificar y conciliar las estadísticas de países que comercian entre sí y, por ejemplo, para analizar transacciones de financiamiento excepcional. (Véase el cuadro *Información suplementaria seleccionada* al final de este capítulo.) El personal del FMI consultará periódicamente con los países para decidir qué otros datos deberán presentar.

145. Es probable que sean pocos los países que cuentan con información significativa sobre todos los componentes normalizados. Tal vez los datos sobre varios de los componentes sólo puedan obtenerse en combinación con otros, o quizás un componente de menor importancia esté agrupado con otro más importante. No obstante, los componentes normalizados deberán declararse al FMI de la manera más completa y exacta que sea posible. En este sentido, los compiladores nacionales se encuentran en mejores condiciones que el personal del FMI para estimar y ajustar los componentes que no correspondan exactamente a los datos básicos de la economía declarante.

Errores y omisiones netos

146. Al aplicar los criterios recomendados en este *Manual*, se obtiene un conjunto coherente de asientos con signo positivo y negativo cuyo total neto es teóricamente igual a cero. En la práctica, sin embargo, una vez sumados todos los asientos, la balanza de pagos casi siempre arroja un crédito neto o un débito neto. Este saldo se debe a errores y omisiones en la compilación de las estadísticas, algunos de los cuales pueden tener relación con recomendaciones para una aproximación práctica a los criterios establecidos.

147. Por regla general, en el estado de balanza de pagos se presenta una partida separada de errores y omisiones netos, que algunos compiladores denominan partida equilibradora o discrepancia estadística, para compensar toda sobrestimación o subestimación de los componentes registrados. Así, si el saldo de estos componentes refleja un crédito,

ANEXO VI. CLASIFICACIÓN Y COMPONENTES NORMALIZADOS DE LA BALANZA DE PAGOS (continuación)

la partida de errores y omisiones netos aparece como un débito de igual valor, y viceversa.

148. Como algunos de los errores y omisiones que se producen al compilar los datos suelen compensarse entre sí, la magnitud de la partida residual no es necesariamente un indicio de la exactitud global del estado. Aun así, cuando el residuo neto es grande, es difícil interpretar un estado.

Clasificaciones principales

149. Los componentes normalizados, cuya lista figura al final de este capítulo, se clasifican en dos grupos principales de cuentas:

La **cuenta corriente**, que comprende **bienes y servicios, renta y transferencias corrientes**.

La **cuenta de capital y financiera**, que se refiere a i) *transferencias de capital y adquisición/-enajenación de activos no financieros no producidos y* ii) *activos y pasivos financieros*.

Esta presentación general refleja el uso común adoptado en la mayoría de los países en el transcurso de los años y un importante cambio que se introduce en este *Manual*. La cuenta de capital se denomina ahora **cuenta de capital y financiera**. A efectos de mantener la uniformidad con el SCN, se hace la distinción entre *transferencias de capital* y **transferencias corrientes** en las cuentas de la balanza de pagos, y se procura la concordancia con la cuenta de capital y la cuenta financiera del SCN.

150. Los asientos de la mayoría de las partidas de la lista de componentes normalizados de la **cuenta corriente** deberán mostrar créditos y débitos en cifras brutas. La mayoría de los asientos de la **cuenta de capital y financiera** deberán registrarse en cifras netas, es decir, cada componente se indicará únicamente como un crédito o como un débito. (Los tratamientos recomendados para determinadas partidas y las excepciones se describen en los capítulos correspondientes.) Las entradas de recursos reales, los aumentos de activos financieros y las disminuciones de pasivos deberán aparecer como débitos, en tanto que las salidas de recursos reales, las disminuciones de activos financieros y los aumentos de pasivos deberán figurar como créditos. Las transferencias de las secciones 1.C. y 2.A. deben ser numéricamente iguales, pero con signo contrario, a los asientos que saldan.

Clasificaciones detalladas

151. De acuerdo con los criterios establecidos en el párrafo 143, se han determinado las siguientes clasificaciones de los componentes normalizados. En los capítulos IX y XVI, respectivamente, se analizan la estructura y las características de la **cuenta corriente** y de la **cuenta de capital y financiera**, mencionándose los cambios significativos con respecto a la cuarta edición. En los capítulos X al XV se

describen detalladamente los componentes normalizados de la **cuenta corriente**, y en los capítulos XVII al XXI, los de la **cuenta de capital y financiera** e *Instrumentos financieros derivados: Suplemento a la quinta edición (1993) del Manual de Balanza de Pagos, 2000*.

Cuenta corriente (1.)

152. En la **cuenta corriente** se registran todas las transacciones en valores económicos, salvo recursos financieros, que tienen lugar entre entidades residentes y no residentes; asimismo se registran los asientos compensatorios de los valores económicos corrientes que se suministren o adquieran sin un quid pro quo. Concretamente, las clasificaciones principales son **bienes y servicios, renta y transferencias corrientes**.

Bienes y servicios (1.A.)

Bienes (1.A.a.)

153. *Mercancías generales* comprende la mayoría de los bienes muebles que los residentes exportan a no residentes, o importan de ellos, dando lugar, salvo algunas excepciones especificadas, a un traspaso de propiedad (efectivo o imputado).

154. *Bienes para transformación* comprende la exportación (o importación, en la economía compiladora) de bienes que cruzan la frontera para ser transformados en el extranjero y la reimportación (o exportación, en la economía compiladora) subsiguiente de dichos bienes, valorados en cifras brutas antes y después de su transformación. Esta partida constituye una excepción al criterio de traspaso de propiedad.

155. *Reparaciones de bienes* comprende las reparaciones de bienes efectuadas para no residentes o recibidas de ellos en embarcaciones, aeronaves, etc. Si bien el movimiento físico de estos bienes es similar al descrito en el párrafo 154, las reparaciones deben valorarse según el precio (derechos pagados o recibidos) de las mismas y no según el valor bruto de los bienes antes y después de las reparaciones.

156. *Bienes adquiridos en puerto por medios de transporte* comprende todos los bienes (como combustibles, víveres, pertrechos y suministros) que las empresas residentes/no residentes de transporte —aéreo, marítimo, etc.— adquieren en el extranjero/en la economía compiladora. Esta clasificación no cubre los servicios auxiliares prestados (remolque, mantenimiento, etc.), que se clasifican en la categoría *transportes*.

157. *Oro no monetario* comprende las exportaciones e importaciones de todo el oro que no esté en poder de las autoridades como activo de reserva (oro monetario). El *oro no monetario* se trata como cualquier otra mercancía y se subdivide, toda vez que sea posible, en oro que se mantiene como reserva de valor y oro para otros usos (industrial).

ANEXO VI. CLASIFICACIÓN Y COMPONENTES NORMALIZADOS DE LA BALANZA DE PAGOS (continuación)

Servicios (1.A.b.)

158. *Transportes* abarca la mayoría de los servicios prestados por residentes a no residentes, y viceversa, que se incluían en las partidas embarques y otros transportes en la cuarta edición del *Manual*. En esta edición se excluye el seguro de fletes, que ahora forma parte de *servicios de seguros*. *Transportes* incluye el transporte de carga y de pasajeros por todos los medios, así como otros servicios de distribución y auxiliares, incluido el arrendamiento de equipo de transporte tripulado, con ciertas excepciones indicadas en los capítulos X, XI y XIII.

159. *Viajes* comprende bienes y servicios —incluidos los relacionados con salud y educación— adquiridos en una economía por viajeros no residentes (incluidos los excursionistas) para fines de negocios y para uso personal durante su estancia (inferior a un año) en esa economía. En *viajes* no se incluyen los servicios de transporte internacional de pasajeros, que forman parte de *transportes*. Los estudiantes y las personas que están bajo tratamiento médico se tratan como viajeros, independientemente de la duración de su estancia, en tanto que otros individuos —personal militar y de embajadas y trabajadores no residentes— no se consideran viajeros. No obstante, los gastos incurridos por los trabajadores no residentes se incluyen en *viajes*, mientras que los del personal militar y de embajadas se incluyen en *servicios del gobierno, n.i.o.p.* Estos casos se tratan en los capítulos XII y XIII.

160. *Servicios de comunicaciones* abarca las transacciones de comunicaciones entre residentes y no residentes, incluidos los servicios postales, de mensajería y de telecomunicaciones (transmisión de sonido, imagen y otra información por diferentes medios, así como el mantenimiento pertinente proporcionado por residentes a no residentes y viceversa).

161. *Servicios de construcción* incluye las obras de proyectos de construcción e instalación realizadas, con carácter temporal, en el extranjero/en la economía compiladora o en enclaves extraterritoriales por empresas residentes/no residentes y su personal. En este concepto no se incluyen las obras realizadas por una filial extranjera de una empresa residente o una oficina local no constituida en sociedad que sea equivalente siempre y cuando satisfaga ciertos criterios a una filial extranjera. En los capítulos IV y XIII se explica lo relativo a la residencia de esta clase de empresas.

162. *Servicios de seguros* comprende la contratación de seguros de no residentes con aseguradoras residentes y viceversa, incluidos los seguros de fletes (de bienes exportados e importados), los servicios correspondientes a otras clases de seguros directos (de vida y otros) y los servicios correspondientes a reaseguros. (En los párrafos 256 y 257 se describe el método que se emplea para calcular el valor de los servicios de seguros.)

163. *Servicios financieros* (salvo los relacionados con las empresas aseguradoras y las cajas de pensiones) abarca los servicios de intermediación financiera y los servicios auxiliares entre residentes y no residentes. Se incluyen las comisiones y derechos relacionados con cartas de crédito, líneas de crédito, arrendamiento financiero, transacciones en divisas, crédito al consumidor y a las empresas, corretaje, colocación y suscripción de valores, instrumentos de coberturas de riesgo de diferentes clases, etc. En los servicios auxiliares se incluyen los servicios de operación y reglamentación de los mercados financieros, servicios de custodia de valores, etc.

164. *Servicios de informática y de información* abarca las transacciones entre residentes y no residentes relacionadas con el asesoramiento en soporte técnico (*hardware*), aplicación de soporte lógico (*software*), servicios de información (procesamiento de datos, bases de datos, agencias noticiosas), y mantenimiento y reparación de computadores y equipo conexo.

165. *Regalías y derechos de licencia* comprende ingresos (exportación) y pagos (importación) de residentes y no residentes por: i) el uso autorizado de activos intangibles no financieros no producidos y derechos de propiedad como marcas registradas, derechos de autor, patentes, procesos, técnicas, diseños, derechos de fabricación, concesiones, etc., y ii) el uso, mediante convenios de licencia, de originales o prototipos producidos, como manuscritos, películas, etc.

166. *Otros servicios empresariales* prestados por residentes a no residentes y viceversa se refiere a servicios de compraventa y otros servicios relacionados con el comercio, servicios de arrendamiento de explotación y servicios empresariales, profesionales y técnicos varios. (Para información más detallada, véase el cuadro *Información suplementaria seleccionada* al final de este capítulo y los párrafos 261 a 264.)

167. *Servicios personales, culturales y recreativos* abarca i) servicios audiovisuales y conexos y ii) otros servicios culturales prestados por residentes a no residentes y viceversa. En el inciso i) se incluyen servicios relacionados con la producción de películas cinematográficas o videocintas, programas de radio y televisión y grabaciones musicales. (Ejemplos de estos servicios son los alquileres y honorarios percibidos por artistas, productores, etc. por sus producciones y por la venta de derechos de distribución a los medios de comunicación.) En el inciso ii) se incluyen otros servicios personales, culturales y recreativos, como los relacionados con bibliotecas, museos y otras actividades culturales y deportivas.

168. *Servicios del gobierno, n.i.o.p.* incluye todos los servicios (como los gastos incurridos por embajadas y consulados) relacionados con sectores gubernamentales u organismos internacionales y regionales y no clasificados en otras partidas.

ANEXO VI. CLASIFICACIÓN Y COMPONENTES NORMALIZADOS DE LA BALANZA DE PAGOS (continuación)

Renta (1.B.)

169. *Remuneración de empleados* abarca los salarios, sueldos y otras prestaciones, en efectivo o en especie, incluidos los de los trabajadores fronterizos, de temporada y otros no residentes (por ejemplo, personal local de embajadas).

170. *Renta de la inversión* comprende los ingresos y pagos de la renta derivados, respectivamente, de las tenencias de activos financieros de residentes frente al exterior y de pasivos frente a no residentes, y se divide en renta de la inversión directa, renta de la inversión de cartera y renta de otra inversión. El componente inversión directa se desglosa en renta procedente de acciones y otras participaciones de capital (dividendos, utilidades de sucursales y utilidades reinvertidas) y en renta procedente de la deuda (intereses); la renta de la inversión de cartera se desglosa también en renta procedente de acciones y otras participaciones de capital (dividendos) y renta procedente de la deuda (intereses); en renta de otra inversión se registran los intereses devengados por otra inversión (préstamos, etc.) y, en principio, la renta imputada a las unidades familiares procedente de su participación neta de capital en las reservas de los seguros de vida y en las cajas de pensiones.

Transferencias corrientes (1.C.)

171. Las *transferencias corrientes* se distinguen de las *transferencias de capital*, que se incluyen en la *cuenta de capital y financiera* para guardar la uniformidad con el tratamiento de las transferencias que hace el SCN. Las transferencias son los asientos compensatorios de los traspasos de propiedad de recursos reales o financieros entre residentes y no residentes, ya sea en forma voluntaria u obligatoria, que no entrañan un quid pro quo en valor económico. Las *transferencias corrientes* comprenden todas aquellas en las que **no tiene lugar**: i) un *traspaso* de propiedad de activos fijos; ii) un traspaso de fondos vinculados o condicionados a la adquisición o enajenación de activos fijos; iii) una condonación de un pasivo por parte de un acreedor, sin que se reciba a cambio una contrapartida. Todas éstas son *transferencias de capital*. En las *transferencias corrientes* se distinguen las del gobierno general (por ejemplo, cooperación internacional corriente entre diferentes gobiernos, pagos de impuestos corrientes sobre la renta y el patrimonio, etc.) y otras transferencias (por ejemplo, remesas de trabajadores, primas —menos cargos por servicio— e indemnizaciones de seguros excepto los de vida). En el capítulo XV se examina en forma detallada la distinción entre *transferencias corrientes* y *transferencias de capital*; véanse también los párrafos 175 y 344.

Cuenta de capital y financiera (2.)

172. Esta cuenta tiene dos componentes principales —la *cuenta de capital* y la *cuenta financiera*— coin-

cidiendo así con la clasificación adoptada en el SCN. Los activos representan créditos frente a no residentes y los pasivos representan deudas contraídas con no residentes. Las dos partes de una transacción de activos o pasivos son, generalmente, un residente y un no residente pero, en algunos casos, ambas partes pueden ser residentes o bien no residentes. (Véase el párrafo 318.)

173. Todas las variaciones de valoración y de otra índole de los activos y pasivos frente al exterior que no reflejen transacciones (véase el párrafo 310) se excluyen de la *cuenta de capital y financiera* pero figuran en la posición de inversión internacional. Los estados suplementarios identifican ciertas partidas que tienen interés analítico y que afectan a varias cuentas, como los pasivos que constituyen reservas de autoridades extranjeras y las transacciones de financiamiento excepcional, que se describen en el capítulo XXII.

174. La clasificación de la *cuenta financiera* y de los componentes de renta de la *cuenta corriente* están interrelacionadas y deben ser coherentes para facilitar el análisis, permitir una vinculación eficaz de la balanza de pagos con la posición de inversión internacional y mantener la compatibilidad con el SCN y con otros sistemas estadísticos del FMI.

Cuenta de capital (2.A.)

175. Los componentes principales de la *cuenta de capital* son las *transferencias de capital* y la *adquisición/enajenación de activos no financieros no producidos*. Las *transferencias de capital* son aquellas en las que tiene lugar un traspaso de propiedad de un activo fijo, un traspaso de fondos vinculado o condicionado a la adquisición o enajenación de un activo fijo, o la cancelación de un pasivo por parte de un acreedor sin que se reciba a cambio una contrapartida. Las *transferencias de capital* se dividen en: i) las del gobierno general, que a su vez se subdividen en condonación de deudas y otras y ii) las de otros sectores, haciéndose el desglose en transferencias de emigrantes, condonación de deudas y otras. (Véase el capítulo XV, donde se explica la diferencia entre las *transferencias de capital* y las *transferencias corrientes*.) La *adquisición/enajenación de activos no financieros no producidos* abarca, en general, los factores intangibles, como las patentes, arrendamientos u otros contratos transferibles, el buen nombre, etc. En esta partida no se incluyen las tierras situadas en un territorio económico específico, pero puede incluirse la compra o venta de tierras por una embajada. (Véase el párrafo 312.)

Cuenta financiera (2.B.)

176. La clasificación de los componentes normalizados de la cuenta financiera se basa en los siguientes criterios:

Todos los componentes se clasifican según la clase de inversión o haciéndose un desglose

ANEXO VI. CLASIFICACIÓN Y COMPONENTES NORMALIZADOS DE LA BALANZA DE PAGOS (continuación)

funcional (*inversión directa, inversión de cartera, instrumentos financieros derivados, otra inversión, activos de reserva*).

Para la categoría *inversión directa*, se hace la distinción según la dirección (en el extranjero o en la economía declarante); para los componentes acciones y otras participaciones de capital, otro capital.

En *inversión de cartera, instrumentos financieros derivados y otra inversión* se hace la distinción habitual entre activos y pasivos.

Cobra particular importancia en *inversión de cartera y otra inversión* la distinción por clases de instrumentos (títulos de participación en el capital, títulos de deuda, créditos comerciales, préstamos, moneda y depósitos, otros activos o pasivos). En este *Manual*, se incluyen en *inversión de cartera* los instrumentos tradicionales y nuevos del mercado monetario y otros instrumentos financieros básicos.

La distinción tradicional entre activos y pasivos a largo y a corto plazo, basada en un plazo contractual original de más de un año o de un año o menos, se efectúa solamente en *otra inversión*. En los últimos años, este desglose ha perdido importancia para muchas transacciones internas e internacionales. En consecuencia, tanto en el *SCN* como en este *Manual*, se da menos importancia a la diferencia entre largo y corto plazo que en ediciones previas. Sin embargo, debido a que el vencimiento sigue siendo importante para fines específicos —el análisis de la deuda externa, por ejemplo—, esta distinción se mantiene en el *Manual* para *otra inversión*.

177. *Inversión directa*, categoría que refleja el interés duradero de una entidad residente de una economía (inversionista directo) en una entidad residente de otra economía (empresa de inversión directa), abarca todas las transacciones entre inversionistas directos y empresas de inversión directa. Es decir, la *inversión directa* abarca la transacción inicial entre las dos partes y todas las transacciones subsiguientes que tienen lugar entre ellas y entre empresas filiales, constituidas o no en sociedad. Las transacciones de inversión directa (en el extranjero y en la economía declarante) se subclasifican en acciones y otras participaciones de capital, utilidades reinvertidas y otro capital (transacciones entre empresas afiliadas). En el caso de las acciones y otras participaciones de capital y otro capital, se hace la distinción entre activos y pasivos frente a empresas filiales y frente a inversionistas directos. Las transacciones entre bancos filiales y entre otros intermediarios financieros filiales se limitan al capital en acciones y al que está relacionado con la deuda permanente. (Véase el párrafo 372 de la quinta edición del *Manual de Balanza de Pagos*.)

178. *Inversión de cartera* comprende las transacciones en títulos de participación en el capital y títulos de deuda. Los títulos de deuda están subdivididos en bonos y pagarés e instrumentos del mercado monetario. Se incluyen, asimismo, varios instrumentos financieros nuevos, además de los derivados financieros, en las clasificaciones de instrumentos pertinentes. (Se excluyen las transacciones clasificadas como *inversión directa y activos de reserva*.)

179. La categoría de instrumentos financieros derivados abarca los instrumentos financieros vinculados a otros instrumentos financieros específicos o indicadores o productos primarios, a través de los cuales pueden negociarse en los mercados financieros, por derecho propio, riesgos financieros específicos (como riesgos de variaciones de tasas de interés, riesgo cambiario, riesgos de variaciones de las cotizaciones bursátiles y de los precios de los productos primarios, riesgo de crédito, etc.). Las transacciones de instrumentos financieros derivados deberán tratarse por separado y no como parte integral del valor de las transacciones a las que estén vinculadas.

180. *Otra inversión* incluye créditos comerciales a corto y largo plazo; préstamos (entre ellos, el uso de crédito del FMI, préstamos del FMI y préstamos relacionados con arrendamientos financieros); moneda y depósitos (transferibles y otros, como depósitos de ahorro y a plazo, acciones de asociaciones de ahorro y préstamo, acciones de cooperativas de crédito, etc.); otras cuentas por cobrar y por pagar. (Se excluyen las transacciones clasificadas como *inversión directa*.)

181. *Activos de reserva* comprende las transacciones de aquellos activos que las autoridades monetarias de una economía consideran disponibles para atender necesidades de financiamiento de la balanza de pagos y, en algunos casos, otras necesidades. Tal disponibilidad, en principio, no guarda estrecha relación con criterios formales tales como los de propiedad o moneda de denominación. Esta categoría se divide en oro monetario, DEG, posición de reserva en el FMI, activos en divisas (moneda, depósitos y valores) y otros activos.

182. La cobertura e identificación de los componentes de los *activos de reserva* están relacionadas con un concepto analítico, son en parte resultado de una decisión razonada y no siempre se prestan a la aplicación de criterios objetivos y formales ni a clasificaciones bien delimitadas respecto a la condicionalidad y otras consideraciones. A diferencia de la cuarta edición del *Manual*, en la quinta edición se excluyen las variaciones de valoración de los *activos de reserva* y sus contrapartidas. También se excluyen la asignación y cancelación de DEG, la monetización y desmonetización del oro y los asientos de contrapartida. Estas variaciones, que no constituyen transacciones, figuran en la posición de inversión internacional.
