

Sudan: Second Review Under the Staff-Monitored Program and Request for Extension-Staff Report; and Statement by the Executive Director for Sudan

SUDAN

June 2021

SECOND REVIEW UNDER THE STAFF-MONITORED PROGRAM AND REQUEST FOR EXTENSION—STAFF REPORT; AND STATEMENT BY THE EXECUTIVE DIRECTOR FOR SUDAN

In the context of the Second Review Under the Staff-Monitored Program, the following documents have been released and are included in this package:

- The **Staff Report** prepared by a staff team of the IMF for the Executive Board's consideration on June 28, 2021, following discussions that ended on May 7, 2021, with the officials of Sudan on economic developments and policies. Based on information available at the time of these discussions, the staff report was completed on June 21, 2021.
- A **Statement by the Executive Director** for Sudan.

The IMF's transparency policy allows for the deletion of market-sensitive information and premature disclosure of the authorities' policy intentions in published staff reports and other documents.

SECOND REVIEW UNDER THE STAFF-MONITORED PROGRAM AND REQUEST FOR EXTENSION

EXECUTIVE SUMMARY

Context: The transitional government embarked on a Staff-Monitored Program (SMP) in 2020 to help address major macroeconomic imbalances caused by decades of mismanagement, lay the groundwork for inclusive growth, and establish a track record of sound policies required for eventual HIPC debt relief. The economic challenges facing the authorities remain significant and have been exacerbated by the COVID-19 pandemic, but there have been improvements in both the domestic and external environment. Sudan has cleared its arrears to the World Bank and African Development Bank thereby regaining access to multilateral grant funding. A financing package for the clearance of arrears to the IMF has been identified, and on May 17, 2021 a development partner conference was held in Paris with a side event to promote investment in Sudan.

Recent developments and outlook. Reforms have moved ahead, but the macroeconomic situation remains challenging and the external position is weak. Growth is expected to turn positive in 2021 but inflation remains very high. The exchange rate has remained stable following unification and adoption of a managed float, but with inflation in triple digits (342 percent in March), further depreciation is expected which will test the government's resolve. Donor financing, strong domestic revenue mobilization and avoiding the re-emergence of fuel subsidies will be needed to rein in monetization and support macroeconomic stability.

Program performance. The authorities met the quantitative benchmarks on banking sector net credit to the central government, the floor on net international reserves (NIR), and the ceiling on contracting or guaranteeing external long-term non concessional debt, but missed the ceiling on net domestic assets (NDA) mainly due to an increase in credit to the banking sector (mainly related to pandemic relief measures) relative to the programmed decline and to valuation effects. The indicative target (IT) ceiling on reserve money was also missed due to unsterilized reserve accumulation and an increase in credit to banks. The Non-Oil Primary Deficit was met by a wide margin though the IT floor on social spending was missed as a result of slower-than-expected rollout of the Sudan Family Support Program. The structural benchmark (SB) on bank stress tests was met but the benchmarks on the establishment of the Anti-Corruption Commission and the implementation of on-site AML/CFT inspections of banks were

missed due to delays in passing the Anti-Corruption Law and staffing challenges resulting partly from COVID-19 mitigation measures, respectively. The authorities are taking remedial actions to address the missed conditionality.

HIPC and proposed program extension. Financing of the IMF's participation in HIPC requires formal pledges by member countries. Given the time required to obtain formal financing pledges, there is a possibility that the HIPC Decision Point will slip past the expiry of the SMP at end-June. In light of the need for a continuous track record under an Upper Credit Tranche (UCT)-quality program, as a precaution the authorities have requested an extension of the current SMP by 6 months to end-December 2021. The SMP will be cancelled at Decision Point when a new Extended Credit Facility (ECF) arrangement is approved.

Staff supports the authorities' request to reset existing structural benchmarks and establish new ones for the extended period of the SMP. The structural benchmark related to the establishment of the Anti-Corruption Commission was originally programmed for end-March 2021, but will be shifted to end-September 2021 to allow more time for the appointment of commissioners. In lieu of the delayed adoption of an automatic fuel price mechanism (an end-September 2020 structural benchmark), an end-December 2021 benchmark will be set on the removal of controls on retail gasoline and diesel prices. Further underscoring the UCT standard of the program, the authorities propose to establish new structural benchmarks during the extension of the SMP on the adoption of a PFM roadmap; issuance of implementing regulations for the Investment Law; elimination of VAT and personal income tax exemptions; adoption of an SOE strategy; and enactment of a revised Banking Regulation Act.

Board engagement. In staff's view, the SMP continues to contain forward-looking policy commitments and conditionality of UCT quality. Staff will seek Directors' endorsement of this view on a lapse of time basis by end-June if the HIPC Decision Point occurs after June 30.

Approved By
Subir Lall (MCD) and
Gavin Gray (SPR)

A virtual mission was held during April 14–May 7, 2021. The team comprised Carol Baker (head), Qiaoe Chen and Atticus Weller (all MCD), Sanan Mirzayev (SPR), Jacques Charaoui (FAD), and Mohammed Zaher (Resident Representative). Mr. Ismail (OED) participated in the discussions. The mission met with Finance Minister Dr. Gibril Ibrahim Mohamed; Central Bank Governor Mohamed Elfatih Zeinelabdin Mohamed; former Acting Finance Minister Hiba Ahmed and other senior government officials.

| Attachment I. Memorandum of Economic and Financial Policies for 2020–2021 | <u>35</u> |
| Attachment II. Technical Memorandum of Understanding | <u>49</u> |

BACKGROUND AND CONTEXT

1. **Since the 2019 popular revolution, Sudan's transitional government has taken difficult steps to right decades of economic mismanagement.** Their home-grown policies, which are supported by the Staff Monitored Program, have reduced distortions and large unaffordable subsidies in support of economic stability, fiscal sustainability and sustained and inclusive growth that reduces poverty. Economic conditions remain challenging but, notwithstanding delays, the rollout of the Sudan Family Support Program (SFSP) on February 24 has already provided support to 160,000 households and its implementation is expected to accelerate through the remainder of the year. This will help ease the burden on families from these necessary policy actions.
2. **Sudan is also on a path to reintegrating with the international financial community and resolving its unsustainable debt burden.** On March 26, Sudan cleared arrears to the World Bank and regained access to multilateral funding through IDA's various facilities and windows and on May 12, cleared its arrears to the African Development Bank (AfDB). A financing package for the clearance of arrears to the IMF has been identified and formal pledges are being sought. On May 17, a development partners' conference was held in Paris with a side event to promote international investment in Sudan.
3. **Nonetheless, the situation remains fragile with significant risks.** Reforms have moved ahead, but the macroeconomic situation remains challenging and the external position is weak. Growth is expected to turn positive in 2021 but inflation remains very high. Fiscal revenue is low and subsidies continue to consume a large proportion of the budget. The move to a market-determined exchange rate has brought significant remittance inflows and the exchange rate has remained relatively stable, but with inflation in triple digits (342 percent in March), further depreciation is expected which will test the government's resolve. Donor financing, strong domestic revenue mobilization and avoiding the re-emergence of fuel subsidies will be needed to rein in monetization and support macroeconomic stability.

RECENT ECONOMIC DEVELOPMENTS AND PERFORMANCE UNDER THE SMP

4. **Sudan's economy is expected to grow modestly in 2021.** In 2020, containment measures to protect human life in the wake of the pandemic reduced economic activity but agricultural production and exports held up and the service sector rebounded quickly following the lock down. GDP is estimated to have contracted by 3.6 percent. With the clearance of arrears to the World Bank and AfDB unlocking grant resources and positive policy developments such as exchange rate unification, GDP growth is expected to recover to about 0.4 percent in 2021.

5. The fiscal balance improved in the first quarter though the composition of adjustment was less than ideal. Tax revenues in Q1 2021 outperformed the authorities' budgetary target due to improved administration, including efforts to combat smuggling. However, social expenditure fell below target due to the slow rollout of the SFSP while spending on fuel and wheat subsidies increased relative to the budget due to an increase in international prices and insufficient adjustment of retail fuel prices.

6. Inflation remains high but the post-unification exchange rate has been stable. As the parallel market exchange rate was already widely used in FX transactions, the unification of the official exchange rate on February 21 had a limited impact on inflation and since then the exchange rate has been stable with daily movement well within the ± 5 percent band around the indicative rate. However, inflation has remained high and continued to accelerate in the first quarter of 2021 due to the base effects from fuel price hikes and their second-round impact, but also shortages of food and fuel. In March, inflation reached 342 percent y-o-y, but on a month-on-month basis slowed to 7.2 percent (13.1 percent in February 2021). The banking sector remains fragile, with several banks undercapitalized and/or vulnerable to exchange rate depreciation.

7. External sector performance was robust with the current account balance turning to surplus. The trade balance improved significantly in Q1 2021 on the back of exchange rate reforms. Exports increased by a robust 54 percent, while imports contracted by 17 percent in the first quarter on year-on-year basis following a surge in late 2020. With more transactions shifting to the formal sector, recorded remittances have increased nearly five-fold. Despite lower than expected external grants disbursements, the current account on a cash basis registered a surplus of 1 percent of GDP. Gross usable international reserves improved to \$327 million at end-March 2021 (the equivalent of 0.4 months of imports).

8. Program performance was satisfactory:

- *Quantitative targets:* The authorities met the quantitative benchmarks on net credit to the central government, the ceiling on contracting or guaranteeing external long-term non-concessional debt and the net international reserves (NIR) floor. However, the ceiling on net domestic assets (NDA) was missed mainly due to an increase in credit to the banking sector (mainly related to pandemic relief measures) relative to the programmed decline.
- *Indicative targets (ITs):* The IT floor on social spending was missed due to delays in the rollout of the SFSP, though the IT on the Non-Oil Primary Deficit was met by a wide margin due to this and other spending shortfalls and better than expected mobilization of tax revenue; the NOPD target was adjusted to reflect deviations from staff projections related to SFSP and other grant inflows. As with NDA, the reserve money ceiling was missed due to a combination of an increase in unsterilized foreign assets and credit to the banking sector.
- *Structural benchmarks:* The structural benchmark (SB) on bank stress tests was met but the implementation of 10 on-site thematic AML/CFT inspections was missed, though significant progress has been made with eight out of 10 inspections completed by mid-May despite

COVID-19 mitigation measures requiring the CBOS and banks to operate at 50 percent capacity. The establishment of the Anti-Corruption Commission is delayed due to the delayed passage of the Anti-Corruption National Commission Law (end-October 2020 SB) which was approved by the Sovereign Council on April 25, but the authorities have made progress in identifying commissioners.

OUTLOOK AND RISKS

The medium-term outlook is positive, but the near-term outlook is subject to significant downside risks.

9. The positive external developments noted above and ongoing policy reforms support an improved outlook. Though the economic and political environment is still unsettled, recent policy actions have engendered stability that if continued will support stronger growth. Growth is expected to pick up gradually to 4½ percent over the medium term as the business climate improves. The move to a market-determined exchange rate on February 21, 2021 has helped to reduce market volatility, bring back foreign exchange transactions to the formal sector, and leveled the playing field for foreign traders. Continued reduction of subsidies and the elimination of the current customs exchange rate regime will provide fiscal space for increasing outlays on needed social spending. The recent passage of the new Investment Law and the Public and Private Partnership Law, and the issuance of regulations underpinning the re-introduction of conventional banking (see below) could help to attract more private sector-led investment and facilitate a transition to reserve money targeting.

10. While medium-term risks are broadly balanced, near-term risks are significant and tilted to the downside. In addition to the risks to the program described in paragraph 3 above, failure to implement needed policy measures or a reversion to past policies, including fiscal subsidies, multiple currency practices and lack of transparency/governance would undermine growth and macroeconomic stabilization. This could lead to persistent and large fiscal deficits with insufficient financing further fueling the inflation/depreciation spiral. The risk that the transitional government will be unable to reach consensus or that a social backlash will impede implementation of difficult but needed economic reforms, including those needed to achieve HIPC debt relief, is non-negligible and would prolong economic hardship and socio-political instability.

POLICY DISCUSSIONS

Policy discussions centered broadly on the need to maintain reform momentum and avoid a reversion to distortionary exchange rate and fiscal policies. Talks focused specifically on: (1) solidifying the transition to a flexible exchange rate and enhancing a monetary policy framework that adheres to reserve money targets; (2) strengthening the financial sector, including by improving the implementation of the AML/CFT regime; (3) reducing distortionary and costly fuel

subsidies while strengthening the social safety net; (4) improving domestic revenue mobilization and MOF oversight over SOEs (PFM); and (5) strengthening governance and the environment for private sector growth.

Exchange Rate, Monetary and Financial Sector Policies

11. The move to a market-determined exchange rate has gone smoothly so far. On February 21, 2021, the authorities unified all exchange rates (excluding the customs valuation exchange rate) at the prevailing market rate of SDG375/USD. Though a ± 5 percent band was set on the daily movement of the exchange rate, most FX transactions have been performed within ± 3 percent of the CBOS's indicative rate, indicating a welcome low level of volatility in the forex market. Staff and the authorities will revisit the band at the end of June 2021 with a view to reassessing its necessity. The authorities have pledged to limit any intervention to mitigating disorderly market conditions.

12. The authorities continue to take steps to facilitate the transition to a reserve money targeting monetary regime. In the short run, the main policy tool for reducing reserve money growth will be fiscal consolidation supplemented by required reserve ratios and use of the limited stock of central bank securities. Over the medium-term, however, the sale of claims by CBOS in commercial and state-owned banks and conversion of claims on the government into monetary instruments will strengthen CBOS' monetary policy toolkit and enhance its ability to mop up liquidity. The CBOS intends to request TA to assess the need and scope to develop both conventional and Islamic monetary tools. In addition, the authorities have passed legislation re-introducing conventional banking thereby establishing a dual banking system comprised of both Islamic and conventional banking. Updated regulations are expected to be completed by end-2021 and will facilitate the transition of monetary policy regime and development of government securities market. On CBOS equity positions (structural feature that precedes the COVID-19 pandemic) in Islamic banks, it is crucial that the authorities proceed carefully on divestment in the broad context of addressing problem banks to reduce any potential negative spillovers on the banking system. The transition to a reserve money targeting regime should help to contain inflation and prevent the re-occurrence of missed targets on NDA and reserve money. On the latter, the authorities plan to begin FX auctions in the coming weeks supported by IMF TA to improve auction regulation and design, which should allow the sterilization of accumulated FX reserves.

13. Additional work is needed to strengthen central bank independence and its supervisory capacity. The revised Central Bank Act aims to strengthen Central Bank independence. It was approved by the CBOS Board on May 1 and it has now been sent to the Justice Department for final review. To strengthen regulatory supervision, banking regulations should be modernized in line with Islamic Financial Stability Board and international standards with a goal of moving to risk-based supervision. This is particularly important with the advent of a dual banking system. Phase 1 of the Asset Quality Review is complete, with Phase 2 underway and the authorities completed bank by bank stress tests in February to assess resilience to exchange rate shocks (end-March structural benchmark). It is imperative that the authorities

enact a revised Banking Regulation Act (end-December structural benchmark) which includes a comprehensive resolution regime for the banking sector in line with international best practice; this will help to lay the groundwork for restructuring the banking sector through bank resolution, and liquidation.

14. Addressing AML/CFT deficiencies must remain a priority. As of mid-May, the authorities had completed eight out of 10 planned AML/CFT on-site inspections of the highest-risk banks (end-March 2021 structural benchmark) as determined by the central bank's off-site assessment tool in 2019 and the remaining two are pending. Given that Sudan will soon undergo an AML/CFT mutual evaluation, the authorities should prioritize the completion of a National Risk Assessment (NRA) and the development of a strategy to mitigate the identified risks.

Fiscal Reforms

15. Sustained efforts toward fiscal consolidation are crucial to stabilize and grow the economy. This will require (i) enhanced domestic revenue mobilization to create fiscal space for needed social and infrastructure spending, and (ii) continued reforms in the energy sector to reduce fuel subsidies and lay the groundwork for lower electricity subsidies. The authorities' 2021 budget targets both sets of policy measures and aims to reduce the deficit by 3 percent of GDP to achieve a fiscal deficit of 2.9 percent of GDP.

16. Reducing fossil fuel subsidies must be at the center of fiscal consolidation efforts. Though gasoline and diesel subsidies were eliminated at the end of 2020, retail prices have recently failed to keep pace with rising international prices, leading to the reemergence of subsidization and threatening fiscal sustainability. To address this, the authorities will remove controls on retail gasoline and diesel fuel prices and allow gasoline and diesel fuel suppliers to contract at negotiated market prices (*end-December structural benchmark*). In the electricity sector, the authorities, with assistance from the World Bank, should develop a more rational tariff regime including increased electricity tariff rates on high-end consumers and improved efficiency in power generation in the broader context of work to increase the reliability and viability of the sector. A revised Electricity Act will create a more effective regulatory framework for power sector development to facilitate private sector investment in power generation and to encourage switching to renewable energy such as solar and wind in power generation.

17. Social spending has lagged program targets but the authorities will take corrective measures. Actual Q1 social spending underperformed the relevant IT floor due to the delay in exchange rate unification as well as coordination and administrative challenges impacting the rollout of the Sudan Family Support Program (SFSP), including the need to recruit staff and implement reliable benefit delivery mechanisms. The authorities will take corrective actions to speed up SFSP implementation, including by convening a Coordination Committee of key government agencies and international partners and appointing a director to lead the Project Implementation Unit. After a slow start, the pace of local staff recruitment has also accelerated, which should allow a pickup in SFSP disbursements through the Summer with a goal of reaching two million households by the end of the year.

18. Additional tax measures and administrative improvements are needed to raise domestic revenue. In addition to the alignment of the customs exchange rate with the CBOS indicative rate (*end-June SB*), the authorities have pledged to eliminate all exemptions on VAT except those related to food, and the personal income tax (PIT) exemption on people over 50 years of age in the context of a progressive PIT structure (*end-December SB*). Strengthening the Large Taxpayer Office by increasing the percentage of taxpayers processed electronically from 70 percent to 75 percent through the Tax Administration Core System (TACS) database by the end of 2021 will also help to boost revenue mobilization. Driven by the elimination of the customs exchange rate, tax revenue is expected to increase to 4.9 percent of GDP in 2021, a notable increase over the 2020 tax revenue yield of 3.4 percent of GDP.

19. Strengthening public financial management will help to enhance fiscal control and revenue collection. To anchor annual budgets on a credible medium-term fiscal framework, the authorities will develop a Public Financial Management Roadmap based on the recent PEFA (*end-September 2021 SB*). Building on improvements in the Treasury Single Account (TSA), they will continue to improve cash forecasting, extending the setting of cash ceilings for ministries, departments, and agencies from one to three months, and gradually expanding TSA coverage to extrabudgetary funds and improving expenditure control.

Business Climate and Governance Reforms

20. Unlocking Sudan's private sector potential is key to robust and inclusive growth, but the authorities should be attentive to fiscal risks in the new PPP and Investment laws. New Investment and PPP laws have been recently enacted with the goal of improving the investment climate, fostering Public-Private Dialogue, strengthening the legal and institutional framework for Public-Private Partnerships (PPPs), and supporting MSME development. These are *prima facie* positive developments, but if not structured correctly, PPPs and investment incentive regimes can carry significant fiscal risks. To mitigate these, the authorities should issue implementing regulations for the Investment Law which stipulate that all tax exemptions must have prior approval from the Ministry of Finance and must be costed (*end-December SB*). There should be a similar stipulation with respect to the PPP Law, as well as strictly defined limits on the government's total exposure to PPPs and procedures to ensure the affordability of PPP projects in the longer term.

21. Combating corruption, improving governance and reducing the role of the state in the economy are key to creating a more enabling environment for private sector-led growth. The new Anti-Corruption Law calls for an independent Anti-Corruption Commission with a strong mandate to prevent, detect, and investigate corruption. Establishing this commission through the appointment of commissioners is a structural benchmark for end-September, which is re-programmed from October 2020 given delays in passing the law. Meanwhile, supervision of the ill-gotten assets from the previous regime will be transferred to a government holding company to improve their oversight. The authorities will also develop an SOE ownership policy which will set forth the strategic purpose, oversight and management

principles of this sector, including a framework for determining which SOEs should remain public, be liquidated or be privatized. The strategy should be endorsed by the Cabinet and the financial oversight of all SOEs transferred to the MOFEP by the end of December 2021 (*structural benchmark*). The timely completion of the delayed governance diagnostic exercise is needed to build a roadmap for strengthening governance across various sectors of government. Finally, corruption vulnerabilities will also be reduced by the previously-mentioned AML/CFT reforms, increased electronic processing of taxpayers, and exchange rate unification, which should eliminate opportunities for insiders to arbitrage across exchange rates.

Other Policy Issues

22. Statistical capacity remains very weak despite extensive TA, undermining macroeconomic management, policy making and program monitoring. There are limited reliable data sources upon which to establish quantitative performance criteria. Critical actions include: update the System of National Account from SNA1968 to SNA 2008 and update the base year from 1981 to one within the last 5 years; improve data accuracy and collection and expand the fiscal accounts to include General Government statistics; and address the large Errors and Omissions in the BOP through better data collection and reporting. The implementation of e-GDDS would also help to improve data collection, dissemination and reporting across all sectors. The IMF stands ready to provide TA.

HIPC STATUS AND PROPOSED PROGRAM EXTENSION

23. The IMF Executive Board agreed to a financing package for the clearance of Sudan's arrears to the Fund and the IMF's participation in HIPC on May 10. The package involves the full distribution of the SCA-1 (SDR 1.066 billion), deferred charges (SDR 611 million), plus additional grant financing. Letters have been sent to capitals requesting formal pledges of their shares of the SCA-1 and deferred charges distributions.

24. Given the time required to obtain formal financing pledges, there is a possibility that the HIPC DP will be reached after the June 30 expiry of the SMP. As HIPC requires an uninterrupted track record of performance under a UCT-quality SMP, as a precaution the authorities are requesting an extension of the current SMP through end-December to mitigate any risk caused by a delay in receiving sufficient financing assurances. In the event that the Decision Point were to slip past June 30, IMF Executive Board endorsement of the UCT quality of the extended SMP would be sought.

25. Staff supports the authorities' request to reset existing structural benchmarks and establish new ones for the extended period of the SMP. The structural benchmark related to the establishment of the Anti-Corruption Commission was originally programmed for end-March 2021, but will be shifted to end-September 2021 to allow more time for the appointment of commissioners. In lieu of the delayed adoption of an automatic fuel price mechanism (an end-

September 2020 SB), an end-December 2021 benchmark on the removal of controls on retail gasoline and diesel prices will be set. Further underscoring the UCT standard of the program, the authorities propose to establish new structural benchmarks during the extension of the SMP on the adoption of a PFM roadmap; issuance of implementing regulations for the Investment Law; elimination of VAT and personal income tax exemptions; adoption of an SOE strategy; and enactment of a revised Banking Regulation Act.

STAFF APPRAISAL

25. International support for Sudan has gained momentum. Sudan has cleared its arrears to the World Bank and the African Development Bank and has regained access to multilateral grant funding. A financing package for the clearance of arrears to the IMF has been identified and work is ongoing to secure formal pledges for the IMF's participation in HIPC, an important step toward HIPC Decision Point.

26. Reforms have moved ahead, but the macroeconomic situation remains challenging and the external position is weak. Growth is expected to turn positive in 2021 but inflation remains very high. The market-determined exchange rate has remained stable following unification, but with inflation in triple digits, further depreciation may occur, testing the government's resolve. Donor financing, strong domestic revenue mobilization and avoiding the re-emergence of fuel subsidies will be needed to rein in monetization and support macroeconomic stability.

27. The move to a market-determined exchange rate has gone smoothly and the authorities should continue to strengthen their reserve money targeting framework. The re-introduction of conventional banking will facilitate development of effective monetary instruments. Over the medium-term, the sale of claims by CBOS in commercial and state-owned banks and conversion of claims on the government into monetary instruments will also strengthen CBOS' monetary policy toolkit and enhance its ability to mop up liquidity. Given weaknesses in the banking sector, the authorities should proceed cautiously on exiting their equity positions in the context of an effective bank resolution framework and strengthening capital adequacy.

28. Additional steps are needed to strengthen central bank independence and its supervisory capacity. The recent approval of the revised Central Bank Act is a welcome first step. The authorities should enact a revised Banking Regulation Act which includes a comprehensive resolution regime for the banking sector in line with international best practice; this will help to lay the groundwork for restructuring the banking sector through bank resolution and liquidation. Capacity to supervise the dual system should be enhanced including through technical assistance.

29. The reduction of fuel subsidies is central to reducing the deficit and creating space for social spending. To address the reemergence of fuel subsidization, it is critical for the

authorities to remove controls on retail gasoline and diesel fuel prices and allow gasoline and diesel fuel suppliers to contract at negotiated market prices. In the electricity sector, a plan should be put in place to reduce electricity subsidies in the context of improving viability of the sector including increased electricity tariff rates on high-end consumers and improved efficiency in power generation. Subsidy reduction will free up fiscal space for social spending, but improvements in coordination and administration are also needed to accelerate the rollout of the Sudan Family Support Program.

30. Additional tax measures and administrative improvements are needed to raise domestic revenue. In addition to the elimination of the customs exchange rate regime, the authorities should eliminate all exemptions on VAT except those related to food, and the personal income tax exemption on people over 50 years of age. Strengthening the Large Taxpayer Office will also help to boost revenue mobilization. PFM reforms, including the development of a Public Financial Management Roadmap, are needed to enhance fiscal control and revenue collection.

31. Unlocking Sudan's private sector potential will require significant steps to improve governance, reduce the role of the state in the economy, and mobilize private investment. The establishment of an independent Anti-Corruption Commission is needed to prevent, detect, and investigate corruption, while a strategy for the SOE sector should establish oversight and management principles of the sector, set forth a framework for determining which SOEs should remain public, be liquidated or be privatized. The authorities should ensure that implementation of the new PPP and Investment Laws are carefully monitored by the MOFEP to prevent the emergence of contingent liabilities and a proliferation of tax exemptions.

32. Staff supports the proposed extension of the program and establishment of new test dates and conditionality. Successful implementation of the extended SMP would improve the external position and support sustainable inclusive growth. Notwithstanding challenges, the authorities have the commitment and capacity to implement the proposed policies, as illustrated by their performance to date and forward commitment to an ambitious adjustment program. Conditionality design remains consistent with applicable policies for a UCT program, and thus the program continues to meet the UCT standard.

Figure 1. Sudan: Selected Economic Indicators

The economy suffered a third consecutive year of contraction in 2020

...while inflation surged due to monetary expansion, shortages of food and fuel, and adjustment of administered prices.

The fiscal deficit narrowed in 2020...

...but large monetary expansion continued due to monetization and purchases of foreign exchange.

The terms of trade increased...

...while imports also grew rapidly.

Sources: Sudanese authorities; and IMF staff calculations.

Figure 2. Sudan: Fiscal Sector

Revenue is low and declined further due to COVID-19.

Subsidies on retail gasoline and diesel were gradually removed.

The fiscal deficit came down but remained large

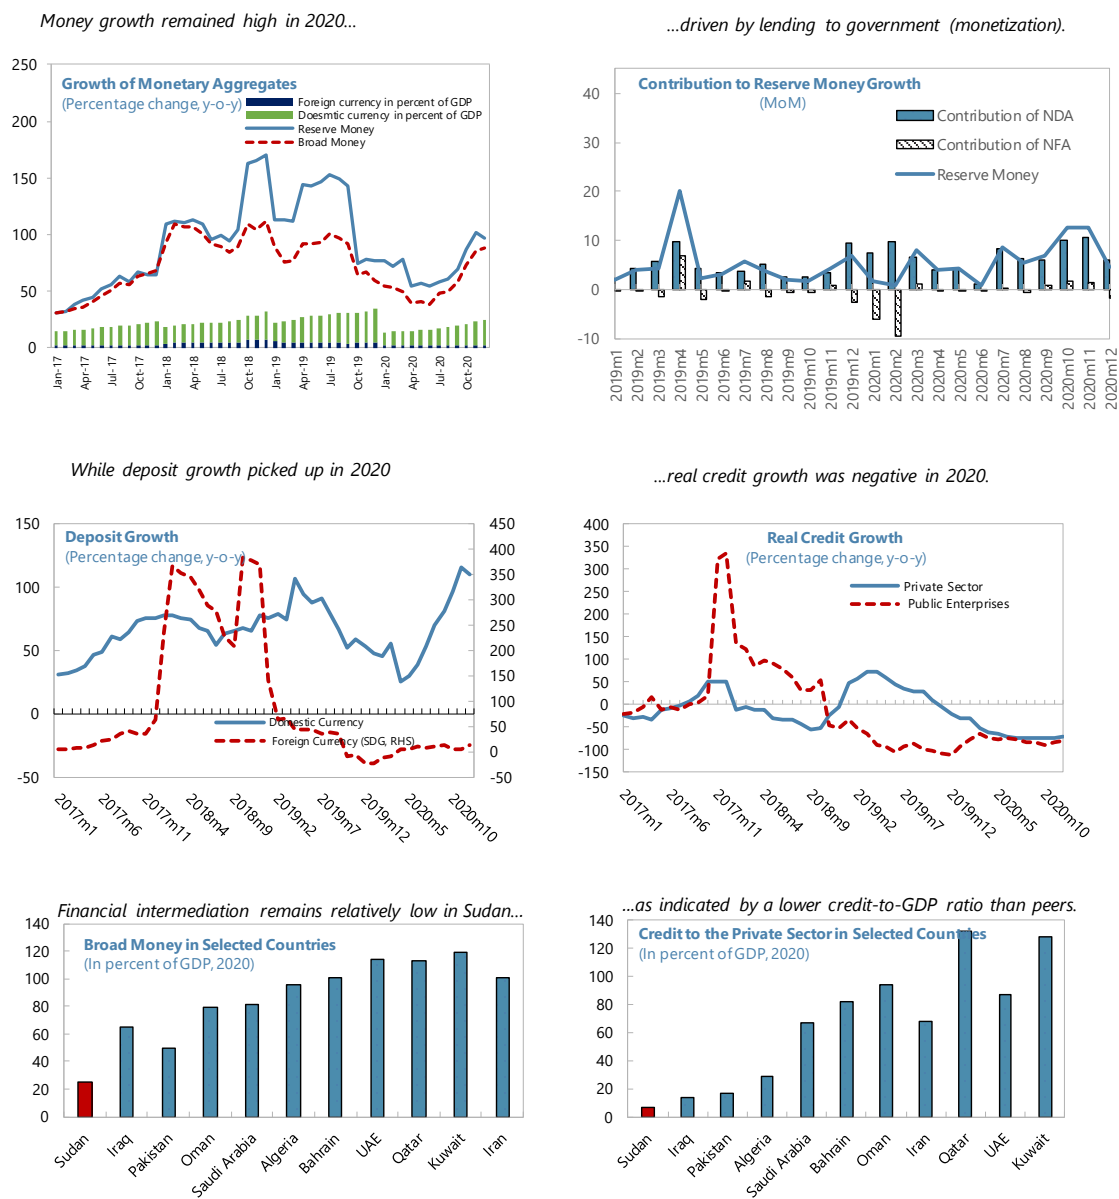

...and continued to drive monetization.

Sources: Sudanese authorities, and IMF Staff estimates.

Figure 3. Sudan: Monetary Sector

Sources: World Economic Outlook, Central Bank of Sudan, and IMF staff calculations.

Figure 4. Sudan: External Sector

Sudan became a net oil importer shortly after the secession of South Sudan.

...but both import and export volumes fell...

Capital inflows decreased...

Sources: Central Bank of Sudan; and IMF Staff calculations.

The terms of trade improved slightly in 2020...

...and the current account deficit remained high.

...and reserve coverage remained very low.

| Indicative Targets | | | | | | | | |
| Social spending (floor: in SDG billion) | 15 | 99 | 39 | 53 | 15 | 43 | 90 | 186 |
| Nonoil primary deficit (ceiling: in SDG billion) 4/ | 242 | 367 | 375 | 219 | 104 | 266 | 306 | 348 |
| Reserve money (ceiling: in SDG million) 2/ | 0 | 766 | 1,000 | 1,094 | 1,208 | 1,451 | 1,565 | 1,770 |
| Memorandum items: | | | | | | | | |
| External grants for Family Support Program (in millions of U.S. dollars) | | 328 | 0 | 92 | 8 | 52 | 126 | 245 |
| Other external non-project grants (in millions of U.S. dollars) | 0 | 212 | 161 | 25 | 0 | 25 | 50 | 100 |
| MOFEP repayments to CBOS for advances related to victims of terrorism (in millions of US dollars) | | | | 356 | 0 | 33 | 67 | 107 |
| Government asset sales (in SGD billion) | | 35 | 0 | 0 | 0 | 0 | 0 | 0 |
| External non-project loans (in millions of U.S. dollars) | 91 | 127 | 0 | 0 | 0 | 0 | 0 | 0 |

1/ The variables are defined according to the TMU.

2/ Evaluated using program exchange rate of 45 SDG per U.S. dollar. The definition of net international reserves is updated to include all external liabilities denominated in foreign currency for March and June target, instead of short-term external liabilities. The actual performance for NIR in Dec-2020 based on the previous definition is \$-803 million.

3/ Continuous benchmark; flow from the beginning of the year.

4/ The unadjusted NOPD target for end March is 312. Adjustments were made per the TMU to account for fluctuations with respect to SSTL, SFSP and non-project grants.

Table 10. Sudan: Prior Actions and Structural Benchmarks Under the SMP

| Benchmarks | Target Date | Macroeconomic Rationale |
|--|--|---|
| Prior Actions | | |
| 1. Complete the stress testing of individual bank resilience to exchange rate movements and prepare appropriate measures to mitigate risks in each problem bank ahead of exchange rate reform, in consultation with the IMF. | Completed PA for SMP request | Prepare for the exchange rate reform |
| 2. Legislative council to pass a revised 2020 budget consistent with program objectives, including incorporating a substantial expansion of the social safety net under the Sudan Family Support Program, increased health expenditure to address COVID-19 needs, and revenue mobilization through customs exchange rate reform and expansion of the tax base. | Completed PA for SMP request | Fiscal consolidation |
| 3. Announce the unification of the official exchange rate (excluding the customs valuation exchange rate) with the market rate at the prevailing market rate and issue regulations to banks and forex bureaus indicating that trading can take place in a +/-5 percent band around the indicative rate announced by the central bank prior to the opening of trading which is calculated as the weighted average of the previous day's trading excluding CBOS sales/purchases from government. | Completed February 21, 2021 | Remove distortions and raise revenue |
| Structural Measures | | |
| Public financial management | | |
| 1. The MOFEP to publish on its website monthly budget execution reports that show actual revenue and expenditure for budgetary central government in comparison with original and revised budget, consistent with the GFSM2001. | Dec. 2020 Met | Improve budget classification and fiscal reporting |
| 2. Develop and adopt a PFM Roadmap based on the 2020 PEFA. | End-Sept 2021 | Strengthen PFM |
| Governance | | |
| 3. Establish an independent anti-corruption commission through appointment of the Commissioners in accordance with the provisions of the Anti-Corruption National Commission Law. | End-Sept 2021 | Strengthen governance |
| Expenditure policy | | |
| 4. Adopt automatic fuel pricing mechanism to ensure that retail diesel and gasoline prices reflect all costs, thus eliminating subsidization. | Sept. 2020 Not Met; see #5 | Support fiscal consolidation |
| 5. Eliminate government price controls on retail gasoline and diesel fuel prices and allow gasoline and diesel fuel suppliers to contract at negotiated market prices. | End-December 2021 | Remove price controls and eliminate subsidies |
| Tax Policy | | |
| 6. Customs valuation exchange rate unification: Publish decree indicating imports to be valued at indicative exchange rate published by CBOS and rationalize multiple ad hoc fees and other related charges. | End-June 2021 | Eliminate distortions and strengthen revenue collection |
| 7. Eliminate (i) all exemptions on VAT except those related to food, and (ii) the personal income tax exemption on people over 50 years of age in the context of a progressive PIT structure. | End-December 2021 | Broaden tax base |
| 8. Issue implementing regulations for the Investment Law which stipulate that all tax exemptions must have prior approval from the Ministry of Finance and must be costed. | End-December 2021 | Strengthen fiscal control; support revenue |
| Governance | | |
| 9. Prepare and publish an inventory of all state-owned enterprises including those supervised by ministry of finance, line ministries and security sector. | Dec. 2020 Not met; full list published on April 5, 2021 with the exception of those | Improve fiscal transparency |

Table 10. Sudan: Prior Actions and Structural Benchmarks Under the SMP (continued)

| Benchmarks | Target Date | Macroeconomic Rationale |
|--|--|--|
| | owned by the intelligence sector due to ongoing work to clarify ownership | |
| 10. Pass a new anti-corruption law, in line with international best practices as agreed in consultation with the IMF, that clearly defines what actions constitute corrupt practices and creates an independent anti-corruption commission. | Oct. 2020 Not Met; approved April 25, 2021 | Fight corruption and improve governance |
| 11. Establish an independent anti-corruption commission, consistent with the provisions of the new anti-corruption law. | Mar. 2021 Not met due to delay in approving law. Reprogrammed #3 above | Fight corruption and improve governance |
| 12. Transfer financial oversight of all SOEs to the MOFEP and adopt an ownership strategy setting forth the strategic purposes, oversight and management principles of SOEs including guiding principles for the review of the existing stock of SOEs. | End-December 2021 | Improve governance and transparency of the SOEs; mitigate contingent fiscal risks. |
| Monetary and Financial Sector | | |
| 13. Finalize an amended Central Bank Law in consultation with IMF staff to, inter alia, (i) establish a central bank mandate focusing on price stability; (ii) strengthen the Central Bank institutional, functional, personal, and financial autonomy, including by limiting monetary financing of the Government and prohibiting the central bank to conduct quasi-fiscal operations; (iii) improve its decision-making structure, by ensuring collegial decision-making, providing for effective oversight over executive; and (iv) enhance transparency and accountability provisions. | Dec. 2020 Not Met; draft sent to CBOS Board in February; approved May 1, 2021 | Enhance central bank independence and improve governance |
| 14. Enact a new Central Bank Law in consultation with IMF staff that, inter alia, (i) establishes a proper central bank mandate focusing on price stability; (ii) strengthens the Central Bank institutional, functional, personal, and financial autonomy, including by limiting monetary financing of the Government and prohibiting the central bank to conduct quasi-fiscal operations; (iii) improves its decision-making structure, by ensuring collegial decision-making, providing for effective oversight over executive; and (iv) enhances transparency and accountability provisions. | June 2021 | Enhance central bank independence and improve governance |
| 15. Unify all but the customs exchange rate and allow commercial banks and FX bureaus to set exchange rates in line with market conditions, but subject to an adjustable band around the daily official exchange rate. Central Bank sets daily official exchange rate based on market average exchange rate. | Sept. 2020. Not met. See Prior Action (#3) for First Review (above). | Strengthen competitiveness and reduce distortions |
| 16. Gradually adjust customs exchange rate towards market exchange rate and fully unify by June 2021. | Jun. 2021 Reprogrammed above #6 | Eliminate distortion in the exchange rate market |
| 17. Establish regular procedures for communication between banking supervision and regulation departments; and conduct semi-annual stress tests to identify and address vulnerabilities of individual banks to exchange rate movements. | Mar. 2021 Met | Strengthen financial sector soundness |

Table 10. Sudan: Prior Actions and Structural Benchmarks Under the SMP (concluded)

| Benchmarks | Target Date | Macroeconomic Rationale |
|--|--|---|
| 18. (i) Conduct thematic AML/CFT on-site inspections of the ten highest-risk banks as determined by the CBOS off-site tool, focusing on politically exposed persons (PEPs), suspicious transaction reporting, and higher-risk customers and transactions in the real estate sector; and (ii) provide aggregate data to the Fund on any related violations found and sanctions levied by the CBOS, in line with the existing legal framework. | Mar. 2021 Not met; five were completed as of end-March and eight as of mid-May with the remaining two pending | Reduce vulnerabilities to corruption and related money laundering |
| 19. Enact a revised Banking Regulation Act which includes a comprehensive resolution regime for the banking sector, in line with international best practice. | End-December 2021 | Strengthen the banking sector |

Appendix I. Letter of Intent

Khartoum, June 10, 2021

Ms. Kristalina Georgieva
Managing Director
International Monetary Fund
700 19th Street N.W.
Washington, D.C. 20431

Dear Ms. Georgieva:

We would like to assure you of the government of Sudan's continued and unwavering commitment to the Staff Monitored Program. Based on the strength of policies outlined in this letter and considering our performance thus far under the program including recent corrective measures, we are requesting the completion of the Second Review. In addition, in light of a possible delay in the HIPC Decision Point beyond the June 30 expiration of the SMP, as a precaution we also are requesting an extension of the SMP through end-December.

The Sudanese people continue to endure hardship as we begin to address the large distortions resulting from decades of economic mismanagement of the previous regime. Low tax revenue and depleted reserves have led to shortages of necessities including food, medicine, and fuel, soaring inflation and a loss of purchasing power. The COVID-19 pandemic exacerbated these challenges. However, the transitional government is committed to addressing these adverse social and economic legacies, and to meeting the aspirations of the Sudanese people to build a democratic and prosperous society. It is these principles that underlie our recently-adopted three-year Poverty Reduction Strategy.

We are making progress in reintegrating into the international community. On March 26, 2021, we cleared our arrears to the World Bank and regained access to multilateral funding through IDA's various facilities and windows. Clearance of our arrears to the African Development Bank (AfDB) was completed on May 12, and we hope that the IMF membership will come forward quickly with pledges to support us in clearing our arrears to the IMF. However, in light of the possibility of a delay in obtaining the required financing assurances before the conclusion of the current SMP at the end of June, as a precaution we are requesting to extend the SMP for 6 months to December 2021 in order to maintain an uninterrupted track record of satisfactory performance under a UCT-quality SMP leading up to the HIPC Decision Point.

Our home-grown reform program which is the basis of the Staff Monitored Program remains our guiding principle, and since the first review under the SMP, we have continued to advance key reform measures. In April, we achieved several important milestones, including the passage of the Anti-

corruption National Commission Law, Investment Law and the Public and Private Partnership Law, and the re-establishment of conventional banking in the context of dual banking system (conventional and Islamic) which aims to attract more private sector-led investment and facilitate a transition to reserve money targeting. On May 1 the CBOS Board approved the revised Central Bank Act which will strengthen independence of the CBOS, and work is underway on the Banking Regulation Act which includes a bank resolution framework to address weaknesses in the current system. We are also benefitting from the move to a market-determined exchange rate on February 21, 2021, through lower volatility of the exchange rate and the return of foreign exchange transactions to the formal sector, including a near five-fold increase in recorded remittances.

Looking ahead, over the next six months we intend to eliminate the customs valuation exchange rate and use the market exchange rate to value imports while removing ad hoc import fees and charges. We will also eliminate price controls on retail gasoline and diesel prices to eliminate retail fuel subsidies and to take steps to phase out some important VAT and personal income tax exemptions. We will continue to improve public financial management and fiscal planning, including steps to strengthen the management and transparency of SOEs. We request modifications to quantitative targets for end-June and the resetting of the structural benchmark (SB) related to the establishment of the Anti-Corruption Commission as an end-September 2021 SB to provide more time for the appointment of commissioners and in lieu of the delayed adoption of an automatic fuel price mechanism (end-September 2020 SB), would set an end-December 2021 SB on the removal of controls on retail gasoline and diesel prices. We would also propose the addition of new structural benchmarks for the second half of 2021 on the adoption of a PFM roadmap; issuance of implementing regulations for the Investment Law; elimination of VAT and personal income tax exemptions; adoption of an SOE strategy; and enactment of a revised Banking Regulation Act.

The policies and measures set forth in the attached Memorandum of Economic and Financial Policies (MEFP; Attachment I) reflect the understandings reached with IMF staff during the April 12 – May 7, 2021 mission, which we believe can achieve the objectives of the program. We will, however, take any additional measures that may become necessary for this purpose. We will remain in close consultation with IMF staff on the adoption of such measures, and in advance of any revisions to the policies contained in the MEFP and its annexes. The government will provide IMF staff with the information necessary to assess the implementation of the staff-monitored program. In line with our commitment to transparency, we authorize the IMF to publish this letter, the MEFP and its attachments, and the accompanying staff report in accordance with the Fund's transparency policy.

We believe that the policies and conditionality under the SMP remain of Upper Credit Tranche (UCT) quality and look forward to the IMF Executive Board's confirmation of this assessment in due course.

Very truly yours,

/s/

Gibril Ibrahim Mohamed
Minister, Ministry of Finance and Economic
Planning

/s/

Mohamed Elfatih Zeinelabdin Mohamed
Governor, Central Bank of Sudan

Attachment I. Memorandum of Economic and Financial Policies for 2020–21

1. **This memorandum sets out the economic and financial policies and objectives of the Government of Sudan for July 1, 2020–December 31, 2021.** These policies will be implemented in the context of Sudan's IMF staff-monitored program (SMP) to help restore macroeconomic stability and support higher and inclusive growth. The government remains determined to implement bold, home-grown structural reforms that have emerged from substantive economic and political dialogue at all levels of government and with domestic stakeholders. We have been making strong efforts to obtain donor financing and hope that credible reforms would catalyze additional donor support and help us progress towards the HIPC decision point.
2. **We appeal to the international community to support our ongoing reform efforts and work toward a rapid resolution of Sudan's debt and arrears problem.** Because of the latter, Sudan continues to suffer from limited access to concessional loans. As a low-income and fragile country, it needs concessional lending to develop and diversify its economy. Our infrastructure, reconstruction, and social development projects, which require critical external funding, are an essential component of our strategy to boost economic growth. In recent years, we have had to resort to non-concessional financing, but remain mindful of the risks to debt sustainability and to the concerns of other creditors. We will continue to limit the contracting of such borrowing to an annual amount of \$300 million (quantitative benchmark, QB #4) for specific, high return and well-identified projects.
3. **Stabilizing the economy calls for bold reforms to address deep seated structural distortions.** Recovery from years of economic mismanagement, neglect of basic services and distortions of the civil service requires reshaping the public-policy framework with a focus on public service delivery, improving quality of institutions, and progressing toward the sustainable development goals (SDGs). Addressing past inequities and investing in peace, notably in long neglected and marginalized states, is also critical. To accomplish these objectives while containing the large and rising fiscal deficit and its monetization, we will continue our vigorous efforts to (a) reform subsidies; (b) substantially raise non-oil revenues; (c) strengthen and expand the social safety net; (d) enhance the oversight and accountability of state enterprises; and (e) strengthen governance. Prudent monetary and financial policies by the Central Bank of Sudan (CBOS) are also important and complementary pillars of our reforms. These policies include reforming the exchange rate system, tightening monetary policy, boosting the resilience of the financial sector, strengthening the central bank's independence, and developing instruments of monetary policy.
4. **Social mitigation of the impact of reforms is critical.** The planned and ongoing reforms have reduced the purchasing power of citizens, including through rising prices, before a supply response has materialized. To mitigate this impact, we have introduced the Sudan Family Support Program (SFSP), a quasi-universal basic income scheme, which was piloted in June 2020, and launched on February 24, 2021 and has already provided support to 160,000 households; rollout of the program

will accelerate through the remainder of the year. We regret that the implementation of the program has been delayed due to delays in the unification of the exchange rate and administrative challenges with the result that the social spending target in the first quarter of 2021 was missed (indicative target, IT #1), but we are committed to now moving ahead fully with the program and will take steps to improve program coordination and administration. Reforms to counter corruption, strengthen governance, and streamline the business environment are also underway.

5. The health and economic fallout from COVID-19 has added considerably to our challenges. While many advanced countries have witnessed a decline of COVID-19 cases thanks to vaccination, we are experiencing a third wave of the COVID-19 pandemic and to this day, government offices and businesses continue to work at 50 percent capacity with limited availability of vaccine. While the pandemic has added to our challenges, it has not reduced our resolve and the government remains committed to the reform effort. We are counting on continued support from our international development partners, not only financial support but also for technical assistance and debt relief in support of attaining debt sustainability and self-reliance.

A. Recent Macroeconomic Developments

6. Sudan's economy is expected to recover in 2021. In 2020, containment measures to protect human life in the wake of the pandemic reduced economic activity but agricultural production and exports held up and the service sector rebounded quickly following the lock down. GDP is estimated to have contracted by -3.6 percent. With the clearance of arrears to the World Bank and AfDB, and positive policy developments such as exchange rate unification, GDP growth is expected to recover modestly to about 0.4 percent in 2021.

7. The fiscal balance improved in the first quarter though the composition of adjustment was less than ideal. Tax revenues in Q1 2021 outperformed our budgetary targets due to improved administration, including efforts to combat smuggling. However, on the expenditure side, social spending was below target due to the slow rollout of the Sudan Family Support Program while spending on fuel and wheat rose due to an increase in international prices and insufficient adjustment in fuel prices at the pump. As a result, while we met the end-March IT on the non-oil primary balance, the IT floor on social spending was missed.

8. Inflation remained high but is on a declining path. As the parallel market exchange rate was already widely used in FX transactions, the unification of the official exchange rate had a minimal impact on inflation. However, inflation remained high and continued to accelerate in the first quarter of 2021 due to the base effect from fuel price hikes and their second-round impact as well as shortages of food and fuel. In March, inflation reached 342 percent y-o-y, but on a month-on-month basis slowed to 7.2 percent compared to 13.1 percent in February 2021.

9. External sector performance was robust and the current account balance turned to surplus. The trade balance improved significantly on the back of exchange rate reforms. Exports increased a robust 54 percent, while imports contracted by 17 percent in the first quarter on year-on-year basis following a surge in late 2020. With more transactions shifting to the formal sector,

recorded remittances have increased nearly five times. Despite lower than expected external grants disbursements, the current account on cash basis registered a surplus of 1 percent of GDP in Q1. Gross usable international reserves improved to \$327 million at end-March 2021 (the equivalent of 0.4 months of imports). The banking sector remains fragile, with several banks undercapitalized and/or vulnerable to exchange rate depreciation and the CBOS is working with problem banks to address it.

B. Program Performance

10. We have recorded the following achievements since the last review:

- *Quantitative targets:* We met the quantitative benchmarks on net credit to the central government, the ceiling on contracting or guaranteeing external long-term nonconcessional debt and the NIR floor. However, the ceiling on NDA was missed mainly due to an increase in credit to the banking sector (mostly related to pandemic relief measures) relative to the programmed decline and to valuation effects. Fiscal consolidation, the reserve money targeting framework, and use of FX auctions should support our efforts to achieve program targets.
- *Indicative targets:* The IT floor on social spending was missed due to delays in the rollout of the SFSP, though the IT on the Non-Oil Primary Deficit was met by a wide margin due to this and other spending shortfalls and better than expected mobilization of tax revenue. Implementation of the SFSP should pick up through the summer as coordination with donors improves and disbursements accelerate. The reserve money ceiling was missed due to a combination of an increase in unsterilized foreign assets and credit to the banking sector.
- *Structural benchmarks:* The SB on bank stress tests was met but the full implementation of 10 on-site thematic AML/CFT inspections was missed, though significant progress has been made with eight out of 10 tests completed as of mid-May despite COVID-19 mitigation measures requiring the CBOS and banks to operate at 50 percent capacity. The establishment of the Anti-Corruption Commission is delayed due to the delayed passage of the Anti-Corruption National Commission Law (*end-October 2020 SB*) which was approved by the Sovereign Council on April 25, but the relevant authorities we have made progress in identifying commissioners.

C. The Economic Program for April 2021–December 2021

11. We remain committed to stabilize the economy and create conditions for robust and inclusive growth. We will eliminate the customs exchange rate while reducing ad hoc fees and charges (SB #6), reduce fiscal imbalances while reorienting spending to critical social services, work to strengthen the monetary policy framework and bolster the resilience of the banking system. We will implement structural reforms to improve public financial management and governance, fight corruption, and strengthen the business environment to support higher and more inclusive growth. We will continue our extensive consultation and communication campaign to strengthen public buy-in of the reforms.

12. Policy adjustment and reforms, and external financing and debt relief, are critical to reducing macroeconomic imbalances and supporting robust and inclusive growth in the medium term. We target to reduce the fiscal deficit by about 3 percent of GDP in 2021, with a further reduction in 2022. Exchange rate and structural reforms would strengthen competitiveness and increase GDP growth to 4.4 percent over the medium term. Inflation is currently high, but we would expect it to decrease over time as the impact of fuel subsidy and exchange rate reforms are fully passed through.

Exchange Rate, Monetary, and Financial Sector Policies

13. We have taken significant steps to reform the exchange rate system to bolster competitiveness and transparency. On February 21, 2021 we unified all exchange rates (excluding the customs valuation exchange rate) at the prevailing market rate of SDG375/USD and issued regulations to commercial banks and FX bureaus to set exchange rates in line with market conditions (prior action). Although we set a ± 5 percent band on the exchange rates set by commercial banks and FX bureaus to help manage volatility, most FX transactions have taken place within ± 3 percent of the CBOS's indicative rate, indicating a welcome low level of volatility in the forex market. We will continue to observe market developments and consult regularly with IMF staff about the width of the band and stand ready to adjust it as needed to ensure that it does not cause market segmentation by excessively restraining commercial banks and FX bureaus from adapting to market conditions. After end-June 2021, we will take stock jointly with IMF staff of the economic context and experience under the reformed policy with a view toward reassessing the necessity of the band. In our view, the recent exchange rate reform has eliminated many of the measures that were previously found to be inconsistent with our obligations under Article VIII, Sections 2 and 3; and we look forward to the Fund's confirmation of the same. We commit to not introduce any new exchange restrictions or multiple currency practices (MCPs), and we will limit exchange rate intervention only to addressing disorderly market conditions. We also remain committed to aligning the customs valuation exchange rate, which is used to value imports for taxation purposes, with the CBOS indicative rate by end-June (SB #6). To limit the price impact of this measure, we plan to remove additional taxes and fees on imports which are subject to the top tariff rate of 40 percent. We will refrain from imposing any administrative restrictions on current account transactions as a means of constraining exchange rate movements.

14. We have taken financial sector and monetary measures to underpin exchange rate reform. To this end, we completed bank by bank stress tests to exchange rate shocks and communicated with identified problem banks to strengthen resilience to exchange rate movements, including through recapitalization and temporary regulatory forbearance, prior to the exchange rate reform (SB #17). We regret that the reserve money ceiling was missed due to an unsterilized accumulation of reserves above that which was programmed and credit to the banking sector. We also issued a new regulation in 2021 to forbid banks from having a short net FX open position and to limit the long position to 1-5 percent of regulatory capital. We are also working to transition our monetary policy framework to the reserve money target regime to help contain inflation. On the latter, we regret that like the NDA target the end-March IT on reserve money (IT #3) was missed due

to an increase in credit to commercial banks and a delay in setting up an FX auction to sterilize the accumulation of FX reserves. Auctions will begin in the coming weeks supported by IMF TA to improve auction regulation and design.

15. We remain committed to a reserve-money targeting framework with effective monetary instruments. We will establish a regular schedule of meetings of the treasury committee to enhance coordination between the central bank and the Ministry of Finance and Economic Planning (MFEP) to improve liquidity management and forecasting to strengthen monetary control and coordination of foreign exchange management. In the short run, the main policy tool for reducing reserve money growth is fiscal consolidation to reduce monetization. We also stand ready to use existing instruments, including reserve requirements and the limited stock of central bank securities, to tighten monetary policy as needed to meet reserve money targets under the SMP (IT #3). For instance, we have announced to increase the required reserve ratios from 20 percent to 22 percent. In the context of our broader strategy of the CBOS exiting its positions in commercial banks and as appropriate, we will mop-up liquidity in the financial system by selling CBOS's shares in the state-owned banks, commercial banks, micro-finance agencies and other companies guided by a fully-fledged action plan to resolve problem banks; we have also suspended the extension of CBOS's investment deposits in commercial banks falling due.

16. To strengthen our monetary toolkit over the medium term, while also helping to eliminate deficit monetization, we will progressively build a strong and liquid government securities market, with active participation of banks, nonbanks, and the general public, supported by the introduction of conventional instruments and IMF TA. Alongside, we will take concrete steps over the remainder of the program to begin to convert the net claims of the central bank on the general government (about SDG 700 billion in 2020, or 13.6 percent of GDP) into government securities. We are currently updating the regulations to fully implement the dual banking system comprised of both Islamic and conventional banking; this work is expected to be completed by end 2021 and will facilitate the sale of government securities.

17. We continue to work to strengthen central bank independence. The revised Central Bank Act has been amended following receipt of comments from the IMF and other stakeholders and was approved by the CBOS Board on May 1. The review by the Ministry of Justice is expected to be completed by end-June (SB #14). The law strengthens the central bank's mandate on price and financial stability, limits monetary financing of the government, and strengthens central bank governance.

18. We will continue to upgrade the central bank's capacity to supervise and mitigate financial stability risks. We will modernize banking regulations in line with Islamic Financial Stability Board standards and international standards and boost supervisory vigilance to ensure that banks comply with prudential regulations, including the recently revised regulation to restrain bank's net open foreign currency position. Over time, we will further strengthen supervision by moving toward a risk-based regime and will work to strengthen corporate governance in the banking sector. Measures will be consistent with the Basel Committee on Banking Supervision Corporate Governance Principles, and address conflicts of interest and related party transactions and ensure that banks

comply with the corporate governance regulations. These steps will be supported by technical assistance from various IFIs, including from METAC.

19. We will strengthen our bank recovery and resolution framework, based on international good practice. We will pass an amended Banking Business Act including establishing an appropriate bank resolution framework (SB# 19), which will pave the way for restructuring the banking sector through bank resolution, liquidation and/or merger and acquisition. With the completion of the Asset Quality Review (phase 1 comprised of 8 banks, phase 2 covering an additional 9 banks and a potential phase 3 on the remaining banks by end-2021, pending available funding), we will adopt an action plan for strengthening the banking system, including application of the resolution framework and divestiture of the CBOS from commercial banks.

20. We have introduced a dual system of conventional and Islamic banking to expand access to credit. The dual banking system will help attract both foreign and domestic investment in the banking sector which will improve financial inclusion, strengthen governance in the financial sector and facilitate investment. We plan to request technical assistance to help strengthen supervision of both the Islamic and conventional banking systems.

21. Addressing AML/CFT deficiencies remains a priority. We will complete the thematic AML/CFT on-site inspections of the remaining two highest-risk banks determined by the central bank's off-site assessment tool, focusing on politically exposed persons (PEPs), suspicious transaction reporting, and higher-risk customers and transactions in the real estate sector, and provide aggregate data to the IMF on any related violations found and sanctions levied by the CBOS in line with the existing legal framework. We will also work toward completing a National Risk Assessment (NRA).

Fiscal Policy

22. Sustained efforts toward fiscal consolidation are vital to stabilizing the economy. Therefore, our fiscal consolidation plan over 2021 focuses on (i) enhance domestic revenue mobilization so as to create fiscal space for needed social and infrastructure spending, and (ii) continued reforms in the energy sector to reverse the reemergence of retail fuel subsidies and facilitate the gradual removal of electricity subsidies. The 2021 budget contains measures that we assess will reduce the deficit by about 3 percent of GDP to achieve a target of 2.9 percent of GDP, and meet the targets under our program including significantly reducing the need for monetization.¹

23. Reducing fossil fuel subsidies, which accounted for 79 percent of total subsidies in 2020, is at the center of our fiscal consolidation efforts. By the end of 2021, we will eliminate government controls on retail gasoline and diesel fuel prices and allow gasoline and diesel fuel suppliers to contract at negotiated market prices (SB# 4). In the electricity sector, we will gradually reduce electricity subsidies by increasing electricity tariff rates on high-end consumers and

¹ The approved 2021 budget was constructed using the then-applicable official rate of SDG55/\$; the fiscal numbers reported in this MEFP represent our assessment of the 2021 budget using the market exchange rate.

improving efficiency in power generation. With the assistance of the World Bank, we will conduct a cost of service study in the electricity sector to formalize the tariff adjustment methodology and new tariff structure while protecting vulnerable groups through continued strengthening of the social safety net. We will adopt a revised Electricity Act to create a more effective regulatory framework for power sector development to facilitate private sector investment in power generation and to encourage switching to renewable energy such as solar and wind in power generation. Lower spending on subsidies will help to free up fiscal space for social spending and infrastructure development.

24. Social spending has lagged program targets but we will take remedial measures. Actual Q1 social spending underperformed the relevant IT floor due to the delay in exchange rate unification as well as donor coordination and administrative challenges impacting the rollout of the Sudan Family Support Program (SFSP), including the need to recruit staff and implement reliable benefit delivery mechanisms. We will take remedial actions to speed up SFSP implementation, including by convening a Coordination Committee of key government agencies and international partners and appointing a director to lead the Project Implementation Unit. After a slow start, the pace of local staff recruitment has also accelerated, which should facilitate SFSP disbursements through the Summer and help in achieving our goal of reaching two million households by the end of the year. We estimate that spending on the SFSP and additional health expenditure, including measures to treat and mitigate the spread of COVID-19, at about 1 ¼ percent of GDP in 2021 (IT #1).

25. Domestic revenue mobilization and donor financing are important for restoring fiscal sustainability. We will continue to expand the tax base by streamlining tax exemptions and rationalizing corporate taxation while improving tax administration. Driven by the unification of the exchange rate, we expect tax revenue to increase to 4.9 percent of GDP in 2021, a notable increase over the 2020 tax revenue yield of 3.4 percent of GDP. Based on donor pledges at the Sudan Partnership Conference on June 25, 2020, and prior assistance for our COVID-19 response, we anticipate donor support of \$770 million in 2021, including 0.7 percent of GDP in grants for the SFSP in 2021. In addition, project grants are expected to increase by one percent of GDP in 2021, after the impact of COVID-19 on project implementation abates. Revenue measures include the elimination of all exemptions on VAT except those related to food, and the elimination of the personal income tax (PIT) exemption on people over 50 years of age in the context of a progressive PIT structure (SB #7); and strengthening the Large Taxpayer Office by increasing the percentage of taxpayers processed electronically from 70 percent to 75 percent through the Tax Administration Core System (TACS) database by the end of 2021.

26. We will continue efforts to strengthen public financial management (PFM). Key areas include budget planning, fiscal reporting, fiscal risk management, and the treasury single account (TSA). We will aim to anchor annual budgets on a credible medium-term fiscal framework including policy tradeoffs, financing constraints, and fiscal risks, and will develop a Public Financial Management Roadmap based on the recent PEFA (SB #2). We have made good progress in establishing the TSA and will continue to improve cash forecasting, extending the setting of cash ceilings for ministries, departments, and agencies from one to three months and will gradually

extend TSA coverage to extrabudgetary funds and improving expenditure control by setting up a commitment control system so that control over expenditure is exercised at the commitment stage, instead of the payment stage.

27. We will improve fiscal coverage and the transparency of reporting. The current system of central government reporting omits key information needed in fiscal policymaking. Therefore, we will work to consolidate financial statements between the central and state governments and annually thereafter within three months of end of the reporting period. We will work toward publishing the financial statement and audit report of the top 10 SOEs starting in 2022 and will provide transparent reporting of spending on subsidies. We will coordinate with the Supreme Audit Institution to enhance audits in line with international best practice.

Other Structural Reforms

28. Unlocking Sudan's private sector potential is key to robust and inclusive growth. The IFC and the World Bank, together with donors, have been supporting our efforts to improve the investment climate, foster Public-Private Dialogue, strengthen the legal and institutional framework for Public-Private Partnerships (PPPs), and support MSME development, focusing on access to finance, business entry and taxation, innovation and entrepreneurship. In addition, a new Ministry of Investment was established by the government and will be supported by the IFC. Finally, new Investment and PPP Laws have been recently enacted. We intend to issue implementing regulations for the Investment Law which will stipulate that all tax exemptions must have prior approval from the Ministry of Finance and must be costed. There will be a similar stipulation with respect to the PPP Law, and we will define overall limits on the government's total exposure on PPPs and procedures to ensure the affordability of PPP projects in the longer term.

29. Combating corruption and improving governance are key priorities of the transitional government. This has been enshrined in the Constitutional Declaration governing the transitional period. Ongoing and planned reforms include:

- The passage of the new Anti-Corruption Law (completed on April 25) and the establishment of an independent Anti-Corruption Commission (as tasked by the Constitutional Declaration) by end-September 2021 with a strong mandate to prevent, detect, and investigate corruption. The establishment of the Commission was a structural benchmark for October 2020 but would be reprogrammed given delays in passing the law. The law also aims to strengthen the role of civil society and journalism in combating corruption.
- Full implementation of the law—passed in December 2019—to dismantle the corrupted institutions of the former regime, recover looted assets, and bring to justice individuals associated with the former regime who obtained these assets through corrupt practices. Oversight of these assets will be transferred to a holding company under the financial oversight of the MOFEP, and their disposal and use of related resources will adhere to fully transparent procedures.

- We will develop an SOE ownership strategy which will set forth the strategic purposes, oversight and management principles of this sector, including a framework for determining which SOEs should remain public, be liquidated, or be privatized. The strategy will be endorsed by the Cabinet and the financial oversight of all SOEs will be transferred to the MOFEP by the end of December 2021 (SB #12).
- Improving the quality and frequency of key macroeconomic statistics would help strengthen governance and policymaking substantially. To this end, we will step up efforts to improve macroeconomic data quality, including national accounts, fiscal, BOP, and labor market data, with technical assistance from the IMF, other international financial institutions, and from bilateral donors.
- The completion of the delayed governance diagnostic exercise, which is needed to build a roadmap for strengthening governance across various sectors of government.
- Finally, AML/CFT reforms, increased electronic processing of taxpayers, and the maintenance of a market-based exchange rate will help to enhance transparency and reduce opportunities for corruption.

D. External Debt and Relief Prospects

30. Sudan is in debt distress. The most recent estimate based on the ongoing debt reconciliation exercise shows total public and publicly guaranteed (PPG) external debt at around USD 56 billion at end-2020 (163 percent of GDP), with the bulk in arrears (87 percent of the external debt stock). Out of this total, 41 percent is owed to Paris Club creditors, 36 percent to Non-Paris Club creditors, 11 percent to multilateral institutions and the remaining 12 percent to commercial creditors. As of end-March 2021, Sudan's outstanding arrears to the IMF stood at SDR 964 million (about USD 1,367 million). Sudan's arrears to the World Bank Group and African Development Bank were cleared on March 26 and May 12, respectively. Final reconciliation of end-2020 PPG debt is still in progress.

31. Our debt strategy is to assure the flow of financing for critical development projects. Under the SMP we intend to limit payments only to those creditors who provide net positive flows to Sudan. We strive to secure this financing at the most concessional terms possible, while recognizing that any new borrowing will eventually need to be treated as part of any comprehensive debt relief workout. We commit to limit new non-concessional borrowing in line with program targets (QB #4) and use the proceeds to finance critical public services in physical infrastructure and social programs. We will regularly report information on debt service payments to creditors—including the amounts of inflows and outflows, the credit outstanding and how much of it is in arrears, and the amount of the debt falling due each year—to IMF staff.

32. We will continue to intensify outreach to international partners to secure debt relief. This will entail: (i) reaching out to creditors with a view to seek a fast-track debt relief process; (ii) minimizing non-concessional borrowing; and (iii) strengthening cooperation with the IMF. We

understand that building a track record of performance is only one of four conditions that must be met to reach the HIPC Decisions Point. In this regard, the government will work with the IMF and World Bank to complete the joint debt reconciliation exercise and will reach out to creditors for the needed financing assurances for eventual comprehensive debt relief through the HIPC process including by the IMF.

33. We are hopeful that the international community will recognize our track record and provide debt relief comparable to that provided to other countries. Prior to the secession, we agreed with South Sudan on a “zero option” clause, under which we would shoulder the entire external debt, provided that the international community provides firm commitments to the delivery of debt relief within two years. We have agreed to extend this agreement on several occasions since 2014. Absent timely progress in debt relief, Sudan’s external debt will need to be apportioned with South Sudan based on a formula to be determined, which could undermine recent progress in peace building in the region.

E. Proposed Extension of the Program, Modalities and Monitoring

34. In light of the possibility that the HIPC DP will slip past end-June we are requesting an extension of the SMP through end-December 2021. While we hope that the international community will urgently provide formal pledges to finance the Fund’s participation in HIPC, we are conscious of the fact that reaching the HIPC DP requires an uninterrupted track record of satisfactory performance under a UCT-quality SMP leading up to the Decision Point.

35. Therefore, out of an abundance of caution, we are requesting an extension of the SMP with the hope that it will not be needed. The extension would establish two additional test dates, one at end-September and another at end-December 2021 as well as corresponding quantitative and indicative targets and structural benchmarks. In addition to new quantitative targets and benchmarks for the fourth (end-September) and fifth (end-December) reviews, we propose that modifications be made to existing structural benchmarks. The structural benchmark related to the establishment of the Anti-Corruption Commission originally programmed for end-March 2021 would be shifted to end-September 2021 to allow more time for the appointment and vetting of commissioners. In lieu of the delayed adoption of an automatic fuel price mechanism (an end-September 2020 SB), an end-December 2021 benchmark should be set on the removal of controls on retail gasoline and diesel prices. Finally, we would propose the establishment of new structural benchmarks during the extended period of the SMP on: the adoption of a PFM roadmap; issuance of implementing regulations for the Investment Law; elimination of VAT and personal income tax exemptions; adoption of an SOE strategy; and enactment of a revised Banking Regulation Act. The quantitative benchmarks and indicative targets are described in detail in Table 1, and the prior actions and structural benchmarks in Table 2. The Technical Memorandum of Understanding (TMU) contains definitions of the quantitative benchmarks, indicative targets, and structural benchmarks. It also specifies data required to monitor the program that the government will need to provide to Fund staff on a timely basis.

36. In September 2020 we set up an institutional framework to monitor program execution and improve data collection. The institutional framework comprised key decision makers on

economic and financial matters, notably the Finance Minister, the Petroleum and Mining Minister and the Governor of CBOS. They are assisted by the SMP Monitoring Committee comprised of senior officials from the Finance and Mining and Petroleum Ministries, the Central Bank of Sudan, the Statistics Office, and other institutions that are key to ensuring adequate execution of the program. We will strive to ensure the SMP Monitoring Committee meets in a frequent and timely manner to ensure adequate program monitoring.

37. We reaffirm our commitment to cooperate with the IMF on both policies and payments. The exceptional circumstances of the COVID-19 pandemic have had a detrimental impact on our capacity to pay. We welcome staff's assessment which supports a reduced annual payment to the Fund starting in 2021, and the IMF Board decision to support a reduction of payments to \$2.5 million annually. We are committed to make regular monthly payments at least sufficient to cover our obligations falling due, and to increase them as our capacity to repay improves; monthly payments were made to the IMF in January, February, March and April 2021 totaling \$880,000, amounting to approximately 35 percent of the expected annual payment.

Table 1. Sudan: Quantitative Targets, 2019–2021 1/

| | Dec-19 Benchmark | Dec-20 Target | Actual | Mar-21 Target | Actual | Jun-21 Target | Sep-21 Target | Dec-21 Target |
|---|---------------------|------------------|--------|------------------|--------|------------------|------------------|------------------|
| Quantitative Benchmarks | | | | | | | | |
| Banking system net credit to the central government (ceiling: in SDG billion) | 386 | 672 | 655 | 758 | 683 | 807 | 909 | 1,092 |
| CBOS net domestic assets (ceiling: in SDG billion) 2/ | 817 | 1,083 | 1,289 | 1,380 | 1,502 | 1,786 | 1,897 | 2,099 |
| Net international reserves (floor: in millions of U.S. dollars) 2/ | -728 | -594 | -6,511 | -6,552 | -6,336 | -6,284 | -6,226 | -6,175 |
| Contracting or guaranteeing of external long term non-concessional debt by the government or the central bank (ceiling: in millions of U.S. dollars) 3/ | 230 | 300 | 0 | 75 | 12 | 150 | 225 | 300 |
| Indicative Targets | | | | | | | | |
| Social spending (floor: in SDG billion) | 15 | 99 | 39 | 53 | 15 | 43 | 90 | 186 |
| Nonoil primary deficit (ceiling: in SDG billion) 4/ | 242 | 367 | 375 | 219 | 104 | 266 | 306 | 348 |
| Reserve money (ceiling: in SDG million) 2/ | 0 | 766 | 1,000 | 1,094 | 1,208 | 1,451 | 1,565 | 1,770 |
| Memorandum items: | | | | | | | | |
| External grants for Family Support Program (in millions of U.S. dollars) | | 328 | 0 | 92 | 8 | 52 | 126 | 245 |
| Other external non-project grants (in millions of U.S. dollars) | 0 | 212 | 161 | 25 | 0 | 25 | 50 | 100 |
| MOFEP repayments to CBOS for advances related to victims of terrorism (in millions of US dollars) | | | | 356 | 0 | 33 | 67 | 107 |
| Government asset sales (in SGD billion) | | 35 | 0 | 0 | 0 | 0 | 0 | 0 |
| External non-project loans (in millions of U.S. dollars) | 91 | 127 | 0 | 0 | 0 | 0 | 0 | 0 |

1/ The variables are defined according to the TMU.

2/ Evaluated using program exchange rate of 45 SDG per U.S. dollar. The definition of net international reserves is updated to include all external liabilities denominated in foreign currency for March and June target, instead of short-term external liabilities. The actual performance for NIR in Dec-2020 based on the previous definition is \$-803 million.

3/ Continuous benchmark; flow from the beginning of the year.

4/ The unadjusted NOPD target for end March is 312. Adjustments were made per the TMU to account for fluctuations with respect to SSTL, SFSP and non-project grants.

Table 2. Sudan: Prior Actions and Structural Benchmarks Under the SMP

| Benchmarks | Target Date | Macroeconomic Rationale |
|--|---|---|
| Prior Actions | | |
| 1. Complete the stress testing of individual bank resilience to exchange rate movements and prepare appropriate measures to mitigate risks in each problem bank ahead of exchange rate reform, in consultation with the IMF. | Completed PA for SMP request | Prepare for the exchange rate reform |
| 2. Legislative council to pass a revised 2020 budget consistent with program objectives, including incorporating a substantial expansion of the social safety net under the Sudan Family Support Program, increased health expenditure to address COVID-19 needs, and revenue mobilization through customs exchange rate reform and expansion of the tax base. | Completed PA for SMP request | Fiscal consolidation |
| 3. Announce the unification of the official exchange rate (excluding the customs valuation exchange rate) with the market rate at the prevailing market rate and issue regulations to banks and forex bureaus indicating that trading can take place in a +/-5 percent band around the indicative rate announced by the central bank prior to the opening of trading which is calculated as the weighted average of the previous day's trading excluding CBOS sales/purchases from government. | Completed February 21, 2021 | Remove distortions and raise revenue |
| Structural Measures | | |
| Public financial management | | |
| 1. The MOFEP to publish on its website monthly budget execution reports that show actual revenue and expenditure for budgetary central government in comparison with original and revised budget, consistent with the GFSM2001. | Dec. 2020 Met | Improve budget classification and fiscal reporting |
| 2. Develop and adopt a PFM Roadmap based on the 2020 PEFA. | End-Sept 2021 | Strengthen PFM |
| Governance | | |
| 3. Establish an independent anti-corruption commission through appointment of the Commissioners in accordance with the provisions of the Anti-Corruption National Commission Law. | End-Sept 2021 | Strengthen governance |
| Expenditure policy | | |
| 4. Adopt automatic fuel pricing mechanism to ensure that retail diesel and gasoline prices reflect all costs, thus eliminating subsidization. | Sept. 2020 Not Met; see #5 | Support fiscal consolidation |
| 5. Eliminate government price controls on retail gasoline and diesel fuel prices and allow gasoline and diesel fuel suppliers to contract at negotiated market prices. | End-December 2021 | Remove price controls and eliminate subsidies |
| Tax Policy | | |
| 6. Customs valuation exchange rate unification: Publish decree indicating imports to be valued at indicative exchange rate published by CBOS and rationalize multiple ad hoc fees and other related charges. | End-June 2021 | Eliminate distortions and strengthen revenue collection |
| 7. Eliminate (i) all exemptions on VAT except those related to food, and (ii) the personal income tax exemption on people over 50 years of age in the context of a progressive PIT structure. | End-December 2021 | Broaden tax base |
| 8. Issue implementing regulations for the Investment Law which stipulate that all tax exemptions must have prior approval from the Ministry of Finance and must be costed. | End-December 2021 | Strengthen fiscal control; support revenue |
| Governance | | |
| 9. Prepare and publish an inventory of all state-owned enterprises including those supervised by ministry of finance, line ministries and security sector. | Dec. 2020 Not met; full list published on April 5, 2021 with the exception of those | Improve fiscal transparency |

Table 2. Sudan: Prior Actions and Structural Benchmarks Under the SMP (continued)

| Benchmarks | Target Date | Macroeconomic Rationale |
|--|---|--|
| | owned by the intelligence sector due to ongoing work to clarify ownership | |
| 10. Pass a new anti-corruption law, in line with international best practices as agreed in consultation with the IMF, that clearly defines what actions constitute corrupt practices and creates an independent anti-corruption commission. | Oct. 2020 Not Met; approved April 25, 2021 | Fight corruption and improve governance |
| 11. Establish an independent anti-corruption commission, consistent with the provisions of the new anti-corruption law. | Mar. 2021 Not met due to delay in approving law. Reprogrammed #3 above | Fight corruption and improve governance |
| 12. Transfer financial oversight of all SOEs to the MOFEP and adopt an ownership strategy setting forth the strategic purposes, oversight and management principles of SOEs including guiding principles for the review of the existing stock of SOEs. | End-December 2021 | Improve governance and transparency of the SOEs; mitigate contingent fiscal risks. |
| Monetary and Financial Sector | | |
| 13. Finalize an amended Central Bank Law in consultation with IMF staff to, inter alia, (i) establish a central bank mandate focusing on price stability; (ii) strengthen the Central Bank institutional, functional, personal, and financial autonomy, including by limiting monetary financing of the Government and prohibiting the central bank to conduct quasi-fiscal operations; (iii) improve its decision-making structure, by ensuring collegial decision-making, providing for effective oversight over executive; and (iv) enhance transparency and accountability provisions. | Dec. 2020 Not Met; draft sent to CBOS Board in February; approved May 1 2021 | Enhance central bank independence and improve governance |
| 14. Enact a new Central Bank Law in consultation with IMF staff that, inter alia, (i) establishes a proper central bank mandate focusing on price stability; (ii) strengthens the Central Bank institutional, functional, personal, and financial autonomy, including by limiting monetary financing of the Government and prohibiting the central bank to conduct quasi-fiscal operations; (iii) improves its decision-making structure, by ensuring collegial decision-making, providing for effective oversight over executive; and (iv) enhances transparency and accountability provisions. | June 2021 | Enhance central bank independence and improve governance |
| 15. Unify all but the customs exchange rate and allow commercial banks and FX bureaus to set exchange rates in line with market conditions, but subject to an adjustable band around the daily official exchange rate. Central Bank sets daily official exchange rate based on market average exchange rate. | Sept. 2020. Not met. See Prior Action (#3) for First Review (above). | Strengthen competitiveness and reduce distortions |
| 16. Gradually adjust customs exchange rate towards market exchange rate and fully unify by June 2021. | Jun. 2021 Reprogrammed above #6 | Eliminate distortion in the exchange rate market |
| 17. Establish regular procedures for communication between banking supervision and regulation departments; and conduct semi-annual stress tests to identify and address vulnerabilities of individual banks to exchange rate movements. | Mar. 2021 Met | Strengthen financial sector soundness |

Table 2. Sudan: Prior Actions and Structural Benchmarks Under the SMP (concluded)

| Benchmarks | Target Date | Macroeconomic Rationale |
|--|--|---|
| 18. (i) Conduct thematic AML/CFT on-site inspections of the ten highest-risk banks as determined by the CBOS off-site tool, focusing on politically exposed persons (PEPs), suspicious transaction reporting, and higher-risk customers and transactions in the real estate sector; and (ii) provide aggregate data to the Fund on any related violations found and sanctions levied by the CBOS, in line with the existing legal framework. | Mar. 2021 Not met; five were completed as of end-March and eight as of mid-May with the remaining two pending | Reduce vulnerabilities to corruption and related money laundering |
| 19. Enact a revised Banking Regulation Act which includes a comprehensive resolution regime for the banking sector, in line with international best practice. | End-December 2021 | Strengthen the banking sector |

Attachment II. Technical Memorandum of Understanding

1. This technical memorandum of understanding (TMU) sets out the framework for monitoring the performance of Sudan under the 2020–21 Staff-Monitored Program (SMP). It specifies the quantitative benchmarks, indicative targets, and structural benchmarks that will be the basis for monitoring the implementation of the SMP. In addition, the TMU establishes the terms and timeframe for transmitting the data that will enable Fund staff to assess program implementation and performance.

2. The SMP will be monitored based on four quarterly quantitative benchmarks and three indicative targets for end-June, end-September and end-December 2021.

3. The quantitative benchmarks are:

- (i) ceiling on net credit to the central government by the banking system;
- (ii) ceiling on the net domestic assets of the Central Bank of Sudan (CBOS);
- (iii) floor on the stock of net international reserves of the CBOS; and
- (iv) ceiling on new non-concessional external loans contracted or guaranteed by the government or the central bank.

4. The indicative targets are:

- (i) floor on social spending;
- (ii) ceiling on reserve money; and
- (iii) ceiling on non-oil primary deficit.

Some of these targets are subject to adjustors. The definitions of these variables and the adjustors are set out below. All the quantitative targets, indicative targets, and structural benchmarks are displayed in Tables 1 and 2 of the MEFP.

5. To evaluate program targets, the local currency equivalent values of foreign exchange denominated items in the balance sheet of the CBOS will be calculated at the program exchange rates of SDG 45.0 per U.S. dollar and SDG 62.2 per SDR, and the program monetary gold price of \$70.73 per gram.

Definitions

6. Net domestic assets (NDA) of the Central Bank of Sudan (CBOS) are defined as the sum of the stock of Net Domestic Credit of the CBOS, excluding claims on the government corresponding

to its overdue obligations to the IMF ("IMF on-lent"), plus claims on public enterprises, claims on commercial banks, and plus other items net:

- CBOS net credit to the central government (NCG) is defined as CBOS credit to the central government minus total central government deposits. Central government deposits include all accounts of line ministries and agencies controlled by the government.
- CBOS credit to the central government is defined as the sum of temporary advance, CBOS's holdings of Government Musharaka Certificates (GMCs) and Government Investment Certificates (GICs), CBOS long-term claims on the central government; central bank losses on gold purchases (devaluation in gold dealings), loan resulted from separation of South Sudan, accumulated interest arrears, sundry debtors, payments to meet government obligations, advances to cover foreign currency obligations, Sudan Cotton Comp. Facility, other long term assets, accrued revenue Shahama Certificates, Ministry of Finance -sugar, stock of CBOS credit to government arising from the financing of wheat subsidies (difference in wheat price), Ministry of Finance debts-ONB shares, and Sudanese Petroleum Corp. overdues and settlement of petroleum shipments value.
- CBOS claims on public enterprises are defined as CBOS credit to public enterprises.
- CBOS claims on commercial banks are defined as CBOS credit to commercial banks
- Other items net is the difference between other assets and other liabilities as reported in CBOS balance sheet as reported by the IMF's Statistics Department, adjusted for exchange rate revaluations arising from the difference between current and program exchange rate (s); and
- The central government comprises all accounts of line ministries and agencies controlled by the government (corresponding to Group no. 11, Group no. 12, and some accounts of the Group no. 19 in the CBOS general ledger), and margin deposits placed with the CBOS by the central government against letters of credit issued by the CBOS.

Adjustors:

- The ceiling on net domestic assets of the CBOS set in Table 1 will be adjusted downward *pro tanto* by the amount of any excess of non-project external grants and loans relative to program projections. The ceiling will be adjusted upward *pro tanto* by the amount of any shortfall in non-project external grants and loans (excluding those for the Sudan Family Support Program (SFSP)) relative to program projections.
- The ceiling on net domestic assets of the CBOS will be adjusted downward *pro tanto* by the amount of any excess of receipts from government asset sales. The ceiling will be adjusted upward *pro tanto* by the amount of any shortfall in receipts from government asset sales.

- The ceiling on net domestic assets of the CBOS will be adjusted downward *pro tanto* by the amount of receipts from the Central Government for SSTL repayment to the central bank.

7. Net international reserves (NIR) of the CBOS are the stock of gross official usable international reserves *minus* external liabilities denominated in foreign currencies. The gross official usable international reserves assets comprise foreign exchange banknotes in the vaults of the central bank, monetary gold, and SDR holdings. External liabilities denominated in foreign currencies are defined as the sum of: short-term foreign liabilities, other deposits from non-residents in foreign currencies, long-term loans from non-residents in foreign currency, and accounts payable from nonresidents in foreign currency and any SDR allocation. SDR allocations are included in external liabilities.

Adjustors:

- The floor on the NIR of the CBOS will be adjusted upward by the amount equal to receipts from the Government for SSTL repayment to the CBOS in foreign currency or monetary gold that would increase gross official usable reserves assets.
- This target will be adjusted upward by the amount of any excess of non-project external grants and loans relative to program projections needed to eliminate monetization.

8. Net credit to the central government by the banking system is defined as the stock of net credit to the central government by the CBOS plus net credit to the central government by commercial banks. The definition of central government for the purpose of this benchmark is the same as the one applied for the NDA of the central bank.

Adjustors:

- The ceiling on the net credit to government by the banking system set in Table 1 will be adjusted downward *pro tanto* by the amount of any excess of non-project external grants and loans (excluding that for the SFSP) relative to program projections. The ceiling will be adjusted upward *pro tanto* by the amount of any shortfall in non-project external grants and loans relative to program projections.
- The ceiling on net credit to government by the banking system will be adjusted downward *pro tanto* by the amount of any excess in receipts from government asset sales. The ceiling will be adjusted upward *pro tanto* by the amount of any shortfall in receipts from government asset sales.
- The ceiling on net credit to government by the banking system will be adjusted downward *pro tanto* by the amount of receipts from the Government for SSTL repayment.

9. Non-oil primary balance of the central government (NOPB) is defined as non-oil revenues¹ minus expenditures excluding interest payments cumulatively since the beginning of the calendar year.

Adjustors:

- The ceiling on the NOPB deficit set in Table 1 will be adjusted downward (upward) *pro tanto* by the amount of any excess (shortfall) of project external loans relative to program projections.
- The ceiling on the NOPB deficit set in Table 1 will be adjusted upward (downward) *pro tanto* by the amount of any excess (shortfall) of non-project grants (excluding those earmarked for the SFSP) relative to program projections.
- The ceiling on the NOPB deficit will be adjusted downward *pro tanto* by the amount of any shortfall in external non-project grants earmarked for the SFSP.
- The ceiling on the NOPB deficit will be adjusted downwards(upwards) *pro tanto* by any excess (shortfall) amount of SSTL payment.

10. Debt is defined for program purposes in accordance with Executive Board Decision No. 12274, Point 9, as revised on August 31, 2009 (Decision No. 14416-(09/91)).

- For the purpose of this guideline, the term “debt” will be understood to mean a current, i.e., not contingent, liability, created under a contractual arrangement through the provision of value in the form of assets (including currency) or services, and which requires the obligor to make one or more payments in the form of assets (including currency) or services, at some future point(s) in time; these payments will discharge the principal and/or interest liabilities incurred under the contract. Debts can take several forms, the primary ones being as follows:
 - (i) loans, i.e., advances of money to the obligor by the lender made on the basis of an undertaking that the obligor will repay the funds in the future (including deposits, bonds, debentures, commercial loans and buyers’ credits) and temporary exchanges of assets that are equivalent to fully collateralized loans under which the obligor is required to repay the funds, and usually pay interest, by repurchasing the collateral from the buyer in the future (such as repurchase agreements and official swap arrangements);
 - (ii) suppliers’ credits, i.e., contracts where the supplier permits the obligor to defer payments until sometime after the date on which the goods are delivered or services are provided; and

¹ Oil revenues are receipts from sales of the government’s share of domestic oil production *plus* receipts from the transitional financial arrangement paid by South Sudan *plus* oil-transit fees paid by South Sudan to export its oil through Sudan’s oil pipeline *plus* receipts from granting exploration rights, and signature bonuses.

- (iii) leases, i.e., arrangements under which property is provided which the lessee has the right to use for one or more specified period(s) of time that are usually shorter than the total expected service life of the property, while the lessee or retains the title to the property. For the purpose of the guideline, the debt is the present value (at the inception of the lease) of all lease payments expected to be made during the period of the agreement excluding those payments that cover the operation, repair or maintenance of the property.
- Under the definition of debt set out in point (a) above, arrears, penalties, and judicially awarded damages arising from the failure to make payment under a contractual obligation that constitutes debt are debt. Failure to make payment on an obligation that is not considered debt under this definition (e.g., payment on delivery) will not give rise to debt.

11. A non-concessional external debt ceiling applies to the contracting and guaranteeing by the central government or central bank of new non-concessional borrowing debt with nonresidents with original maturities of one year or more. The ceiling applies to debt and commitments contracted or guaranteed for which value has not yet been received. This applies to private debt for which official guarantees have been extended and which, therefore, constitute a contingent liability of the central government or central bank.

- For program purposes, the guarantee of a debt arises from any explicit legal obligation of the public sector to service a debt in the event of nonpayment by the debtor (involving payments in cash or in kind), or from any implicit legal or contractual obligation of the public sector to finance partially or in full any a shortfall incurred by the debtor.

12. For program purposes, a debt is concessional if it includes a grant element of at least 35 percent, calculated as follows: the grant element of a debt is the difference between the present value (PV) of debt and its nominal value, expressed as a percentage of the nominal value of the debt. The PV of debt at the time of its contracting is calculated by discounting the future stream of payments of debt service due on this debt. The degree of concessionality of debt will be calculated using a 5 percent discount rate.

13. Reserve money is defined as the sum of local currency circulating outside of the banks, total reserves (required and excess) of banks, and deposits of local and state governments and non-financial public corporations at the CBOS .

14. Priority social spending of the central government is defined as the central government's spending on social benefits program that includes cash transfer, spending on health insurance, on primary health care, students support, unemployment benefits and other social programs to cope with COVID-19.

The List of Social Benefits

National fund for sponsorship for students
 Support social activities
 Support for medical treatment abroad
 Support medical treatment domestic
 Support for life saving medicine
 Support for hospital surgery
 Support for treatment of accident
 Food for prisoners
 Medical treatment of prisoners
 Health insurance for poor families
 Special support for cardio hospital
 Salaries of island Al Jazeera
 Salary of social insurance
 Removing wage gaps
 Family Support Program

Program Monitoring

15. The Sudanese authorities shall maintain a program-monitoring committee composed of senior officials from the Ministry of Finance, the Ministry of Minerals, Oil and Gas, the CBOS, Ministry of Labor and Administrative Reforms, and other relevant agencies. The IMF Resident Representative will have observer status on this committee. The committee should be responsible for monitoring the performance of the program, recommending policy responses, informing the IMF regularly about the progress of the program, and transmitting the supporting materials necessary for the evaluation of benchmarks. The committee should provide the IMF with a progress report on the program on a monthly basis within four weeks of the end of each month, using the latest available data.

Data Reporting

16. The following table contains the agreed reporting framework. To the extent possible, the data will be submitted in both printed and electronic form to the IMF local office and uploaded to the IMF's Integrated Monetary Database and Balance of Payment database. Every data submission should begin with January 2020, with revision of previous months identified.

| Reporting Agency | Type of Data | Description of Data | Frequency | Timing (within period specified) |
|-----------------------|---|--|-----------|-------------------------------------|
| Central Bank of Sudan | CBOS balance sheet and CB-1SR | Detailed CBOS balance sheet | Monthly | 30 days after the end of each month |
| | Monetary survey and ODC_2SR | Banking system balance sheet and consolidated balance sheet of commercial banks | Monthly | 30 days after the end of each month |
| | Comprehensive lending to central government by CBOS | Details of CBOS claims on the Central Government (see attached template) | Monthly | 30 days after the end of each month |
| | Cash flow of foreign exchange | Cash flow data of foreign exchange, including sales and purchases by the dealing room at the CBOS (see attached template) | Monthly | 2 weeks after the end of each month |
| | Banking indicators | Capital adequacy; asset composition and quality including nonperforming loans; profitability; liquidity; open FX positions; and compliance with prudential norms | Monthly | 30 days after the end of each month |

| Reporting Agency | Type of Data | Description of Data | Frequency | Timing (within period specified) |
|---|----------------------------------|--|-----------|--|
| | Exchange Rates | Official Exchange Rate (bid/ask) | Daily | 2 days after the end of each week |
| | | Average of exchange rates used to calculate the bid and ask rates of official exchange rate | Daily | 2 days after the end of each week |
| | | Market Exchange Rate (bid/ask) | Daily | 2 days after the end of each week |
| | Balance of payments | Detailed composition (exports, imports volume and values, invisible transactions, quarterly BOP tables). | Quarterly | 2 months after the end of each quarter |
| | External debt | Contracting or guaranteeing of medium-and long-term external debt of the government, the CBOS, and state-owned companies | Quarterly | 1 month after the end of each quarter |
| | | Disbursements and repayments, (i) scheduled, and (ii) actual interest and principal on debt of the government, the CBOS, and state-owned companies, by creditor | Monthly | 30 days after the end of each month |
| Ministry of Finance and Economic Planning | Central government operations | Revenues, expenditures, and financing as in GFSM 2001 format | Monthly | 45 days after the end of each month |
| | Privatization receipts | Detailed figures for each transaction and nature of the transaction | Monthly | 30 days after the end of each month |
| | Central government domestic debt | End-month stocks, and monthly issuances and repayments, of all domestic debt instruments: GMCs, GICs, loans and advances from the banking system, sanadat, letters of guarantee, standing orders, accounts payable (including arrears) and amortization schedule | Monthly | 30 days after the end of each month |
| | Social spending | Spending on direct cash transfer, education, health and training | Monthly | 45 days after the end of each month |
| | External support | Disbursement of grants, disbursement and repayment (principal and interest) of loans by donor, breakdown of foreign budget and project grants | Monthly | 30 days after the end of each month |

| Reporting Agency | Type of Data | Description of Data | Frequency | Timing (within period specified) |
|---|--|--|-----------|-------------------------------------|
| Central Bureau of Statistics | CPI | Including detailed data and inflation for imported products | Monthly | 2 weeks after the end of each month |
| Ministry of Finance and Economic Planning / Ministry of Minerals, Oil and Gas | Oil transit fees/TFA, from South Sudan | Shipment data, listing by blend specifying date, quantity, prices, and values in US\$ and in guinea | Monthly | 30 days after the end of each month |
| | Crude oil | Production by block; share of Sudan and foreign partners; prices and values (\$ million), investment and production costs by block | Monthly | 30 days after the end of each month |
| | Sales to refineries | Sales listing by refineries specifying date, quantity, prices, and values in US\$ and in guinea | Monthly | 30 days after the end of each month |
| | Refineries | Volumes and prices of production, cost of crude oil, consumption and imports of gasoline, gasoil, fuel oil, jet oil, kerosene, and LPG | Monthly | 30 days after the end of each month |
| | Fuel prices | Gasoline and diesel prices at the domestic market, and automatic pricing formula | Monthly | 30 days after the end of each month |

**Statement by Ms. Mannathoko, Executive Director for Sudan and
Mr. Ismail, Senior Advisor to the Executive Director
June 28, 2021**

This Board meeting marks a historic moment in Sudan's long journey towards re-engagement and normalization of relations with International Financial Institutions (IFIs) after 36 years of global financial isolation. Broad-based support from 101 member countries will enable the clearance of Sudan's arrears to the IMF and allow it to reach the HIPC Decision point, facilitating the delivery of HIPC and other debt relief to Sudan, while allowing the provision of new Fund financing. This milestone will also help unlock much needed development assistance to support Sudan's efforts to get out the COVID-19 crisis and start reversing decades of economic scarring while positioning the economy for higher and more inclusive growth. The Sudanese authorities, thank the Fund membership for the resolute support, amidst a challenging pandemic. My authorities request the support of Executive Directors for the following Decisions:

- i. Termination of Ineligibility to Use the General Resources of the Fund.*
- ii. A 39-month financial arrangement under the Extended Credit Facility (ECF) at 275 percent of quota; and*
- iii. Sudan's qualification for assistance under the HIPC Initiative and approval of the HIPC Decision Point document. This includes approval for the IMF to provide interim assistance between the HIPC Decision and Completion Points, towards reducing the NPV of the debt to exports ratio to 150 percent.*

The Sudanese government has made a sustained and concerted effort to ensure that the qualification criteria required for the above decisions are met. The SMP review submitted by staff establishes the track record required to reach Decision Point. The authorities are committed to sustained reform under the new program. The assessment of risk to the Fund shows that Sudan will be able to meet its obligations to the IMF under the above arrangement.

I. Introduction

1. Our Sudanese authorities thank the Fund Board and membership for their support in making the HIPC Decision Point a possibility for Sudan. They are also appreciative of the unflinching support from Fund management and the determined hard work of the staff teams that have helped bring Sudan to this point. It has also taken significant collective effort to mobilize the financial assurances required for arrears clearance and debt relief.

2. Since its formation in August 2019, the transitional government in Sudan has taken difficult but necessary steps to address adverse social and economic legacies and position the country to pursue the aspirations of the Sudanese people to build a democratic and prosperous society. In this context, the authorities have made significant strides in addressing legacy issues and restoring peace, while rebuilding macroeconomic stability and setting the stage to advance inclusive

development goals, all supported by ambitious reforms under the Upper Credit Tranche (UCT) SMP. This notwithstanding, the COVID-19 pandemic has exerted a significant economic toll, exacerbating pre-existing social and economic challenges. At the same time, large debt arrears accumulated by previous regimes have continued to prevent Sudan from accessing urgently needed financing to advance its development and poverty reduction agenda.

3. The clearance of Sudan's arrears to the General Department of the Fund, will eliminate its non-observance of financial obligations that led to its ineligibility to use Fund resources. Once this happens, Sudan will be able to seek critical support needed for its economic and governance transformation. Directors' support is therefore sought for the termination of Sudan's ineligibility to use the General Resources of the Fund. Against this background, the authorities also request Executive Directors' endorsement of the SMP track record, and support for the request for a 39-month arrangement under the ECF. The ECF program will help anchor medium-term policies and reforms between the HIPC Decision Point and the HIPC Completion Point. The authorities also seek Directors' confirmation of Sudan's qualification for assistance under the Enhanced HIPC Initiative, and for Interim Assistance between the HIPC Decision and Completion Points.

II. The Pandemic and Recent Economic Developments

4. The country is now experiencing its third COVID-19 wave with acceleration in the infection rates since early March. This has prompted a reinstatement of various containment measures with restrictions on large group contact. The authorities have embarked on vaccinating citizens targeting about 20 percent of the targeted populations in the first stage. To this effect, the authorities have thus far received about 1.1 million vaccine doses from the COVAX facility and China, which translates to two doses for less than 1.3 percent of the population. The government also signed an agreement with the Arab Bank for Economic Development for a grant of US\$10 million to support health services. Nevertheless, the need for vaccines remains urgent and dire.

5. In the wake of the pandemic and its associated containment measures, GDP growth is estimated to have contracted by 3.6 percent in 2020. GDP growth is expected to recover to about 0.9 percent in 2021 supported by grant resources unlocked by the clearance of arrears to the IFIs, alongside the normalization of economic policies, including the unification of the exchange rate. Inflation, however, continues to accelerate reaching 363 percent in April 2021 compared to 269 percent in December 2020, and driven mainly by fuel price increases and their second-round effects following the removal of subsidies, as well as some food and fuel shortages. Inflation is expected to decline to double digits next year as monetization is reduced and pass-through effects from the unification of the customs rate dissipate. Inflation is expected to stabilize at around 8 percent over the medium-to-long-term.

6. The current account balance shifted from a deficit of 13.2 percent in 2020 to a surplus of 0.1 percent of GDP in the first quarter 2021, following the exchange rate unification and the resultant significant improvement in net exports and shifting of resources towards official markets. In the same vein, recorded remittances, through formal channels, have increased nearly five-fold on the back of the exchange rate unification.

III. Track Record Under the Staff Monitored Program

7. To qualify for HIPC assistance, Sudan had to establish a track record of economic reforms that meets the initiative's standards of upper credit tranche conditionality. Performance under the Staff Monitored Program (SMP) used to establish this track record, through to the current period, has been satisfactory and has enabled the authorities to now seek the Board's endorsement of this track record for the purposes of reaching the HIPC Decision Point.

8. Program performance remained satisfactory under the latest, second review of the SMP. The authorities thank staff for the constructive engagement during both the review and the negotiations for support under the Extended Credit Facility (ECF). They broadly agree with staff's assessment and policy recommendations under the SMP review. The authorities met almost all quantitative benchmarks (QBs). The QB on net credit to the central government, the ceiling on contracting or guaranteeing external long-term non-concessional debt and the net international reserves (NIR) floor were all met. The one exception was the ceiling on net domestic assets (NDA) that was missed mainly due to exchange rate valuation effects, and an increase in credit to the banking sector related to pandemic relief measures. In line with this, the target for the ceiling on reserve money was also missed, also reflecting unsterilized reserve accumulation and increased credit to banks amidst the pandemic. The indicative target (IT) on the non-oil primary deficit was met by a wide margin. With delayed receipt of World Bank funding for the Sudan Family Support Program (SFSP), alongside some logistical challenges, the targeted IT floor on social spending was missed due to the slower-than-planned rollout of the SFSP.

9. In the financial sector, the structural benchmark (SB) on bank stress tests was met. Despite COVID-19 mitigation measures requiring CBOS and banks to operate at 50 percent capacity, significant progress was made on on-site thematic AML/CFT inspections, with eight out of 10 inspections completed by mid-May, however the SB was still missed as all 10 were not completed by the target date. Since the Anti-Corruption National Commission Law was only approved by the Sovereign Council on April 25 this year, this delayed the establishment of the Anti-Corruption Commission (the SB), nevertheless progress has been made in identifying commissioners. The authorities are taking remedial actions to avoid missed targets. Against this background, the authorities seek Directors' endorsement of the staff's assessment that Sudan has satisfactorily established a track record of strong policy implementation under the current UCT quality SMP.

IV. Request for an Extended Credit Facility Program

10. Sudan's capacity to repay the Fund is assessed as adequate once the provision of debt relief under the HIPC framework is effective. Moreover, risks to repayment are mitigated by the fact that Sudan will now have continued access over the foreseeable future to concessional financing, and improved debt management capacity under the program. The ECF program will cement progress made under the SMP, advancing reforms needed to strengthen governance and reduce distortionary policies while laying the groundwork for economic stability and sustained, inclusive, poverty reducing, private-sector-led growth.

11. Under the program, the authorities will target a fiscal deficit of 1.5 percent of GDP in 2022 (compared to 2.9 percent in 2021 and 6 percent in 2020), which will be further reduced to 1 percent over the medium-term, to help preserve debt and fiscal sustainability after HIPC debt relief. They are already implementing revenue mobilization measures to further improve the fiscal balance while creating space for essential social and infrastructure spending. They are also eliminating all VAT exemptions, except those related to food, reforming personal income tax (PIT) and strengthening the Large Taxpayer Office.

12. To contain fiscal expenditure, the authorities plan to continue eliminating fossil fuel subsidies; abolishing government price controls on retail gasoline and diesel fuel and allowing gasoline and diesel fuel suppliers to contract at market prices. They also intend to continue the gradual reduction in electricity subsidies, allowing higher electricity tariff rates for high-end consumers. Alongside the subsidy reductions, the authorities rolled out the Sudan Family Support Program (SFSP) on February 24, 2021, to alleviate the burden of economic reforms on vulnerable households. It has provided support to 160,000 households through April and is expected to cover two million households by the end of the year. The authorities will strengthen cash transfer schemes and social safety nets. Under the ECF, deployment of cash transfers will be carried out in tandem with the reduction of energy subsidies to alleviate the impact of the reforms on vulnerable populations and sustain public support. The authorities will continue to strengthen public financial management (PFM), revamp the public procurement system, and reform the SOE sector while improving fiscal transparency.

13. Preserving debt sustainability post HIPC debt relief, will be an important consideration and with this in mind, the authorities will continue to focus on concessional financing for the foreseeable future, while strengthening debt management and transparency. They will enact a Debt Management Law that clearly identifies objectives, authority, responsibilities, and procedures, and reporting and auditing requirements of public debt operations. They also intend to start publishing quarterly external public debt reports covering the outstanding debt stock, debt flows, and new borrowing, as well as annual public debt reports covering external and domestic public and publicly guaranteed debt.

14. On monetary and exchange rate policies, the authorities transitioned to a market-determined exchange rate in February 2021 and will continue to limit their FX interventions to the mitigation of disorderly market conditions. The customs exchange rate was also unified this week on June 22, 2021. It is expected that measures to strengthen central bank independence, and the transition to a reserve money targeting regime, will reduce deficit monetization and help to contain high inflation. In addition, existing monetary policy tools, including reserve requirements and central bank securities, can also help to tighten monetary policy as the authorities pursue reserve money targets under the ECF.

15. The goal for financial market development over the medium term, is to deepen the government securities market facilitated by the recently adopted dual banking system and TA from the Fund. The authorities are also revising the Banking Regulation Act in line with best international practices, to further improve the soundness and governance of the banking sector. They are working to strengthen the implementation of the AML/CFT framework, addressing current weaknesses.

16. Structural reforms are critical in the effort to entrench good governance and position the economy for sustainable growth. In this regard, the authorities intend to intensify the fight against corruption and improve governance in line with the Constitutional Declaration. They enacted the Anti-Corruption National Commission Law in April 2021, which will lay the foundation for the establishment of an independent Anti-Corruption Commission with a strong mandate to combat corruption. They will also continue measures to recover assets that were illegally obtained by individuals associated with the former regime, in line with the law passed in December 2019 for that purpose. At the same time, scaling up of efforts to improve the business environment with help from the World Bank and IFC, including strengthening the legal and institutional PPP framework, enhancing access to finance to support financial inclusion and MSME development, and fostering public-private dialogue, will in time support faster, more sustainable private sector growth and jobs.

V. HIPC Decision Point

17. The Sudanese authorities have fulfilled the necessary conditions to reach the HIPC Decision Point. They have established a satisfactory track record of sound policy implementation under the current UCT quality SMP. They also adopted a comprehensive and widely consulted Poverty Reduction Strategy Paper (PRSP) in May 2021 and cleared their arrears to the World Bank and the African Development Bank, while securing adequate financing assurances to clear arrears to the IMF. They have also agreed on appropriate Completion Point triggers with IDA and IMF staffs, with reforms set to promote stronger public financial and debt management, improved governance, and enhanced social protection, while supporting private sector-led growth, reflected in the ECF program. The removal of Sudan from the US State Sponsors of Terrorism List (SSTL) in December 2020 has also paved the way for reintegration with the international financial system.

18. Sudan, therefore, qualifies for debt relief under the HIPC Initiative based on end-2020 data as indicated in the DRA. Creditors representing 76 percent of the net present value (NPV) of eligible debt have committed to provide their share of debt relief under the HIPC Initiative. The authorities have also fully reconciled their debt to multilateral creditors. Overall, adding bilateral debt covered so far, they have reconciled 80 percent of Sudan's total debt, with support from the World Bank and the Fund. The authorities are also beginning outreach to non-Paris Club creditors. They intend to reach out to official non-Paris Club creditors and commercial creditors to seek negotiations on equivalent terms, once this stage is complete.

19. Against this background, the Sudanese authorities seek the Executive Board's support for the proposed HIPC Decision. This will affirm Directors' endorsement and agreement that Sudan qualifies for assistance under the Enhanced HIPC Initiative, alongside approval of the provision of interim assistance between the HIPC Decision and Completion Points, with a view to helping the authorities reduce the NPV of the debt to exports, to 150 percent. The authorities request the full provision of the expected HIPC Initiative debt relief on eligible debt.

VI. Conclusion

20. With the change in government, Sudan's successful re-engagement with the IMF and other donors, and its implementation of an ambitious reform program, has placed it on a path towards normalization, peace and recovery. The Sudanese authorities are grateful for the support received from the international community and development partners, which has been instrumental in bringing them to this point and has helped them overcome critical constraints such as the overwhelming arrears inherited from previous regimes. They wish to thank all the members of the Fund who have pledged for their support and their contributions from the SCA-1 and Deferred Charge Accounts. They are also grateful to those who provided additional cash grants that have facilitated the clearing of arrears to the Fund, paving the way for Sudan to regain access to much needed financing. The authorities are mindful of the challenges ahead but are optimistic and determined to remain on track with the implementation of reforms under the ECF program and the associated floating triggers needed to reach the HIPC Completion Point.
